	2.2 Alternative arrangements for the installation design are considered based on the requirements outlined in the design brief.
	2.3 Safety, functional and budgetary considerations are incorporated in the installation design.
	2.4 Installation design draft is checked for compliance with the design brief and regulatory requirements.
	2.5 Installation design is documented for submission to appropriate person(s) for approval.
	2.6 Solutions to unplanned situation are provided consistent with organisation policy.
3 Obtain approval for installation design.	3.1 Installation design is presented and explained to client and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing custom electronic installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH135A Custom electronic equipment installation design

Evidence shall show an understanding of custom electronic equipment installation design, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Integrated audio systems

- Types of audio control and switching devices
- Types of surround sound systems
- Operation of system control circuits, including the remote device

T2. Video and display set up

- Projectors encompassing:
 - Aspect ratio
 - Screen size
 - Orientation
 - Throw distance, vertical elevation and horizontal orientation
- Direct view monitors adjustments

T3. Audio/video control equipment

- Types of control devices and their operating principles
- Control equipment arrangement in an audio/video system

T4. Technical standards, regulations and codes for extra-low voltage work

- Limitation imposed by regulations
- How to read and apply a standard
- Aspects of technical Standards that apply to extra-low voltage work

T5. Environmental and heritage awareness

- Purpose of environmental and heritage regulation
- Typical issues affecting electrotechnology services and systems
- Meeting requirements

T6. Acoustics, spatial treatment and sound reproduction

- Effects of room dimensions, spatial shape and surface textures on acoustics

REQUIRED SKILLS AND KNOWLEDGE

- Ideal acoustic for specific purposes - speech, solo or small group music, rock music, orchestral music, choral music, cinema and the like.
- Measuring room response
- Speaker placement and room response
- Room treatment methods to improve acoustic response
- Active methods to improve acoustic response

T7. Equipment installation design

- Requirements
- Limitations
- Procedures
- Documentation

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the

most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a

percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design custom electronic installations as described in 8) and including:

- A Developing outlines of alternative designs.
- B Developing the design within the safety and functional requirements and budget limitations.
- C Documenting and presenting design effectively.
- D Successfully negotiating design alteration requests.
- E Obtaining approval for final design.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in 'Context of assessment', which should also be used in the formal

learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing custom electronic installations.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by designing the entertainment aspects of a representative range of two custom electronic installations one of which shall incorporate dedicated home theatre.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the design of video/audio facilities in meeting rooms, classrooms, studios, theatres, halls and the like. It encompasses applying knowledge of electronic audio/video components, acoustics and visual displays, analogue and digital communication, multimedia storage and reproduction, negotiating with clients and others and documenting design.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH1 Program and commission commercial
37A video/audio systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design commercial video/audio installations.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the proposed integrated installation is determined from the design brief or in consultations with appropriate person(s).
	1.4 Design development work is planned to meet scheduled timelines in consultation with others involved in the work.
2 Develop installation design.	2.1 Knowledge of audio/video components, acoustics and visual displays, analogue and digital communication, multimedia storage and reproduction is applied to designing the installation.
	2.2 Alternative arrangements for the installation design are considered based on the requirements outlined in the design brief.
	2.3 Safety, functional and budgetary considerations are incorporated in the installation design.
	2.4 Installation design draft is checked for compliance with the design brief and regulatory requirements.
	2.5 Installation design is documented for submission to appropriate person(s) for approval.

ELEMENT	PERFORMANCE CRITERIA
	2.6 Solutions to unplanned situation are provided consistent with organisation policy.
3 Obtain approval for installation design.	3.1 Installation design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing commercial audio/video installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH136A

Commercial video/audio installation design

Evidence shall show an understanding of commercial video/audio installation design, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Acoustics, spatial treatment and sound reproduction

- Effects of room dimensions, spatial shape and surface textures on acoustics
- Ideal acoustic for specific purposes - speech, solo or small group music, rock music orchestral music, choral music, cinema and the like.
- Measuring room response
- Speaker placement and room response
- Room treatment methods to improve acoustic response
- Active methods to improve acoustic response

T2. Environmental and heritage awareness

- Purpose of environmental and heritage regulation
- Typical issues affecting electrotechnology services and systems
- Meeting requirements

T3. Venue lighting for audio/video/live presentations

- Lighting types and colour
- Effects of direction of light
- Use of natural light
- Lighting levels and control

T4. Equipment installation design

- Requirements
- Limitations

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to commission commercial video/audio systems.	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	1.4 The extent of programming and commissioning is determined from reports and other documentation and fro discussion with

ELEMENT	PERFORMANCE CRITERIA
	appropriate personnel.
	1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.6 Tools, equipment and testing devices needed to program and commission are obtained in accordance with established procedures and checked for correct operation and safety.
2 Commission commercial video/audio systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Audio/video devices are checked for correct location and alignment.
	2.5 Functional settings are made for each audio/video apparatus in accordance with design specifications.
	2.6 Audio/video system functions are tested in accordance with commissioning requirements.
	2.7 Sources of audio/video system anomalies are identified and corrected.
	2.8 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.9 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.10 Commissioning activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding

ELEMENT	PERFORMANCE CRITERIA
	environment or services and using sustainable energy practices.
3 Complete and report commissioning activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is made safe in accordance with established safety procedures.
	3.3 'As-installed' audio/video system is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

- ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Find and repair faults.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Fault finding is approached methodically drawing on knowledge of complex power supplies and circuits using measured and calculated values of power supply parameters.
- 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
- 2.6 Faulty components are rechecked and their fault status confirmed.
- 2.7 Materials required for the repair work are sourced and obtained in accordance with established procedures.
- 2.8 Effectiveness of the repair is tested in accordance with established procedures.
- 2.9 Apparatus is reassembled, finally tested and prepared for return to customer.
- 2.10 Unexpected situations are dealt with safely and

ELEMENT**PERFORMANCE CRITERIA**

- with the approval of an authorised person.
- 2.11 Fault finding and repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work area is cleaned and made safe in accordance with established procedures.
- 3.3 Written justification is made for repairs to apparatus.
- 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in complex power supplies.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH138A

Complex power supplies fault finding and repair

Evidence shall show an understanding of complex power supplies fault finding and repair to an extent indicated by the following aspects:

T1. Series regulation

- Operating principles
- Operation and specifications of three terminal regulators
- Internal protection for three terminal regulators
- Increasing the output current of a three terminal regulator
- Increasing the output voltage of a three terminal regulator
- The three terminal regulator as a current regulator
- Heat sink selection
- Fault finding a series regulator

T2. Series regulator employing closed loop control

- Components selection
- Basic discrete circuits
- Closed loop control of regulators
- Error amplification
- The BJT used as an error amplifier
- Operation of a series BJT regulator employing closed loop control
- Typical faults
- Crowbar protection
- Current limiting
- Verification of circuit operation
- Fault finding a series BJT regulator employing closed loop control

T3. Switching regulation - basic principles

- Components selection
- Basic principles of switching regulators
- Pulse width modulation (PWM) and frequency modulation
- Switching regulator configurations: step-up, step-down, inverting and isolating
- Circuit analysis of each regulator, constructed from a BJT, inductor, diode and

REQUIRED SKILLS AND KNOWLEDGE

filter capacitor

- Electromagnetic radiation (EMR) and noise emissions
- Ferrite cores
- Verification of circuit operation
- Heat sink selection

T4. Switching regulation - closed loop control of output

- Generic block diagram of a switching regulator employing feedback to control output voltage
- Circuit operation
- Typical faults
- Emerging technologies in IC regulators
- Verification of load regulation

T5. Off-line switching regulators

- Isolation and safety requirements
- Specialised safety equipment
- Operation of flyback (buck) and forward (boost) converters
- Typical faults
- Verification of circuit operation

T6. OH&S

- Safe working practices and relevant Standards, Codes and Regulations

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in complex power supplies as described in 8) and including:

- A Using methodical fault finding techniques.
- B Finding faults efficiently.
- C Replacing components without damage.
- D Providing written justification for the repairs.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice

using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and repairing faults in complex power supplies.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing a range of faults in a representative range of regulated power supply and a switch mode power supply.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers determining correct operation of basic amplifier circuits. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in basic amplifier circuits.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended for development of competency in either entry-level employment based programs incorporated in approved contracts of training or other approved training programs. It may also be used to augment formally acquired competencies.

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 3 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at

License to practice**3)**

voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH1 Repair basic electronic apparatus faults by
02A replacement of components

AND

UEENEEH1 Troubleshoot resonance circuits in an
14A electronic apparatus

OR

UEENEEG1 Solve problems in low voltage a.c. circuits

Prerequisite Unit(s) 4)

02A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information**Employability Skills** 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to troubleshoot basic amplifiers.	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Solve basic amplifier circuit problems.	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Fault finding is approached methodically drawing on knowledge of basic amplifiers using measured and calculated values of parameters.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6 Fault finding activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using

ELEMENT	PERFORMANCE CRITERIA
	sustainable energy practices.
3 Complete work and document problem solving activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to troubleshooting problems is documented.
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and troubleshooting basic amplifiers.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH139A

Basic amplifier circuit troubleshooting

Evidence shall show an understanding of basic amplifier circuit troubleshooting, applying safe working practices and relevant Standards Codes and Regulations to an extent indicated by the following aspects:

T1. Introduction to Amplifiers

- Purpose of amplifiers
- Introduction to black box model of amplifier
- Decibels, engineering terms and formulae
- Measurement of gain and frequency response

T2. Amplifier Terminal Characteristics

- Amplifier types and transfer characteristics
- Ideal amplifier transfer characteristics

T3. Practical amplifiers

- Practical amplifier terminal characteristics
- Input and output resistance calculations based on voltage measurements

T4. Operational amplifiers - Introduction

- Advantages of operational amplifiers
- Schematic symbol
- Open loop configuration
- Input and output resistance
- Gain bandwidth product
- Open loop amplifier operation
- Comparator circuit
- Circuit verification of operational amplifier configured as a comparator

T5. Operational amplifiers – Inverting Amplifier

- The need for and effects of negative feedback
- Inverting operational amplifier circuit configuration
- Inverting operational amplifier gain calculations
- Summing inverting operational amplifier gain calculations
- Circuit verification of operational amplifier gain

REQUIRED SKILLS AND KNOWLEDGE

T6. Operational amplifiers – Non-inverting amplifier

- Non-inverting operational amplifier circuit configuration
- Non-inverting operational amplifier gain calculations
- Circuit verification of non inverting operational amplifier gain
- Voltage follower circuit configuration
- Voltage follower circuit gain
- Circuit verification of voltage follower

T7. Operational amplifiers – Differential Amplifier

- The differential amplifier
- Schematic circuit of differential amplifier using an operational amplifier
- Differential amplifier gain calculations
- Circuit verification of differential amplifier operation
- The Schmitt trigger
- Circuit verification of Schmitt trigger circuit

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside

the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

- work.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
 - 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
 - 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
 - 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Fault find and repair
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
 - 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
 - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance with OHS requirements and procedures.
 - 2.4 Logical diagnostic methods are applied to diagnose sonar apparatus and system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
 - 2.5 Suspected fault scenarios are tested as being the source of system problems.
 - 2.6 Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of electronics.
 - 2.7 Faults in the electronic components of the system are rectified to raise sonar apparatus

ELEMENT**PERFORMANCE CRITERIA**

- and system to its operation standard.
- 2.8 System is tested to verify that the system operates as intended and to specified requirements.
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault find and repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work site is made safe in accordance with established safety procedures.
- 3.3 Rectification of faults is documented in accordance with established procedures.
- 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and fault find and repairing sonar apparatus and systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH140A Sonar apparatus and system fault finding and repair

Evidence shall show an understanding of sonar apparatus and systems fault finding and repair, applying safe working practices and relevant Standards Codes and Regulations to an extent indicated by the following aspects:

T1. Electronic communications, sonar system operating principles

- The purpose and application of sonar systems
- Sonar equipment encompassing:
 - Types and their applications
- Sub-system components (i.e. functional blocks) and their function encompassing:
 - Transducer
 - Input amplifier
 - Sonar interface unit
 - Beam forming network (transmit / receive)
 - Signal processing
 - Own Doppler nullification
 - Display system
 - Headset
 - Interfaces
 - Transmitter
 - T/R Switch
 - Timer/Timing
- Sonar operating parameters
- Sonar transmission characteristics

T2. Electronic communications, sonar transducers and arrays

- Hazards and risk control measures
- Transducer types, their operating principles and parameters
- Transducer array encompassing:
 - Types and their construction
 - Applications

REQUIRED SKILLS AND KNOWLEDGE

- Transducer hull outfits
 - Beam forming principles and requirements
 - Transducer installation and operational maintenance
- T3. Electronic communications, sonar measurement and set up
- Sonar parameters and measurements
 - Sonar physical parameters
 - Constraints and Consequences
- T4. Electronic communications, radar and sonar displays devices
- Types and their applications - CRT, Plasma, LCD, Monochrome, Colour, and Touch screen.
 - Sub-system components (i.e. functional blocks) and their operating parameters encompassing:
 - EHT transformers
 - detectors
 - video distribution
 - time base generators
 - phase locked loops
 - microprocessors
 - memory devices
 - demodulators
 - focusing/deflection devices
 - delay lines
 - bleed resistors
 - HV generation
 - Calibration testing and maintenance procedures
 - Typical fault finding, their symptoms and cause
- T5. Advanced electronic (sonar) testing and measuring devices and techniques
- Test/measuring devices and their application - frequency counters, and synthesisers, spectrum analysers, noise and distortion meters and RF communications service monitor.
 - Connection of test/measuring devices into a circuit encompassing:
 - safety procedures
 - loading and matching
 - storage and delay
 - circuit arrangement of test/measuring devices
 - Taking and interpreting readings
 - Notion of decibels including dBm, dBr, dBu, dBo
- T6. Fault finding and repair

REQUIRED SKILLS AND KNOWLEDGE

- Typical faults, their symptoms and cause
- Fault diagnosis procedures and testing
- Component replacement
- Equipment adjustments

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

- Fault find and repair sonar apparatus and systems as described in 8) and including:
 - A Applying logical diagnostic methods.
 - B Using fault scenarios to test the source of system faults.
 - C Identifying faults and competency needed to rectify them.
 - D Rectifying faults in system electronics.
 - E Verifying that the system operates correctly.
 - F Documenting fault rectification.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in sonar apparatus and systems.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in sonar

apparatus and systems.

**Method of
assessment** 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by fault find and repairing at least four faults system faults in a representative range of electronic sonar apparatus and systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the management of computer systems/electronics projects involving management of safety, budget variation, personnel, resources, timelines and completion documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It is intended to apply to any formal recognition for this standard at the aligned AQF 6 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish the scope of the projects.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Project deliverables and project objectives (as measurable outcomes) are established from project planning and other relevant documentation and from discussions with appropriate person(s).
	1.3 The "work breakdown structure" (WBS) is developed to identify component parts of the project.
	1.4 Major milestones and deliverables are identified.
	1.5 Resources needed to meet project outcome are established.
	1.6 Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement.
	1.7 Risks are identified and project plan strategies devised to ensure that outcomes are achieved to the required standard of quality specified in the contract.
	1.8 A project plan is devised. The project plan typically includes: scope statement, WBS, cost estimates, proposed timeline and deliverables, required staff and other resources, key risks and their planned responses.
2 Manage computer systems/electronics/projects.	2.1 OHS policies, procedures and programs are implemented and monitored.
	2.2 Achievement of project outcomes is delegated to appropriately competent person(s) involved in the project.
	2.3 Risk events are monitored and project plan strategies implemented to ensure that outcomes are achieved to the required standard of quality specified in the contract.

ELEMENT	PERFORMANCE CRITERIA
	2.4 Procurement processes and procedures are monitored to ensure on time supply of equipment and materials and in accordance with organisation policy.
	2.5 Verification of the project technical design, modification, installation, and/or maintenance of system and equipment parameters is frequently made against specifications and established procedures.
	2.6 Project progress is monitored against schedule, quality requirements and budget.
	2.7 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with established procedures.
	2.8 Variations are managed in accordance with agreed processes and in accordance with the contract.
	2.8 Project records are maintained and progress reports written and forwarded to all appropriate person(s).
3 Complete projects and document	3.1 Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record, and budget.
	3.2 Project completion acceptance is sought from appropriate person(s) and hand-over documented in accordance with organisation policy and established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge of safe working practices and managing electronics/computer systems projects has been acquired.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH141A management

Computer systems/electronics project

Evidence shall show an understanding of computer systems/electronics project management, applying safe working practices and relevant Standards Codes and Regulations to an extent indicated by the following aspects:

T1. Electronic/computer systems industry sector customs and practices

- Technical aspects of project planning and management encompassing:
 - Method of ensuring equipment meets specified performance requirements
 - Performance/cost benefit analysis
 - Equipment procurement
- Typical approaches to planning and management
- Successful planning techniques
- Best practice management methods and styles

T2. Defining project parameters - Project scope; Project stakeholders and clients; Project phases and the relationship between phases; Time requirements and limitations; Resource requirements and limitations; Quality requirements and limitations.

T3. Time management - time management concepts; standard practices for ensuring a project runs to time and the like.

T4. Financial management - Financial management concepts; Standard practices for managing project finances; Project budgets; Costs, variations and estimations; Invoicing against project phases/deliverables; Acquittals and the like.

T5. Quality management - Quality management concepts; Standard practices for managing quality within a project.

T6. Human Resource management - human resource management concepts; standard practices for managing personnel within a project

T7. Communication management - Communication management concepts; Standard practices for managing communication within a project and the like.

T8. Risk management and contingencies - risk management concepts; standard practices for managing risk within a project; Internal risks; External risks; Risk minimisation; Risk removal; Contingencies and the like.

REQUIRED SKILLS AND KNOWLEDGE

T9. Procurement management - procurement management concepts; standard practices for managing procurement and the like.

T10. Physical Resource management - Types of physical resource, including; Equipment, Technology, Information, Facilities; Physical resource management concepts; Standard practices for managing physical resources

T11. Contracts - Understanding project contracts; Standard practices for working to contract specifications; Contract format; Contract content; Legal obligations of contract parties; Accompanying documentation including; Contract Schedules and the like.

T12. Performance assessment and continuous improvement - standard performance assessment practices; standard continuous improvement practices and the like

T13. Engineering ethics principles

T14. Customer/Client relations

- Importance of customer/client relations
- Interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control

measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Manage electronics/computer systems projects as described in 8) and including:

- A Establishing the scope of the project accurately.
- B Managing time effectively.
- C Developing project plans.
- D Managing resources and variations effectively.
- E Resolving conflicts.
- F Adopting risk management strategies.
- G Maintaining records and submitting progress reports.
- H Verifying the project technical design, modification, installation, and/or maintenance of system and equipment parameters
- I Meeting project outcomes.
- J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to managing electronic/computer systems projects.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to managing medium sized electronics/computer systems projects (see Note 1), which involves design, modifications, installation, and/or maintenance of systems and equipment, with attributes that include management of safety, budget variation, personnel, resources and critical path timelines, and completion documentation.

Note 1:

Medium sized electronics/computer systems projects are those which would be recognised by a representative peer group of industry experts as medium sized within the norm customs and practices of the industry.

Note 2:

“Work breakdown structure” (WBS) – used for the purposes of identifying manageable components of a project including their hierarchical structure.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers determining correct operation of discrete component and modularised oscillators. It encompasses working safely, problem solving procedures, including the use of; voltage, current, resistance and phase measuring devices, providing solutions derived from measurements and calculations to predictable problems in oscillators.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended for development of competency in either entry-level employment based programs incorporated in approved contracts of training or other approved training programs. It may also be used to augment formally acquired competencies.

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 3 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at

License to practice**3)**

voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH1 Troubleshoot resonance circuits in an
14B electronic apparatus

UEENEEH1 Troubleshoot basic amplifier circuits
39A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information**Employability Skills 5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

- | | |
|---|---|
| 1 Prepare to work on oscillator sections. | 1.1 OHS procedures for a given work area are obtained and understood. |
| | 1.2 OHS risk control work preparation measures and procedures are followed. |

ELEMENT	PERFORMANCE CRITERIA
	1.3 The nature of oscillator problems is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Solve oscillator section problems.	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Established methods are used to solve problems from measure and calculated values as they apply to oscillator sections in an electronic apparatus.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6 Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document problem solving activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.

ELEMENT**PERFORMANCE CRITERIA**

- 3.3 Justification for solutions used to solve circuit problems is documented.
- 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in oscillator sections of electronic apparatus.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH142A

Oscillator problem solving

Evidence shall show an understanding of oscillator problem solving, applying safe working practices and relevant Standards Codes and Regulations to an extent indicated by the following aspects:

T1. Requirements for Oscillation

- Feedback principles
- Barkhausen Criterion
- Frequency Stability
- Effects of Load Impedance
- Causes of waveform distortion

T2. Problem Solving in Oscillator Circuits

- Practice in constructed circuits
- Practice with circuit simulators

T3. Wien Bridge Oscillators.

- Typical circuits and applications including operational amplifiers.
- Typical values for A_v and β
- Derivation of the Lead Lag network

T4. Phase Shift Oscillators.

- Typical circuits and applications including operational amplifiers.
- Typical values for A_v and β
- Derivation of three section phase shifts

T5. Colpitts Oscillators and Hartley Oscillators.

- Typical circuits and applications.
- Values for A_v and β
- Circuits using collector and emitter sourced feedback

T6. Crystal Oscillators.

- Typical circuits and applications.
- Values for A_v and β
- Circuits using collector and emitter sourced feedback

REQUIRED SKILLS AND KNOWLEDGE

- Crystal Equivalent Circuit
- Parallel and series mode
- Fundamental and overtone operation

T7. Astable Oscillators

- Circuits using operational amplifiers
- Circuits using discrete components

T8. 555 timer I.C. ccts and applications

- Astable Oscillators
- Frequency Modulation
- Monostable Oscillators

T9. V.C.O. Circuits.

- Typical ccts. and applications
- The use of varactor diodes

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as

specified in the performance criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve oscillator problems as described in 8) Range: and including:

- A Using methodical problem solving methods.
- B Taking measurements correctly and accurately.
- C Calculating parameters correctly and accurately.
- D Providing solution to oscillator component/circuit problems.
- E Providing written justification for the solutions to problems.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to troubleshooting oscillators.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with unit.

UEENEEH1 02A Repair basic electronic apparatus faults by replacement of components

UEENEEH1 39A Troubleshoot basic amplifier circuits

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by solving at least three problems in typical oscillator sections of electronic apparatus

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This competency standard unit covers developing engineering solutions to solve problems with analogue electronics. It encompasses working safely, apply extensive knowledge of analogue electronics circuit and device operation and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical analogue electronic problems are those encountered in meeting performance requirements and compliance standards, revising analogue electronics operating parameters and dealing with analogue electronic malfunctions.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a

License to practice**3)**

licence to practice in the workplace for work plant and equipment which is directly connected to installation wiring that operates at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and the like.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare to develop engineering solution for analogue electronic problems. | 1.1 OHS processes and procedures for a given work area are obtained and understood. |
| | 1.2 Established OHS risk control measures and procedures in preparation for the work are followed. |

ELEMENT	PERFORMANCE CRITERIA
	1.3 The extent of the analogue electronic problem is determined from performance specifications and situation reports and in consultations with relevant persons.
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.
2 Develop engineering solution for analogue electronic problems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of analogue electronics circuit, device operation, characteristics and applications are applied to developing solutions to analogue electronic problems.
	2.3 Parameters, specifications and performance requirements in relation to each analogue electronic problem are obtained in accordance with established procedures.
	2.4 Approaches to resolving analogue electronic problems are analysed to provide most effective solutions.
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
	2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards
3 Test, document and implement engineering solution for analogue electronic problems.	3.1 Solutions to analogue electronic problems are tested to determine their effectiveness and modified where necessary.
	3.2 Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.

ELEMENT**PERFORMANCE CRITERIA**

- 3.3 Appropriately competent and qualified person(s) required to implement solutions to analogue electronic problems are coordinated in accordance with regulatory requirements and enterprise policy. (See Note)
- 3.4 Justification for solutions used to solve analogue electronic problems is documented for inclusion in work/project development records in accordance with professional standards.

Note:

A licence to practice in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing solutions to analogue electronic problems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH145A

Analogue electronic circuits and systems

Evidence shall show an understanding of analogue electronic circuits, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

Single-stage analogue electronics

T1. Understanding of differential amplifiers using discrete components (transistors) of suitable characteristics to meet system objective

- differential gain, common mode rejection ratio and the required CMRR
- variable gain input stage

T2. Operational amplifier circuits

- use of d.c. offset
- operation of single-supply inverting and non-inverting amplifiers employing DC offset bias at the input and blocking capacitors
- operation of a high input resistance unity gain
- areas of use for single-supply amplifiers.

T3. Comparator circuits (open loop, limited swing and hysteresis) using operational amplifiers:

- ideal op-amp comparator
- typical uses of the comparator.
- comparators with limited (i) negative swing and (ii) both positive negative swing
- hysteresis comparator with positive resistor divider feedback and calculate the input switching voltages.
- desirable properties of an operational amplifier for use as comparator and the characteristics of comparator op amps.

T4. Amplifiers with given piecewise linear transfer characteristics

T5. Operation and building precision of half-wave and fullwave rectifiers

- precision two-diode half-wave and full-wave rectifier
- typical applications of precision rectifiers.

T6. Oscillators

- Operation of oscillators

REQUIRED SKILLS AND KNOWLEDGE

- Purpose of oscillators
- Conditions for sustained oscillation
- Operation of phase shift oscillators
- The operation and characteristics of a Colpitts oscillator
- Conditions that cause instability in amplifier circuits

Advanced power amplifiers

- Analysing the performance of power amplifiers
- Minimum power, voltage and current rating of an output transistor.
- Aspects of heat transfer related to heat sinking.
- Common forms of distortion encountered in power amplifiers. (eg. Total harmonic distortion)
- Techniques for overcoming common forms of distortion.

T9. (is the number correct?) Classes of power amplifiers and indicate typical maximum efficiencies for each class

- conduction, angle, output power and efficiency of a power amp.
- typical and/or maximum efficiencies of each class of power Amp.
- d.c and/or a.c load line,
- output power and efficiency of a large signal amplifier

T10. Operation of each class and type of power amplifier circuit

- load line operation.
- Class A – direct, RC, transformer coupled. Class B – Complementary symmetry, drivers, single supply/dual supply. Class C and Class D.
- measure the characteristics of a fully integrated operational power Amplifiers.

T11. Active filters

- frequency response of low-pass, high-pass, low-Q band-pass, high-Q bandpass, notch and all-pass filters and define pass-band, stop-band and rate of roll-off.
- main features in the amplitude and phase plots of Butterworth, Chebyshev, Cauer-Elliptic and Bessel filter responses.
- pros and cons of active and passive filters.
- non-unity gain Sallen-Key low-pass filter.
- Types of active filters available in IC form - Variable filter, Switched Capacitor Filters and digital (sampled data) filters.
- Low-Q (i.e. cascade of lowpass and high-pass) and/or narrow bandpass filters

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the “Assessment Guidelines – UEE11”. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop solutions to analogue electronic problems as described in 8) and including:

- A Understanding the extent of the analogue electronic problem.
- B Forming effective strategies for solution development and implementation.
- C Obtaining analogue electronic parameters, specifications and performance requirements appropriate to each problem.
- D Testing and solutions to analogue electronic problems.
- E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
- F Documenting justification of solutions implemented in accordance with professional standards.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing solutions to analogue electronic problems.

Method of assessment

9.4)

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to developing engineering solution for at least four analogue electronic problems.

Note.

Typical analogue electronic problems are those encountered in meeting performance requirements and compliance standards, revising an analogue electronic operating parameters and dealing with analogue electronic malfunctions.

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers ascertaining correct operation of communications systems and solving fundamental system problems as met in engineering support work functions. It encompasses working safely; problem solving techniques, and the use of a range of measuring devices, providing solutions derived from measurements to predictable problems in electronic communication systems.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It is intended to apply to any formal recognition for this standard at the aligned AQF 3 level.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also

License to practice**3)**

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH1 Troubleshoot amplifiers in an electronic
13A apparatus

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to solve fundamental problems in electronic communications systems.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
	1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

ELEMENT	PERFORMANCE CRITERIA
	1.5 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.6 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.
2 Solve fundamental problems in electronic communications systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Knowledge of fundamental characteristics communication system components and transmission media is applied to solving system problems.
	2.5 Logical approaches are used to solve system problems from measure and calculated values as they apply to communication systems.
	2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.7 Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document problem solving activities.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Reports are written outlining system problem and justifying solutions used.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving fundamental problems in electronic communications systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH146A

Fundamental electronic communications systems

Evidence shall show an understanding of fundamental electronic communications systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Requirements of a Radio Communications System

- Safety
- Communications system requirements
- Notion of decibels including dB, dBm, dBmV, dBuV
- Antenna Types
- Modulation
- Baseband signals
- Bandwidth
- Wavelength and frequency
- Radio spectrum

T2. Optical Communications Principles

- Safety
- Optical fibre fundamentals
- Optical fibre parameters
- Typical optical link
- Bit rates

T3. Wave Propagation

- Half wave dipole
- Radiation patterns
- Polarisation
- Propagation modes

T4. Modulation Concepts and Amplitude Modulation (AM)

- Modulation principles
- Sidebands
- Types of modulation (Analog and digital modulation)

REQUIRED SKILLS AND KNOWLEDGE

- Circuit verification of the modulation process
- AM envelope
- Diodes as modulators/demodulators
- Modulation index, Percentage, Spectral content, Over modulation
- Calculating sideband frequency and power of AM signals
- Bandwidth requirements for radio services
- Bandwidth measurement
- The diode demodulator circuit.

T5. Introduction to Frequency and Phase Modulation

- Typical deviations
- Carson's rule
- Sideband distribution
- Carrier and sideband power
- Phase modulation
- Pre-emphasis/ De-emphasis
- Limiter stage
- FM detectors

T6. The superheterodyne Receiver

- The TRF receiver
- AM superheterodyne receiver block diagram
- RF and IF amplifier
- Image and intermediate frequencies
- FM superheterodyne receiver
- Sensitivity, selectivity and image rejection
- Measurements of receiver parameters
- Binary Digital Modulation/Demodulation

T7. Supplementary Receiver circuitry

- AFC and AGC systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve fundamental problems in electronic communications systems as described in 8) and including:

- A Applying knowledge of communication system and transmission media characteristics.
- B Using logical and methodical approaches to solving system problems.
- C Solving system problems.
- D Providing written justification for solutions used.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving fundamental problems in electronic communications systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to evaluate electronic apparatus compliance.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Examination and testing area is checked for safety hazards and risk control measures implemented in strict accordance with safety policy and procedures.
	1.4 Relevant documentation is obtained and read to determine the certification/approval specifications for which the equipment is to be assessed. (see note 1)
	1.5 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

ELEMENT	PERFORMANCE CRITERIA
	1.6 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.
2 Evaluate electronic apparatus compliance	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 In depth knowledge of the operating requirements of the electronic apparatus under scrutiny is applied to the assessment process.
	2.5 Apparatus examination and tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.
	2.6 Apparatus examination and tests are carried out methodically and results and comments systematically noted.
	2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8 Assessment is carried out without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document evaluate results.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Examination and test results are evaluated and non-compliance issues identified.

ELEMENT**PERFORMANCE CRITERIA**

- 3.4 Examination, test results and comments on non-compliance issues are documented and reported to appropriate person(s) in accordance with established procedures.

Note 1

Examples of documentation are those specifying safety requirements, technical standard, as marketed technical performance, product quality endorsement standards and the like.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assessing compliance of electronic apparatus.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH147A

Electronic apparatus compliance assessment

Evidence shall show an understanding of electronic apparatus compliance assessment, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Technical standards, regulations and codes for electronic apparatus

- Standards philosophy and format
- How to read and apply a standard
- Standards and Codes that apply to electronic apparatus
- Applying standards, regulations and codes

T2. Compliance certification

- the purposes of certification of equipment;
- the parties involved in the assessment/testing and certification of equipment, and
- the scheme for recognition of assessment/testing and certification

T3. Preparation required to assess equipment for compliance with Standards:

- documentation required prior to conducting conformity assessment;
- tests necessary to establish that an item of equipment conforms with relevant Standards;

T4. Compliance testing and assessment of equipment

- types of assessment tests
- test set ups and procedures.
- recording and reporting requirements of conformity assessment.

| | | 1.3 | The extent of the proposed digital system development is determined from the design brief or in consultations with appropriate person(s). |
| | | 1.4 | Design development work is planned to meet scheduled timelines in consultation with others involved on the work site. |
| | | 1.5 | Materials and devices/components required for the work are selected on compatibility of their specifications with digital system requirements and project budget constraints. |
| | | 1.6 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety. |
| 2 | Design and develop advanced digital systems. | 2.1 | OHS risk control work measures and procedures are followed. |
| | | 2.2 | Knowledge of digital devices and systems and compliance standards are applied to the design |
| | | 2.3 | Alternative arrangements for the design are considered based on the requirements outlined in the design brief. |
| | | 2.4 | Safety, functional and budget considerations are |

ELEMENT	PERFORMANCE CRITERIA
	incorporated in the design.
	2.5 Prototype devices and circuits are constructed and tested for compliance with the design brief and regulatory requirements.
	2.6 Prototype malfunctions are rectified and retested to ensure effective operation of design.
	2.7 Digital system design is documented for submission to appropriate person(s) for approval.
	2.8 Solutions to unplanned situation are provided consistent with organisation policy.
3 Obtain approval for the design.	3.1 The design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for modifications to the design are negotiated with relevant person(s) within the constraints of organisation policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and developing advanced digital systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH148A

Advanced digital systems design and development

Evidence shall show an understanding of advanced digital systems design and development, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Design techniques for combinational and sequential logic circuits (as a minimum a three levels, four input circuit).

- equation writing, reduction
- propagation delay calculation

T2. Design of complex sequential logic circuits (as a minimum a three levels sequential circuit) using current techniques - equation writing, reduction, propagation delay calculation, etc.

T3. Selection of current types of oscillators based on their characteristics and operation.

T4. Selection of current memory and storage devices based on their characteristics and operation - (eg flash, I2C)

T5. Connection of test/measuring devices into a circuit encompassing:

- safety procedures
- circuit arrangement using test/measuring devices(eg multimeters, voltage and digital testers, signal generators and oscilloscopes)
- Taking readings
- Storage, maintenance and care of test/measuring devices

T6. Electronic Safe working practices

- Application of risk management principles
- Control measures for dealing with
 - non-electrical hazards
 - extra-low voltage hazards
 - low-voltage hazards
 - high-voltage hazards
 - high-current hazards

REQUIRED SKILLS AND KNOWLEDGE

T7. Digital to analogue conversion

- Applications of D/A converters
 - Summing D/A converters
 - R-2R D/A converters
 - Verification of circuit operation of an IC D/A converter
 - Selection of an D to A for use in a digital application based on their characteristics and operation.

T8. Analogue to digital conversion

- Applications of A/D converters
- Digital ramp, dual slope, successive approximation and simultaneous (flash) A/D converters.
- Verification of circuit operation of an IC A/D converter
- Selection of an A to D for use in a digital application based on their characteristics and operation.

T9. Programmable logic devices

- Types of programmable logic devices
- Comparison between different programmable logic devices
- Programmable Logic Devices (PLD) and CPLDs
- Field Programmable Gate Arrays (FPGA)
- Programming and verifying correct operation

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design and develop advanced digital systems as described in 8) and including:

- A Developing outlines of alternative designs.
- B Developing the design within the safety and functional requirements and budget limitations.
- C Constructing and testing prototype devices and circuits according to design brief and regulatory requirements.
- D Documenting and presenting design effectively.
- E Successfully negotiating design alteration requests.
- F Obtaining approval for final design.
- G Verifying compliance of the design against the final brief.
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing and developing advanced digital systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and developing an advanced digital system with at least five variables and a mixture of sequential and combinatorial functions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Electronics

UEENEEH149A Develop engineering solutions to audio electronic problems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers developing engineering solutions to resolve problems with audio electronics. It encompasses working safely, applying extensive knowledge of audio electronics circuits and device operation and application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives

Note.

Typical audio electronic problems are those encountered in meeting performance requirements and compliance standards, revising audio electronic operating parameters and dealing with audio electronic malfunctions.

Application of the Unit

Application of the Unit 2)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace for work involving

License to practice**3)**

direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH1 Troubleshoot basic amplifier circuits
39A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in

this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1 Prepare to develop engineering solution for audio electronic problems.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the audio electronic problem is determined from performance specifications and situation reports and in consultations with</p>

ELEMENT	PERFORMANCE CRITERIA
	relevant persons.
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.
2 Develop engineering solution for audio electronic problems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of audio electronics circuit, device/component operation, characteristics and applications are applied to developing solutions to audio electronic problems.
	2.3 Parameters, specifications and performance requirements in relation to each audio electronic problem are obtained in accordance with established procedures.
	2.4 Approaches to resolving audio electronic problems are analysed to provide most effective solutions.
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
	2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.
3 Test, document and implement engineering solution for audio electronic problems.	3.1 Solutions to audio electronic problems are tested to determine their effectiveness and modified where necessary.
	3.2 Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.
	3.3 Appropriately competent and qualified person(s) required to implement solutions to

ELEMENT**PERFORMANCE CRITERIA**

audio electronic problems are coordinated in accordance with regulatory requirements and enterprise policy. (See Note)

- 3.4 Justification for solutions used to solve audio electronic problems is documented for inclusion in work/project development records in accordance with professional standards.

Note:

A license to practice in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing solutions to audio electronic problems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH149A

Audio electronics engineering solutions

Evidence shall show an understanding of audio electronics engineering solutions, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Acoustics, spatial treatment and sound reproduction

- Effects of room dimensions, spatial shape and surface textures on acoustics
- Ideal acoustic for specific purposes - speech, solo or small group music, rock music orchestral music, choral music, cinema and the like.
- Measuring room response
- Speaker placement and room response
- Room treatment methods to improve acoustic response
- Active methods to improve acoustic response

T2. Audio reproduction, electronic components

- Preamplifiers amplifier encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Power and integrated amplifiers encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Graphic equalizers encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Component interconnections

T3. Advanced electronic testing and measuring devices and techniques

- Test/measuring devices and their application - frequency counters, and synthesisers, spectrum analysers, noise and distortion meters and RF communications service monitor.
- Connection of test/measuring devices into a circuit encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- safety procedures
- loading and matching
- storage and delay
- circuit arrangement of test/measuring devices
- Taking and interpreting readings
- Notion of decibels including dBm, dBr, dBu, dBo

T4. Audio system advance diagnostic techniques

- Perception and measurement of sound
- Acoustics and equalisation
- Sound recording and reproduction technologies

Audio component testing, measurements and adjustments - frequency response for given loads, small signal test, distortion measurement, noise measurement, frequency versus distortion, intermodulation spectrum, spectral-decay plots, acoustic cross-over, anechoic response, lateral and vertical response and the like.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside

the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop solutions to audio electronic problems as described in 8) and including:

- A Understanding the extent of the audio electronic problem.
- B Forming effective strategies for solution development and implementation.
- C Obtaining audio electronic parameters, specifications and performance requirements appropriate to each problem.
- D Testing and solutions to audio electronic problems.
- E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
- F Documenting justification of solutions implemented in accordance with professional standards.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing solutions to audio electronic problems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing engineering solutions for at least four representative range audio electronic problems.

Note.

Typical audio electronic problems are those encountered in meeting performance requirements and compliance standards, revising an audio electronic operating parameters and dealing with audio electronic malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers installing electronic security systems with up to 50 connected devices typically used in single domestic and small commercial premises. It encompasses, working safely and to standards, following oral and written instructions and procedures, securely placing and connecting security system components, and applying customer relation protocols.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training or approved training programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice of this unit in the work place is subject to State and Territory Security Industry regulations. Where the

License to practice**3)**

security system has a call-back-to-base facility practice in the workplace is also subject to ACMA regulations to undertake cabling work.

Note:

Units 'UEENEEF101A and UEENEEF102A provide the required skill and knowledge for registration in accordance with ACMA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 02A Fabricate, dismantle, assemble of utilities industry components

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and

Numeracy⁷

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|---|-----|---|
| 1 | Prepare to assemble and set up basic wired and wireless security systems. | 1.1 | OHS procedures for a given work area are identified, obtained and understood through established routines. |
| | | 1.2 | Established OHS risk control measures are followed in preparation for the work. |
| | | 1.3 | Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor. |
| | | 1.4 | The nature and location of the work is obtained from work supervisor or other appropriate |

ELEMENT**PERFORMANCE CRITERIA**

- person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor or other appropriate person to ensure the work is co-ordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Assemble basic wired and wireless security systems.
- 2.1 Established OHS risk control measures for carrying out the work are followed.
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.3 Security controllers, access, intrusion and surveillance devices are located for optimum performance within limitation imposed by customers and regulations.
- 2.4 Accessories are installed straight and square in the required locations and within acceptable tolerances.
- 2.5 Cables and conductors are terminated at accessories in accordance with manufacture's specifications and regulatory requirements.
- 2.6 Procedures for referring non-routine events to immediate supervisor for directions are followed.
- 2.7 Security installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Complete and document security systems installation.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Security system is documented in accordance with regulatory requirement and established routines.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assembling and setting up basic wired and wireless security systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH150A

Basic security system assembly and set up

Evidence shall show an understanding of basic security system assembly and set up, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Regulations applicable to the security industry

- Security Act
- Occupational Health and Safety Act
- Australian Standards AS630, AS2201
- ACMA Standards

T2. Circuit arrangements

- Range of typical resistor values used in alarm systems
- End line resistors
- Wiring of a detector with split EOL resistors
- Zone doubling
- Open circuits and short circuits

T3. Mechanical detectors

- Pressure pads
- Trip wires
- Window tape
- Screens
- Switches
- Vibration

T4. Electro-mechanical detectors

- Ultrasonic
- Microwave
- Glass break
- Smoke
- Active infrared beams
- Passive infrared
- Strain system

REQUIRED SKILLS AND KNOWLEDGE

- Renamed magnetic reed switches
- Optical fibre cable

T5. Relays

- NC and NO relays
- transistor as a switch
- wiring diagram for a relay connected to an open collector output on an alarm panel
- typical uses for a relay type output

T6. Security panels

- Features of commonly used panels
- Operation of programmable and non-programmable panels
- Sound sources used with security alarms
- Power sources used with security systems
- Panel to base communication systems
- Locks commonly used in the security industry
- Batteries:
 - types
 - application
 - maintenance

T7. Communication systems

- Panel to base systems
- Dialler sequence
- Secsoa dialling system
- Dual tone multi frequency
- Ademco high speed
- Ademco contact ID

T8. Closed circuit television

- Application
- Types of cameras
- Types of monitors
- Switching methods
- Earthing
- Ambient lighting

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Assemble and set up basic wired and wireless security systems as described in 8) and including:
 - A Reading and interpreting drawings related to cable layouts and apparatus locations.
 - B Placing and securing devices and accessories accurately.
 - C Maintaining fire integrity.

- D Terminating cable and conductors correctly.
- E Documenting installation.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to assembling and setting up basic wired and wireless security systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE10 2A Fabricate, dismantle, assemble of utilities industry components

UEENEEE10 5A Fix and secure electrotechnology equipment

UEENEEE10 7A Use drawings, diagrams, schedules, standards, codes and specifications

The critical aspects of occupational health and safety covered in UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by installing for a representative range of basic wired and wireless security systems at least two basic security system.

Systems shall consist of a controller and access device and at least two other different connected device both wire and wireless.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers installing, entering instructions and testing of electronic security systems within excess of 50 connected devices in buildings, premises and precincts. It encompasses working safely and to standards, following and job specifications, securely placing and connecting security system components, and applying customer relation protocols.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training or approved training programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice of this unit in the work place is subject to State and Territory Security Industry regulations. Where the

License to practice

3)

security system has a call-back-to-base facility practice in the workplace is also subject to ACMA regulations to undertake cabling work.

Note:

Unit ‘UEENEEF102A and UEENEEF104A provide the required skill and knowledge for registration in accordance with ACMA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH1 Assemble and set up basic security systems 50A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare to install and set up basic wired and wireless security systems.	1.1	OHS procedures for a given work area are identified, obtained and understood through established routines.
		1.2	Established OHS risk control measures are followed in preparation for the work.
		1.3	Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
		1.4	The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
		1.5	Advice is sought from the work supervisor or other appropriate person to ensure the work is co-ordinated effectively with others.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|--|--|
| | 1.6 | Sources of materials that may be required for the work are established in accordance with established routines. |
| | 1.7 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety. |
| 2 | Install basic wired and wireless security systems. | <p>2.1 Established OHS risk control measures for carrying out the work are followed.</p> <p>2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.3 Security controllers and devices are located for optimum performance within limitation imposed by customers and regulations. (See note 1)</p> <p>2.4 Accessories are installed straight and square in the required locations and within acceptable tolerances.</p> <p>2.5 Cables and conductors are terminated at accessories in accordance with manufacture's specifications and regulatory requirements.</p> <p>2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.</p> <p>2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.</p> <p>2.8 Security installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.</p> |
| 3 | Set up basic wired and wireless security systems and document. | <p>3.1 OHS work completion risk control measures and procedures are followed.</p> <p>3.2 Work site is cleaned and made safe in accordance with established procedures.</p> |

ELEMENT**PERFORMANCE CRITERIA**

- 3.3 Security system is documented in accordance with regulatory requirement and established routines.

Note1:

Examples of security devices are, Reed switches, PIRs, Glass break facilities, Panic buttons, Monitored Door Strikes, Momentary Key Switches, Latching Key Switches, CCTVs, Monitors and Access panels.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing large wired and wireless security systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH151A Large security systems

Evidence shall show an understanding of closed circuit televisions to an extent indicated by the following aspects:

T1 Application CCTV systems encompassing:

- Sub-system components (i.e. functional blocks) and their function

T2 Television principles encompassing:

- Sub-system components (i.e. functional blocks) and their function
- Video signals

T3 CCTV cameras encompassing:

- Types of cameras
- Sub-system components (i.e. functional blocks) and their operating parameters

T4 Camera lens encompassing:

- Types of lenses and their characteristics
- Application of various types
- Setting up

T5 Monitors and recording devices

- Types and application
- Analogue and digital recording devices and their application

T6 Installation and mounting encompassing:

- Consideration in locating and mounting CCTV camera and auxiliary equipment

Note.

1. Examples are need for sealed and heated housings, IP rating required, methods for overcoming earth (ground) loops, need for lighting protection.

2. Examples of auxiliary equipment are in-line video amplifiers/ equalizers and video distribution amplifiers

T7 Evidence shall show an understanding of advanced electronic security systems to an extent indicated by the following aspects:

- Connection of input and output devices to detectors and control panels
- Procedures to perform hardware and software upgrades

REQUIRED SKILLS AND KNOWLEDGE

- Types of code pads and commands required to operate the system

T8 Security video monitoring and recording

Evidence shall show an understanding of security video monitoring and recording to an extent indicated by the following aspects:

- Principles of television systems
- Multiplexing techniques
- Multiplex display and recording of CCTV
- Digital encoding techniques
- Video distribution and transmission techniques
- Microprocessor based CCTV systems
- Factors affecting picture quality

T9 Evidence shall show an understanding of biometric devices to an extent indicated by the following aspects:

- Biometrics techniques and processes including definitions, terminology, advantages, disadvantages and applications

Note.

Includes basic principles of database design, software techniques, classifier combination, feature extraction, feature enhancement, chain code methods, image analysis, biometric transforms, matching techniques, verification and identification, biometric tools, statistical measures of biometrics

T10 Biometric device tools, software and testing techniques

- Physical interaction with biometric devices including operation and installation of biometric devices examples are iris scanners, hand scanners voice recognition apparatus, facial recognition devices and like equipment
- Legal aspects of biometrics
- Australian laws impacting on biometrics security and privacy legislation.
- Australian standards

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install large wired and wireless security systems as described in 8) and including:

- A Reading and interpreting drawings related to cable layouts and apparatus locations.
- B Placing and securing devices and accessories accurately.
- C Maintaining fire integrity.
- D Terminating cable and conductors correctly.
- E Documenting installation.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing large wired and wireless security systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE 108A Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits

UEENEEF1 02A Install and maintain cabling for multiple access to telecommunication services

UEENEEH 150A Assemble and set up basic security systems

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by installing for a representative range of large wired and wireless security systems at least two large security systems.

Systems shall have controllers and more than 50 connected devices of five different types.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers, entering instructions and testing electronic security systems with up to 50 connected devices typically used in single domestic and small commercial premises. It encompasses safe working practices, basic programming as directed in user manuals, adjusting security devices, system testing and following written and oral instruction and procedures and customer relations.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training or approved training programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to

License to practice**3)**

electrical work.

Practice of this unit in the work place is subject to State and Territory Security Industry regulations. Where the security system has a call-back-to-base facility practice in the workplace is also subject to ACMA regulations to undertake cabling work.

Note:

Units 'UEENEEF102A and UEENEEF104A provide the required skill and knowledge for registration in accordance with ACMA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH1 Assemble and set up basic security systems
50A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Program and test large wired and wireless security systems as described in 8) and including:

- A Entering system instructions.
- B Testing system functions.
- C Identifying and correcting operational malfunctions.
- D Documenting 'as-installed' system correctly.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to programming, testing large wired and wireless security systems.

**Method of
assessment** **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH 154A Program and commission commercial security systems

UEENEEH 155A Program and commission commercial access control security systems

UEENEEH 156A Program and commission commercial security closed circuit television systems

The critical aspects of occupational health and safety covered in unit UEENEEH101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by program and testing of a representative range of large wired and wireless security systems at least two large security system.

Systems shall have controllers and more than 50 connected devices of five different types.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers installation and testing of security alarm system typically used in commercial buildings and premises. The unit encompasses working safely, following specifications and security access scenarios, programming security alarm functions, using circuit diagrams and schedules, and providing as-programmed document.

Application of the Unit

Application of the Unit **2)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 3 level or higher.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

License to practice

3)

training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH1 Enter instructions and test wired and
52A wireless security systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to program and commission.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards, which have not previously been identified, are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	1.4 The extent of programming and commissioning is determined from reports and other documentation and fro discussion with appropriate personnel.
	1.5 Appropriate personnel are consulted to ensure

ELEMENT**PERFORMANCE CRITERIA**

- the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to program and commission are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Program and commission.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Security alarm functions and instructions are entered into the system in accordance with design specifications.
- 2.5 Security alarm devices are checked for correct location and alignment.
- 2.6 Security alarms are tested in accordance with commissioning requirements.
- 2.7 Sources of alarm anomalies are identified and corrected.
- 2.8 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 2.9 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.10 Programming and commissioning activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Complete and report programming and commissioning activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is made safe in accordance with established safety procedures.
	3.3 'As-installed' security alarm system is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and programming and commissioning commercial security alarm systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH154A

Security systems alarms programming

Evidence shall show an understanding of security systems alarms programming to an extent indicated by the following aspects:

T1 Vender programming codes and functions encompassing:

- Input/output instruction
- Variable
- Timers
- Limitations of vender software

T1 Program loading methods using a personal computer

T2 Program testing methods

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Program and commission commercial security alarm systems as described in 8) and including:

- A Entering system functions.
- B Testing system functions.
- C Identifying and correcting function anomalies.
- D Documenting 'as-installed' system correctly.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to programming and commissioning commercial security alarm systems.

Method of assessment **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH 153A Program and test large security systems

UEENEEH 155A Program and commission commercial access control security systems

UEENEEH 156A Program and commission commercial security closed circuit television systems

The critical aspects of occupational health and safety covered in unit UEENEEH101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of commercial security alarm systems by programming and commissioning at least two different commercial security alarm systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and programming and commissioning commercial security closed circuit television (CCTV) systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH156A Security systems closed circuit television programming

Evidence shall show an understanding of security systems access control programming to an extent indicated by the following aspects:

T1 Vender programming codes and functions encompassing:

- Input/output instruction
- Variable
- Timers
- Limitations of vender software

T2 Program loading methods using a personal computer

T3 Program testing methods

T4 Evidence shall show an understanding of OHS enterprise responsibilities to an extent indicated by the following aspects:

- Provisions of relevant health and safety legislation
- Principles and practice of effective occupational health and safety management
- Management arrangements relating to regulatory compliance
- Enterprise hazards and risks, control measures and relevant expertise required
- Characteristics and composition of workforce and their impact on occupational health and safety management
- Relevance of enterprise management systems to occupational health and safety management
- Analysis of working environment and design of appropriate occupational health and safety management systems
- Analysis of relevant data and evaluation of occupational health and safety system effectiveness
- Assess resources to establish and maintain occupational health and safety management systems.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Program and commission commercial security closed circuit television (CCTV) systems as described in 8) and including:

- A Entering system functions.
- B Testing closed circuit television functions.
- C Identifying and correcting function anomalies.
- D Documenting 'as-installed' system correctly.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to programming and commissioning commercial security closed circuit television (CCTV) systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH 153A Program and test large security systems

UEENEEH 154A Program and commission commercial security systems

UEENEEH 155A Program and commission commercial access control security systems

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of commercial security closed circuit television (CCTV) systems by programming and commissioning at least two different commercial security closed circuit television systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electronics

UEENEEH157A Develop basic plans for integrating security systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers integrating security components to form a complete security system with up to 100 connected intrusion and access devices and based on common security scenarios. It encompasses applying knowledge of common security scenarios and security network standards and protocols, selecting network topology and physical media, disaster recovery planning, performance management and documentation of work activities.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It is intended to apply to any formal recognition for this standard at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where

License to practice 3)
 applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH1 Program and test large security systems
 53A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop integrated security systems	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the proposed integrated security system is determined from the system specification or in consultations with appropriate person(s)
	1.4 Development work is planned to meet scheduled timelines in consultation with others involved on the work site
2 Develop integrated security system plan	2.1 Knowledge of common security scenarios and security network standards and protocols, network topology, physical media and disaster planning is applied to the system plan.
	2.2 Alternative system arrangements are considered based on the requirements job specification.
	2.3 Safety, functional and budget considerations are incorporated in the system plan.
	2.4 System draft plan is checked for compliance with the job specifications and regulatory requirements.
	2.5 System plan is documented for submission to

ELEMENT	PERFORMANCE CRITERIA
	appropriate person(s) for approval
	2.6 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
3 Obtain approval for system plan	3.1 System design is forwarded to client representative and/or other relevant person(s) for approval.
	3.2 Requests for alterations to the plan are negotiated with relevant person(s) in accordance with established procedures.
	3.3 Final system plan is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing basic integrated security systems plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH157A Common security scenarios and solutions

Evidence shall show an understanding of common security scenarios and solutions to an extent indicated by the following aspects:

- T1. Alternative access arrangement
- T2. Intrusion protection and monitoring options
- T3. Available technologies
- T4. Integration with other systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop basic integrated security systems plan as described in 8) and including:

- A Developing outlines of alternative system plan.
- B Developing the plan within the safety and functional requirements and budget limitations.
- C Documenting the plan effectively.
- D Obtaining approval for final plan.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing basic integrated security systems plan.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of basic integrated security systems plan by planning two basic integrated security systems with up to 100 connected intrusion and access devices.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

	consistent with organisation policy.
3 Obtain approval for system design	3.1 System design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing integrated security systems for a single site.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH158A

Integrated security systems

Evidence shall shoe an understanding of integrated security systems to an extent indicated by the following aspects:

- T1. security scenarios
- T2. security network standards and protocols
- T3. network topology
- T4. physical media
- T5. disaster planning

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design integrated security systems for a single site as described in 8) and including:

- A Developing outlines of alternative system plan.
- B Developing the design within the safety and functional requirements and budget limitations.
- C Documenting and presenting design effectively.
- D Successfully negotiating design alteration requests.
- E Obtaining approval for final design.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing integrated security systems for a single site.

**Method of
assessment 9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units 9.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of integrated security systems for a single site by designing two integrated security systems with multiple and interrelated subsystems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control

measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design integrated complex security systems as described in 8) and including:

- A This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.
- B This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.
- C This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.
- D This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.
- E This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.
- F This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing integrated complex security systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of integrated complex security systems by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Electronics

UEENEEH160A Plan large electronic projects

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers development and documentation of large electronics project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It is intended to apply to any formal recognition for this standard at the aligned AQF 6 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to plan project.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established techniques for project planning are reviewed are adopted in accordance with organisation's policies.
	1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).
2 Develop project plan proposal.	2.1 Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation's policies and procedures.
	2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with organisation's policies and procedures.
	2.3 Knowledge of critical path analysis is applied to developing workflow strategies.
	2.4 Sources and availability of materials and human resources needed for the project are established in accordance with organisation's policies and procedures.
	2.5 Risk management strategies are sought and obtained for incorporating in the project plan.
	2.6 Project plan is reviewed against all inputs and adjusted to rectify any anomalies.
	2.7 Project plan proposal is documented in accordance with organisation's policies and procedures.
3 Obtain approval for project plan.	3.1 Project plan is presented and discussed with person(s) of higher authority.
	3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with

ELEMENT**PERFORMANCE CRITERIA**

person(s) of higher authority within the constraints of organisation policy.

- 3.3 Final project plan is documented and approval obtained from appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning electronic projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH160A

Large Electronic Project Planning

Evidence shall show an understanding of project planning to an extent indicated by the following aspects:

2.2.16.1

- T1. Purpose of project planning
- T2. Documents needed to plan a project
- T3. Factors influencing sequence and restraints of project activities
- T4. Critical path analysis encompassing:

- Graphical representation methods
- Methods of representing time/rates

2.2.18

Evidence shall show an understanding of customer/client relations to an extent indicated by the following aspects:

- T1. Purpose of critical path analysis
- T2. Essential data
- T3. Relational sequence of work activities
- T4. Graphical representation methods
- T5. Methods of representing time/rates
- T6. Monitoring methods

2.2.29

Evidence shall show an understanding of electronic industry sector customs and practices to an extent indicated by the following aspects:

- T1. Technical aspects of project planning and management encompassing:
 - Method of ensuring equipment meets specified performance requirements
 - Performance/cost benefit analysis
 - Equipment procurement
- T2. b) Typical approaches to planning and management

REQUIRED SKILLS AND KNOWLEDGE

- T3. c) Successful planning techniques
- T4. d) Best practice management methods and styles

2.18.8.2

Evidence shall show an understanding of OHS enterprise responsibilities to an extent indicated by the following aspects:

- T1. Provisions of relevant health and safety legislation
- T2. Principles and practice of effective occupational health and safety management
- T3. Management arrangements relating to regulatory compliance
- T4. Enterprise hazards and risks, control measures and relevant expertise required
- T5. Characteristics and composition of workforce and their impact on occupational health and safety management
- T6. Relevance of enterprise management systems to occupational health and safety management
- T7. Analysis of working environment and design of appropriate occupational health and safety management systems
- T8. Analysis of relevant data and evaluation of occupational health and safety system effectiveness
 - a. T9 Assess resources to establish and maintain occupational health and safety management systems.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Plan electronic projects as described in 8) and including:
 - A Determining the project requirements accurately.
 - B Establishing a project budget.
 - C Developing effective work flow strategies.
 - D Documenting project plan proposal.
 - E Negotiating alterations to the proposed project plan successfully
 - F Obtaining approval of the final plan.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to planning electronic projects.

The resources used for assessment should reflect current industry practices in relation to planning electronic projects.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative electronic project, by planning an industry accepted medium sized electronic project with the following attributes:

- budgets
- critical path analysis
- workflow strategies development
- budgets and timelines negotiation
- plan presentation
- documentation

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Not applicable.

Competency Field

Competency Field 11)

Electronics

UEENEEH161A Install fire detection and warning system apparatus

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers installing electronic fire detection and warning systems in buildings and premises. It encompasses, working safely and to standards, following oral and written instructions and procedures, securely placing and connecting fire detection system and warning components, and applying customer relation protocols.

Application of the Unit

Application of the Unit 2)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work. Where the fire alarm system has a call-back-to-base facility practice in the workplace is also subject to ACMA regulations to undertake cabling work.

Note:

Unit 'UEENEEF102A' provides the required skill and knowledge for registration in accordance with ACMA regulations for undertaking cabling work

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 02A	Fabricate, assemble and dismantle utilities industry components
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1 Prepare to assemble and set up basic fire detection and warning systems. | 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines. |
| | 1.2 Established OHS risk control measures are followed in preparation for the work. |
| | 1.3 Safety hazards that have not previously been identified are reported and advise on risk control measures are sought from the work supervisor. |
| | 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken. |
| | 1.5 Advice is sought from the work supervisor or other appropriate person to ensure the work is co-ordinated effectively with others. |

ELEMENT	PERFORMANCE CRITERIA
	1.6 Sources of materials that may be required for the work are established in accordance with established routines.
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Assemble and set up basic fire detection and warning systems.	2.1 Established OHS risk control measures for carrying out the work are followed.
	2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.3 Fire protection controller and detection and warning devices are located for optimum performance within limitation imposed by customers and regulations.
	2.4 Accessories are installed straight and square in the required locations and within acceptable tolerances.
	2.5 Cables and conductors are terminated at accessories in accordance with manufacture's specifications and regulatory requirements.
	2.6 Procedures for referring non-routine events to immediate supervisor for directions are followed.
	2.7 Fire protection installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
3 Set up basic fire detection and warning systems.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Fire protection system is documented in accordance with regulatory requirement and established routines.

REQUIRED SKILLS AND KNOWLEDGE

- T15. Bi-products of combustion that can be detected
- T16. Basic principles of fire behaviour within and enclosure
- T17. Types of fire protection systems and the difference between automatic and passive systems and wet and dry systems.
- T18 Risks and control measures associated with fire protection equipment encompassing:
 - Principle and purpose of risk management,
 - Processes for conducting a risk assessment
 - Hazards associated with low-voltage, extra-low voltage and high-currents (arrangement of power distribution and circuits in an electrical installations, parts of an electrical system and equipment that operate at low-voltage and extra-low voltage, and parts of an electrical system and equipment where high-currents are likely).
 - Procedures for isolating/reinstating and disconnection and reconnection of supplies in excess of extra-low voltage (Isolation and disconnection and reconnection are required to be performed by an appropriately qualified and authorised persons).
 - Arrangements for isolating/reinstating fire protection systems to inhibit back-to-base signals to monitoring station.
 - Arrangements for isolating/reinstating fire protection systems to inhibit alarms operating fire protection suppression equipment
 - Arrangements for isolating/reinstating sections or parts of a fire protection system to inhibit alarms during building maintenance or system testing.
 - Interface arrangements to isolate control functions between different fire protection building service systems
 - Documentation and licensing requirements for working on fire protection systems
 - Identification of personal and environmental hazards in working on fire protection systems.
 - Control measures used for dealing with the hazards related to fire protection systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Position and terminate fire detection and warning system apparatus as described in 8) and including:

- A Reading and interpreting drawings showing apparatus/device locations and connection arrangements.
- B Placing and securing devices and accessories accurately.
- C Maintaining fire integrity.
- D Terminating cable and conductors correctly.
- E Documenting installation.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to positioning and terminating fire detection and warning system apparatus.

Method of assessment**9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units**9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE1 Fabricate, assemble and dismantle utilities industry components
02A

UEENEEE1 Fix and secure electrotechnology equipment
05A

UEENEEE1 Use drawings, diagrams, schedules, standards, codes and specifications
07A

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of fire detection and warning system apparatus by installing at least two-fire alarm and warning systems.

Installation shall include the following system components:

- Fire alarm system with at least one control and indicating panel, 50 input devices, 5 output device and 2 system interface controls on at least of the following: Analogue addressable system, addressable system and or conventional system.
- Fire warning system with at least one control and indicating panel, 50 speakers, 5 interface communication devices and 2 warning indicators

Note:

1. Input devices can be conventional, analogue or analogue addressable fire detectors, flow switch connections or switch connections and the like.
2. Output devices can be shutdown signal, door or system release controls, solenoid valve controls and the like.
3. System interface controls can be communication signals to remote Control and indicating equipment, Building monitoring systems, paging system, Colour graphics and or the like.
4. Interface communication devices can be Warden In communication phones, Remote PA inputs and the like.
5. Warning Indicators are flashing lights for hearing impaired persons, fire brigade building indication and the like.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers testing and visual inspection for verifying that a fire protection system and components are safe, and complies with requirements and functions as intended. It encompasses working safely, conducting compliance tests, conducting visual inspections, identifying non-compliance defects and mandatory reporting requirements.

Application of the Unit

Application of the Unit 2)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work. Where the fire alarm system has a call-back-to-base facility practice in the workplace is also

License to practice

3)

subject to ACMA regulations to undertake cabling work.

Note:

Unit 'UEENEEF102A' provides the required skill and knowledge for registration in accordance with ACMA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH161A Install fire detection and warning system apparatus

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to verify fire protection installations	1.1	OHS procedures for a given work area are obtained and understood.
	1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3	Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4	Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.5	Location of system components is determined from specifications and diagrams.
	1.6	Inspection and tests are appropriately sequenced in accordance with job schedule.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|-----------------------------------|--|
| | 1.7 | Materials needed for the tests and verification are obtained in accordance with established procedures and checked against job requirements. |
| | 1.8 | Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety. |
| 2 | Visually inspect the installation | |
| | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures. |
| | 2.3 | Cabling/wiring is checked for appropriate type and size. |
| | 2.4 | Cabling/wiring, accessories and fire alarm warning components are validated as being suitably located, securely fixed and suitably protected from damage or corrosion. |
| | 2.5 | Accessories and components are validated as being appropriately rated and meeting functional requirements. |
| | 2.6 | Evidence that equipment complies with safety and functional requirements is cited. |
| | 2.7 | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented. |
| | 2.8 | Unexpected situations are dealt with safely and with the approval of an authorised person. |
- Inspection is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Conduct tests	3.1 OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Back-to-base facilities and other system interfaces are isolated in accordance with established procedures.
	3.3 Testing or measuring on a live and operating system in strict accordance with OHS requirements and within established safety procedures.
	3.4 Circuits/machines/plant/other system interfaces are checked as being isolated to ensure the system is not activated during testing in strict accordance OHS requirements and procedures.
	3.5 Electrical tests are conducted to verify that the electrical circuit within the fire installation are safe and function as intended.
	3.6 System tests are conducted to verify that the fire protection equipment and cabling/wiring within the fire protection installation is safe and functions as intended.
	3.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	3.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
	3.9 Testing is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
4 Report inspection and verification findings	4.1 OHS work completion risk control measures and procedures are followed.
	4.2 Work site and equipment is cleaned and made safe in accordance with established procedures.
	4.3 Non-compliance defects are identified and reported in accordance with established procedures.

ELEMENT

PERFORMANCE CRITERIA

- 4.4 Recommendations for rectifying defects are made in accordance with established procedures.
- 4.5 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of fire protection installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH162A

Fire protection installations, testing and verification methods

Evidence shall show an understanding of methods for testing and verifying compliance and functionality of fire protection installation to an extent indicated by the following aspects:

2.7.5.3

T1. Mandatory and optional testing and verification requirements applicable to fire protection installations.

T2. Testing techniques

T3. Features of fire protection installations that can be visually inspected

2.9.37

Evidence shall show an understanding of fire alarm and warning system routine testing to an extent indicated by the following aspects:

T1. Types and uses of test equipment

T2. Fire alarm and warning system components and their location

T3. Periodic testing requirements to meet manufacturer's and standards requirements

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Verify compliance and functionality of fire protection installations as described in 8) and including:

Identifying visual defects.

Conducting all electrical tests safely and correctly.

Conducting all fire alarms and warning tests safely and correctly.

Identifying non-compliant defects from test results.

Recommending appropriate corrective actions.

Acting within regulatory limits.

Reporting legibly and accurately.

Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to verifying compliance and functionality of fire protection installations.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This unit shall be demonstrated in relation to at least two different new or existing fire protection installations and shall include:

The following components:

- Fire alarm system with at least 50 input devices, 20 output device and 2 system interface controls
- Fire warning system with at least 5 speakers, 5 interface communication devices and 2 warning indicators
- Voice message facilities

Note:

1. Input devices can be conventional, analogue or analogue addressable fire detectors, flow switch connections or switch connections and the like.
2. Output devices can be shutdown signal, door or system release controls, solenoid valve controls and the like.
3. System interface controls can be communication signals to remote Control and indicating equipment, Building monitoring systems, paging system, Colour graphics and or the like.
4. Interface communication devices can be Warden In communication phones, Remote PA inputs and the like.
5. Warning Indicators are flashing lights for hearing impaired persons, fire brigade building indication and the like.

Verification by:

- Visual inspection of cabling/wiring, accessories and controls
- Conducting electrical tests

Note:

1. Electrical testing includes isolation testing; insulation resistance of equipment; resistance of the internal circuits of equipment; polarity of supply and equipment; continuity of earthing; correct electrical connections load current.
 2. Electrical testing may be limited by the scope permitted under restricted electrical work
- Conducting system tests as required by regulations

Note:

1. System testing includes weekly requirements to annual performance verification
2. Examples of tests are operation and control of indicating equipment, in-situ testing of detectors, taking sound measurements and the like

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these

RANGE STATEMENT

and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers programming fire protection systems that include multiple connected detection, warning and fire control devices and remote monitoring. It encompasses working safely, applying knowledge of fire protection scenarios, using fire protection standards and protocols, entering system instructions, testing functionality of fire protection components and system operation, and documentation of commissioning activities.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may be used to augment previously acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where

License to practice

3)

applicable contracts of training such as apprenticeships.

Note:1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH162A Enter and verify programs for fire protection systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to enter operating instructions	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures. 1.2 Established OHS risk control measures and procedures are followed in preparation for the work. 1.3 Safety hazards that have not previously been identified are reported and advise on risk control measures are sought from the work supervisor. 1.4 The extent of programming work is determined from job specifications and in consultation with appropriate person(s). 1.5 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety. 1.6 Device installation is checked for compliance

ELEMENT	PERFORMANCE CRITERIA
	with job specification and regulations where they apply.
2 Enter software operating instructions	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.3 The required status of each function of the device is entered and their parameters set in accordance manufactures programming instructions.
	2.4 Entered data are checked as meeting those specified by the work job specification.
	2.5 Methods for dealing with unexpected situations are decided on the basis of safety and required work outcomes.
	2.6 Programming is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services.
3 Test device operation and report	3.1 Device operation is tested in strict accordance OHS requirements and procedures.
	3.2 Operating anomalies are identified and corrected in accordance with established routines.
	3.3 OHS work completion risk control measures and procedures are followed.
	3.4 Work site is cleaned and made safe in accordance with established procedures.
	3.5 Work completion is reported and an appropriate person or persons notified in accordance with established routines.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Evidence shall show that knowledge has been acquired of safe working practices and verifying programs in preparation for commissioning fire protection systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH163A Fire protection system programming methods

Evidence shall show an understanding of fire protection systems programming methods to an extent indicated by the following aspects:

2.4.51

T1. Vender programming codes and functions encompassing:

- Input/output instruction
- Variable
- Timers
- Limitations of vender software

T2. Program loading methods using a personal computer

T3. Program testing methods

T4. Program back up, version control and documentation requirements

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria & range
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Enter and verify programs in preparation for commissioning fire protection systems as described in 8) and including:
 - a. Understanding required operating functions and parameters.
 - b. Identifying non-compliance conditions of device installation.
 - c. Entering functions and parameters correctly.
 - d. Correcting programming anomalies.
 - e. Testing and verify device operation.
 - f. Program backups, version controls and documentation.
 - g. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to entering and verifying programs in preparation for commissioning fire protection systems

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Range Statement

RANGE STATEMENT

10) This unit shall be demonstrated in relation to entering and verifying programs in preparation for commissioning fire protection systems in at least two types of microprocessor fire protection control and indicating equipment. Programming shall include the following parameters:

- At least 50 input devices
- At least 20 output device
- At least 1 system interface control
- At least 2 logic timers
- System variables

Note:

1. Input devices can be conventional alarm zones, analogue or analogue addressable fire detectors, flow switch connections or switch connections and the like.
2. Output devices can be shut down signal, door or system release controls, solenoid valve controls and the like.
3. System interface controls can be communication signals to remote control and indicating equipment, Building monitoring systems, paging system, colour graphics and or the like.
4. Logic times can be software programs that control the operation of non-latching detectors, timer periods before operation of fire system suppression systems and or the like.
5. System variables can be standard software functions that operate AS 1668 smoke detector controls, dual zone alarm configurations, alarm and fault global functions and the like.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to commission	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards, which have not previously been identified, are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	1.4 The extent of commissioning is determined from reports and other documentation and from discussion with appropriate personnel.
	1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others

ELEMENT	PERFORMANCE CRITERIA
	involved on the work site.
	1.6 Tools, equipment and testing devices needed to program and commission are obtained in accordance with established procedures and checked for correct operation and safety.
2 Commission fire protection systems	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Fire protection system components are verified as complying with design specifications and regulations.
	2.5 Fire protection devices are checked for correct location and alignment.
	2.6 Fire protection functions are tested in accordance with commissioning requirements.
	2.7 Sources of fire protection system anomalies are identified and corrected.
	2.8 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.9 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.10 Commissioning activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Complete and report programming and commissioning activities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is made safe in accordance with established safety procedures.
	3.3 'As-installed' fire protection system is documented and an appropriate person or persons notified in accordance with established procedures.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to find and rectify faults	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.
2 Find and repair faults	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant/system interfaces are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|------|--|
| 2.4 | Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel. |
| 2.5 | Fault finding is approached methodically drawing on knowledge of fire protection systems and components using measured values of system parameters. |
| 2.6 | System components are dismantled where necessary and parts stored to protect them against loss or damage. |
| 2.7 | Faulty system/components are rechecked and their fault status and confirmed. |
| 2.8 | Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures. |
| 2.9 | Effectiveness of the repair is tested in accordance with established procedures. |
| 2.10 | Apparatus is reassembled, finally tested and prepared for return to service. |
| 2.11 | Unexpected situations are dealt with safely and with the approval of an authorised person. |
| 2.12 | Fault finding and repair activities are carried out without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices. |
| 3 | Completion and report fault finding and repair activities |
| 3.1 | OHS work completion risk control measures and procedures are followed. |
| 3.2 | Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares. |
| 3.3 | Fault finding and repair work activities are documented in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in fire protection systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

Fire protection systems' faults

Evidence shall show an understanding of technical fault finding to an extent indicated by the following aspects:

2.2.3

T1 Factors to consider in clarifying the nature of a fault encompassing:

- Initial fault report
- Confirmation of symptoms of the fault
- Comparison of symptoms with normal operation

T2 Effect to cause reasoning — assumptions of possible causes

T3 Methods for testing assumptions encompassing:

- Visual inspection
- Sectional testing
- Split-half tests
- Component isolation

T4 Dealing with intermittent faults

Note:

Typical causes of intermittent faults are vibration, shock, changes in temperature and electromagnetic interference.

2.2.4

Evidence shall show an understanding of problem solving concepts and techniques as they apply in the workplace, to an extent indicated by the following aspects:

T1 Identify problems

Note.

Examples may include: Process and quality problems; Equipment selection, availability and failure; Teamwork and work allocation problems; Safety and emergency situations and incident; Performance gaps; Profit improvement and the like.

T2 Mathematical Tools

Note.

Examples may include: Average, Standard deviation and the like.

REQUIRED SKILLS AND KNOWLEDGE

T3 Use of analytical techniques in problem solving

Note.

Examples may include: Brainstorming; Fishbone diagrams/cause and effect diagrams; Logic trees; Process logic/process requirements; Similarity/difference analysis; Pareto analysis; Force field/SWOT analysis.

T4 Using tools to assistance in problem solving

Note.

Examples may include: Procedures and work instructions; Safety data sheets; Job cards; Maintenance logs; Plant drawing.

T5 Determine corrective action encompassing:

- Tools
- Mode of communication procedure used within each enterprise
- Established work procedures and policies
- Size and structure of the teams/enterprise
- Group goals - team, section, enterprise
- Enterprise specific conflict resolution procedures
- Action plans
- Priority requirements
- Measurable objectives
- Resource requirements
- Methods for reaching objectives
- Timelines
- Safety requirements
- Risk assessment
- Environmental requirements

T6 Communicate recommendations

Note.

Examples may include: Feedback requirements; Corrective action and analysis; Following up recommendations and the like.

T7 Implement Monitoring encompassing:

- Identifying components to be measured
- Measurement and monitoring techniques
- Measurement and monitoring tools

2.9.79

Evidence shall show an understanding of fire protection technologies to an extent indicated by the following aspects:

REQUIRED SKILLS AND KNOWLEDGE

- T1 Life and safety concerns for fire protection.
- T2 Basic principles of combustion
- T3 Bi-products of combustion that can be detected
- T4 Basic principles of fire behaviour within and enclosure
- T5 Types of fire protection systems and the difference between automatic and passive systems and wet and dry systems.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in fire protection systems as described in 8) and including:
 - a. Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s).
 - b. Using methodical fault finding techniques.
 - c. Finding faults efficiently.
 - d. Rectifying faults effectively.
 - e. Completing documentation correctly.
 - f. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved

industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and repairing faults in fire protection systems.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This unit shall be demonstrated in relation to:

Both a fire alarm and warning systems that include at least the following system components:

- Fire alarm system with at least 50 input devices, 20 output device and 2 system interface controls
- Fire warning system with at least 50 speakers, 5 interface communication devices and 2 warning indicators.
- Voice message facilities

Note:

1. Input devices can be conventional, analogue or analogue addressable fire detectors, flow switch connections or switch connections and the like.
2. Output devices can be shutdown signal, door or system release controls, solenoid valve controls and the like.
3. System interface controls can be communication signals to remote control and indicating equipment, Building monitoring systems, paging system, colour graphics and or the like.
4. Interface communication devices can be Warden In communication phones, Remote PA inputs and the like.
5. Warning indicators are flashing lights for hearing impaired persons, fire brigade building indication and the like.

Finding and repairing any six of the following faults in fire alarm and warning systems:

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Program failure
- Apparatus/component failure
- Related mechanical failure
- Electrical induced interference
-
- Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electronics

UEENEEH166A Troubleshoot microcontroller based hardware systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers determining correct operation of microcontroller systems. It encompasses working safely, problem solving procedures, providing solutions derived from measurements and calculations to predictable faults in microcontroller hardware.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also be used to augment formally acquired competencies.

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It is intended to apply to any formal recognition for this standard at the aligned AQF 3 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not

License to practice

3)

require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work on microcontroller hardware	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of microcontroller hardware problems is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with

REQUIRED SKILLS AND KNOWLEDGE

T8. Electronic fault finding techniques

- Fault identification techniques
- Test equipment, safe operating procedure, application and in circuit connection.

T9. Methods:

- Visual inspection
- Sectional testing
- Split-half tests
- Component isolation
- Dealing with intermittent faults

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may

be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material rries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or

- licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
 - Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Fault find Microcontroller based hardware as described in 8) and including:
 - a. Using methodical problem solving methods.
 - b. Taking measurements correctly and accurately.
 - c. Calculating parameters correctly and accurately.
 - d. Providing solution to microcontroller component/circuit problems.
 - e. Providing written justification for the solutions to problems.
 - f. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment,

conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to fault finding Microcontroller based hardware.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

Repairs basic electronic apparatus faults by replacement of components

Troubleshoot digital sub-systems

Troubleshoot amplifiers in an electronic apparatus

Find and repair microwave amplifier section faults in electronic apparatus

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving at least two of the following types of microcontroller hardware problems.

- Determining the operating parameters of an existing circuit
- Alternating an existing circuit to comply with specified operating parameters
- Developing circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This competency standard unit covers undertaking commissioning procedures of electronics and communications systems to comply with predetermined parameters and delivery to client. It encompasses safe working practices, system parameter testing, analysis and adjusting to assure optimum performance, following procedures, and documenting final operating parameters and settings.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a licence to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to

License to practice

3)

practice this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and the like.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation and the like.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to commission electronics and communications systems	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.5 System operating parameters are identified by reviewing system specifications and component technical data.

ELEMENT**PERFORMANCE CRITERIA**

- | | | | |
|---|---|-----|--|
| 2 | Commission electronics and communications systems | 1.6 | Tools, equipment, applications, and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety. |
| | | 1.7 | Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements. |
| | | 1.8 | Circuits are checked as being isolated, where necessary, in strict accordance OHS requirements and procedures. |
| | | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | | 2.2 | Testing/measuring devices are connected and set up in accordance with requirements for a particular system. |
| | | 2.3 | Measurements and adjustments are made to electronics and communications equipment to provide optimum system performance in accordance with system specifications and/or regulatory requirements. |
| | | 2.4 | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements. |
| | | 2.5 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes. |
| | | 2.6 | Systems' commissioning procedures are performed in accordance with requirements. |
| | | 2.7 | Commissioning is carried out efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles. |

ELEMENT	PERFORMANCE CRITERIA
3 Completion and report commissioning activities	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Adjustment settings are documented in accordance with established procedures.
	3.3 Work site is cleaned and made safe in accordance with established procedures.
	3.4 Commissioning results and work completion are notified to appropriate person or persons in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning computer systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH167A commissioning

Electronic and communication systems

T1. Commissioning processes

- Purpose of commissioning
- Commissioning planning and documentation
- Procedures for commissioning systems encompassing:
 - a. Configuring
 - b. Calibrating
 - c. Tuning
 - d. Validating system performance to specification
 - e. Procedures followed to commission instrument systems
- Purpose and importance of documentation

T2. Project to be carried out in accordance with current OH&S procedures.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package..

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the “Assessment Guidelines – UEE11”. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Commission electronics and communications systems as described in 8) and including:
 - a. Identifying system design performance parameters and requirements
 - b. Measuring and adjusting system components to provide optimum system performance
 - c. Ensuring system operates within regulatory and/or specification requirements

- d. Documenting adjustment settings with established procedures
- e. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to commissioning electronics and communications systems.

Method of assessment **9.4)**

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package..

This competency standard unit shall be demonstrated in relation to commissioning two different types of electronics and communications systems and associated components and controls.

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Competency Field

Competency Field 11)

Electronics

UEENEEH168A Modify - redesign of electronics and communications systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This competency standard unit covers the modification and redesign of electronics and communications systems to augment existing systems for clients. It encompasses safe working practices, system parameter reconfiguration, analysis to assure optimum performance, following procedures, and documenting final modifications and settings.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a licence to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practice this unit in the workplace subject to regulations

License to practice

3)

for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and the like.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation and the like.
2. Compliance may be required in various jurisdictions relating to currency in first aid, confined space, lifting, risk safety measure and the like.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to modify-redesign of electronics and communications system(s)	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.5 System operating parameters are identified by reviewing system specifications and component technical data.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|--|---|
| | 1.6 | The limitations, use and operation of the system to be modified is established from original specifications, manufacturers' data and the like |
| | 1.7 | The extent of modification is determined from measurements, tests, inspections, system limitations and other relevant requirements |
| | 1.8 | Specifications and instructions for the modifications are documented in accordance with requirements and organisational procedures |
| | 1.9 | Tools, equipment, applications, and devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety. |
| | 1.10 | Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements. |
| 2 | Generate modification-redesign of electronics and communications system(s) | |
| | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | Alternative modification arrangements are considered and discussed with appropriate personnel |
| | 2.3 | Safety, functionality and economic considerations are incorporated in the proposed modification design

Proposed modification complies with all requirements and includes specifications and documentation for alteration of the system(s)

Changes in the use and operation of the system(s) as a consequence of the proposed modification are included in the documentation |
| | 2.4 | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements. |
| | 2.5 | Methods for dealing with unexpected situations |

ELEMENT	PERFORMANCE CRITERIA
3 Completion and report modification-redesign activities.	<p>are selected on the basis of safety and specified work outcomes.</p> <p>2.6 Modification-redesign is carried out efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.</p> <p>3.1 OHS risk control work completion measures and procedures are followed.</p> <p>3.2 Proposed modification is checked under established procedures for compliance with all relevant requirements</p> <p>3.3 Work site is cleaned and made safe in accordance with established procedures.</p> <p>3.4 Proposed modification is submitted for appropriate organisational approval and, where applicable, statutory or regulatory approval</p> <p>3.5 Approved copies of the modification-redesign documents are issued, and copies retained, documented and stored in records in accordance with established procedures and requirements</p>

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the “Assessment Guidelines – UEE11”. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Modify-redesign of electronics and communications systems as described in 8) and including:
 - a. Developing outlines of alternative redesigns.
 - b. Developing the modified-redesigned system within the safety and functional requirements and budget limitations.
 - c. Documenting and presenting modifications-redesigns effectively.

- d. Successfully negotiating system alteration requests.
- e. Obtaining approval for final modified-redesigned system.
- f. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to modifying-redesigning electronics and communications systems.

Method of assessment 9.4)

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to modifying-redesigning electronics and communications systems across two different and representative types of electronics and communications systems and associated components and controls.

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work on electronic circuits	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Solve electronic circuit problems	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Established methods are used to solving circuit problems from measure and calculated values as

ELEMENT	PERFORMANCE CRITERIA
3 Complete work and document problem solving activities	<p>they apply to electronic circuit.</p> <p>2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.</p> <p>2.6 Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.</p> <p>3.1 OHS work completion risk control measures and procedures are followed.</p> <p>3.2 Work site is cleaned and made safe in accordance with established procedures.</p> <p>3.3 Justification for solutions used to solve circuit problems is documented.</p> <p>3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in electronic circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH169A

Electronics Circuit Principles

Evidence shall show an understanding of power supplies for electronics circuit principles, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Basic circuit configurations encompassing:

- circuit configurations are single source a.c. and d.c. circuits,
- series circuits,
- parallel circuits
- series-parallel circuits.

T2. The relationship between variable parameter in electrical /electronic circuits encompassing:

- Variables parameters –
 - voltage,
 - current,
 - resistance
 - impedance,
 - inductance,
 - capacitance
 - reactance.

T3. Behaviour of electrical /electronic circuits for various values of voltage, current, resistance, impedance, inductance, capacitance and reactance and variable parameters encompassing:

- single source circuits,
- series circuit configurations,
- parallel circuit configurations
- series-parallel circuit configurations

T4. Types of voltage testers, multimeters, clamp meters, continuity testers and insulation resistance testers and their application.

T5. Features of testing/measuring devices - safety, user calibration and parameter and range settings.

REQUIRED SKILLS AND KNOWLEDGE

- T6. Connection of test/measuring devices into a circuit encompassing:
- safety procedures
 - circuit arrangement of test/measuring devices
- T7. Taking readings
- T8. Storage, maintenance and care of test/measuring devices.
- T9. Australian Standard quality assurance requirements for test equipment calibration certification.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package..

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UEE11". Evidence shall also comprise:

A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
- Apply sustainable energy principles and practices as specified in the performance criteria and range; and
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements. and

- Demonstrate an appropriate level of skills enabling employment; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and

Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

- Solving problems in electronic circuits as described in 8) and including:
 - a. Determining the operating parameters of an existing circuit.
 - b. Altering an existing circuit to comply with specified operating parameters.
 - c. Developing circuits to comply with a specified function and operating parameters.
 - d. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to in solving problems in electronic circuits.

**Method of
assessment****9.4)**

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units****9.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to:

Single source parallel and series-parallel electronic circuits as they apply to operational circuit functions in relation to at least two of the following types of circuit problems and on at least two occasions:

- Determining the operating parameters of an existing circuit
- Altering an existing circuit to comply with specified operating parameters
- Developing circuits to comply with a specified function and operating parameters

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to find and repair faults	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with

ELEMENT	PERFORMANCE CRITERIA
	established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.
2 Find faults	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Fault finding is approached methodically drawing on knowledge of chrominance and luminance signal processing and scanning and deflection sections of television receivers using measured and calculated values of apparatus parameters.
	2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
	2.6 Faulty components are rechecked and their fault status confirmed.
	2.7 Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.
	2.8 Effectiveness of the repair is tested in accordance with established procedures.
	2.9 Apparatus is reassembled, finally tested and prepared for return to service.
	2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.11 Fault finding activities are carried out efficiently without waste of materials or damage to

ELEMENT	PERFORMANCE CRITERIA
	apparatus and the surrounding environment or services and using sustainable energy practices.
3 Repair fault	3.1 OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	3.3 Materials required for the repair work are sourced and obtained in accordance with established procedures.
	3.4 Repairs are affected efficiently without damage to other components, apparatus or circuits.
	3.5 Effectiveness of the repair is tested in accordance with established procedures.
	3.6 Apparatus is reassembled, finally tested and prepared for return to customer.
4 Completion and report fault finding and repair activities	4.1 OHS work completion risk control measures and procedures are followed.
	4.2 Work area is cleaned and made safe in accordance with established procedures.
	4.3 Written justification is made for repairs to apparatus.
	4.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in television receivers.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH171A

Television Receivers Troubleshooting

Evidence shall show an understanding of power supplies for TV and VCR, television RF stages and television receivers troubleshooting, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 components providing RFI suppression protection, rectification and filtering in a typical TV power supply.

T2 safe working procedures to test the power supply circuitry of a typical “hot chassis” television receiver.

T3 The operation of series regulated power supplies as used in typical TV receiver/monitors and VCRs.

T4 Subsystem arrangements and the operating principles of series and shunt type TV/VCR SMPS.

T5 The operation of the SMPS control circuits in a TV/VCR.

T6 The operation of typical self-oscillating TV/VCR SMPS circuits.

T7 Techniques for locating and repairing faults in a defective SMPS in a typical TV/monitor or VCR.

T8 The operation of tuners found in typical TV receivers.

T9 Techniques for locating and repairing faulty components in VST and FST tuning systems in typical TV receivers or VCRs.

T10 Techniques for locating and repairing faults in typical vision IF circuits.

T11 The operation of and fault find a typical TV synchronous demodulator circuit.

T12 AGC circuits in typical TV receivers encompassing

- Operation
- Fault finding techniques

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in television receivers as described in 8) and including:
 - a. Using methodical fault finding techniques.
 - b. Finding faults efficiently.
 - c. Replacing components without damage.
 - d. Providing written justification for the repairs.
 - e. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions

incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and repairing faults in television receivers.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment

and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of television receiver faults to find and repair faults in signal processing and scanning and deflection sections of television receivers.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers fault finding and repair of communication systems. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also used to augment formally acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational

License to practice

3)

health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH146A Solve fundamental electronic communications system problems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.
---	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to find and repair faults	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.</p> <p>1.5 Sources of materials that may be required for the work are established in accordance with established procedures.</p>

ELEMENT**PERFORMANCE CRITERIA**

- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Find faults
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Fault finding is approached methodically drawing on knowledge of communication systems using measured and calculated values of apparatus parameters.
- 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
- 2.6 Faulty components are rechecked and their fault status confirmed.
- 2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.8 Fault finding activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Repair fault
- 3.1 OHS risk control measures and procedures for carrying out the work are followed.
- 3.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- Materials required for the repair work are sourced and obtained in accordance with established procedures.

ELEMENT**PERFORMANCE CRITERIA**

		Repairs are affected efficiently without damage to other components, apparatus or circuits.
		Effectiveness of the repair is tested in accordance with established procedures.
		Apparatus is reassembled, finally tested and prepared for return to customer.
4	Completion and report repair activities	4.1 OHS work completion risk control measures and procedures are followed.
		4.2 Work area is cleaned and made safe in accordance with established procedures.
		4.3 Written justification is made for repairs to apparatus.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in communication systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH172A troubleshooting

Electronic communications systems

?

T1. AM and FM tuners

- Superheterodyne receivers
- Operational characteristics and techniques used in AM and FM receivers
- Frequency modulation, stereo encoding and de-coding used in commercial FM transmissions
- Amplitude modulation and de-modulation used in commercial AM transmissions
- RF signal requirements for AM tuners
- RF signal requirements for stereo FM tuners

T2. Modulation and de-modulation

- AM principles Radio Communications System (Review)
- Operational characteristics and techniques used in AM
- Amplitude modulation and de-modulation used in commercial AM transmissions
- RF signal requirements for AM tuners
- Modulation
 - Envelope
 - Index and percentage modulation depth
 - Power in carrier and sidebands
 - Over modulation and "splatter"
- Sideband modulation terminology and techniques
- Transmissions

T3. Sideband modulation terminology and techniques

- Double-sideband (DSB),
- Single-sideband (SSB)
- Frequency domain representation
- Double-sideband signal (DSB)

REQUIRED SKILLS AND KNOWLEDGE

- Single-sideband signal (SSB)
- Demodulation requirements for DSB and SSB RF Amplifiers

T4. IF principles

- IF principles and operation
- Intermediate frequency
- Down converters
- Amplification
- The diode demodulator circuit.

T5. RF circuits

- Introduction to RF Amplifiers
- RF Oscillators (eg, Hartley, Colpitts, Clapp)
- RF Mixers
- Attenuators
- Transmission lines – Impedance matching
- Terminations

T6. Frequency and phase modulation Principles

- Time and frequency domain representation, amplitude and frequency
- Frequency modulation (FM) production,
- Phase modulation (PM)
- Digital Encoding
- Spread spectrum
- Equivalent FM and PM (eg. – audio processing)
- Bessel function and distribution of sidebands,
- Modulation
 - Envelope
 - Index and percentage modulation depth
 - Power in carrier and sidebands
 - Over modulation and "splatter"
 - Sideband modulation terminology and techniques
- Bandwidth

T7. Frequency and phase de-modulation Principles

- FM Demodulation Circuits
- Frequency synthesizers (eg. PLL)

REQUIRED SKILLS AND KNOWLEDGE

T8. Antennas

- Principles
- Half wave/quarter wave configurations
- Impedance matching networks
- Polarisation

T9. Transmitter and Receiver systems configurations

- High and low-level AM transmitters
- High and low-level FM transmitters
- Transmitter Power ratings
- Spectral purity (eg. harmonics, spurious emissions and IMD)

T10. RF Filters

- Types (eg. Butterworth, Chebyshev, Bessel and Elliptical)
- Crystal filters
- Mechanical Filters

T11. RF Safety and precautions

- Effects of RF radiation on the human body and work practices to protect against radio frequency radiation.
- Standards, Codes and Regulations of ACMA regulation for power, frequency and antenna gain and Occupational Health & Safety.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this

Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in communication systems as described in 8) and including:
 - a. Using methodical fault finding techniques.
 - b. Finding faults efficiently.
 - c. Replacing components without damage.
 - d. Providing written justification for the repairs.
 - e. Dealing with unplanned events by drawing on essential

knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and
specific
resources for
assessment** 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and repairing faults in communication systems.

**Method of
assessment** 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended

for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of communication systems' faults in finding and repairing faults in communication systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to find and repair faults	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

ELEMENT	PERFORMANCE CRITERIA
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.
2 Find faults	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Fault finding is approached methodically drawing on knowledge of audio reproduction components and circuits using measured and calculated values of apparatus parameters.
	2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage
	2.6 Faulty components are rechecked and their fault status confirmed.
	2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8 Fault finding activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Repair fault	3.1 OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.

ELEMENT	PERFORMANCE CRITERIA
	3.3 Materials required for the repair work are sourced and obtained in accordance with established procedures.
	3.4 Repairs are affected efficiently without damage to other components, apparatus or circuits.
	3.5 Effectiveness of the repair is tested in accordance with established procedures.
	3.6 Apparatus is reassembled, finally tested and prepared for return to customer.
4 Completion and report repair activities	4.1 OHS work completion risk control measures and procedures are followed.
	4.2 Work area is cleaned and made safe in accordance with established procedures.
	4.3 Written justification is made for repairs to apparatus.

Evidence Guide

- 4.3 Written justification is made for repairs to apparatus.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing in audio/video recording equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH174A troubleshooting

Audio/video recording equipment

Evidence shall show an understanding of audio/video recording equipment troubleshooting, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 VCR basic principles encompassing:

- Installation and operation of a VCR
- Techniques used in magnetic tape recording
- Helical scanning process and FM magnetic recording principles
- Adjustment and replacement of components within mechanical sections
- Luminance signal processing stages
- Operation of electronic systems

T2 VCR fault finding encompassing:

- Faulty component location in the sections of a VCR
 - Mechanical components
 - luminance components
 - chroma components
 - servo control sections
 - system control sections
 - timer and display sections
 - power supply sections
 - sound sections
 - RF sections

T3 VCR advanced principles encompassing:

- The operation of the chrominance processing in practical circuits
- Control sections operated by microprocessors
- The operation of analogue and digital servo systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in audio/video recording equipment as described in 8) and including:
 - a. Using methodical fault finding techniques.
 - b. Finding faults efficiently.
 - c. Replacing components without damage.
 - d. Providing written justification for the repairs..
 - e. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions

incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and repairing faults in audio/video recording equipment.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment

and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of audio/video recording equipment faults in finding and repairing four different faults in two different audio/video recording and replay components.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Electronics

UEENEEH175A Troubleshooting in security system installations

Modification History

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers fault finding and repair of security system installations. The unit encompasses safe working practices, interpreting circuit diagrams, applying knowledge of security systems to logical fault finding procedures, rectifying faults/malfunctions, and safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also used to augment formally acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also

License to practice

3)

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH153A Program and test large security systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to find and rectify faults and malfunctions	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.

ELEMENT	PERFORMANCE CRITERIA
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.
2 Find and rectify faults and malfunctions	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Fault finding is approached methodically drawing on knowledge of security systems, circuits and diagnostic tools.
	2.5 Faulty security cables or terminations are identified, their fault status confirmed and repair or replace in accordance with established procedures.
	2.6 Faulty or malfunctioning security devices are identified, their fault status confirmed and readjusted or replace in accordance with established procedures.
	2.7 Malfunctions in security system software are identified and rectified following established routine procedures.
	2.8 Effectiveness of the repaired component is tested in accordance with established procedures.
	2.9 Apparatus is reassembled, finally tested and prepared for return to customer.
	2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.11 Fault finding and repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or

ELEMENT	PERFORMANCE CRITERIA
3 Completion and report fault finding and rectification activities	services and using sustainable energy practices.
	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Written justification is made for repairs to apparatus including components and materials used.
	3.4 Acceptance that the reported fault(s) have been repaired is sought from an appropriate person in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults and malfunctions in security system installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH175A Security systems installation faults

Evidence shall show an understanding of security systems installation to an extent indicated by the following aspects:

- T1. Sub-system components (i.e. functional blocks) and their operating parameters
- T2. Factors effecting system performance
- T3. Typical faults, their symptoms and cause.

Note.

Faults include circuit, hardware and software faults

- T4. Fault diagnosis procedures and testing

Note.

Faults confined to circuit and hardware faults and basic programming faults

- T5. System adjustments

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1 Prepare to diagnose and rectify faults | 1.1 OHS procedures for a given work area are identified, obtained and understood. |
| | 1.2 Established OHS risk control measures and procedures are followed in preparation for the work. |
| | 1.3 Safety hazards, which have not previously been identified, are documented and risk control measures devised and implemented in consultation with appropriate personnel. |
| | 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel. |

ELEMENT	PERFORMANCE CRITERIA
	1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
2 Diagnose and rectify faults	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Logical diagnostic methods are applied to diagnose display circuits faults employing measurements of circuit operating parameters referenced to display operating specifications.
	2.5 Suspected fault scenarios are tested as being the source of display circuit problems.
	2.6 Faults in the electronic components of the display circuits are rectified to raise display circuits to its operation standard.
	2.7 Circuits are tested to verify that the display operates as intended and to specified requirements.
	2.8 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and consistent with job specifications and requirements.
	2.9 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Complete and report fault diagnosis and rectification activities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is made safe in accordance with established safety procedures.
	3.3 Rectification of faults is documented in accordance with established procedures.
	3.4 Appropriate person or persons notified, in accordance with established procedures, that display circuit faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in display circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH176A

Electronic displays faults

Evidence shall show an understanding of electronic displays faults, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Cathode ray tube displays encompassing:

- Operation and characteristics of various types of cathode-ray tubes including delta, in-line and precision in-line
- Voltages, statics and x-rays around CRTs
- Set up and adjustment techniques
- Rear and front projection TV systems
- Typical faults

T2. Plasma displays and their circuit control operation encompassing:

- Advantages of flat panel displays (over conventional CRT's, Raster geometry etc)
- Theory of plasma gas discharge and phosphor excitation
- Scanning techniques (column/row addressing)
- Luminance/colour aspects (the need to re-address pixels to control light output)
- Gamma correction considerations. (reversal of the gamma correction that is carried out at the TV studio to compensate for the non-linearity of light output of a conventional CRT)
- Plasma flat panel construction (and handling)

T3. Liquid crystal displays and the control circuit operation encompassing:

- Principles of transmissive LCD displays (as opposed to reflective types)
- Light polarisation. (polarisation twisting characteristics of liquid crystal and the need for polarisation filters in display panel)
- Voltage/current requirements and need for electric field
- Fluorescent back light (need for high frequency operation and power requirements)
- Scanning techniques (colour/row addressing and thin film transistors)
- Light attenuation (caused by the many layers/filters the back light has to pass through)
- Construction and handling

REQUIRED SKILLS AND KNOWLEDGE

T4. Display circuit diagnostics encompassing:

- Sub-system components (i.e. functional blocks) and their operating parameters
- Factors effecting system performance
- Typical faults, their symptoms and cause.
- Fault diagnosis procedures and testing
- Sub-system adjustments

T5. Advance electronic measuring instruments encompassing:

- Test/measuring devices and their application - Examples are frequency counters, and synthesisers, spectrum analysers, noise and distortion meters and RF communications service monitor.

T6 Connection of test/measuring devices into a circuit encompassing:

- safety procedures
- loading and matching
- storage and delay
- circuit arrangement of test/measuring devices

T7 Taking and interpreting readings

T8 Notion of decibels including dBm, dBr, dBu, dBo

T9. OHS enterprise responsibilities encompassing:

- Provisions of relevant health and safety legislation
- Principles and practice of effective occupational health and safety management
- Management arrangements relating to regulatory compliance
- Enterprise hazards and risks, control measures and relevant expertise required
- Characteristics and composition of workforce and their impact on occupational health and safety management
- Relevance of enterprise management systems to occupational health and safety management
- Analysis of working environment and design of appropriate occupational health and safety management systems
- Analysis of relevant data and evaluation of occupational health and safety system effectiveness
- Assess resources to establish and maintain occupational health and safety management systems.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose and rectify faults in display circuits as described in 8) and including:
 - a. Applying logical diagnostic methods.
 - b. Using fault scenarios to test the source of circuit faults.
 - c. Identifying the cause faults using logical diagnostic methods.
 - d. Rectifying faults effectively.
 - e. Verifying that the display operates correctly.

- f. Documenting fault rectification.
- g. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in display circuits.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires

that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of display circuits by diagnosing and rectifying at least four circuit faults in two different types of displays.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|---|
| 1 | Prepare to diagnose and rectify faults | 1.1 | OHS procedures for a given work area are obtained and understood. |
| | | 1.2 | Established OHS risk control measures and procedures are followed in preparation for the work. |
| | | 1.3 | Safety hazards, which have not previously been identified, are documented and risk control measures devised and implemented in consultation with appropriate personnel. |
| | | 1.4 | The extent of faults is determined from reports and other documentation and from discussion |

ELEMENT**PERFORMANCE CRITERIA**

- with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Diagnose and rectify faults
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Logical diagnostic methods are applied to diagnose recording and replay apparatus faults employing measurements of circuit operating parameters referenced to recording and replay apparatus operating specifications.
- 2.5 Suspected fault scenarios are tested as being the source of recording and replay apparatus problems.
- 2.6 Faults in the electronic components of the recording and replay apparatus are rectified to raise recording and replay apparatus to its operation standard.
- 2.7 Apparatus are tested to verify that they operate as intended and to specified requirements.
- 2.8 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and consistent with job specifications and requirements.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|--|-----|--|
| | 2.9 | Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 Complete and report fault diagnosis and rectification activities | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | 3.2 | Work site is made safe in accordance with established safety procedures. |
| | 3.3 | Rectification of faults is documented in accordance with established procedures. |
| | 3.4 | Appropriate person or persons notified, in accordance with established procedures, that recording and replay apparatus faults have been rectified. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in recording and replay apparatus.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH177A Recording and replay apparatus diagnostics

Evidence shall show an understanding of recording and replay apparatus diagnostics, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Diagnosing recording and replay apparatus encompassing:

- Sub-system components (i.e. functional blocks) and their operating parameters
- Factors effecting system performance
- Typical faults, their symptoms and cause.
- Fault diagnosis procedures and testing
- Sub-system adjustments

T2. Advance electronic measuring instruments encompassing:

- Test/measuring devices and their application - Examples are frequency counters, and synthesisers, spectrum analysers, noise and distortion meters and RF communications service monitor.

T3 Connection of test/measuring devices into a circuit encompassing:

- safety procedures
- loading and matching
- storage and delay
- circuit arrangement of test/measuring devices

T4 Taking and interpreting readings

T5 Notion of decibels including dBm, dBr, dBu, dBo

T6. OHS enterprise responsibilities encompassing:

- Provisions of relevant health and safety legislation
- Principles and practice of effective occupational health and safety management
- Management arrangements relating to regulatory compliance
- Enterprise hazards and risks, control measures and relevant expertise required
- Characteristics and composition of workforce and their impact on occupational health and safety management
- Relevance of enterprise management systems to occupational health and safety management

REQUIRED SKILLS AND KNOWLEDGE

- Analysis of working environment and design of appropriate occupational health and safety management systems
- Analysis of relevant data and evaluation of occupational health and safety system effectiveness
- Assess resources to establish and maintain occupational health and safety management systems.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose and rectify faults in recording and replay apparatus as described in 8) and including:
 - a. Applying logical diagnostic methods.
 - b. Using fault scenarios to test the source of apparatus faults.
 - c. Identifying the cause faults using logical diagnostic methods.
 - d. Rectifying faults effectively.
 - e. Verifying that the recording and replay apparatus operates correctly.
 - f. Documenting fault rectification.
 - g. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved

industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in recording and replay apparatus.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of recording and replay apparatus by diagnosing and rectifying at least four circuit faults in two different types of recording and replay apparatus.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Electronics

UEENEEH178A Diagnose and rectify faults in camera circuits and equipment

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers fault finding and repair of faults in camera circuits and equipment. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of camera circuit components, rectifying faults, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

License to practice**3)**

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH118A Fault find and repair electronic apparatus

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to diagnose and rectify faults

1.1 OHS procedures for a given work area are obtained and understood.

1.2 Established OHS risk control measures and procedures are followed in preparation for the work.

1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.

1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|-----------------------------|--|
| | 1.5 | Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site. |
| | 1.6 | Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety. |
| 2 | Diagnose and rectify faults | |
| | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
| | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures. |
| | 2.4 | Logical diagnostic methods are applied to diagnose camera circuit's faults employing measurements of circuit operating parameters referenced to camera operating specifications. |
| | 2.5 | Suspected fault scenarios are tested as being the source of camera circuit problems. |
| | 2.6 | Faults in the electronic components of the camera circuits are rectified to raise camera circuits to its operation standard. |
| | 2.7 | Circuits are tested to verify that the camera operates as intended and to specified requirements. |
| | 2.8 | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and consistent with job specifications and requirements. |
| | 2.9 | Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |

ELEMENT	PERFORMANCE CRITERIA
3 Complete and report fault diagnosis and rectification activities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is made safe in accordance with established safety procedures.
	3.3 Rectification of faults is documented in accordance with established procedures.
	3.4 Appropriate person or persons notified, in accordance with established procedures, that camera circuit faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in camera circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH178A

Camera circuits and equipment diagnostics

Evidence shall show an understanding of camera circuits and equipment diagnostics, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Camcorders and digital cameras encompassing:

- Operation of camera circuits
- Recording media, standards and formats
- Pick up tubes and charge coupled devices
- Operation of optical transducers, lenses
- Colour separation techniques and signal processing
- Charge coupled devices
- Mechanics and adjustments
- Power supplies and batteries
- MPEG capability

T2. Camera circuit diagnosis encompassing:

- Sub-system components (i.e. functional blocks) and their operating parameters
- Environment factors effecting system performance
- Typical faults, their symptoms and cause.
- Fault diagnosis procedures and testing
- Sub-system adjustments

T3. OHS enterprise responsibilities encompassing:

- Provisions of relevant health and safety legislation
- Principles and practice of effective occupational health and safety management
- Management arrangements relating to regulatory compliance
- Enterprise hazards and risks, control measures and relevant expertise required
- Characteristics and composition of workforce and their impact on occupational health and safety management
- Relevance of enterprise management systems to occupational health and safety management
- Analysis of working environment and design of appropriate occupational health and safety management systems

REQUIRED SKILLS AND KNOWLEDGE

- Analysis of relevant data and evaluation of occupational health and safety system effectiveness
- Assess resources to establish and maintain occupational health and safety management systems.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. 		3.4 Appropriate person or persons notified, in accordance with established procedures, that apparatus faults have been rectified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in digital television apparatus.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH179A

Digital television faults

Evidence shall show an understanding of digital television receivers, digital television principles and digital television faults, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Integrated Receiver Decoder IRD (The Set Top Box) encompassing:

- sub-system components (i.e. functional blocks) and their operating parameters
- Basic diagnostic tests

T2. Channel decoders encompassing:

- Method used to determining the analogue to digital converter (ADC) sampling rate.
- Function of the Forward Error Correction (FEC) unit and Reed Solomon (RS) and Viterbi plus interleaving.
- Purpose of the OFDM modulator.
- Principle of operation of an OFDM demodulator and hierarchical (de) modulation.
- Principles of operation of a QPSK demodulator.
- Perform measurements and diagnostic test points in a typical IRD channel decoder.

T3. Conditional access encompassing:

- Purpose of a conditional access module (CAM).
- Access descrambler unit sub-system components (i.e. functional blocks) and their operating parameters
- Function of the component parts of conditional access descrambler unit.
- Purpose of a conditional access module 'smart card'.
- Single chip set top box sub-system components (i.e. functional blocks) and their operating parameters

T4. Repair and maintenance of digital television signal decoding circuitry. encompassing:

- Correct operation of the transport stream processor with reference to typical input and output signal.
- Testing techniques to determine correct operation of the video decoder, audio decoder and PAL encoder

REQUIRED SKILLS AND KNOWLEDGE

- Testing techniques to determine identify faulty data streams.
- Pin connections of a SCART socket.
- Operation of a typical UHF modulator.
- List precautions to be observed when performing tests on functional and non-functional units.
- Identify and replace faulty components in malfunctioning units.
- Perform functional testing after repair.

T5. Describe the basic techniques used to process an analogue signal for integration in a digital broadcasting system encompassing:

- Basic technique of sampling an analogue waveform and assigning quantisation levels to those samples for both video and audio.
- Calculation of the number of pixel's per line and the sampling rate for a range of typical DTV aspect ratios.
- Typical sampling rates for Standard Definition Digital Television (SDTV) and High Definition Digital Television (HDTV) broadcasts.
- Range of different sampling structures used to sample luminance and colour difference signals.
- Determination of the total bit rate required for a required sampling rate.
- Factors limiting digital television picture quality.
- Minimum MPEG video requirements for HDTV and SDTV.
- Factors that create the need for video data compression.

T6. Describe the process used to prepare video data for integration encompassing:

- Major methods used to compress video data.
- How a complete picture frame is assembled from samples, blocks, macroblocks and slices.
- Meaning of the terms DCT coefficients, temporal frequency, and spatial frequency, temporal and spatial redundancy.
- Purpose of the Discrete Cosine Transfer (DCT) processor in the processing of video data compression.
- Relationship between spatial frequencies, DCT coefficients and quantisation levels in the DCT block.
- Compression techniques used to code quantised DCT coefficients.
- How Run Length Coding (RLC) is used to group DCT values into a series of values.
- How Variable Length Coding (VLC or Huffman coding) processes each DCT value according to probability.

T7. Describe the role of the DCT coder encompassing:

- Sub-system components (i.e. functional blocks) and their operating parameters of a DCT coder.
- Typical construction of a Group of Pictures (GOP).
- Individual frames in a GOP sequence that uses forward prediction and

REQUIRED SKILLS AND KNOWLEDGE

- bi-directional prediction.
- Purpose of differential coding.
- Structure of a video Packetised Elementary Stream (PES).
- Types of information included in the PES.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

- Diagnose and rectify faults in digital television apparatus as described in 8) and including:
 - a. Applying logical diagnostic methods.
 - b. Using fault scenarios to test the source of circuit faults.
 - c. Identifying the cause faults using logical diagnostic methods.
 - d. Rectifying faults effectively.
 - e. Verifying that the apparatus operates correctly.
 - f. Documenting fault rectification.
 - g. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in digital television apparatus.

Method of assessment **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of digital television apparatus by diagnosing and rectifying at least four circuit faults in two different types of digital television apparatus.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electronics

UEENEEH180A Diagnose and rectify faults in digital transmission circuits and systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers fault finding and repair of faults in digital transmission systems. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of digital transmission systems circuit components, rectifying faults, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

License to practice

3)

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH176A Diagnose and rectify faults in electronic display circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to diagnose and rectify faults	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards, which have not previously been identified, are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|-----------------------------|---|
| | 1.5 | Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site. |
| | 1.6 | Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety. |
| 2 | Diagnose and rectify faults | <p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Logical diagnostic methods are applied to diagnose digital television apparatus faults employing measurements of circuit operating parameters referenced to apparatus operating specifications.</p> <p>2.5 Suspected fault scenarios are tested as being the source of apparatus problems.</p> <p>2.6 Faults in the electronic components of the digital television apparatus are rectified to raise digital television apparatus to its operation standard.</p> <p>2.7 Circuits are tested to verify that the apparatus operates as intended and to specified requirements</p> <p>2.8 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and consistent with job specifications and requirements.</p> <p>2.9 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable</p> |

ELEMENT

PERFORMANCE CRITERIA

- energy practices.
- 3 Complete and report fault diagnosis and rectification activities
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work site is made safe in accordance with established safety procedures.
- 3.3 Rectification of faults is documented in accordance with established procedures.
- 3.4 Appropriate person or persons notified, in accordance with established procedures, that apparatus faults have been rectified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in digital transmission systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH180A

Digital television transmission faults

Evidence shall show an understanding of advanced digital television principles, digital television transmission towers and equipment and digital television transmission faults, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Audio component encompassing:

- Audio Encoding
- Audio Masking
- Audio sub band encoding

T2. Dolby AC-3

T3. MPEG-2 System Layer encompassing:

- PES Packet Construction
- Time Stamps
- Programme Clock Reference (PCR)
- Transport Packet Header
- Programme Specific Information (PSI)

T4. Channel Encoding

- Forward Error Correction (FEC)
- Bit Error Rate (BER)
- Puncturing

T5. Interleaving.

T6. Modulation

- Phase Shift Keying (PSK)
- Quadrature Amplitude Modulation (QAM)
- Orthogonal Frequency Division Multiplexing (OFDM)
- Coded Orthogonal Frequency Division Multiplexing (COFDM)

T7. Hierarchical Modulation.

- Terrestrial Channel Encoder

REQUIRED SKILLS AND KNOWLEDGE

- Satellite Channel Encoder
- Carrier to Noise Ratio (C/N)

T8 Single Frequency Networks

- Guard Interval
- Megaframes

T9. The requirements of DTTB program input and monitoring equipment encompassing:

- basic system arrangement - Example is a central router connected to a number of control rooms.
- Terminologies - Examples are Vertical, Multi-level; Tie-line Routing and cross point
- typical signal types processed by a router.
- the purpose of "redundant CPU's and power supply units".
- common control protocols used in routers.
- typical analogue audio and video output voltage levels present at the router.
- typical specifications for digital data signals present at the router.
- function of various test equipment used in DTTB measurements.

T10. The operating characteristics of a digital television terrestrial broadcast (DTTB) transmitter encompassing:

- typical DTTB digital transmission system.
- safety precautions required when working with high power RF transmitters.
- operating characteristics of a typical MPEG encoder.
- operation of a coded orthogonal frequency division multiplex (COFDM) modulator.
- arrangement of subsystem components in a DTTB transmitter
- purpose of an up converter in a DTTB transmitter.
- typical characteristics of a DTTB power amplifier.
- advantages and disadvantages of air and liquid cooling systems used in transmitters.
- typical DTTB transmitter measurements techniques.

T11. The performance requirements of the DTTB combiner and antenna systems encompassing:

- minimum channel separation required between digital and analogue TV channels
- typical specifications of an antenna combiner system.
- the need for combiner systems in DTTB systems.
- typical system faults in combiners and antenna system.

T12. The requirements of remote monitoring and measurement equipment encompassing:

- purpose of control panel indicators and controls.

REQUIRED SKILLS AND KNOWLEDGE

- Process by which the system manages a critical failure. -Example of component failure deemed as critical are power supplies and CPUs
- different system alarm signals.
- periodic equipment self tests and diagnostic routines on DTTB systems.
- DTTB systems fault diagnostic and rectification techniques.
- function of the basic components of a DTTB system.
- typical units of a DTTB Telemetry system

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination

- legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose and rectify faults in digital transmission systems as described in 8) and including:
 - a. Applying logical diagnostic methods..
 - b. Using fault scenarios to test the source of circuit faults.
 - c. Identifying the cause faults using logical diagnostic methods.
 - d. Rectifying faults effectively.
 - e. Verifying that the apparatus operates correctly.
 - f. Documenting fault rectification.
 - g. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry

practices in relation to diagnosing and rectifying faults in digital transmission systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of digital transmission systems by diagnosing and rectifying at least four circuit faults in two different types of digital transmission systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

UEENEEH181A Design electronic printed circuit boards

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the design of electronic printed circuit boards. The unit encompasses application of knowledge of electronic circuits, components, component assemblies, developing alternative design schemes based on design brief, customer relations and documenting designs.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice

3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element.

Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design PCB assembly	1.1 OHS processes and procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the proposed electronic circuits and sub assemblies is determined from the design brief or in consultations with appropriate person(s)
	1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site
2 Develop PCB assembly design	2.1 Knowledge of electronic components and sub assemblies and standards are applied to the design.
	2.2 Alternative arrangements for the design are considered based on the requirements outlined in the design brief.
	2.3 Safety, functional and budget considerations are incorporated in the design.
	2.4 PCB design draft is checked for compliance with the design brief and design rules.
	2.5 PCB design is documented for submission to appropriate person(s) for approval
	2.6 Solutions to unplanned situation are provided consistent with organisation policy.
3 Provide detailed assembly drawings and artwork files ready for production	3.1 PCB design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.

ELEMENT**PERFORMANCE CRITERIA**

- 3.3 Final design is documented and approval obtained from appropriate person(s).
- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing printed circuit boards.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH181A

Printed circuit board design techniques

Evidence shall show an understanding of printed circuit board design techniques, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Component specifications and their implication in a given circuit.

T2. Sources of components and technical data.

- Sources of components and technical data. (eg. data sheets, manufacturer's data)
- Electrical and physical considerations
- Circuit/apparatus parameters and specification

T3. Printed circuit board techniques

- Printed circuit board materials and processes overview (eg. photographic, mechanical, thermal, dielectric)
- Types of Printed circuit boards (eg. single sided, double sided, multilayer)

T4. Factors influencing design

- Component placement
- Routing and auto-routing
- Design rules
- CAM tools (computer Automated manufacture)
- Version control

T5. Design tools and software

- Library components
- Preparing a schematic
- Documentation and version control

T6. Design standards

- Electronic symbols
- Circuit schematics and optimisation
- Printed circuit board manufacturing techniques

T7. MSDS materials and processes

Competency Field 11)

Electronics

UEENEEH182A Develop engineering solutions to RF amplifiers problems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers developing engineering solutions to resolve problems with RF amplifiers. It encompasses working safely, applying extensive knowledge of RF amplifier circuits and device operation and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical RF amplifiers electronic problems are those encountered in meeting performance requirements and compliance standards, revising an RF amplifier electronic operating parameters and dealing with RF amplifiers electronic malfunctions.

Application of the Unit

Application of the Unit 2)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a

License to practice**3)**

license to practice in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. (See Note)</p>

ELEMENT**PERFORMANCE CRITERIA**

- 3.4 Justification for solutions used to solve RF amplifiers problems is documented for inclusion in work/project development records in accordance with professional standards.

Note:

A license to practice in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing solutions to RF amplifiers problems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH182A

RF amplifiers problems

T1. RF amplifiers

- Selection of RF components
- Frequency response of amplifiers
- Gain levelling techniques
- Tuned amplifiers
- Techniques for impedance matching capacitive and transformer coupling
- Double-tuned circuits
- Tapped C and L circuits for Z-matching (Examples are use of S parameters and Smith charts.)
- Small signal RF amplifiers and
- RF Power amplifiers class A,B,C,D - low power (1W) / high power (kW) - typical circuits
- Power combiners
- Strip line circuit techniques

T2. Transmission lines and antennas

- Reflectometry minimum and maximum voltage and current values on a transmission line carrying an RF signal
- Transmission line loss measured in decibels
- EH field directions in relation to antenna elements

T3. OH&S

- Standards, Codes and Regulations of ACMA regulation for power, frequency and antenna gain and Occupational Health & Safety.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop solutions to RF amplifiers problems as described in 8) and including:
 - a. Understanding the extent of the RF-amplifiers electronic problem.
 - b. Forming effective strategies for solution development and implementation.
 - c. Obtaining RF-amplifiers electronic parameters, specifications and performance requirements appropriate to each problem.

- d. Testing and solutions to RF-amplifiers electronic problems.
- e. Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
- f. Documenting justification of solutions implemented in accordance with professional standards.
- g. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing solutions to RF amplifiers problems.

Method of assessment **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of RF amplifier problems in developing engineering solutions for at least four RF amplifiers’ electronic problems.

Note.

Typical RF amplifiers electronic problems are those encountered in meeting performance requirements and compliance standards, revising RF amplifiers electronic operating parameters and dealing with RF amplifiers electronic malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electronics

UEENEEH183A Analyse the performance of wireless-based electronic - communication systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the analysis of wireless-based electronic systems to provide solutions to mobile communications performance. It encompasses working safely, applying extensive knowledge of mobile communications parameters, gathering and analysing data, applying problem solving techniques, developing and documenting results and solutions for use in design work.

Application of the Unit

Application of the Unit 2)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It is intended to apply to any formal recognition for this standard at the aligned AQF 6 level.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the

License to practice 3)
operation of automated machinery.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to analyse the performance of wireless-based systems	1.1 OHS processes and procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the wireless-based electronic systems issues are determined from performance specifications and situation reports and in consultations with relevant persons
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.
2 Analyse the wireless-based electronic systems performance	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of wireless communications principles are applied to analytical solutions to electronic systems.
	2.3 Parameters, specifications and performance requirements in relation to wireless-based electronic systems are obtained in accordance with established procedures.

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|---|--|
| | 2.4 | Approaches to analysing wireless-based electronic systems parameters are carried out to provide the most effective solution. | |
| | 2.5 | Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy. | |
| | 2.6 | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards | |
| 3 | Document and report on the results of the wireless-based electronic systems performance analysis and actions taken | 3.1 | Solutions to wireless-based electronic systems issues are evaluated to determine their effectiveness and modified where necessary. |
| | | 3.2 | Analysis is documented including details of all findings, calculations and assumptions. |
| | | 3.3 | Analysis is reported to appropriately personnel to establish appropriate action to be taken based on findings. |
| | | 3.4 | Justification for findings and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional standards. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing the performance of wireless-based electronic systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH183A

Wireless networks infrastructure

Evidence shall show an understanding of wireless networks infrastructure, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Networking fundamentals encompassing:

- How information is carried
- Signal distortion (Examples include attenuation, reflection, noise, dispersion, jitter, latency and collisions, Bit Error Rate)
- Types of networks, network components and hardware
- Local Area Network (LAN) architectures
- Networking protocols and the OSI model
- Network signal propagation
- Transmission Control Protocol / Internet Protocol (TCP/IP)
- Basics of Encoding Networking Signals
- Internet services

T2. Wireless networks infrastructure encompassing:

- Network configurations
- Wireless network security

T3. Fundamentals of wireless security encompassing:

- Wireless topologies
- Network Interface Cards (NICs)
- Access points
- Bridges
- Antennas
- Security
- Application design and site survey preparation
- Troubleshooting, management, monitoring and diagnostics
- Emerging technologies

T4. OH&S encompassing:

- Standards, Codes and Regulations of ACMA regulation for power, frequency and

REQUIRED SKILLS AND KNOWLEDGE

antenna gain and Occupational Health & Safety.

- All tasks to be carried out in accordance with current OH&S procedures.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to modify DSP based systems	1.1 OHS processes and procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the proposed electronic DSP based system is determined from the design brief or in consultations with appropriate person(s)
	1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site
	1.5 Materials and devices/components required for the work are determined on compatibility of their specifications with DSP based system requirements and project budget constraints.
2 Modify DSP based systems	2.1 OHS risk control measures and procedures are followed.
	2.2 Knowledge of digital and analogue elements used in DSP based systems and compliance standards are applied to the design
	2.3 Alternative arrangements for the modification are considered based on the requirements outlined in the design brief.
	2.4 Safety, functional and budget considerations are incorporated in the design.
	2.5 Prototype devices and circuits are constructed, programmed and tested for compliance with the design brief and regulatory requirements.
	2.6 Prototype malfunctions are rectified and retested to ensure effective operation of design.
	2.7 DSP based system modification is documented for submission to appropriate person(s) for approval

ELEMENT	PERFORMANCE CRITERIA
	2.8 Solutions to unplanned situation are provided consistent with organisation policy.
3 Obtain approval for electronic DSP based systems modification	3.1 DSP based system modification is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and modifying DSP based systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH184A

Digital Signal Processing

Evidence shall show an understanding of digital signal processing, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. DSP development technologies

T2. Infinite Impulse Response (IIR) filter encompassing:

- pole-zero placement method to obtain coefficients for a simple first-order and second-order low-pass and band-pass IIR filter.
- direct-form realisation of a simple IIR filter suitable for $\sin(x)/x$ compensation.
- DSP system

T3 High-order IIR filter encompassing:

- filter design package to obtain the coefficients for a high-order IIR filter
- high-order IIR filter would be realised using a cascade or a parallel combination of first-order or second-order IIR filter blocks.
- effect of coefficient quantisation errors and calculation rounding-off errors on filter performance.
- IR filters and symmetrical FIR filters

T4 Discrete Fourier Transform (DFT) to a signal encompassing:

- discrete correlation.
- signal-detection.
- correlation used to generate DFT.
- window-function when generating the DFT.

T5 Concept of complex signals encompassing:

- positive-frequency and a negative frequency signal.
- exponential and polar form of sinusoidal signal and a complex sinusoidal signal.
- spectra of a general signal having equal real and imaginary components. (An “analytic” or “quadrature” signal).
- analytic signals simplification filtering operations

T6 Fast Fourier Transform (FFT) encompassing:

- Decimation in Time FFT, and the “twiddle factor”.

REQUIRED SKILLS AND KNOWLEDGE

- sample-frequency and number of signal samples needed for a FFT.
- FFT routine.

T7 FIR filtering using FFT encompassing:

- overlap, save method of implementing a long FIR filter using the FFT and the inverse FFT.
- limitations on the stored frequency-response coefficients and the resulting impulse-response.

T8 Data-rate conversion encompassing:

- data-rate conversion (decimation) simplification of the anti-alias filter requirement
- data-rate conversion (interpolation) of the DSP system simplification the reconstruction-filter requirement and reduces the need for $\sin(x)/x$ compensation.

T9 Modulation and de-modulation techniques encompassing:

- Spectra where real signals and analytic (quadrature) signals are modulated by a sinusoidal function.
- amplitude-modulated signal
- single-sideband signal

T10 Digital processing steps in practical DSP applications

T11 Currently available DSP support chips

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships.

However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design signal-conditioning subsystems	1.1 OHS processes and procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the proposed signal-conditioning subsystem is determined from the design brief or in consultations with appropriate person(s)
	1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site
	1.5 Materials and devices/components required for the work are determined on compatibility of their specifications with data acquisition system requirements and project budget constraints.
2 Design signal-conditioning subsystems	2.1 OHS risk control work measures and procedures are followed.
	2.2 Knowledge of digital and analogue elements used in signal-conditioning subsystems and compliance standards are applied to the design
	2.3 Alternative arrangements for the design are considered based on the requirements outlined in the design brief.
	2.4 Safety, functional and budget considerations are incorporated in the design.
	2.5 Prototype devices and circuits are constructed, programmed and tested for compliance with the design brief and regulatory requirements.
	2.6 Prototype malfunctions are rectified and retested to ensure effective operation of design.
	2.7 The design is documented for submission to appropriate person(s) for approval

ELEMENT	PERFORMANCE CRITERIA
	2.8 Solutions to unplanned situation are provided consistent with organisation policy.
3 Obtain approval for signal-conditioning subsystems design	3.1 The design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for modifications to the design are negotiated with relevant person(s) within the constraints of organisation policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing a signal-conditioning subsystem.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH185A

Principles of Signal Conditioning

Evidence shall show an understanding of principles of signal conditioning, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Differential amplifiers of suitable characteristics to meet system objective

- differential gain, common mode rejection ratio and the required CMRR
- variable gain input stage
- connections for an instrumentation amplifier to meet given objectives.

T2. Audio frequency integrator working to given specifications

- ideal integrator
- practical difficulty with the ideal circuit
- common applications of the integrator.

T3. Operational amplifier circuits

- use of d.c. offset and capacitive blocking and Norton amplifiers powered by a single supply
- operation of single-supply inverting and noninverting amplifiers employing DC offset bias at the input and blocking capacitors
- operation of a high input resistance unity gain
- circuit symbol of the Norton (input current difference) amplifier
- areas of use for single-supply amplifiers.

T4. Comparator circuits (open loop, limited swing and hysteresis) using operational amplifiers:

- ideal op-amp comparator
- typical uses of the comparator.
- comparators with limited (i) negative swing and (ii) both positive negative swing
- hysteresis comparator with positive resistor divider feedback and calculate the input switching voltages.
- desirable properties of an operational amplifier for use as comparator and the characteristics of comparator op amps.
- op amp oscillators

REQUIRED SKILLS AND KNOWLEDGE

- T5. Amplifiers with given piecewise linear transfer characteristics
- T6. Operation and building precision of half-wave and fullwave rectifiers
- precision two-diode half-wave rectifier
 - typical applications of precision rectifiers.
- T7. Operation of and build a sine - triangle – square function generator:
- block diagram of a sine-triangle-square signal generator using an integrator, comparator and sine-wave shaper.
 - waveforms at various points in the circuit.
 - frequency range and setting of frequency changes.
 - Timer circuits
 - function generators and oscillators.
- T8. Sensors and transducers
- static and dynamic characteristics Sensor types encompassing:
 - strain and force
 - thermocouples
 - displacement, location, proximity
 - motion
 - light and radiation
 - pressure
- T9. Feedback Control Systems basics
- closed loop systems
 - open loop systems
- T10. Actuators and Drive Systems
- types and characteristics
 - Power Ics
 - PLL circuits

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design signal-conditioning subsystems as described in 8) and including:
 - a. Developing outlines of alternative designs.
 - b. Developing the design within the safety and functional requirements and budget limitations.
 - c. Documenting and presenting design effectively.
 - d. Successfully negotiating design alteration requests.
 - e. Obtaining approval for final design.

- f. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing signal-conditioning subsystems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended

for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated using a representative range of signal-conditioning subsystems in designing signal-conditioning subsystems incorporating sensors and transducers and digital and analogue elements.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
Electronics

UEENEEH186A Commission satellite and microwave communication systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the setting-up and adjusting of satellite and microwave communication systems for optimum performance. It encompasses safe working practices, signal testing and analysis, adjusting equipment, following procedures and documenting.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may be used to augment previously acquired competencies.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

License to practice 3)

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH116A Find and repair microwave amplifier section faults in electronic apparatus

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to set-up process measuring instruments	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.5 Measurement parameters are identified by reviewing transmission/reception requirements and equipment manufacturer's instructions.
	1.6 Tools, equipment and testing devices needed for

ELEMENT**PERFORMANCE CRITERIA**

- the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.7 Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements.
- 1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 1.9 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2 Set-up process measuring instruments
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular control system.
- 2.3 Measuring instruments are set up and adjusted in accordance with transmission/reception requirements and equipment manufacturer's instructions.
- 2.4 Adjustments are made to provide optimum transmission/reception performance within regulatory requirements.
- 2.5 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.7 Setting-up is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.

ELEMENT**PERFORMANCE CRITERIA**

- | | | | |
|---|---|-----|---|
| 3 | Completion and report set-up activities | 3.1 | OHS risk control work completion measures and procedures are followed. |
| | | 3.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | | 3.3 | Adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning microwave and satellite communication systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH186A

Electronic communications, satellite and microwave

Evidence shall show an understanding of electronic communications, satellite and microwave, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Propagation of electromagnetic waves through the atmosphere, transmission lines and waveguides including characteristic impedance, impedance matching, standing waves, microwave frequency bands

T2. Microwave device parameters involving wavelength, phase, VSWR, impedance matching, circuit parameters, amplifiers, transmission, reception, oscillation, noise figure, noise temperature

T3. Microwave devices and components

T4. Microwave operational constraints and operating parameters such as power, bandwidth, gain, efficiency, operational life, electrical parameters, stability, cooling, size, testing and device selection

T5. Microwave measurements, test equipment and testing techniques

T6. EMI/EMC, generation, suppression and reduction

T7. Satellite communications systems encompassing:

- Types of satellite systems and sub-systems
- Earth station locality and antenna parameters
- Link specifications and link calculations
- Base band signalling processes
- Modulation and system access

T8. Commissioning electronic communication systems encompassing:

- Purpose of commissioning
- Commissioning planning and documentation
- Initial tests and adjustments
- Commissioning procedures

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in musical equipment circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH187A

Electronic Musical Instruments

Evidence shall show an understanding of electronic musical instruments, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Vacuum tubes encompassing:

- history
- construction
- principles of thermionic emission
- advantages and disadvantages compared with solid state devices
- applications

T2 Vacuum diodes encompassing:

- schematic symbol
- terminals
- operation and typical voltages
- rectifier circuits
- typical devices and part numbers

T3 Triodes, tetrodes, and pentodes encompassing:

- schematic symbols
- terminals
- operation and typical voltages
- bias requirements
- AC parameters

T4 Small signal valve amplifier stages encompassing:

- typical devices and part numbers
- typical configurations
- quiescent conditions
- AC conditions: gain, input impedance, bandwidth

T5 Valve power amplifier stages encompassing:

- typical devices and part numbers
- typical push-pull configurations

REQUIRED SKILLS AND KNOWLEDGE

- output transformer
- reflected impedance
- parallel output arrangements
- quiescent conditions
- AC conditions
- output power

T6 Complete valve amplifiers encompassing:

- preamp stages
- coupling methods
- gain and master volume controls
- clean and “dirty” channels
- channel mixing
- valve tone controls
- spring reverb systems
- tremolo circuits
- effect sends
- foot switches
- differential amplifier
- phase splitter
- push-pull output configurations
- output transformer
- output impedance selection
- speaker connections
- local and global feedback arrangements

T7 Valve amplifier troubleshooting and servicing encompassing:

- safety considerations: high voltages, heat and glass
- testing procedures and importance of testing with a load
- troubleshooting techniques
- typical faults
- locating and replacing faulty components

T8 Electronic musical instruments encompassing:

- Electric guitar and bass wiring systems
- Active pickups
- Effects pedals and racks - principles of operation and basic circuits
- Electric keyboards, basic operation and circuits
- Troubleshooting and repairing musician instruments

T9 Advance electronic measuring instruments encompassing:

- Test/measuring devices and their application - examples are frequency counters, and synthesisers, spectrum analysers, noise and distortion meters and RF

REQUIRED SKILLS AND KNOWLEDGE

communications service monitor.

T10 Connection of test/measuring devices into a circuit encompassing:

- safety procedures
- loading and matching
- storage and delay
- circuit arrangement of test/measuring devices

T11 Taking and interpreting readings

T12 Notion of decibels including dBm, dBr, dBu, dBo

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package..

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
 - Solve problems in musical equipment circuits as described in 8) Range: and including:
 - a. Using methodical problem solving methods.
 - b. Taking measurements correctly and accurately.
 - c. Calculating parameters correctly and accurately.
 - d. Providing solution to component/circuit problems.
 - e. Providing written justification for the solutions to problems.
 - f. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment

it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in musical equipment circuits.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with unit:

UEENEEH102A Repairs basic electronic apparatus faults by replacement of components

UEENEEH112A Troubleshoot digital sub-systems

UEENEEH114A Troubleshoot resonance circuits in an electronic apparatus

UEENEEH115A Develop software solutions for microcontroller based systems

UEENEEH116A Find and repair microwave amplifier section faults in electronic apparatus

UEENEEH139A Troubleshoot basic amplifier circuits

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational

UEENEEH188A Design and develop electronics - computer systems projects

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the design and development of electronics/computer systems projects. It encompasses working safely, designing, constructing, and recording, evaluating and reporting of an electronics/computer systems design project.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element.

Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design and develop electronics/computer systems projects	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the proposed project development is determined from the design brief or in consultations with appropriate person(s).
	1.4 Project work is planned to meet scheduled timelines in consultation with others involved on the work site.
	1.5 Resources required for the work are selected based on compatibility with project requirements and budget constraints.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Design and develop electronics/computer systems projects	2.1 OHS risk control work measures and procedures are followed.
	2.2 Knowledge of devices and systems and compliance standards are applied to the design
	2.3 Alternative arrangements for the design are considered based on the requirements outlined in the design brief.
	2.4 Safety, functional and budget considerations are incorporated in the design.
	2.5 Prototype hardware and/or software systems are constructed and tested for compliance with the design brief and regulatory requirements.
	2.6 Prototype malfunctions are rectified and retested to ensure effective operation of design.

ELEMENT	PERFORMANCE CRITERIA
	2.7 Project design is documented for submission to appropriate person(s) for approval.
	2.8 Solutions to unplanned situation are provided consistent with organisation policy.
3 Obtain approval for the design	3.1 The design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for modifications to the design are negotiated with relevant person(s) within the constraints of organisation policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge of safe working practices and designing and developing electronics/computer systems projects has been acquired.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH188A

Engineering design process

Evidence shall show an understanding of engineering design process, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Electronic measuring instruments encompassing:

- Test/measuring devices and their application - examples are analogue and digital multimeters, voltage and digital testers, signal generators and oscilloscopes

T2 Connection of test/measuring devices into a circuit encompassing:

- safety procedures
- circuit arrangement of test/measuring devices

T3 Taking readings

T4 Storage, maintenance and care of test/measuring devices

T5 Engineering design processes

T6 The functional and non-functional requirements of a customer encompassing:

- scope of the project,
- non-functional requirements

Note:

Examples include economics (time, cost) including total life-cycle costs - design, implementation (construction), maintenance (operation), decommissioning (recycling); aesthetics (quality)

T7 Design objectives (specifications) to satisfy a given set of customer attributes

Note:

Establishing the specifications by defining the problem and producing a solution to satisfy the customer.

T8 Creation of the design plan through solution synthesis by selecting or creating the solution

T9 Analysis

T10 Optimisation of the proposed solution

REQUIRED SKILLS AND KNOWLEDGE

T11 Validations of the resulting design against the customer's needs

T12 Implementation of the selected design

T13 Occupational health and safety fundamentals encompassing:

- underlying principles of OH&S
- general aims and objectives of the relevant state or territory legislation relating to OH&S.
- employer and employee responsibilities, rights and obligations.
- major functions of safety committees and representatives.
- powers given to Occupational Health and Safety Inspectors
- housekeeping and potential hazards in relation to improper housekeeping
- selecting appropriate personal protective equipment (PPE) given hazardous situations

T14 The work environment encompassing:

- typical hazards associated with a range of work environments
- procedures used to control the risks associated with these hazards
- principles of risk assessment / management and state the purpose of each.
- hierarchy of OH&S hazard control measures.
- required documentation for risk assessment.
- commonly used workplace safety signs.
- workplace emergencies that pose a threat to health and safety and suitable procedure for an emergency workplace evacuation.
- appropriate fire extinguisher for a given type of fire.
- requirements for the location, mounting and maintenance of portable fire extinguishers.
- basic process of fighting a fire.
- safe premises, buildings and security are important in an industrial setting and the consequences of non-compliance with these.
- standard work procedure is and why they are required in some circumstances.

T15 Manual Handling encompassing:

- typical manual handling injuries and the effect they can have on lifestyle
- situations that may cause manual handling injuries
- correct procedures for lifting and carrying to prevent manual handling injuries
- Chemicals in the workplace encompassing:
 - hazardous substances and dangerous goods.
 - Classification of chemicals as hazardous substances and/or dangerous goods
 - requirements for labelling of chemicals in the workplace
 - safe storage procedures for chemicals
 - purpose of and interpretation of material safety data sheet (MSDS)

T16 Working at heights encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- dangers associated with working on ladders and scaffolds
- identification of work area as a height risk and use appropriate safety equipment to prevent a fall
- selecting an appropriate ladder for a given situation and perform a safety check before use
- precautions that should be taken when ascending and working off a ladder
- precautions that should be taken when working on and around a scaffold and elevated platforms.

T17 Confined spaces encompassing:

- hazards associated with working in a confined space
- identifying workplace situations that could be classified as a confined space
- control measures for working in a designated confined space

T18 Physical and psychological hazards encompassing:

- short and long term effects of excessive noise and techniques to avoid damage to hearing due to excessive noise
- effects of vibration on the human body and work practices to protect against vibration
- effects of thermal stress on the human body and work practices to protect against thermal stress
- effects of ultraviolet (UV) radiation on the human body and work practices to protect against UV radiation.
- dangers associated with laser operated equipment and tools and suitable protective measures to overcome the danger.
- occupational overuse syndrome, state examples of how it occurs and describe means to overcome it
- factors that cause stress in the workplace, symptoms of a person suffering from stress and personal stress management techniques
- detrimental effects and dangers of drug and alcohol use in the workplace

T19 Working safely with electricity encompassing:

- effects of electric shock on the human body
- common causes of electrical accidents
- precautions that can minimise the chance of electric shock (earthing, extra low voltage, fuses, circuit breakers and residual current devices – RCDs)
- protection offered by a residual current device (RCD)
- need for ensuring the (safe) isolation of an electrical supply
- appropriate method of removing an electric shock victim from a live electrical situation

T20 Life support - CPR in the workplace encompassing:

- First Aid.
- responsibilities of the First Aider.

REQUIRED SKILLS AND KNOWLEDGE

- priorities of first aid management for any accident or injury.
- procedures required at an accident scene.
- legal and ethical issues, which may impact on the management of care.
- 'Duty of Care'.
- examination of a casualty for injuries.
- effect of cardio pulmonary arrest on the body.
- Managing simulated conditions of: airway obstruction; respiratory arrest and cardio pulmonary arrest,
- single and two-person cardio pulmonary resuscitation (CPR).
- signs and symptoms of an altered level of consciousness
- management of simulation of a casualty with an altered level of consciousness.
- signs and symptoms of shock.
- management of simulation of a casualty in shock

T21 Risk management and assessment of risk encompassing:

- Principle and purpose of risk management, and
- Processes for conducting a risk assessment

T22 Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:

- Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
- Parts of an electronic systems and equipment where high-currents are likely.

T23 Risks and control measures associated with high-voltage encompassing:

- Parts of an electronic systems and equipment that operate at high-voltage,
- The terms used - 'touch voltage', 'step voltage', 'induced voltage' and 'creepage' as they relate to the hazards of high-voltage, and
- Control measures used for dealing with the hazards of high-voltage.

T24 Risks and control measures associated with low voltage encompassing:

- Risks associated with installation, fault finding, maintenance and repair.
- Control measures before, while and after working on electronic systems or equipment
- Isolation and tagging-off procedures.
- Risks and restrictions in working live.
- Control measures for working live.

T25 Risks and control measures associated with the high levels of radiation encompassing:

- RF hazards
- Maximum exposure levels to RF
- Maximum exposure to microwave radiation

REQUIRED SKILLS AND KNOWLEDGE

T26 Optical fibre safety encompassing:

- Coherent optical sources and joining procedures
- Laser safety class 3a devices or their replace

T27 Safety, selection, use, maintenance and care of test equipment encompassing:

- Safety characteristics of electrical testing devices,
- Chemical cleaning solvents, glues and joining wastes used in electronics,
- Safe use of electrical testing device, and
- Checks and storage methods for maintaining the safety of testing devices.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design and develop electronics/computer systems projects as described in 8) and including:
 - a. Developing outlines of alternative designs.
 - b. Developing the design within the safety and functional requirements and budget limitations.
 - c. Constructing and testing prototype hardware and/or software according to design brief and regulatory requirements.
 - d. Documenting and presenting design effectively.
 - e. Successfully negotiating design alteration requests.
 - f. Obtaining approval for final design.
 - g. Verifying compliance of the design against the final brief.
 - h. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing and developing electronics/computer systems projects.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and developing a medium sized electronics/computer systems project (see Note1), which involves design, modifications, installation, and/or maintenance of systems and equipment.

Note1:

Medium sized electronics/computer systems projects are those which would be recognised by a representative peer group of industry experts as medium sized within the norm customs and practices of the industry.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Competency Field	11)
	Electronics/Computer Systems

UEENEEH189A Provide Gate Array solutions for complex electronics systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers design and development of electronic systems using gate array technology. It encompasses working safely, following design briefs and applying knowledge of gate arrays and interpreting device specifications, constructing prototypes, using appropriate development software, applying programming techniques, testing developed system prototype operation, verifying compliance of the design against the final brief and documenting design and development work.

Application of the Unit

Application of the Unit **2)**

This competency standard unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practise in this unit is subject to regulations directly

License to practice

3)

related to occupational health and safety and, where applicable, contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design and develop advanced gate array systems	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 Operational safety procedures for a given work area are obtained and understood
	1.3 The extent of the proposed gate array system design and development is determined from the design brief or in consultation with appropriate person(s).
	1.4 Design and development work is planned to meet scheduled timelines in consultation with others involved on the work site.
	1.5 Materials and devices/components required for the work are selected on compatibility of their specifications with system requirements and project budget constraints.
	1.6 Tools, equipment, software and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Design and develop advanced gate array systems	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of gate array devices, gate array systems and compliance standards are applied to the design.
	2.3 Alternative arrangements for the design and development are considered based on the

ELEMENT

PERFORMANCE CRITERIA

- requirements outlined in the design brief.
- 2.4 Safety, functional and budget considerations are incorporated in the design.
 - 2.5 Prototype devices and circuits are constructed and tested for compliance with the design brief and regulatory requirements.
 - 2.6 Prototype malfunctions are rectified and retested to ensure effective operation with the design.
 - 2.7 Gate array system design and development is documented for submission to appropriate person(s) for approval.
 - 2.8 Solutions to unplanned situation are provided consistent with organisation policy.
- 3 Obtain approval for the design and development of advanced gate array systems and document
- 3.1 Gate array system design is presented and explained to client representative and/or other relevant person(s).
 - 3.2 Requests for design modifications are negotiated with relevant person(s) within the constraints of organisation policy.
 - 3.3 Final design and development is documented and approval obtained from appropriate person(s).
 - 3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing gate array systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH189A

Gate Array fundamentals

Evidence shall show an understanding of gate array fundamentals to an extent indicated by the following aspects:

T1 Introduction to PLDs encompassing:

- Types of programmable logic devices.
- Features of CPLD devices
- Features of FPGA devices.
- Input /Output Logic family assignment for FPGA.

T2 Hardware Design language encompassing:

- Create a HDL design (using Verilog, VHDL or similar).
- Create a State machine design using CAD tools.
- Create instances of components, then interconnect the design using HDL.
- Interfacing to a FPGA using the JTag connection
- Program a FPGA in a currently working system with predetermined designs.

T3 Design Project encompassing:

- Use simulation tools to test each aspect of the design.
- Timing constraints, analysis, and hazards.
- Design implementation.
- Present documentation for a FPGA

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design Gate Array systems as described in 8) and including:
 - a. Developing outlines of alternative designs and comparing advantages and disadvantages on each.
 - b. Developing the design within the safety and functional requirements and budget limitations.
 - c. Constructing and testing prototype devices and circuits according to design brief and regulatory requirements

- d. Documenting and presenting design effectively
- e. Successfully negotiating design alteration requests.
- f. Obtaining approval for final design.
- g. Verifying compliance of the design against the final brief
- h. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and
specific
resources for
assessment** **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- • OHS policy and work procedures and instructions.
- • Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit. These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing and developing gate array systems.

**Method of
assessment** **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and developing a gate array system, which controls at least three I/O devices or functions.

Note:

Examples may include: Security alarm system, Temperature control system, Data/information storage and retrieval system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Electronics

UEENEEH190A Provide engineering solutions to air traffic control system problems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers providing solutions to resolve problems in air traffic control systems. The unit encompasses safe working practices, interpreting diagrams, applying knowledge of air traffic control systems and their application, using effective problem solving techniques, safety and reporting work activities and outcomes.

Note.

Typical systems could be Air Traffic Management (ATM), Voice Switching and Control (VSCS), Data and Communications Networks, Aeronautical Fixed Telecommunications Network (AFTN), Control Maintenance Monitoring (CMM), Operational Display Suite (ODS), Air Situation Display (ASD), Tower Situational Awareness Display (TSAD), Aeronautical Reference Data Display and Distribution System (ARDDDS), back up to the above systems, Buildings & Services and Navigational Aids.

Application of the Unit

Application of the Unit **2)**

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice

3)

CASA certification on a relevant facility or a class of facility.

Other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as traineeship.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

The skills and knowledge described in this unit may require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c.

Pre-Requisites

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1 Prepare to provide solutions in air traffic control systems</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Operational safety procedures for a given work</p>

ELEMENT

PERFORMANCE CRITERIA

- area are obtained and understood
- 1.3 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.4 The extent of problems within the air traffic control system are determined from performance specifications and situation reports and in consultations with relevant persons.
- 1.5 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Provide solutions to problems within air traffic control systems
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of air traffic control systems operation, characteristics and applications are applied to developing solutions to control problems.
- 2.3 Parameters, specifications and performance requirements in relation to air traffic control systems problem are obtained in accordance with established procedures.
- 2.4 Approaches to resolving air traffic control systems problems are evaluated to provide most effective solutions.
- 2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.6 Problems are solved efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|---|
| 3 | Test and document solutions to problems within air traffic control systems | 3.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | | 3.2 | Solutions to air traffic control systems problems are tested to determine their effectiveness and modified where necessary. |
| | | 3.3 | Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed. |
| | | 3.4 | Justification for solutions used to solve air traffic control system problems are documented in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing solutions to air traffic control systems problems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH190A Air traffic control systems technology

Evidence shall show an understanding of air traffic control systems technology to an extent indicated by the following aspects:

T1 Regulatory bodies encompassing:

- structure and function of each of the regulatory bodies

International Civil Aviation Organisation – ICAO

Australian Transport Safety Bureau – ATSB

Civil Aviation Safety Authority – CASA

- standards and recommended practices issued by the regulatory bodies
- relationship between the regulatory bodies and a provider of Air Traffic Services

T2 Air traffic services encompassing:

- services provided by Air Traffic Services
- objectives of Air Traffic Services

T3 Air traffic control awareness encompassing:

- process of maintaining an orderly flow of air traffic
- different states of an aircraft flight
- need and purpose of flight data regions
- enroute airspace and sectors
- airspace and sectors around air traffic control facilities
- instructions and information exchanged between controllers and pilots
- information exchanged between air traffic controllers

T4 The components of an air traffic control system encompassing:

- Air Traffic Management (ATM), Voice Switching and Control (VSCS), Data and Communications Networks, Aeronautical Telecommunications Network (AFTN),

REQUIRED SKILLS AND KNOWLEDGE

Control Maintenance Monitoring (CMM), Buildings & Services

- purpose and function of each of the components of an air traffic control system

T5 Inputs to the air traffic management system (ATM) encompassing:

- messages and information received by the ATM system such as surveillance, time, metrological, flight plans and controller input

T6 Air traffic management (ATM) system architecture encompassing:

- the various Hardware Configuration Items (HWCI)
- operating system and other layers of software installed on the ATM system
- basic block diagram of the ATM system indicating the network topology, data processing subsystem and data presentation processing
- requirement for redundancy and the master / slave relationship
- the different partitions, connections and dependencies within the ATM system
- functions that can be performed from the Control Maintenance and Monitoring work station

T7 Outputs from the Air Traffic Management (ATM) system encompassing:

- the Operation Display Suites (ODS) and positions where they are used
- block diagram of the display suites indicating peripherals and connections
- different aircraft tracks generated by the ATM system
- other information shown on an Air Situation Display (ASD)
- requirement for and use of the recording and playback facility
- block diagram of the recording and playback facilities showing media devices and connections to the replay position
- requirement for and use of the trace collection facility
- block diagram of the trace collection facility showing media devices
- data and information provided to other systems by the ATM system

T8 The fallback system for ATM encompassing:

- purpose of the Ultimate Fallback (UFB) system
- block diagram of UFB indicating peripherals and connections
- operating system and application software installed on the UFB computers
- information used by UFB
- how the information is presented to the air traffic controllers
- actions required by an air traffic controller to access UFB system

REQUIRED SKILLS AND KNOWLEDGE

T9 Voice switching and control System (VSCS) encompassing:

- purpose of the Voice Switching and Control System (VSCS)
- top level block diagram of the VSCS
- top level operation and protocols used by the VSCS
- various VSCS interfaces and functionality they provide
- basic operation of an air to ground communication facility
- need for and basic operation of air ground retransmission
- requirement for and use of the audio recording and replay facility
- block diagram of the audio recording and replay facilities showing the media access devices and connection to the VSCS
- functionality provided by the System Management System (SMS)

T10 Fallback for the voice switching and control system (VSCS) encompassing:

- purpose and functionality provided by the Air Ground Air (AGA) Bypass facility
- purpose and functionality provided by the Ground Ground (GG) Bypass facility
- block diagram of the VSCS and AGA Bypass connections
- block diagram of the VSCS and GG Bypass connections
- how an air traffic controller would access the AGA or GG Bypass facility if required

T11 Data and communication networks encompassing:

- purpose and primary use of the networks used by the air traffic control system
- systems and end users of each of the networks
- block diagram to show the high level architecture of each of the networks
- function of the networking devices used by the networks
- technologies and protocols used by the networks

T12 Aeronautical Fixed Telecommunications Network (AFTN) encompassing:

- function of the AFTN
- structure and type of message carried by the traditional AFTN
- type of messages that can be distributed by more contemporary message systems
- services provided by contemporary message systems
- basic block diagram of a contemporary message system

T13 Buildings and services encompassing:

- building layout and format of an air traffic control centre
- building layout and format of an air traffic control tower

REQUIRED SKILLS AND KNOWLEDGE

- services required to support an air traffic control centre
- block diagram of the air traffic control centre electrical power system including main power, standby generator, UPS, batteries, switching equipment
- block diagram of the air traffic control centre airconditioning system including the major components and the primary and secondary loops
- basic flow chart to show the interaction between the fire system and other services in the air traffic control centre
- physical security requirements of an air traffic control centre
- components and operation of the security system used in an air traffic control centre

T14 Tower situational awareness display (TSAD) encompassing:

- need for and functionality provided by the Tower Situational Awareness Display (TSAD) System
- block diagram of a TSAD installation
- the source of and the information used by the TSAD system
- operating system and application software installed on the TSAD computers

T15 Aeronautical Reference Data Display and Distribution System (ARDDDS) encompassing:

- functionality provided by ARDDDS
- block diagram of an ARDDDS installation
- information used by the ARDDDS
- operating system and application software installed on the ARDDDS computers

T16 Navigational aids encompassing:

- purpose and functionality provided the navigational aids
- location of navigational aids
- basic principle of operation of the navigational aids

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Provide solutions to air traffic control systems problems as described in 8) and including:
 - a. Understanding the extent of the air traffic control system problem.
 - b. Obtaining air traffic control systems specifications and performance requirements appropriate to each problem.
 - c. Testing and solutions to air traffic control system problems.
 - d. Documenting justification of solutions implemented in

accordance with established procedures.

- e. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing solutions to air traffic control systems problems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires

that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to providing solutions to at least four air traffic control system problems.

Systems problems could cover Air Traffic Management (ATM), Voice Switching and Control (VSCS), Data and Communications Networks, Aeronautical Fixed Telecommunications Network (AFTN), Control Maintenance Monitoring (CMM), Operational Display Suite (ODS), Air Situation Display (ASD), Tower Situational Awareness Display (TSAD), Aeronautical Reference Data Display and Distribution System (ARDDDS), backup to the above systems, Buildings & Services and Navigational Aids.

Note.

Typical air traffic control systems problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with systems malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Electronics

UEENEEH191A Diagnose and rectify faults in air navigation circuits and systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor 1) Scope:

1.1) Descriptor

This unit covers fault finding, repairing of faults and commissioning of air navigation systems. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical diagnostic methods and knowledge of navigation system components, rectifying faults, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as traineeship.

License to practice

3)

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

The skills and knowledge described in this unit may require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c.

Pre-Requisites**Prerequisite Unit(s)**

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH127A Set up and adjust commercial radio frequency (RF) transmission and reception systems

UEENEEH172A Troubleshoot communication systems

UEENEEH190A Provide engineering solutions to air traffic control system problems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills

indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| <p>1 Prepare to diagnose and rectify faults</p> | <p>1.1 OHS procedures for a given work area are obtained and understood.</p> <p>1.2 Operational safety procedures for a given work area are obtained and understood</p> <p>1.3 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.4 Safety hazards that have not previously been identified are documented and risk control</p> |
|---|--|

ELEMENT**PERFORMANCE CRITERIA**

		measures devised and implemented in consultation with appropriate personnel.
	1.5	The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel.
	1.6	Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.7	Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
2	Diagnose and rectify faults	
	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4	Logical diagnostic methods are applied to diagnose navigation system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
	2.5	Suspected fault scenarios are tested as being the source of system problems.
	2.6	Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of electronics.
	2.7	Faults in the electronic components of the system are rectified to raise navigation system to its operation standard.
	2.8	System is tested to verify that the system operates as intended and to specified

ELEMENT**PERFORMANCE CRITERIA**

- requirements.
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Commissioning of navigational systems
- 3.1 OHS risk control measures and procedures for carrying out the work are followed.
- 3.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular air navigational system.
- 3.3 Measuring instruments are set up and adjusted in accordance with transmission/reception requirements and equipment manufacturer's instructions.
- 3.4 Adjustments are made to provide optimum transmission/reception performance within regulatory requirements.
- 3.5 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 3.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 3.7 Setting-up is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.

ELEMENT	PERFORMANCE CRITERIA
4 Complete and report fault diagnosis and rectification activities	4.1 OHS work completion risk control measures and procedures are followed.
	4.2 Work site is made safe in accordance with established safety procedures.
	4.3 Rectification of faults is documented in accordance with established procedures.
	4.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified and re commission

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing, rectifying faults and commissioning air navigation systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH191A

Electronic communications - air navigation systems

Evidence shall show an understanding of electronic communications - air navigation systems to an extent indicated by the following aspects:

T1 Aviation navigation services and principles encompassing:

- role of navigation aids in providing Air Traffic Control Services.
- functions provided by navigational aids
- Rho Theta concept in context of navigational aids used within aviation.
- relevant ICAO (Annex 10) specifications
- Monitoring – equipment, status and pilot

T2 Principle of operation of the NDB encompassing:

- simple block diagram of an NDB
- frequency band of operation
- parameters ICAO requires to be monitored
- typical radiation hazard issues
- simple block diagram of the aircraft Automatic Direction Finding (ADF) display
- NDB is used by Pilots and ATC

T3 Principle of operation of the CVOR/DVOR encompassing:

- simple block diagram of a CVOR labelling each part.
- basic principles of variable and reference information
- RF phasing and far field space modulation
- frequency band of operation.
- features of a typical aircraft display
- possible errors and their cause in a CVOR.
- typical CVOR and DVOR facilities.
- main differences of operation between CVOR and DVOR.

T4 Principle of operation of the DME encompassing:

- simple block diagram of a DME
- typical timing diagram from interrogation to reply.
- features of aircraft display system

REQUIRED SKILLS AND KNOWLEDGE

- frequency band of operation
- modes of operation.

T5 Principle of operation of the ILS

- frequency band of operation
- simple diagram of the localiser antenna pattern marking on it the zero DDM line, the represented colour and modulating frequency of each lobe and the clearance signal.
- simple sketch showing the glide path and the location of the marker beacons listing their identification, frequency and duration.
- simple block diagram to show the generation of the Carrier and Sidebands and Sideband only signals.
- ILS antenna arrays and farfield radiation patterns
- Far field phasing and space modulation
- terms DDM, and SDM.
- performance requirements for CAT I, CAT II and CAT III ILS

T6 Principle of Global Navigation Satellite System (GNSS)

- basic principles of the Wide Area Differential Global Positioning System (WADGPS)
- basic principles of the Local Area Differential Global Positioning System (LADGPS)

T7 NDB Technology and Maintenance.

- key functional modules of a contemporary NDB transmitter.
- function of the aerial coupling unit.
- radiation hazard issues, site restrictions and safety considerations in context of an NDB facility.
- signals in and out of the main components
- key features and theory of operation of an NDB antenna (Field Pattern, Capacity hat and Ground Plane)
- hardware configurations of current models of NDB used in the National Airways System of Australia.
- indicators on NDB equipment that may be used to determine status and locate a fault
- method(s) for conducting routine performance measurements on NDB equipment.
- process for removing an NDB from service.
- correct test equipment based on measurement tolerance and parameter being measured.
- correct use of selected test equipment.
- process for returning the aid to service
- locate and identify appropriate NDB documentation (AEIs)
- Flight Check of an NDB is mandated.

REQUIRED SKILLS AND KNOWLEDGE

T8 DME Technology and Maintenance.

- key functional modules of a contemporary DME beacon.
- modes of operation and relevant channel spacing for the Interrogation and Reply of the Beacon.
- purpose of the “squitter”.
- typical DME Block Diagram, the signal flow through the Beacon from incoming interrogation to outgoing Reply.
- function of each module in a contemporary DME.
- term “Gaussian Shaped Pulse” and why it is used.
- operation and purpose of the identification signal including test transmissions.
- define “Dead Time”
- monitored parameters of a DME.
- controls and indicators
- correct ON/OFF sequence
- process for removing a DME from service.
- auto-recycle operation
- typical function of the CTU for testing
- typical Alarm Registers
- measurement of parameters such as: Beacon Delay, Pulse Spacing, Pulse Width, Ident, Beacon Sensitivity, Selectivity, Reply Rate, Dead Time, Frequency, Monitor limits, Antenna VSWR, using the correct test equipment.
- correct use of test equipment.
- correlate the measurements to the Standard Operating Conditions (SOC)
- maintenance actions that may be performed without the requirements of a flight inspection
- Flight Calibration Check of an DME is mandated.
- process for returning the aid to service
- locate and identify appropriate DME documentation (AEIs)

T9 CVOR Technology and Maintenance.

- principles of operation of a VOR and how the component signals are generated in a contemporary CVOR beacon.
- basic operation and functionality of the; Transmitter, Goniometer, Modulation Eliminator, Monitor, Antenna
- typical monitored parameters for a CVOR
- purpose of monitor bypass
- correct use of test equipment and interpretation of results, SOCs
- measurement of performance parameters using the correct test equipment.
- correct use of test equipment.
- correlate the measurements to the Standard Operating Conditions (SOC).
- maintenance actions that may be performed without the requirements of a flight

REQUIRED SKILLS AND KNOWLEDGE

inspection

- maintenance actions that do require a flight inspection
- importance of beacon accuracy

T10 DVOR Technology and Maintenance.

- principles of operation of a DVOR and how the component signals are generated in a contemporary DVOR beacon.
- basic operation and functionality of the; modules used in the following sub systems; Carrier generation and modulation, Timing sequence generation, Sideband amplifier and modulator, Sideband antenna commutation, Monitor and Controller
- front panel indications under normal and fault conditions
- operation and functionality of the following circuits; Carrier amplifier and modulation (CGD, CPA, CDC, CMP), Timing signals generation (TSD), Reference phase generator (RPG), Antenna switching (ASD, ADS), Sideband generator (SGN, SMA, SCU), Control unit (CTU), Monitor unit (MRF, MSC, MFI, MBD, MSD).
- typical monitored parameters for a DVOR
- correct use of test equipment and interpretation of results, SOCs
- measurement of performance parameters using the correct test equipment
- correct use of test equipment.
- correlate the measurements to the Standard Operating Conditions (SOC).
- maintenance actions that may be performed without the requirements of a flight inspection
- maintenance actions that do require a flight inspection
- importance of beacon accuracy

T11 ILS Technology and Maintenance.

- ILS functional blocks and typical cabinet modules of a Localiser and Glide Path (NM7000 series).
- main functional elements of a contemporary marker beacon.
- location and function of modules and system interconnections; Transmitter, Changeover, Monitor, Transmitter controller, Remote control, RMS/RMM, Power
- block diagram illustrate at specified points, the signal flow out from the distribution side and/or return via the recombination side of a Localiser and/or Glide Path
- operation of a specified Localiser antenna array.
- operation of an 'M'-Array or other specified Glide Path antenna array
- the features and function of the RMM and/or RMS.
- performance requirements for CAT I, CAT II and CAT III ILS and how these are provisioned in the system hardware and monitoring.
- function of equipment indicators and controls, including the correct operation of controls to achieve a nominated function

REQUIRED SKILLS AND KNOWLEDGE

- typical monitored parameters for a Localiser, Glide Path and Marker beacon
- correct use of test equipment (BITE and external) and interpretation of results, SOCs
- measurement of performance parameters using the correct test equipment.
- correct use of test equipment.
- correlate the measurements to the Standard Operating Conditions (SOC).
- maintenance actions that may be performed without the requirements of a flight inspection
- maintenance actions that do require a flight inspection
- typical tests and maintenance actions required during a flight calibration of an ILS

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may

be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or

- licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
 - Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose and rectify faults in air navigation systems as described in 8) and including:
 - a. Applying logical diagnostic methods.
 - b. Using fault scenarios to test the source of system faults.
 - c. Identifying faults and competency needed to rectify them.
 - d. Rectifying faults in system electronics.
 - e. Verifying that the system operates correctly.
 - f. Documenting fault rectification.
 - g. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and

replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in air navigation systems.

Method of assessment**9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units**9.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four system faults across a representative range of electronic air navigation systems.

NDB, VOR, DME, ILS. GNSS

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

1) Scope:

1.1) Descriptor

This unit covers development of engineering solutions for air surveillance apparatus and systems. The unit encompasses safe working practices, interpreting diagrams, applying logical engineering solution methods and knowledge of air surveillance apparatus and systems, safety and functional testing, and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as traineeship.

License to practice**3)**

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

The skills and knowledge described in this unit may require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH116A Find and repair microwave amplifier section faults in electronic apparatus

UEENEEH172A Troubleshoot communication systems

UEENEEH190A Provide engineering solutions to air traffic control system problems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills

indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| <p>1 Prepare to provide engineering solutions</p> | <p>1.1 OHS procedures for a given work area are obtained and understood.</p> <p>1.2 Operational safety procedures for a given work area are obtained and understood</p> <p>1.3 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.4 Safety hazards that have not previously been identified are documented and risk control</p> |
|---|--|

ELEMENT**PERFORMANCE CRITERIA**

		measures devised and implemented in consultation with appropriate personnel.
	1.5	The extent of problems is determined from reports and other documentation and from discussion with appropriate personnel.
	1.6	Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.7	Tools, equipment and testing devices needed to provide engineering problems are obtained in accordance with established procedures and checked for correct operation and safety.
2	Provide engineering solutions	2.1 OHS risk control measures and procedures for carrying out the work are followed.
		2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
		2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
		2.4 Logical diagnostic methods are applied to provide engineering solutions to problems in air surveillance apparatus and systems employing measurements and estimations of system operating parameters referenced to system operational requirements.
		2.5 Suspected problems scenarios are tested as being the source of system problems.
		2.6 Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of electronics.
		2.7 Problems in the electronic components of the system are rectified to raise air surveillance and observation system to its operation standard.
		2.8 System is tested to verify that the system operates as intended and to specified

ELEMENT	PERFORMANCE CRITERIA
	requirements.
	2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.11 Rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Complete and report engineering solutions activities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is made safe in accordance with established safety procedures.
	3.3 Engineering solutions for air surveillance apparatus and systems is documented in accordance with established procedures
	3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices, engineering solutions air surveillance and observation systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH192A

Electronic communications air surveillance systems

Evidence shall show an understanding of electronic communications - air surveillance systems to an extent indicated by the following aspects:

T1 Basic Radar Principles encompassing:

- requirement of surveillance to support efficient, safe and effective ATC operations
- aircraft aspects
- basic radar history
- electromagnetic waves
- radiation hazards and OHS considerations
- radar principles of operation
- types of radar and radar block diagram
- main inputs and outputs for designated blocks of a given diagram
- requirement for redundancy
- go / nogo concept
- radar performance limitations
- different types of radar self testing
- surveillance- original environment, developing environment
- surveillance users
- radar locations and radar coverage map

T2 Principles of operation of a Primary Surveillance Radar (PSR) encompassing:

- purpose of a PSR
- principles of radar blind speed and measures to overcome this
- why radars use pulse compression and list the types of modulation used
- diversity operation is used in Primary radars
- radiation pattern for a 'cosec²' and slotted waveguide antenna
- radars use high / low coverage
- features of Primary radars currently in service

T3 Principles of operation of a Classical Secondary Surveillance Radar (SSR) encompassing:

- similarities and differences between PSR and SSR

REQUIRED SKILLS AND KNOWLEDGE

- requirement to use wobulation
- relevant ICAO (Annex 10) specifications
- modes of operation
- transponder special replies and their functions
- SSR radiation patterns
- reasons for “No Reply” from an aircraft
- define garbling
- define FRUIT
- function of a Site Monitor
- advantages and disadvantages of SSR over primary radar
- features of classical SSRs

T4 Principles of operation of a Mode S Secondary Surveillance Radar encompassing:

- improvements Mode S has over classical SSR
- ICAO requirements relating to the use of aircraft addresses and Interrogator Codes
- purposes of All-call and roll-call interrogations
- principles of acquiring aircraft
- users of Mode S Transponders quitter
- protocols used to reduce FRUIT
- principles of All-call Lockouts and Lockout Overrides
- requirement for Classical SSR and Mode S SSR compatibility
- benefits to a controller of using elementary and enhanced surveillance
- features of Mode S SSRs

T5 Principles of operation of Radar Track Processors encompassing:

- function of radar track processor currently in service

T6 Principles of operation of Radar RCMS

- requirement for radar RCMS
- Radar RCMS network layouts

T7 Principles of operation of ADS encompassing:

- principles of operation of ADS-B
- aircraft data transmitted by ADS-B
- aircraft ADS-B transmission rates
- principles of operation of ADS-C

T8 Principles of operation of Multilateration encompassing:

- introduction, definition and history of Multilateration
- TDOA concepts
- Airport / local area concept
- Airborne / wide area concept

REQUIRED SKILLS AND KNOWLEDGE

- Data and identification
- Surveillance strategies
- MLAT coverage
- principles of operation of MLAT
- message formats used by MLAT systems
- similarities and differences between MLAT and ADS-B systems

T9 Principles of Surveillance Track Messages encompassing:

- requirement for duplicated data paths
- ATS Centre processing and displaying of surveillance tracks
- contents of data messages sent from radar sites
- contents of data messages sent from ADS-B radar sites

T10 Principles of ACAS/TCAS encompassing:

- purpose and types of ACAS/TCAS
- function of ACAS/TCAS
- how ACAS/TCAS acquires and tracks aircraft
- ICAO requirements with respect to complying with RAs

T11 Performance characteristics and checks encompassing:

- measurement of radar PRF
- measurement of radar pulse shape / timing check
- measurement of radar transmitter frequency
- performing radar spectrum check
- identification of radar performance with or outside documented performance limits

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Provide solutions in air surveillance apparatus and systems as described in 8) and including:
 - a. Applying logical diagnostic methods.
 - b. Using test equipment to test the apparatus and system
 - c. Identifying problems and competency needed to provide solutions
 - d. Implementation of solutions
 - e. Verifying that the system operates correctly.

- f. Documenting engineering solutions.
- g. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and
specific
resources for
assessment** **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing engineering solutions for air surveillance apparatus and systems.

**Method of
assessment** **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires

that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four engineering solutions in a representative range of electronic air surveillance and observation systems.

Primary Surveillance Radar (PSR)

Secondary Surveillance Radar (SSR)

Mode S Secondary Surveillance Radar

Radar Track Processors

Radar RCMS

ADS

Multilateration

Surveillance Track Messages

ACAS/TCAS

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Electronics

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers using drawings, specifications, standards and equipment manual applicable to installing, maintaining and fault finding process controls. It encompasses the principles of process control embodied in drawings, standards, specifications and equipment manuals, matching equipment with that specified for a given function and location and determining the connections required between pneumatic, hydraulic and electrical equipment from instrumentation drawings and specifications

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical

License to practice

3)

work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEE101A Apply Occupational Health Safety regulations, codes and practices in the workplace`

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills

indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.
---	---

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to use instrumentation drawings, specification, standards and equipment manuals.	1.1 Established OHS risk control measures and procedures are followed.
	1.2 The need for instrumentation drawings, specification, standards or equipment manuals is determined from the nature of the work to be undertaken.
	1.3 Established routines and procedures are followed to obtain instrumentation drawings, specification, standards or equipment manuals required for the work to be undertaken.

ELEMENT	PERFORMANCE CRITERIA
2 Use instrumentation drawings, specification, standards and equipment manuals	2.1 Instrumentation drawings, specification, standards and/or equipment manuals are selected, appropriate to the work being undertaken.
	2.2 Instrumentation drawings, specification, standards and equipment manuals are interpreted using knowledge of process controls and instrumentation drawing layouts, conventions and symbols.
	2.3 Dimensions are extracted from drawings and diagrams for application to work undertaken.
	2.4 Location of equipment is determined from instrumentation drawings and specification.
	2.5 Connections between pneumatic, hydraulic and electrical equipment are determined from instrumentation drawings and specifications
	2.6 Equipment manuals are reviewed to ascertain their format and where information relevant to the work to be undertaken is located.
	2.7 Information given in equipment manuals is interpreted in relation to the work to be undertaken.
3 Convey instrumentation information and ideas using drawings and diagrams.	3.1 Drawing conventions are used in neat freehand drawings to convey instrumentation information and ideas to others involved in the work to be undertaken.
	3.2 Instrumentation drawing conventions are used to neatly correct freehand original job drawing to show final 'as-installed' arrangement.
	3.3 Corrected drawings are forwarded to appropriate person(s) in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and using instrumentation drawings, specification, standards and equipment manuals.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI101A Concepts and Practices of Industrial Instrumentation

Evidence shall show an understanding of the concepts of industrial instrumentation and the basic practices to an extent indicated by the following aspects:

T1 Industrial Instrumentation encompassing:

- Introduction to the purposes of measurement in industrial processes
- Instrument control loops
- Types of measurement in these processes
- Local and remote measurement
- Measurement signal methods
- Signal transmissions electrical standards
- Signal transmissions pneumatic standards
- Flow, temperature, pressure and other appropriate measurements.
- Identification and purpose of instruments measuring processes directly and those measuring indirectly.
- Instrumentation and control components: sensors, transducers, converters and transmitters.

T2 Instrument Standards encompassing:

- Instrumentation standards
- Relationship between standards
- Using standards
- Fluids in Process Piping Colour Coding.
- Instruments symbols

T3 Instrumentation Terminology and SI units encompassing:

- SI base units
- SI derived units
- Scientific notation and engineering notation
- SI prefixes.
- Instrumentation metric units
- Non-standard SI Units - kg/cm², etc.
- Conversion of units
- Instrumentation terminology:

REQUIRED SKILLS AND KNOWLEDGE

- Span
- Range
- Accuracy
- Precision
- Errors
- Zero
- Repeatability
- Sensitivity
- Hysteresis

T4 Calibration of link and lever instruments encompassing:

- Principles of levers and links and calibration of indicator recorder instrument
- Calibration terms
- Calibrate a link and lever instrument
- Interpret calibration data so as to identify the types of error displayed by an instrument and whether the instrument is within its specified accuracy.
- Interpretation of graphs and tables associated with instrumentation

T5 Instrumentation safe working practices encompassing:

- Identification of instrumentation and control hazards
- Risk control measures for instrumentation work.
- Risk assessment

T6 Instrumentation drawings, diagrams and manuals encompassing:

- Electrotechnology drawing symbols for instrumentation and control (electrical/electronic circuits; Instrument circuits/diagrams; PLC diagrams; pneumatic; hydraulic)
- standards used in Instrumentation drawings (ISA; ASME; AS; SAMA).
- Drawings used in Instrumentation - schematic; single line; wiring; PLC diagrams; process flow diagrams - brief instrument information; process loop diagrams - details, terminals, types of instruments.
- Manufacturers Data Sheets, Manuals, Specifications and Test Procedures - instrumentation Manuals, Catalogues and Drawings.
 - Interpretation of the specifications contained within instrumentation Manuals, Catalogues and Drawings.
 - Interpretation of the test procedures contained within instrumentation Manuals, Catalogues and Drawings.
 - Comparison of data presented in different forms for the same equipment.
 - Identification of data relevant to instrumentation from a range of publicity material.
 - Extraction of information such as calibration, testing or installation procedures from manuals, specification sheets and drawings.

REQUIRED SKILLS AND KNOWLEDGE

- Quantity take-offs and Parts Lists
 - Part Numbers for components, assemblies and equipment.
 - Parts List for a specified project or installation from Manuals, Catalogues, Specifications and Drawings.
 - List of equipment, required to undertake a specified project or installation, from Manuals, Catalogues, Specifications and Drawings.
 - Identification and extraction of a Part Number for an actual sample component or part from a Manual, Catalogue, Specification and/or Drawing
- Sketching of instrumentation and control drawings:
 - Sketching a schematic circuit diagram from a given circuit board layout diagram, wiring or installation drawing and installation or modification of a specified project using information contained within Manuals,
 - Sketching a part or equipment layout needed to perform a specified task, such as installation or modification, from given Manuals, Catalogues, Specifications and Drawings

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Use instrumentation drawings, specification, standards and equipment manuals as described in 8) and including:

- A Identifying instrumentation drawings, specification, standards and equipment manuals relevant to the work to be undertaken.
- B Interpreting instrumentation drawings, specification, standards and equipment manuals using knowledge of process controls and instrumentation drawing layouts, conventions and symbols.
- C Determining location of equipment from instrumentation drawings and specification
- D Determining connections between pneumatic, hydraulic and electrical equipment correctly
- E Using correct conventions in freehand drawings.
- F Giving correct information in freehand drawings.
- G Dealing with unplanned event

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment

environment.

Note: Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to instrumentation drawings, specification, standards and equipment manuals

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEE10 7A Use drawings, diagrams, schedules, standards, codes and specifications

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to instrumentation assembly, installation, fault finding, maintenance or development work functions using at instrumentation drawings, specification, standards and equipment manuals for least two different process control systems

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers setting up pressure measuring components and systems and providing solutions to pressure measurement problems as they apply to various process and control work functions. It encompasses working safely, setting up and calibrating pressure measuring components and systems, problem solving techniques, the use of a range of measuring devices, providing solutions derived from measurements and calculations to predictable problems in pressure measurement components and systems.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. The unit may also be used to augment previously acquired competencies.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the work place. However they are subject to regulations directly related to occupational health and safe and contracts of training such

License to practice

3)

as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare to work on pressure measurement components and systems	1.1	OHS procedures for a given work area are identified, obtained and understood
		1.2	OHS risk control work preparation measures and procedures are followed.
		1.3	The nature of the pressure measurement problem is obtained from documentation or from an appropriate person to establish the scope of work to be undertaken.
		1.4	Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved or affected by the work.
		1.5	Sources of materials that may be required for the work are established in accordance with established procedures.

ELEMENT

PERFORMANCE CRITERIA

	1.6	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2	Solve pressure measurement problems	<p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 The need to test or measure any electrical components live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures</p> <p>2.3 Pressure measurement apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.4 Established methods are used to solve measurement problems from tests and calculated values as they apply to pressure measurement components and systems</p> <p>2.5 Unexpected situations are dealt with safely and with the approval of an authorised person</p> <p>2.6 Problems are solved using sustainable energy principles and without damage to apparatus, the surrounding environment or services</p>
3	Complete work and document work activities	<p>3.1 OHS work completion risk control measures and procedures are followed</p> <p>3.2 Work site is cleaned and made safe in accordance with established procedures</p> <p>3.3 Written justification is made for solutions to pressure measurement problems</p> <p>3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in pressure measurement components and systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI102A Pressure Measurement

Evidence shall show an understanding of pressure measurement used in industrial processes to an extent indicated by the following aspects:

T1 Pressure measurement terms and transducers encompassing:

- Purpose of pressure measurement
- Applications of pressure measurement
- Common terms and relationships
- Pressure and the relationship between applied pressure, density, mass, force, area and the height of liquid columns.
- Types and applications of pressure transducers
- Transducers input/outputs - Measurement and evaluation
- Transducer connections

T2 Manometers encompassing:

- Types of manometers
- Operating principles of manometers
- Gauge pressure measurement
- Wet leg
- Manometers applications
- Manometer limitations

T3 Absolute, gauge and atmospheric pressure measurement encompassing:

- Absolute and gauge pressure.
- Absolute zero pressure
- Atmospheric pressure
- Barometers
- Absolute pressure gauges

T4 Mechanical pressure measuring devices encompassing:

- Bourdon tube gauges
- Spiral and helical gauges
- Term: Flexibility spring rate
- Other mechanical pressure elements: bellows, capsule, slack/stiff diaphragms.

REQUIRED SKILLS AND KNOWLEDGE

- Pressure measurement using elastic deformation gauges
- T5 Electrical pressure measuring devices encompassing:
- Electrical sensors for pressure measurements: (capacitive, piezo, inductive, strain gauge).
 - Operating principles of electrical pressure elements
 - Testing elements
 - Electrical signal transmission devices.
- T6 Dead weight testers encompassing:
- Law of hydraulics
 - Dead Weight Tester operating principles
 - Dead Weight Tester operating procedures
 - Terms: Backlash, hysteresis, repeatability
 - Calibration of gauges
 - Precautions
 - Bourdon tube gauges calibration
- T7 Testing and installation of pressure measurement devices encompassing:
- Testing
 - Calibration
 - Installation of pressure measurement devices within pressure vessel systems.
 - Isolation, seal, vent, drain and bypass valves location and operation sequence.
- T8 Pressure transmitters and converters encompassing:
- Principle of operation of moment, motion and forced balanced transmitters for pneumatic, electrical, and electronic transmitters.
 - Applications of transmitters
 - Transmitter connections
 - Manufacturer's manuals
 - Calibration of transmitters
 - Principle of operation of signal converters
 - Applications of pressure converters
 - Calibration of pressure converters

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in pressure measurement systems as described in 8) and including:

- A Determining the operating parameters of a pressure measuring system
- B Setting up and calibrating a pressure measuring system
- C Altering an existing pressure measuring system to comply with specified operating parameters
- D Developing a pressure measuring system to comply with a specified function and operating parameters
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in pressure measurement systems.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE10 Use drawings, diagrams, schedules, standards,
7A codes and specifications

UEENEEI107 Install instrumentation and control cabling and
A tubing

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to pressure measurement apparatus and systems as they apply to chemical, industrial or medical processes associated with installation, fault finding, maintenance or development work functions, and at least three of the following types pressure measurement problems on at least two occasions:

- Determining the operating parameters of a pressure measuring system
- Setting up and calibrating a pressure measuring system
- Altering an existing pressure measuring system to comply with specified operating parameters
- Developing a pressure measuring system to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Instrumentation and Control

UEENEEI103A Solve problems in density/level measurement components and systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers setting up density/level measuring components and systems and providing solutions to density/level measurement problems as they apply to various process and control work functions. It encompasses working safely, setting up and calibrating density/level measuring components and systems, problem solving techniques, the use of a range of measuring devices, providing solutions derived from measurements and calculations to predictable problems in density/level measurement components and systems.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. The unit may also be used to augment previously acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the work place. However they are subject to regulations directly related to occupational health and safe and contracts of training such

License to practice

3)

as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI10 1A Use instrumentation drawings, specification, standards and equipment manuals

UEENEEI10 2A Solve problems in pressure measurement components and systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and

Numeracy⁷

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to work on density/level measurement components and systems	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the density/level measurement problem is obtained from documentation or from an appropriate person to establish the scope of work to be undertaken.
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved or affected by the work.

ELEMENT	PERFORMANCE CRITERIA
2 Solve density/level measurement problems	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure any electrical components live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Density/level measurement apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Established methods are used to solve measurement problems from tests and calculated values as they apply to density/level measurement systems.
3 Complete work and document work activities	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6 Problems are solved using sustainable energy principles and without damage to apparatus, the surrounding environment or services.
	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
3.3 Written justification is made for solutions to density/level measurement problems.	
3.4 Work completion is documented and appropriate person(s) notified in accordance	

ELEMENT

PERFORMANCE CRITERIA

with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in density/level measurement systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI103A Level/Density Measurement

Evidence shall show an understanding of level/density measurement used in industrial processes to an extent indicated by the following aspects:

T1 Introduction to level/density measurement encompassing:

- Definitions density and relative density (sg)
- Application
- Factors affecting density
- Density measurement
- Archimedes' Principle
- Density calculations
- Types and applications of level/density transducers
- Transducers input/outputs - measurement and evaluation
- Transducer connections

T2 Level measurement techniques – sight type encompassing:

- Dipstick and hook gauges
- Tubular and flat glass gauges
- Accuracy of flat glass gauges
- Magnetically coupled gauges
- Float Level Measuring devices
- Application of float devices

T3 Level/density measurement - force type techniques encompassing:

- Comparison of float and displacement type systems
- Interface sensing devices
- Torque tube type displacer operation
- Torque tube type displacer construction
- Pneumatic and electronic transmitters

T4 Level/density measurement - pressure-type techniques encompassing:

- Diaphragm level detectors
- Applications of diaphragm level detectors
- Differential pressure cells advantages and disadvantages

REQUIRED SKILLS AND KNOWLEDGE

- Density measurement using D/P cells

T5 Level/density measurement - electrical techniques encompassing:

- Application of conductance probes
- Operation of a conductivity-level controller
- Resistance tapes level detectors
- Capacitance probes level detectors
- Ultrasonic level detectors
- Microwave-based level detectors
- Nucleonic-type level sensors
- Load Cells used for level measurement

T6 Level/density measurement - non-intrusive type techniques encompassing:

- Radiation-type density sensor
- Hydrometer element used for density measurement
- Vibrating tube type liquid density meter

T7 Level/density measurement calibration encompassing:

- D/P cell calculations
- D/P cell calibration
- Open Tank installation level measurement.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships.

However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace

procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in density/level measurement systems as described in 8) and including:

- A Determining the operating parameters of a density/level measuring system
- B Setting up and calibrating a density/level measuring system
- C Altering an existing density/level measuring system to comply with specified operating parameters
- D Developing a density/level measuring system to comply with a specified function and operating parameters
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice

using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in density/level measurement systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEI10 2A Solve problems in pressure measurement components and systems

UEENEEI10 4A Solve problems in flow measurement components and systems

UEENEEI10 5A Solve problems in temperature measurement components and systems

The critical aspects of occupational health and safety covered in unit UEENEEI101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the density/level measurement apparatus and systems as they apply to chemical, industrial or medical processes associated with installation, fault finding, maintenance or development work functions, and at least three of the following types density/level measurement problems on at least two occasions:

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in flow measurement systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI104A **Fluid flow measurement principles**

Evidence shall show an understanding of fluid flow measurement used in industrial processes to an extent indicated by the following aspects:

Introduction to flow measurement in closed conduits encompassing:

- Basic principles of fluid flow
- SI units pertaining to flow and conversion factors to SI units.
- Volumetric and mass flow
- Reynolds numbers
- Behaviour of fluid flow in pipes
- Correction methods
- Flow terminology
- Pressure loss
- Integration
- Uses of flow meters
- Types and applications of flow transducers
- Transducers input/outputs - Measurement and evaluation
- Transducer connections

Differential pressure flow measurement encompassing:

- Bernoulli's theorem
- Calculations of the differential pressure
- Calibration of the associated secondary instrument.
- Square-root head law
- Types of differential pressure flow meters.
- Types of differential pressure flow primary elements
- Installation of differential pressure flow primary elements

Differential pressure flow measurement circuits encompassing:

- Define turndown and accuracy

REQUIRED SKILLS AND KNOWLEDGE

- Output signals
- Square root extractors
- Scaling factors
- Signal scaling

Variable area flow meters and turbine flow meters encompassing:

- Operating principles of variable area flow meters
- Density correction calculations
- Variable area meters performance factors
- Applications of variable area meters
- Installation of variable area meters
- Operating principles of turbine meters
- Scaling factors
- Performance of turbine meters.
- Application of turbine meters
- Installation of turbine meters

Electromagnetic, vortex and ultrasonic flow meters encompassing:

- Operating principles of electromagnetic flow meters
- Construction of electromagnetic flow meters
- Performance of electromagnetic flow meters.
- Applications of electromagnetic flow meters
- Installation of electromagnetic flow meters
- Operating principles of vortex flow meters
- Operating principles and applications of ultrasonic flow meters
- Installation of vortex and ultrasonic flow meters

Mass flow measurement and volumetric flow rate correction encompassing:

- Volumetric flow rate correction
- Calculations of corrected flow rate
- Calibration of corrected systems components
- Mass flow measurement
- Operating principles of mass flow meters
- Performance of mass flow meters.
- Applications of mass flow meters
- Installation of mass flow meters

Mechanical flowmeters for liquid service encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Operating principles of mechanical flow meters
- Performance of mechanical flow meters
- Applications of mechanical flow meters
- Installation of mechanical flow meters
- Operating principles of gas flow meters
- Performance of gas flow meters
- Applications of gas flow meters
- Installation of gas flow meters

Open-channel flow measurement and flow meter calibration encompassing:

- Principles of fluid flow in open channels
- Principles of head/flow relationships
- Non-linear head/flow relationships
- Calculations of the head generated
- Operating principles of secondary instruments
- Open channel flow measurement
- Installation of open channel flow meters
- Flow meter calibration

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships.

However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in flow measurement systems as listed as described in 8) and including:

- A Determining the operating parameters of a flow measuring system
- B Setting up and calibrating a flow measuring system
- C Altering an existing flow measuring system to

comply with specified operating parameters

- D Developing a flow measuring system to comply with a specified function and operating parameters
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in flow measurement systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEI102 Solve problems in pressure measurement
A components and systems

UEENEEI103 Solve problems in density/level measurement
A components and systems

UEENEEI105 Solve problems in temperature measurement
A components and systems

The critical aspects of occupational health and safety covered in unit UEENEEI101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the flow measurement apparatus and systems as they apply to chemical, industrial or medical processes associated with installation, fault finding, maintenance or development work functions, and, and at least three of the following types flow measurement problems on at least two occasions:

- Determining the operating parameters of a flow measuring system
- Setting up and calibrating a flow measuring system
- Altering an existing flow measuring system to comply with specified operating parameters
- Developing a flow measuring system to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**
Instrumentation and Control

UEENEEI105A Solve problems in temperature measurement components and systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers setting up temperature measuring components and systems and providing solutions to temperature measurement problems as they apply to various process and control work functions. It encompasses working safely, setting up and calibrating temperature measuring components and systems, problem solving techniques, the use of a range of measuring devices, providing solutions derived from measurements and calculations to predictable problems in temperature measurement components and systems.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. The unit may also be used to augment previously acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the work place. However they are subject to regulations directly related to occupational health and safe and contracts of training such

License to practice

3)

as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI10 1A Use instrumentation drawings, specification, standards and equipment manuals

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in temperature measurement components and systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI105 Temperature measurement principles

A

Evidence shall show an understanding temperature measurement used in industrial processes to an extent indicated by the following aspects:

Introduction to Temperature Measurement encompassing:

- Temperature measurement terms
- International Temperature Scale
- Temperature scales
- Conversion of temperature readings
- Temperature measuring elements
- Temperature sensor selection factors
- Errors in temperature measurement
- Methods used to reduce errors.
- Types and applications of temperature transducers
- Transducers input/outputs - Measurement and evaluation
- Transducer connections

Resistance Temperature Detectors (RTDs) encompassing:

- Selection of RTDs
- RTD terms
- Determining RTD standard resistance values
- Calculating RTD resistance or temperature
- Selecting RTD configurations
- Using Australian Standards for RTDs

RTD Measuring Circuits encompassing:

- RTD unbalanced Wheatstone bridge circuits
- Calculations of unbalanced Wheatstone bridge circuits voltage outputs
- Non-linear voltage output compensation methods

REQUIRED SKILLS AND KNOWLEDGE

- Calculations of RTD resistance in Wheatstone bridge circuits
- RTD lead resistance errors
- Compensation method of lead resistance errors
- RTD immersion error

Thermocouples encompassing:

- Thermo-electric effects principles
- Thermocouple thermo electric laws
- Determining thermocouple measuring junction temperature
- EMF distribution in thermocouple circuits
- Calibration of thermocouple measuring instruments
- Characteristics of thermocouples
- Advantages and disadvantages of thermocouples

Thermocouple Measuring Circuits encompassing:

- Characteristics of thermocouple connection wires
- Identification of thermocouple connection wires
- Thermocouple measuring junction configurations
- Industrial thermocouple assembly
- Thermowell properties
- Thermocouple fabrication methods
- Handling of thermocouples
- Thermocouple test equipment
- Thermocouple selection
- Thermocouple installation errors

Filled System Thermometers encompassing:

- Liquid in glass thermometers construction
- Filled systems operating principles
- Applications of filled system thermometers.
- Calibration of filled systems

Radiation Thermometers encompassing:

- Radiation pyrometer terms
- Operating principles of radiation thermometers.
- Operating principle of radiation pyrometer measurement
- Construction of optical pyrometers and radiation thermometers.
- Signal conditioning
- Factors affecting the use of radiation thermometers

REQUIRED SKILLS AND KNOWLEDGE

- Calibration of optical pyrometers and radiation thermometers.

Other Temperature Measuring Techniques encompassing:

- Thermistor characteristics
- Thermistor temperature measuring circuits operation
- Thermistor digital thermometer
- Temperature measurement solid state devices characteristics
- Temperature measurement solid state devices circuits
- Temperature indicators characteristics
- Temperature indicators applications
- Liquid crystals
- Bimetallic thermometers

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a

percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in temperature measurement systems as listed as described in 8) and including:

- A Determining the operating parameters of a temperature measuring system
- B Setting up and calibrating a temperature measuring system
- C Altering an existing temperature measuring system to comply with specified operating parameters
- D Developing a temperature measuring system to comply with a specified function and operating parameters
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and

materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in temperature measurement systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEI102 Solve problems in pressure measurement components and systems
A

UEENEEI103 Solve problems in density/level measurement components and systems
A

The critical aspects of occupational health and safety covered in unit UEENEEI101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to temperature measurement apparatus and systems as they apply to chemical, industrial or medical processes associated with installation, fault finding, maintenance or development work functions, and, and at least three of the following types temperature measurement problems on at least two occasions:

- Determining the operating parameters of a temperature measuring system
- Setting up and calibrating a temperature measuring system
- Altering an existing temperature measuring system to comply with specified operating parameters
- Developing a temperature measuring system to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Competency Field

Competency Field	11)
	Instrumentation and Control

UEENEEI106A Set up and adjust PID control loops

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers providing solutions to predictable problems in process control loops. It encompasses working safely, applying logical problem solving procedures, evaluating performance, the use of measuring devices, providing solutions to predictable control problems, and documenting solutions.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI10 3A Solve problems in density/level measurement components and systems

UEENEEI10 4A Solve problems in flow measurement components and systems

UEENEEI10 5A Solve problems in temperature measurement components and systems

AND

UEENEEG1 02A Solve problems in low voltage a.c. circuits

OR

UEENEEE1 19A Solve problems in multiple path extra low voltage (ELV) a.c. circuits

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to work on process control loops	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 OHS risk control work preparation measures and procedures are followed
	1.3 The nature of the control problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

ELEMENT	PERFORMANCE CRITERIA
2 Solve process control loops problems	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Process controller/transmitters/converters and control loops are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Known solutions that include the use of measured and calculated values are used for solving predictable process control loops problems.
	2.5 Written justification is made for solutions used to solve process control loops problems.
	2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.7 Problems are solved without damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3 Complete work and provide status report(s)	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Status report(s) is/are completed and work supervisor notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in process control loops.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI106A Process control loops principles

Evidence shall show an understanding of process control principles and systems to an extent indicated by the following aspects:

Introduction to control systems encompassing:

- Control loop components
- Purpose of control loop components
- Open and closed loop control
- Control loop block diagram
- Direct acting and reverse acting controllers.

Process control terminology encompassing:

- Process control terms
- Conversion of gain and % proportional band
- Process controller features

Process characteristics encompassing:

- Process control static characteristics
- Process control characteristic terminology
- Effects of change on process control systems
- process characteristics: , resistive lag, capacitive, dead-time, on/off control, proportional control – amplitude – time, proportional plus integral control, proportional plus integral plus derivative control.

Types of control and control modes encompassing:

- Types of control modes
- Effects of set point/process demand changes
- Repeat/minute
- Integral time
- Changing integral time
- Resistance/capacitance networks

REQUIRED SKILLS AND KNOWLEDGE

- Derivative time
- Reset wind-up

Connection of controllers encompassing:

- Control loop power requirements
- Control loop inputs and outputs
- Instrument connections
- Connecting control loops

Testing of control modes encompassing:

- Process controller adjustments
- Process control test equipment
- Bench testing procedures
- Bench test connections
- Bench testing process controllers

Process controllers encompassing:

- PID functions
- Applications of PID modes of control
- Applications of controller options
- Checking/adjustment of controllers
- Reset windup

Tuning and installation of control loops encompassing:

- Application of control valves
- Control valve characteristics
- Installation and commissioning control loops
- Tuning control loops
- Microprocessor controller tuning

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in process control loops as listed as described in 8) and including:

- A Determine the operating parameters of a controller in an existing control loop.
- B Configure/and tune a controller in an existing control loop to comply with specified operating parameters.

- C Configure/and tune a controller to comply with a specified function
- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in process control loops.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEI102 Solve problems in pressure measurement
A components and systems

UEENEEI103 Solve problems in density/level measurement
A components and systems

UEENEEI104 Solve problems in flow measurement components
A and systems

UEENEEI105 Solve problems in temperature measurement
A components and systems

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to a hydraulic or pneumatic controller and a microprocessor-based controller and solving at least two of the following problems:

- Determining the operating parameters of a controller, in an existing control loop
- Configuring/tuning a controller in an existing control loop to comply with specified operating parameters
- Configuring/tuning a controller to comply with a specified function

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1 Prepare to install cabling and tubing</p>	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 Health and safety risks are identified, and established risk control measures and procedures</p>

ELEMENT**PERFORMANCE CRITERIA**

- in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
 - 1.4 Installation of cabling and tubing is prepared in consultation with other affected by the work and sequenced appropriately.
 - 1.5 The nature and location of the work is determined from documentation or appropriate person(s) to establish the scope of work to be undertaken.
 - 1.6 Cable and tube routes are planned within the constraints of the building and plant structure, significant and regulations.
 - 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
 - 1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
 - 1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
 - 1.10 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements.
- 2 Install cabling, tubing and accessories
 - 2.1 OHS risk control measures and procedures for carrying out the work are followed.
 - 2.2 Plant/machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures
 - 2.3 Cabling, tubing and accessories are installed to comply with technical standards and job specifications and requirements with sufficient

ELEMENT	PERFORMANCE CRITERIA
	excess to affect terminations.
	2.4 Accessories are installed in the required locations and within acceptable tolerances.
	2.5 Cables and conductors are terminated at accessories in accordance with manufacture's specifications and regulatory requirements
	2.6 Tubing is terminated at accessories in accordance with manufacture's specifications and regulatory requirements
	2.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.9 Ongoing checks of the quality of installed wiring are undertaken in accordance with established procedures.
	2.10 Cabling and tubing installation is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3 Completion and report installation activities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Final checks are made to that the installed wiring conforms to requirements.
	3.4 'As-installed' cables, tubes and accessories are documented and appropriate person(s) notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing instrumentation and control cabling and tubing.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI107 Instrumentation and control cables, conductors and tubing

A

Evidence shall show an understanding of instrumentation and control cables, conductors and tubing to an extent indicated by the following aspects:

Instrumentation cable types and terminations encompassing:

- Cable specifications
- Cable applications
- Cable preparation
- Cable termination
- Connection hardware

Instrumentation pneumatic/hydraulic control tubing/piping encompassing:

- Control tubing/piping
- Pneumatic/hydraulic terms
- Cutting pipe tubing/piping
- Bending, shaping/setting pipe and tubing
- Joining connecting/terminating tubing/piping
- Instrumentation air supply maintenance

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install instrumentation and control cabling and tubing as listed as described in 8) and including:
 - A Reading and interpreting drawings related to cable and tube layouts, schedules and control apparatus locations
 - B Routing, placing and securing cables and tubing to comply with requirements

- C Placing and securing accessories accurately
- D Maintaining fire integrity
- E Terminating cables and tubing to comply with requirements
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and
specific
resources for
assessment** 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing instrumentation and control cabling and tubing.

**Method of
assessment****9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units****9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEI108 Install instrumentation and control apparatus and
A associated equipment

The critical aspects of occupational health and safety covered in unit UEENEEI101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to at least three different wiring systems and two types of tubing.

Note:

1. Examples of wiring systems include armoured cable; fire performance cables e.g. MIMS; thermoplastic insulated cable; thermoplastic sheathed cable; UTP, FTP, STP and coaxial communications cables.

2. Tubing types include low pressure metallic and non-metallic tubing and high pressure tubing

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the installation of measurement, monitoring and control apparatus and associated equipment. It encompasses working safely and to installation standards, matching equipment with that specified for a given location, placing and securing equipment accurately, making required pneumatic, hydraulic and electrical circuit connections and completing the necessary installation documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational

License to practice

3)

health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI10 1A Use instrumentation drawings, specification, standards and equipment manuals

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1 Prepare to instrumentation and control apparatus and associated equipment | 1.1 OHS procedures for a given work area are identified, obtained and understood |
| | 1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed. |
| | 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented. |
| | 1.4 Installation of apparatus is prepared in consultation with other affected by the work and sequenced appropriately. |
| | 1.5 The nature and location of the work is |

ELEMENT

PERFORMANCE CRITERIA

- determined from documentation or appropriate person(s) to establish the scope of work to be undertaken.
- 1.6 Location of instrumentation and control apparatus and associated equipment is planned within the constraints of the building structure, significant and regulations.
 - 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
 - 1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
 - 1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
 - 1.10 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements.
- 2 Install instrumentation and control apparatus and associated equipment
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
 - 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
 - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
 - 2.4 Instrumentation and control apparatus and associated equipment is installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance.
 - 2.5 Wiring and tubing is terminated at instrumentation and control apparatus and associated equipment in accordance with

ELEMENT

PERFORMANCE CRITERIA

- manufacture’s specifications and functional and regulatory requirements.
- 2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
- 2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.8 Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures.
- 2.9 Apparatus installation is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
- 3 Completion and report installation activities
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work site is cleaned and made safe in accordance with established procedures.
- 3.3 Final checks are made to that the installed apparatus conforms to requirements.
- 3.4 ‘As-installed’ apparatus and associated equipment is documented and appropriate person(s) notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing instrumentation and control apparatus and associated equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI108 **Instrumentation and control equipment installation requirements and techniques** A

Evidence shall show an understanding of instrumentation and control equipment installation requirements and techniques to an extent indicated by the following aspects:

Regulatory requirements

- Equipment specification
- Manufacturer's installation instructions
- System specifications
- Communication/signal cabling installation requirements
- Power wiring requirements
- Initial set up procedures

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that

can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install instrumentation and control apparatus and associated equipment as listed as described in 8) and including:
 - A Reading and interpreting drawings related to and apparatus locations and tubing electrical circuit connections.
 - B Placing and securing apparatus accurately
 - C Connecting apparatus and associated equipment to comply with requirements.
 - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing instrumentation and control apparatus and associated equipment.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE10 7A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEI107 A Install instrumentation and control cabling and tubing

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance

This unit must be demonstrated in relation to at least four different instrumentation and control apparatus and associated equipment.

- pressure measurement apparatus and systems,
- temperature measurement apparatus and systems,
- level/density measurement apparatus and systems,
- flow measurement apparatus and systems, and
- chemical measurement apparatus and systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to tune control loop with advance functions	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.5 Advanced control loop parameters are identified by reviewing process specification and equipment manuals.
	1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with

ELEMENT	PERFORMANCE CRITERIA
	established procedures and checked for correct operation and safety
	1.7 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements
	1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	1.9 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
2 Tune control loop for advanced functions	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular control system for advanced functions.
	2.3 Control set-point is established and control loop adjusted in accordance with process specification
	2.4 Process is observed and decisions made in consultation with process operation personnel to readjusted control loop settings to ensure process demand and output quality is met.
	2.5 Process control loops are readjusted as required and checked.
	2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8 Ongoing checks of the quality of process output are undertaken to ensure control loop is tuned as required.
	2.9 Tuning is carried out efficiently without waste of materials or damage to apparatus, the

ELEMENT	PERFORMANCE CRITERIA
	surrounding environment or services and using sustainable energy principles.
3 Completion and report control loop tuning activities	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Control loop settings are documented and appropriate person(s) notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up process measuring and control instruments.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI110 Advanced process control

A

Evidence shall show an understanding of advanced process control principles and systems to an extent indicated by the following aspects:

Feedforward control strategy encompassing:

- Need for feedforward control
- Operating principles
- Control system adjustments
- Control system difficulties
- Feedback trim
- Configuration diagrams
- Controller configuration.

Cascade control strategy encompassing:

- Need for cascade control

REQUIRED SKILLS AND KNOWLEDGE

- Operating principles
- Control system adjustments
- Control system problems
- Configuration diagrams
- Controller configuration.

Ratio control strategy encompassing:

- Need for ratio control
- Operating principles
- Control system adjustments
- Configuration diagrams
- Controller configuration

Batch control strategy encompassing:

- Need for batch control
- Operating principles
- Control system adjustments
- Control system controller requirements
- Reset windup
- Configuration diagrams
- Controller configuration

Connection of controllers encompassing:

- Control loop power requirements
- Control loop inputs and outputs
- Instrument connections
- Connecting control loops

Testing of control modes encompassing:

- Process controller adjustments
- Process control test equipment
- Bench testing procedures
- Bench test connections
- Bench testing process controllers

Process controllers encompassing:

- PID functions
- Applications of PID modes of control
- Applications of controller options
- Checking/adjustment of controllers

REQUIRED SKILLS AND KNOWLEDGE

- Reset windup

Tuning and installation of control loops encompassing:

- Application of control valves
- Control valve characteristics
- Installation and commissioning control loops
- Tuning control loops
- Microprocessor controller tuning.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to find and repair faults in final control elements	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the fault is obtained from documentation, tests or from work supervisor to establish the scope of work to be undertaken.
	1.4 The need to test or measure operating systems is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.6 Sources of materials that may be required for the work are established in accordance with

ELEMENT	PERFORMANCE CRITERIA
	established procedures.
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety
2 Find faults in final control elements and associated equipment	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.3 Fault finding is approached methodically drawing on knowledge of processes, control valves, actuators and positioners using measured and calculated values.
	2.4 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage
	2.5 Faulty components are rechecked and their fault status confirmed.
	2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.7 Fault finding activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
3 Rectify faults in final control elements and associated equipment	3.1 OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures
	3.3 Materials required to rectify faults are sourced and obtained in accordance with established procedures.
	3.4 Rectification and repairs are affected efficiently without damage to other components, apparatus

ELEMENT	PERFORMANCE CRITERIA
	or circuits.
	3.5 Effectiveness of repairs is tested in accordance with established procedures.
	3.6 Apparatus is reassembled, finally tested and prepared for return to service.
	3.7 Repairs are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
4 Completion and report fault finding and rectification activities	<p>4.1 OHS work completion risk control measures and procedures are followed.</p> <p>4.2 Work area is cleaned and made safe in accordance with established procedures.</p> <p>4.3 Written justification is made for repairs to control valves</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults in process final control elements and associated equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI111 Final control elements principles and applications

A

Evidence shall show an understanding of principles of final control elements to an extent indicated by the following aspects:

Control valve body and trim types and flow characteristics encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- body types and their typical applications.
- seating and trim arrangements.
- flow characteristics of various valves.
- Control valve terms - leakage, turndown, rangeability, choked, flow, Cv rating, and perform basic calculations and Cv a rating

Control valve selection encompassing:

- Valve purpose size and characteristic
- Valve manufactures specifications
- Valve faults

Spring opposed diaphragm actuator encompassing:

- control valve actuators
- air-to-raise
- air-to-lower.
- fail-safe action of a valve/actuator combination.
- Actuator characteristics and applications encompassing:
- actuator forces, spring rate values and process pressure on valve performance.
- spring opposed actuator to suit air-to-open and air-to-close valves. Adjust a single seating valve for shut-off.

Valve positioners encompassing:

- valve positioner operation.
- Calibrate/adjust valve positioners for various signals.
- cam and spring feedback positioners on control valves.
- pneumatic, electro-pneumatic and electro hydraulic positioners/actuators.
- Reverse positioner control action and adjust for split range.

Power cylinder (piston actuator) types encompassing:

- test power cylinders.
- extension and retraction forces.
- single acting positive
- single acting negative
- double acting
- Position controllers (positioners)
- Directional control valves and pilot operators
- Power cylinder pilot valve combinations - two, three and five port types, actuation and return modes: solenoid, mechanical, electrical, spring, regulator, filter and lubricator sets and

REQUIRED SKILLS AND KNOWLEDGE

pneumatic control circuits

Self-acting pressure and temperature control valves encompassing:

- pressure or temperature regulating valves.
- self-acting valves to load changes.
- pressure reducing and pressure relief valves.
- self acting valve for required control point

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and rectify faults in process final control elements and associated equipment as listed as described in 8) and including:
 - A Using methodical fault finding techniques
 - B Finding faults efficiently
 - C Replacing/rectifying and repairing components without damage
 - D Providing written justification for the repairs
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these

cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and rectifying faults in process final control elements and associated equipment.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation at least two types of final control elements including the associated equipment.

Note:

1. Examples of control valves types (by application) are additive valves, level control valve, temperature control valve, flow control valve and pressure control valve.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Instrumentation and Control

UEENEEI112A Verify compliance and functionality of instrumentation and control installations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers pre-commissioning testing and visual inspection for verifying that installed instrumentation and control apparatus in non-hazardous areas is safe and complies with requirements. It encompasses procedures for safely conducting safety tests, conducting visual inspections, identifying non-compliance defects and reporting requirements.

Application of the Unit

Application of the Unit 2)

This unit is intended to augment previously acquired competencies. It is suitable for employment based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

License to practice

3)

training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI11 0A Set up and adjust advanced PID process control loops

UEENEEI11 3A Setup and configure Human-Machine Interface (HMI) and industrial networks

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to inspect and test a instrumentation and control installations	1.1 OHS measures for the site are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are noted, and established risk control measures are implemented.
	1.4 Documentation or deemed to comply standard on which installation is based is reviewed and understood.
	1.5 Appropriate personnel are consulted to ensure

ELEMENT

PERFORMANCE CRITERIA

- the work is coordinated effectively with others involved on the work site
- 1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety
- 1.7 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements
- 2 Visually inspect the installation.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Instrument cabling and tubing is checked for suitability for the environments in which they are installed and suitably protected from damage.
- 2.5 The type and configuration/sizing of instrument cabling and tubing is confirmed as meeting that specified for the installation.
- 2.6 Evidence that control apparatus complies with safety and installation requirements is cited.
- 2.7 Marking of control apparatus is checked for accuracy and clarity and compliance with requirements.
- 3 Conduct functional and safety testing.
- 3.1 OHS risk control measures and procedures for carrying out the work are followed.
- 3.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|-------------------------------------|---|
| | 3.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures. |
| | 3.4 | Where process control apparatus operates at low voltage arrangements are made for an authorised person to conduct and report on all required electrical safety tests. |
| | 3.5 | Insulation and continuity tests are conducted on process control cabling operating at extra-low voltage. |
| | 3.6 | Process control tubing/piping is pressure tested in accordance with established practice. |
| | 3.7 | Functional and test are checks are conducted on all process control apparatus in accordance with established practice. |
| 4 | Report inspection and test findings | |
| | 4.1 | OHS risk control work completion measures and procedures are followed. |
| | 4.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | 4.3 | Non-compliance defects are identified and reported in accordance with established procedures. |
| | 4.4 | Recommendations for rectifying defects are made in accordance with established procedures. |
| | 4.5 | Verification documentation is completed in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of process control installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI112A Instrumentation and control system installation, testing and verification methods

Evidence shall show an understanding of process control installation, verification and testing to an extent indicated by the following aspects:

Safety working practices encompassing:

- Risk management – purpose/process
- Hazards associated with materials/areas
- Risk control measures associated with materials, areas, electrical equipment, and systems

Equipment selection encompassing:

- Types of test equipment
- Testing techniques

Control loop installation encompassing:

- Instrument selection
- Calibration
- Control loop set up

Test and verification encompassing:

- Visual inspection methods
- Electrical testing
- Pressure testing
- Loop tuning
- Trouble shooting.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Verify compliance and functionality of process control installations as listed as described in 8) and including:
 - A Selecting correct tools and testing equipment.
 - B Identifying visual non-compliance defects
 - C Using effective methods for conducting tests
 - D Identifying non-compliance from test results.

- E Identifying causes of non-compliance and recommending how these should be rectified.
- F Completing verification documentation
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to verifying compliance and functionality of process control installations.

Method of assessment **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to verifying compliance and functionality of at least one electrical/electronic and one pneumatic process control installation comprising a measuring transmitter, controller, final control element, indicator and cabling/tubing.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the setting up and configuring human machine interface and industrial networks for process control systems to meet performance standards. This encompasses the adoption of process control schemes that meet safety and process requirements, selection of control equipment and interconnecting cabling and tubing/piping based on calculated and deemed-to-comply arrangements.

Application of the Unit

Application of the Unit **2)**

This unit covers the setting up and configuring human machine interface and industrial networks for process control systems to meet performance standards. This encompasses the adoption of process control schemes that meet safety and process requirements, selection of control equipment and interconnecting cabling and tubing/piping based on calculated and deemed-to-comply arrangements.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly

License to practice

3)

related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI11 0A Set up and adjust advanced PID process control loops

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills

5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to set-up and configure HMI and industrial networks	1.1 The extent and nature of the control system is determined from job specifications.
	1.2 Safety and other regulatory requirements to which the control system shall comply are identified, obtained and understood
	1.3 Control apparatus and interconnecting components need for the control system and how they are arranged is determined from job specifications and knowledge of process control systems.
2 Set-up and configure HMI and industrial networks	2.1 Manufacturer's specifications and limitations of appropriate control apparatus is sought and comparisons made with process parameters and control requirements.
	2.2 Control apparatus is selected on compatibility with process parameters and control requirements and environmental conditions.
	2.3 Evidence of specified apparatus IP rating is sought from manufacturer where necessary.
	2.4 Control valves are selected based on percentage travel, flow and loop-and-process characteristics, optimum size, range ability, ability to cope with process pressures and environmental considerations.

ELEMENT	PERFORMANCE CRITERIA
3 Select interconnecting cabling and tubing/piping	3.1 Types of control cabling and their configuration are selected to meet environmental conditions and interconnection requirements.
	3.2 Tubing/piping and accessories are sized to meet capacity and pressure requirements
	3.3 Route lengths of cable and tubing/piping are determined from site drawings.
4 Document process control system	4.1 Reasons for selections made, including calculations, are documented in accordance with established procedures.
	4.2 Process control system arrange and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting equipment for process control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI113 HMI and industrial networks

A

Evidence shall show an understanding of HMI interfacing and industrial networks to an extent indicated by the following aspects:

Purpose and application of control system networks systems:

- Open and common proprietary control system networks models (layers) and protocols - CANopen, ControlNet, Devicenet, Ethernet, Foundation Fieldbus, Interbus, Modbus, and Profibus.
- Control system networks interface.

REQUIRED SKILLS AND KNOWLEDGE

- Common types of signal conditioning, instruments encompassing:
- principles of operation signal conditioners and instruments
- isolators and protection equipment.

Analogue and digital signals encompassing:

- structure of a typical message block.
- differences between analogue and digital signals.
- typical message block used with a digital telemetry systems.
- Types of transmission links,

Telemetry overview encompassing:

- Definition
- Applications
- Basic principle of operation
- Telemetry standards

Telemetry Components encompassing:

- Analog signals
- Digital signals
- Signal conditioning
- Control system networks
- Connection/link types

Telemetry Systems encompassing:

- Pneumatic
- Current
- Digital
- Wireless
- Microwave
- Optical
- Data Bus

Telemetry Installation encompassing:

- System selection
- Hardware –
- Types of cable, connectors, sources and detectors used in a fibre optic telemetry system
- Interconnection requirements
- Calibration/configuration
- System testing.

REQUIRED SKILLS AND KNOWLEDGE

Distributive control principles (DCS) encompassing:

- Concepts of a DCS
- differences between hierarchical and distributive systems.
- Functional and geographical distribution.
- Individual features of a DCS -
- Major components in a DCS
- historical and managerial data collection
- type and form of information at the operator and engineering interface levels - programmable logic controllers, SCADA/touch screen systems, system server and smart devices connected by a control network.
- Function block technology to design control algorithm - various loop types, using function block technology from an available DCS.
- Optimum control of a variety of process loops.
- Connection of field instrumentation for selected control operation and diagnostic checking to ensure correct operation of system.
- On-line changes to parameters in a DCS with minimum interference to controlled variable

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Setting up and configuring human machine interface and industrial networks for process control systems as listed as described in 8) and including:
 - A Setting up control system to comply with safety and other regulatory requirements and process functions
 - B Configuring human machine interface control systems
 - C Setting up industrial networks for control systems
 - D Documenting control system arrangement, specification for items selected and reasons for the selections made
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to selecting equipment for process control systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEE10 Use computer applications relevant to a workplace
1A

The critical aspects of occupational health and safety covered in unit UEENEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to setting up and configuring human machine interface and industrial networks for two process control systems each with more than one input and more than one final control element.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers finding and rectifying faults in process control apparatus and systems. The unit encompasses safe working practices, interpreting process and circuit diagrams, applying knowledge of process controls to logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

License to practice

3)

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI11 0A Set up and adjust advanced PID process control loops

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to find and rectify faults.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for

ELEMENT	PERFORMANCE CRITERIA
	correct operation and safety
2 Find faults.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Fault finding is approached methodically drawing on knowledge of industrial processes and control apparatus and systems using measured and calculated values of system parameters.
	2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage
	2.6 Faulty components are rechecked and their fault status confirmed.
	2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8 Fault finding activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
3 Rectify fault.	3.1 OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures
	3.3 Materials required to rectify faults are sourced and obtained in accordance with established procedures.
	3.4 Repairs are affected efficiently without damage to other components or apparatus and using

ELEMENT	PERFORMANCE CRITERIA
	sustainable energy principles.
	3.5 Effectiveness of the repair is tested in accordance with established procedures.
	3.6 Apparatus is reassembled, finally tested and prepared for return to customer.
4 Completion and report fault finding and rectification activities	4.1 OHS work completion risk control measures and procedures are followed. 4.2 Work area is cleaned and made safe in accordance with established procedures. 4.3 Written justification is made for repairs to apparatus. 4.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults in process control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI114 Trouble shooting process control systems

A

Evidence shall show an understanding of trouble shooting process control systems to an extent indicated by the following aspects:

Factors to consider in clarifying the nature of a fault encompassing:

- Initial fault report
- Confirmation of symptoms of the fault

REQUIRED SKILLS AND KNOWLEDGE

- Comparison of symptoms with normal operation

Effect to cause reasoning — assumptions of possible causes

Methods for testing assumptions encompassing:

- Visual inspection
- Sectional testing
- Split-half tests
- Component isolation

Dealing with intermittent faults - typical causes of intermittent faults are vibration, shock, changes in temperature and electromagnetic interference.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the

workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as

- specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures
 - Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and rectify faults in process control systems as listed as described in 8) and including:
 - A Using methodical fault finding techniques
 - B Finding faults efficiently
 - C Rectifying faults without damage
 - D Providing written justification for the rectifications undertaken
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and

materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and rectifying faults in process control systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit

The critical aspects of occupational health and safety covered in unit UEENEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to finding and rectifying faults in two different systems containing more than one control loop.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults in process control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI115 Medical equipment principles and control systems

A

Evidence shall show an understanding of medical equipment principles and control systems to an extent indicated by the following aspects:

REQUIRED SKILLS AND KNOWLEDGE

Medical equipment safe working practices encompassing:

- Risk management and assessment of risk -
- Principle and purpose of risk management, and
- Processes for conducting a risk assessment
- Hazards associated with medical equipment-
- Infections
- Toxic materials
- Electrical components
- Radiation
- Risks and control measures associated with working with medical equipment

Medical equipment principles encompassing:

- Equipment function and operation
- Hazards and safety procedures
- Causes of failure
- Safety testing requirements and methods
- Categories and examples of medical equipment encompassing:
- Cardiovascular systems: blood warmers, cardiac catheterisation systems, defibrillators, electrocardiogram(ECG) machines, electrocardiogram(ECG) monitors, heart-lung machines, infusion pumps, intra-aortic balloon pumps, pacemakers, syringe pump and cardiac output measurement equipment.
- Respiratory systems: anaesthetic delivery and monitoring units, medical gases, oxygen concentrator, pulse oximeter, respiratory humidifier, respiratory support units and ventilators.
- Neurological systems: electroencephalograph (EEG recorder), electromyograph (EMG recorder) and intracranial pressure monitoring (ICP).
- Renal systems: haemodialysis machine, CVVH machine and peritoneal dialysis.
- Medical imaging including: x-ray equipment, computerised axial tomography (CT scan), magnetic resonance imaging (MRI), nuclear medicine and diagnostic ultrasound equipment.
- Physiological equipment: blood pressure monitors, foetal cardio-tocograph, infant care systems, multiparameter systems, thermometry, telemetry, networking and patient warmers.
- Miscellaneous equipment: electrosurgery, electric stimulators, and endoscopy and laparoscopy systems, laser, operating microscopes, therapeutic diathermy and ultra sound.

REQUIRED SKILLS AND KNOWLEDGE

Medical equipment, anatomy and physiology and infection control encompassing:

- Nature of infection
- Control of microbial growth
- Infection control strategies
- Body systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects

required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination

- legislation, regulations, polices & workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and rectify faults in process control systems as listed as described in 8) and including:
 - A Using methodical fault finding techniques
 - B Finding faults efficiently
 - C Rectifying faults without damage
 - D Providing written justification for the rectifications undertaken
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved

industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and rectifying faults in process control systems.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to finding and rectifying faults in two items of equipment representative of each of the following categories:

- Cardiovascular systems
- Respiratory systems
- Neurological systems
- Renal systems
- Medical imaging
- Physiological equipment
- Miscellaneous medical equipment

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers assembling and entering instructions in microprocessor-equipped devices (embedded system) with simple built-in programming function and verifying that the device operates as intended. It encompasses safe working practices, checking device installation, following written and oral instruction and procedures and completing necessary documentation.

Note:

Examples of devices are simple programmable relays, timers, temperature controllers, switches and basic detection devices for security and fire the like.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft,

near live electrical apparatus, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to assemble and enter operating instructions.	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.
	1.4 Work supervisor or customers are consulted to determine which functions of the device are to be used and the parameter of each
	1.5 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|--|-----|--|
| | 1.6 | Device installation is checked for compliance with job specification and regulations where they apply. |
| 2 Assemble and enter operating instructions. | 2.1 | Established OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures. |
| | 2.3 | The required status of each function of the device is entered and their parameters set in accordance with manufacturer programming instructions. |
| | 2.4 | Entered data are checked as meeting those specified by the work supervisor or customer. |
| | 2.5 | Procedures for referring non-routine events to immediate supervisor for directions are followed. |
| | 2.6 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety. |
| 3 Test device operation and report. | 3.1 | Device operation is tested in strict accordance OHS requirements and procedures. |
| | 3.2 | Operating anomalies are identified and corrected in accordance with established routines. |
| | 3.3 | OHS work completion risk control measures and procedures are followed. |
| | 3.4 | Work site is cleaned and made safe in accordance with established procedures. |
| | 3.5 | Work completion is reported and appropriate person(s) notified in accordance with established routines. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and entering and verifying operating instruction in basic microprocessor equipped devices.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI11 Microprocessor equipped devices

6A

Evidence shall show an understanding of microprocessor equipped devices to an extent indicated by the following aspects:

1. Overview of digital controllers
 - types
 - block diagram of controller
 - applications
 - terms
2. Controller input and output equipment
 - input sensors (transducers)
 - current loop concepts
 - output current and voltage ratings
 - supplementary solid state relays/ contactors
3. Installation of controllers
 - types of input sensors
 - wiring
 - mounting techniques
 - terminal types
 - output current protection
4. Configuration and digital controller set-up
 - operator interfaces
 - manufacturer's data
 - testing

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Enter and verify operating instructions in microprocessor equipped devices as described in 8) and including:
 - A Understanding required operating functions and parameters.
 - B Identifying non-compliance conditions of device installation.
 - C Entering functions and parameters correctly.

- D Correcting programming anomalies.
- E Testing and verify device operation.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to enter and verifying operating instructions in microprocessor equipped devices.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to assembling, entering and verifying operating instruction in at least two types of microprocessor equipped devices with built-in icon-based programmable functions such as programmable relays, timers, temperature controllers, detection devices for security and fire.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Instrumentation and Control

UEENEEI17A Calibrate, adjust and test measuring instruments

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers calibration, adjustment and testing of measuring instruments. It encompasses working safely and to standards, following calibration and adjustment procedures, applying knowledge of parameters to be measured, testing and reporting.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

Licensing/Regulatory Information

License to practice

3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work

License to practice

3)

platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI10 Use instrumentation drawings,
1A specification, standards and equipment manuals

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to calibrate, adjust and test measuring instruments	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.5 Instrument parameters are determined by reviewing process specification and equipment manuals.
	1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with

ELEMENT	PERFORMANCE CRITERIA
2 Calibrate, adjust and test measuring instruments	established procedures and checked for correct operation and safety
	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Calibration testing/measuring arrangement is connected and set up in accordance with manufacturer's instructions and certification requirements for a particular instrument.
	2.3 Factors effecting instrument error are determined and taken into account in the calibration process.
	2.4 Instrument set-point is established and error adjustments are in accordance with manufacture's and compliance specification
	2.5 Instrument is tested and adjustment made as necessary to ensure instrument meets calibration requirements.
	2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8 Ongoing checks of the quality of process output are undertaken to ensure control loop is tuned as required.
2.9 Calibration is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.	
3 Completion and report calibration activities	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Calibration is documented in accordance with certification requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and calibrating and testing measuring instruments.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI11 Calibration of measuring instruments

7A

Evidence shall show an understanding of calibration of measuring instruments to an extent indicated by the following aspects:

Measurement standards applicable to scientific instruments encompassing:

- Standards philosophy and format
- How to read and apply a standard.
- Certificate standards that apply to scientific instrumentation
- Scientific instrumentation certification process

Fundamentals of calibration encompassing:

- Calibration processes
- Need for calibration
- Metrology standards
- Traceability
- Electrical measuring instruments and devices
- High order frequency references
- Counters
- Signal and function generators

Calibration techniques encompassing:

- Principles of common calibration techniques
- Purpose of Standards and calibration certification
- Minimising error during calibration -
 - source and type of errors
 - techniques to minimise errors during measurements
 - calculating the degree of error and calibration factors

REQUIRED SKILLS AND KNOWLEDGE

- Determining the parameters to which the device will be calibrated
- Need for normal performance check.
- Purpose of calibration documentation

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Calibrate and test measuring instruments as listed as

described in 8) and including:

- A Identifying instrument parameters
- B Setting up calibration arrangement in accordance with manufacturer's instructions and certification requirements for a particular instrument.
- C Determining factors effecting error
- D Calibrating instrument to measure within specified tolerance
- E Documenting calibration with certification requirements
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved

industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to calibrating and testing measuring instruments.

**Method of
assessment** **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to calibrating, adjusting and testing measuring at least one electrical/electronic and one non-electrical instrument.

The calibrated instruments measure accurately within the prescribe tolerance.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 Solve problems in d.c. circuits
04A

UEENEEI10 Use instrumentation drawings,
1A specification, standards and equipment
manuals

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to set-up weighting measuring instruments	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.5 Measurement parameters are identified by reviewing process requirements and instrument manufacturer's service manual.
	1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct

ELEMENT	PERFORMANCE CRITERIA
	operation and safety
	1.7 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements
	1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	1.9 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
2 Set-up weighting measuring instruments	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular control system.
	2.3 Measuring instruments are set up and adjusted in accordance with process requirements and instrument manufacturer service manual.
	2.4 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6 Setting-up is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3 Completion and report set-up activities	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Adjustment settings are documented and appropriate person(s) notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up weight measuring and control instruments.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI11 Weight measurement principles

8A

Evidence shall show an understanding of weighing measurement principles to an extent indicated by the following aspects:

Weighing and the relationship between force and weighing.

Methods of weighing and common factors affecting weighing system performance.

Principles of strain gauge measurement encompassing:

- compression and tension stress.
- relationship between stress and strain.

Principles of operation of various load cells in common use encompassing:

- Pneumatic and hydraulic load cells.
- Linear Voltage Differential Transformer

Methods of weighing materials in motion encompassing:

- weigh feeder control
- method of calibration of a belt weigher.
- operation of a nuclear radiation conveyor weigher and the safety precautions to be observed.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers setting up industrial field control devices such as transducers, sensors, and actuators. It encompasses working safely, following design brief, applying knowledge of device operating principles, interpreting device specifications, following manufacturer's set up specifications, testing device operation and documenting set up parameters.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as

License to practice

3)

apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)**

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI12 Diagnose and rectify faults in electronic
4A control systems

UEENEEI13 Diagnose and rectify faults in digital
9A controls systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and

Numeracy⁷

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|---|
| 1 | Prepare to set up industrial field control devices | 1.1 | OHS processes and procedures for a given work area are identified, obtained and understood |
| | | 1.2 | Established OHS risk control measures and procedures are followed in preparation for the work. |
| | | 1.3 | The field devices to be set up are determined from control system specifications and in consultations with relevant persons |
| | | 1.4 | Activities are planned to meet scheduled timelines in consultation with others involved in the work. |

ELEMENT	PERFORMANCE CRITERIA
	1.5 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
2 Set up industrial field control devices	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Devices are set up drawing on knowledge of field device and operation, characteristics and applications.
	2.3 Devices are positioned and adjusted in accordance with their operating principles, manufacturer instructions and control system requirements.
	2.4 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.5 Setting up devices is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Test and document set up of industrial field control devices	3.1 OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Field devices are tested and final adjustments made to correct any anomalies in their operation.
	3.3 Field device set up is documented in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up field control devices.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI119 Industrial Field Control Devices

A

Evidence shall show an understanding of industrial field control devices to an extent indicated by the following aspects:

Industrial processes and the terminology used in measurement encompassing:

- Forms of energy
- General classification of transducers
- Measurement technology
- Static accuracy.

Devices used in optoelectronic systems encompassing:

- Physics of light
- Spectral response
- Photometry
- Light sources and detectors
- Len's and mirror theory
- Optoelectronic systems and photoelectric switches
- Optoelectronic circuits
- The laser

Temperature detection and measurement and their circuit configurations encompassing:

- Introduction to temperature sensing
- Bimetallic and filled thermal sensors
- Thermocouples, resistance temperature detectors, thermistors, solid state temperature, sensors, integrated circuit temperature sensors and phrometers
- Control circuits using temperature detectors.

Measurement of pressure, flow and chemical encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Diaphragm, bellows and venturi
- Strain gauges and load cells
- Ultrasonic and magnetic flowmeters
- Measurement technology and accuracy
- Viscosity, humidity and pH

Linear, angular and rotary motion detection encompassing:

- Linear motion sensors
- Angular and rotary motion sensors
- Shaft angle encoders
- Linear encoders
- Tachometers
- Accelerometer and vibrometer

Proximity and level detection encompassing:

- Mechanical
- Ultrasonics
- Microwave
- Passive infrared
- Nucleonics
- Capacitive and inductive proximity

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this

shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set up field control devices as listed as described in 8) and including:

- A Determining the field control devices to be set up
- B Positioning and adjusting devices accordance with their operating principles, manufacturer instructions and control system requirements
- C Testing field devices and making final adjustments to correct any anomalies in their operation
- D Documenting field control device set up in accordance established procedures
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to setting up field control devices.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to setting up at least four different industrial field control devices.

Note.

Examples are field control devices measurement/detection of flow, temperature, pressure, density, weight, level, smoke, motion.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Instrumentation and Control

UEENEEI120A Provide solutions to problems in industrial control systems

Modification History

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers solving problems in industrial control systems. The unit encompasses safe working practices, interpreting process and circuit diagrams, applying knowledge of industry controls to problem solving techniques, safety and functional testing and completing the necessary documentation.

Note.

Typical basic industrial control system problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace for work involving direct access to plant and equipment connected to

License to practice**3)**

installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI12 Diagnose and rectify faults in electronic
4A control systems

UEENEEI13 Diagnose and rectify faults in digital
9A controls systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1 Prepare to provide solutions to industrial control system problems</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the</p>

ELEMENT	PERFORMANCE CRITERIA
	work.
	1.3 The extent of industrial control system problems are determined from performance specifications and situation reports and in consultations with relevant persons.
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
2 Provide solutions to industrial control system problems	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of industrial control system device and circuit operation, characteristics and applications are applied to developing solutions to control problems.
	2.3 Parameters, specifications and performance requirements in relation to each industrial control system problems are obtained in accordance with established procedures.
	2.4 Approaches to resolving industrial control system problems are evaluated to provide most effective solutions.
	2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.6 Problems are solved efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Test and document solutions to industrial control system problems	3.1 OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Solutions to industrial control system problems are tested to determine their effectiveness and

ELEMENT**PERFORMANCE CRITERIA**

modified where necessary.

- 3.3 Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed. (See Note)
- 3.4 Justification for solutions used to solve industrial control system problems are documented in accordance with established procedures.

Note:

A license to practice in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing solutions to problems in industrial control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI120 Industrial control systems

A

Evidence shall show an understanding of industrial control systems to an extent indicated by the following aspects:

Control amplifiers encompassing:

- Introduction
- Amplifier Operation
- Operational Amplifiers
- Operational Amplifier Configurations

Industrial transducers encompassing:

- Introduction
- SI Units

REQUIRED SKILLS AND KNOWLEDGE

- Forms of Energy
- Transducer Terminology
- Temperature Measurement
- Force Measurement
- Speed Measurement
- Positional Measurement

Industrial final control elements encompassing:

- Introduction
- Electromagnetic Devices
- Valves
- Solid State Switching Devices

Industrial control systems encompassing:

- Automatic Control
- Open Loop Control
- Closed Loop Control
- Control System Terminology
- Control System Evaluation
- Two Position Control
- Proportional Control (P)
- Proportional + Integral Control (P+I)
- Proportional + Derivative Control (P+D)
- Proportional + Integral + Derivative Control (P+I+D)

Industrial control loops and control signals encompassing:

- Introduction
- Control Loops
- Converters (D to A and A to D)
- Multiplexing

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Provide solutions to problems in industrial control systems as described in 8) and including:

- A Understanding the extent of the industrial control system problem
- B Obtaining electronic device and circuit parameters, specifications and performance requirements appropriate to each problem.

- C Testing and solutions to industrial control system problems
- D Documenting justification of solutions implemented in accordance established procedures
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing solutions to problems in industrial control systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to providing solutions to at least four industrial control system problems.

Note.

Examples are process control, speed control, positional control.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers finding and repairing faults in measuring and analysis systems. It encompasses working safely, reading circuit diagrams and device specifications, applying logical fault finding procedures, conducting repairs and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States and Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

License to practice**3)**

training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI11 2A Verify compliance and functionality of instrumentation and control installations

AND

UEENEEI11 8A Set up weighting measuring and control instruments

OR

UEENEEI13 1A Set up gas analysis measuring and control instruments

OR

UEENEEI13 2A Set up water analysis measuring and control instruments

Prerequisite Unit(s) 4)

OR

UEENEEI13 Set up scientific analysis measuring and control instruments
3A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information**Employability Skills 5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to find and repair faults	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.
2 Find and repair faults	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Fault finding is approached methodically drawing on knowledge of measuring and analytical equipment and circuit using measured and calculated values of apparatus parameters.
	2.5 Equipment components are dismantled where necessary and parts stored to protect them against loss or damage.
	2.6 Faulty components are rechecked and their fault

ELEMENT	PERFORMANCE CRITERIA
	status confirmed.
	2.7 Faulty components are readjusted or replaced in accordance with established procedures.
	2.8 Effectiveness of the repaired component is tested in accordance with established procedures.
	2.9 Apparatus is reassembled, finally tested and prepared for return to customer.
	2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.11 Fault finding and repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Completion and report fault finding and repair activities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Written justification is made for repairs to apparatus, including components and materials used.
	3.4 Acceptance that the reported fault(s) have been repaired is sought from an appropriate person in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in measuring and analysis systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI121 Trouble shooting measuring and analysis systems

A

Evidence shall show an understanding of measurement circuits and applications to an extent indicated by the following aspects:

- Principles of measurement
- Circuit components and configurations
- Applications of measurement circuits

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range

statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in measuring and analysis systems as described in 8) and including:

- A Using methodical fault finding techniques
- B Finding faults efficiently
- C Replacing components without damage
- D Providing written justification for the repairs
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and repairing faults in measuring and analysis systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

The critical aspects of occupational health and safety covered in unit UEENEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to finding and repairing at least four faults in two different types of measuring and analytical equipment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assisting in commissioning process control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI122 **Process control, commissioning**

A

Evidence shall show an understanding of commissioning process control instruments and systems to an extent indicated by the following aspects:

Purpose of commissioning

Commissioning planning and documentation

Procedures for commissioning instrumentation encompassing:

- configuring
- calibrating
- tuning
- validating system to drawings
- procedures followed to commission instrument systems

Purpose and importance of documentation

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for

Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Assist in commissioning process control systems as described in 8) and including:

A Understanding the role of each commission team member

B Connecting and setting-up commissioning testing/measuring devices in accordance with

- requirements for a particular control system and team instructions
- C Setting-up and adjusting process instruments and apparatus in accordance with process control requirements and equipment manufacturer instructions and team instructions.
- D Documenting adjustment settings in accordance with established procedures.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to assisting in commissioning process control

systems.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to process control systems incorporating closed loop control and digital and analogue elements and with at least five interacting control functions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Instrumentation and Control

UEENEEI123A Design electronic control systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers designing electronic control systems incorporating closed loop and digital and analogue elements. It encompasses working safely, following design brief, applying knowledge of digital and analogue devices, interpreting device specifications, constructing prototypes, using appropriate development software, applying programming techniques, testing developed system prototype operation and documenting design and development work.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI12 Diagnose and rectify faults in electronic
4A control systems

UEENEEI13 Diagnose and rectify faults in digital
9A controls systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design electronic control systems	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the proposed electronic control system is determined from the design brief or in consultations with appropriate person(s)</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site</p> <p>1.5 Materials and devices/components required for the work are determined on compatibility of their specifications with control system requirements and project budget constraints.</p>
2 Design electronic control systems	<p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 Knowledge of digital and analogue elements used in control systems and compliance standards are applied to the design</p> <p>2.3 Alternative arrangements for the design are considered based on the requirements outlined in the design brief.</p> <p>2.4 Safety, functional and budget considerations are incorporated in the design.</p> <p>2.5 Prototype devices and circuits are constructed, programmed and tested for compliance with the</p>

ELEMENT	PERFORMANCE CRITERIA
	design brief and regulatory requirements.
	2.6 Prototype malfunctions are rectified and retested to ensure effective operation of design.
	2.7 Control system design is documented for submission to appropriate person(s) for approval
	2.8 Solutions to unplanned situation are provided consistent with organisation policy.
3 Obtain approval for electronic control systems design	3.1 Control system design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing electronic control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI12 Designing complex control systems

3A

Evidence shall show an understanding of complex control systems indicated by the following aspects:

Control systems encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- process controller and programmable controllers and personal computer
- control peripherals suitable control

Purpose built microprocessor controller multiple inputs resulting in different or changed outputs

Different types and applications of system transducers and sensors

Actuators and drive systems.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling

employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design electronic control systems as described in 8) and including:

- A Developing outlines of alternative designs,
- B Developing the design within the safety and functional requirements and budget limitations,
- C Documenting and presenting design effectively,
- D Successfully negotiating design alteration requests
- E Obtaining approval for final design
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing electronic control systems.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to an electronic control system incorporating closed loop control and digital and analogue elements and with at least five interacting control functions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Not applicable.

Competency Field

Competency Field	11)
	Instrumentation and Control

UEENEEI124A Fault find and repair analogue circuits and components in electronic control systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers fault finding and repairing analogue applications in electronic control systems. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of analogue circuits and components to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

Note.

Examples of analogue applications are power and differential amplifiers, integrators, comparators function generators precision rectifiers, active filters and the like.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a

License to practice

3)

license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG1 Trouble-shoot and repair faults in low
08A voltage electrical apparatus and circuits

OR

UEENEEI11 Verify compliance and functionality of
2A instrumentation and control installations

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.
---	---

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|------------------------------------|--|
| 1 Prepare to fault find and repair | 1.1 OHS procedures for a given work area are identified, obtained and understood. |
| | 1.2 Established OHS risk control measures and procedures are followed in preparation for the |

ELEMENT

PERFORMANCE CRITERIA

- work.
- 1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
 - 1.4 The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel
 - 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site
 - 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Fault find and repair
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
 - 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
 - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
 - 2.4 Logical diagnostic methods are applied to diagnose electronic control system apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
 - 2.5 Suspected fault scenarios are tested as being the cause(s) of system fault.
 - 2.6 Cause of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of the analogue circuits and components.
 - 2.7 Faults in the electronic components of the system are rectified to raise apparatus and

ELEMENT

PERFORMANCE CRITERIA

- system to its operational standard.
- 2.8 System is tested to verify that the system operates as intended and to specified requirements
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault find and repair activities
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work site is made safe in accordance with established safety procedures.
- 3.3 Rectification of faults is documented in accordance with established procedures.
- 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and fault finding and repairing analogue circuits and components in electronic control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI124A Analogue electronic control systems

Evidence shall show an understanding of analogue electronic control systems indicated by the following aspects:

1. Amplifier fundamentals

- The purpose and application of amplifiers
- The basic characteristics of small signal amplifiers.
- The ideal op amp

2. Basic op-amp configurations

- Various operational amplifier circuit configurations and where they are used.
- Measured and calculated values of gain and output voltage for various operational amplifier configurations
- Circuit configurations:
 - inverting,
 - non-inverting,
 - voltage follower,
 - summing
 - comparators
 - Schmitt trigger
 - differential configurations

3. Op amp limitations

- Use of frequency compensation,
- Offset null,
- Bias compensation
- Slew rate
- Frequency response
- Bandwidth

REQUIRED SKILLS AND KNOWLEDGE

- Noise figures.
4. Single stage amplifiers
 - Determination of d.c. bias conditions for a single-stage amplifier
 - Small signal terminal characteristics of single-stage amplifiers
 - Effects of coupling and by-pass capacitors in single-stage amplifiers
 5. Amplifier applications
 - Operation of multistage amplifiers
 - Effects of component values and frequency response
 - Negative feedback loop in multistage amplifiers
 - Negative feedback and amplifier parameters
 - Effects on the output voltage when amplifiers are subjected to control signal overdrive, bias faults and amplifying device faults
 6. Op amp/diode circuits
 - Clippers
 - Clamp circuits
 - Precision rectifiers
 7. Oscillators
 - Oscillator circuits using op amps
 - sine wave
 - square wave
 - triangular wave
 - sawtooth
 8. Op amp/RC circuits
 - Integrator
 - Differentiator
 - Function generators
 9. Filters
 - Active filter circuits
 - First and second order
 - Low, high and band pass circuits
 10. Timers
 - Operation of typical timer ICs

REQUIRED SKILLS AND KNOWLEDGE

11. Power amplifiers

- Power output ICs
- Power amplifiers using op amps
- Power supplies

12. Multi-stage circuits

- Circuits using several different op amp configurations.
- Fault-finding procedures

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Fault finding and repairing analogue circuits and components in electronic control systems as described in 8) and including:
 - A Applying logical diagnostic methods.
 - B Using fault scenarios to test the cause(s) of system faults.
 - C Identifying faults and their cause and competency needed to rectify them.
 - D Rectifying faults in system analogue circuits and components.
 - E Verifying that the system operates correctly.
 - F Documenting fault rectification.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and

materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in analogue circuits and components in electronic control systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by fault finding and repairing at least four of the following faults in analogue circuits and components:

- Open-circuit
- Short-circuit
- Incorrect or failed connections
- Insulation failure
- Unsafe condition
- Apparatus/component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Competency Field

Competency Field **11)**

Instrumentation and Control

UEENEEI125A Provide solutions to fluid circuit operations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the solution to problems associated with the operation of fluid controlled circuits. It encompasses working safely, problem solving procedures, including using measuring instruments, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher. It may also be suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of fluid operated automated machinery.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1 Prepare to provide solutions to fluid circuit problems	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Provide solutions to fluid circuit problems	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure active circuits is determined in strict accordance with OHS requirements and when necessary conducted

ELEMENT	PERFORMANCE CRITERIA
	within established safety procedures
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Established methods are used for solving circuit problems from measure and calculated values, as they apply to fluid circuits.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices with the minimum waste and rework
3 Complete work and document solutions to discovered problem	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to solve circuit problems is documented.
	3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing solutions to fluid circuit operations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI125 Fluid power control

A

Evidence shall show an understanding of fluid power control to an extent indicated by the following aspects:

Terms and their definitions used in fluid power systems

Applications of fluid power

Pascal's law as it relates to force transfer, multiplication and intensification

Mathematical relationships involving temperature and volume (Charles law), pressure and volume (Boyles law), pressure and volume (Boyles law) and their combinational relationships

Fluid power principles related to components and the identification of components

Operation of fluid power components

Interpretation of fluid system operation from circuit diagrams

Operation and construction of basic pneumatic circuit

Operation and construction of a basic hydraulic circuit

Routing maintenance procedures

Safety requirement

Evidence Guide

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Provide solutions to fluid circuit operations as described in 8) and including:
 - A Determining the operating parameters of existing circuit
 - B Using established problem solving methods
 - C Taking relevant measurements accurately

- D Interpreting measured values appropriately
- E Providing effective solutions to circuit problems from measurements and calculations
- F Giving written justification of solutions provided
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing solutions to fluid circuit operations.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires

assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to fluid power circuits as they apply to problems related to engineering diagnosis and development work functions in any 2 of the following types of circuit problems:

- determining the operating parameters of an existing circuit
- alternating an existing circuit to comply with specified operating parameters
- developing circuits to comply with a specified function and operating parameters

In relation to either types of the following pumps and their associated control equipment:

- hydraulic
- pneumatic

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Instrumentation and Control

UEENEEI126A Provide solutions to pneumatic-hydraulic system operations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the set-up and maintenance of pneumatic and hydraulic systems. It encompasses working safely, problem solving procedures, including using measuring instruments, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher. It may also be suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of pneumatic and hydraulic operated automated

License to practice 3)
machinery

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI12 Provide solutions to fluid circuit operations
5A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to provide solutions to pneumatic/hydraulic system operations	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the system problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Provide solutions to pneumatic/hydraulic system operations	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure active systems is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Systems are checked as being isolated where necessary in strict accordance OHS requirements

ELEMENT	PERFORMANCE CRITERIA
	and procedures
	2.4 Established methods are used for solving system problems from measure and calculated values, as they apply to pneumatic/hydraulic circuits.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices with the minimum waste and rework.
3 Complete work and document solutions to discovered problem	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to solve system problems is documented.
	3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing solutions to pneumatic/hydraulic system operations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI126 Pneumatics and hydraulics systems

A

Evidence shall show an understanding of pneumatics and hydraulics to an extent indicated by the following aspects:

REQUIRED SKILLS AND KNOWLEDGE

Terms and their definitions used in pneumatic components and systems

Application, operation and installation requirements of pneumatic components and systems

Interpretation and selection of manufacturers equipment specifications to establish the performance of pneumatic components

Construct circuits from control diagrams

Location and correction of faults on pneumatic components and systems

Terms and their definitions used in hydraulics components and systems

Application, operation and installation requirements of hydraulic components and systems

Interpretation and selection of manufacturers equipment specifications to establish the performance of hydraulic components

Construct circuits from control diagrams

Location and correction of faults on hydraulics components and systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment,

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated

within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Provide solutions to pneumatic/hydraulic system operations as described in 8) and including:
 - A Determining the operating parameters of existing systems
 - B Using established problem solving methods
 - C Taking relevant measurements accurately
 - D Interpreting measured values appropriately
 - E Providing effective solutions to system problems from measurements and calculations
 - F Giving written justification of solutions provided
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing solutions to pneumatic/hydraulic system operations.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to pneumatic/hydraulic power systems as they apply to problems related to engineering diagnosis and development work functions in any of the following:

- determining the operating parameters of an existing system
- alternating an existing system to comply with specified operating parameters
- developing systems to comply with a specified function and operating

In relation to both types of the following systems:

- Pneumatics – any two of the following main components:
 - Cooler
 - Dryer
 - Filter
 - Receiver
- Control devices – any two of the following components:
 - Linear actuator
 - Rotary actuator
 - Directional control valve
 - Timer
 - Counter
- Hydraulics – any two of the following main components:
 - Two cylinder sequenced system
 - Single cylinder skip-check system
- Control devices – any two of the following components:
 - Rotary actuators
 - Linear actuators
 - Directional control valve
 - Rotary control valve
 - Pressure control valve

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the analysis of complex electronic control circuits that integrate with the operation of fluid control systems on machinery. It encompasses working safely, applying extensive knowledge of equipment and electronic and fluid control circuit operations, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However,

License to practice 3)

practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI12 Provide solutions to fluid circuit operations 5A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare to analyse complex circuits controlling fluids.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	The extent of the circuit analysis is determined from performance specifications and situation reports and in consultations with relevant persons
		1.4	Activities are planned to meet scheduled timelines in consultation with others involved in the work.
		1.5	Effective strategies are formed to ensure solution development and implementation is carried out efficiently.
2	Analyse complex circuits controlling fluids	2.1	OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Knowledge of complex control concepts and electro-fluid control circuits are applied to developing analytical solutions to machine

ELEMENT**PERFORMANCE CRITERIA**

- parameters.
- 2.3 Parameters, specifications and performance requirements in relation to each circuit are obtained in accordance with established procedures.
- 2.4 Approaches to analysing circuit parameters are carried out to provide the most effective solution.
- 2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
- 2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards
- 3 Document and report on the results of the circuit analysis and actions taken.
- 3.1 Solutions to circuit analysis are tested to determine their effectiveness and modified where necessary.
- 3.2 Analysis is documented including details of all findings, calculations and assumptions.
- 3.3 Analysis is reported to appropriate personnel to establish suitable action to be taken based on findings.
- 3.4 Justification for findings and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing complex electronic circuits controlling fluids.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI127A Electronic control of fluid processes

Evidence shall show an understanding of interfacing electronics with hydraulic and pneumatic devices and systems to an extent indicated by the following aspects:

Determining control static and dynamic operating conditions for stages in a control process from block diagrams

Identification of process characteristics from process test data and process flow diagrams

Linearisation functions and feedback

Placement of sensors and actuators to eliminate dead time

Lag reduction strategies

Consideration of steady state gain vs. offset and stability vs. performance

Controller tuning and calibration

Analyse control system functions

Construct a time-displacement diagram for a functional system

Design relay logic ladder diagram for the system

Identification of components required by a fluid power circuit

Selection of proportional valves to suit fluid applications

Determination of ramp time for motor and cylinder circuits

Determine maximum flow rates in cylinder circuits that accelerate and decelerate a load and selection of an appropriate valve spool

REQUIRED SKILLS AND KNOWLEDGE

Determine pressure in cylinder circuits

Design fluid power circuits using proportional valves

Adjust points on a proportional valve control card to meet specifications

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Analyse complex electronic circuits controlling fluids as described in 8) and including:

- A Understanding the operation of electronic and fluid controls
- B Forming effective strategies for analysing circuit performance
- C Obtaining circuit control parameters,

- specifications and performance requirements appropriate to each situation.
- D Testing the results of the analysis
- E Documenting instruction for implementing any actions resulting from the analysis that incorporates risk control measure to be followed.
- F Documenting justification of actions to be implemented in accordance with professional standards
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry

practices in relation to analysing complex electronic circuits controlling fluids.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to set up controls on complex fluid systems.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the work to be undertaken is determined from performance specifications and situation reports and in consultations with relevant persons
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5 Effective strategies are determined to ensure solutions developed and related implementation is carried out efficiently.

ELEMENT	PERFORMANCE CRITERIA
2 Set up controls on complex fluid systems	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of complex controls and integrated fluid systems are applied to developing analytical solutions to machine parameters and operation.
	2.3 Parameters, specifications and performance requirements in relation to each control circuit and fluid device are obtained in accordance with established procedures.
	2.4 Approaches to setting up, maintenance and/or modification are carried out to provide the most effective solution(s).
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
	2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards
3 Document and report on the results of the set up and actions taken.	3.1 Solutions to set up, maintenance activity and/or modification are tested to determine their effectiveness and modified where necessary.
	3.2 Set-up, maintenance activity and/or modification is documented including details of all findings, calculations and assumptions.
	3.3 Set-up, maintenance activity and/or modification is reported to appropriate personnel to establish suitable action to be taken based on findings.
	3.4 Justification for findings and any actions to be undertaken in relation to the work activity is documented for inclusion in work/project or development records in accordance with professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up controls on complex fluid systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI128 Complex fluid control systems

A

Evidence shall show an understanding of advanced fluid mechanics to an extent indicated by the following aspects:

The relationship between Reynolds Number and flow regime

Head loss in pipes and fittings and system head curves

Head loss in parallel and serial pipes and how systems can be reduced to an equivalent single pipe system for analytical purposes

Flow rates through open channels

Positive displacement and rotodynamics of fluid machinery

Duty point for a pump in a system including flow rate and head pressure

Cavitations and the influence of inlet system design and fluid temperature and pressure on cavitations

Circuits and operation of fluid hydraulic componentry in a system

Technical specifications and associated data for the selection of hydraulic components for machine control operation

Installation requirements for the installation, commissioning and testing hydraulic components and systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set up controls on complex fluid systems as described in 8) and including:

- A Understanding the operation of electronic and hydraulic controls
- B Forming effective strategies for analysing circuit and hydraulic performance
- C Obtaining circuit control and hydraulic

- parameters, specifications and performance requirements appropriate to each situation.
- D Testing the results of the analysis
- E Documenting instruction for implementing any actions resulting from the analysis that incorporates risk control measure to be followed.
- F Documenting justification of actions to be implemented in accordance with professional standards
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry

practices in relation to setting up controls on complex fluid systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to setting up electronically controlled fluid operated complex systems on at least 2 types of machines.

Note.

Typical circuits are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

UEENEEI129A Set up electronically controlled mechanically operated complex systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the setting up, adjustment, maintenance and modification to electronically controlled mechanically operated complex systems. It encompasses working safely, applying extensive knowledge of electronic circuits and the integration to mechanically operated equipment and systems, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note:

Typical problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

Application of the Unit

Application of the Unit **2)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not

License to practice

3)

require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI12 4A Diagnose and rectify faults in electronic control systems

UEENEEI12 7A Analyse complex electronic circuits controlling fluids

UEENEEI13 9A Diagnose and rectify faults in digital controls systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare to set up electronically controlled mechanically operated complex systems.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work
		1.3	The extent of the work to be undertaken is determined from performance specifications and situation reports and in consultations with relevant persons
		1.4	Activities are planned to meet scheduled timelines in consultation with others involved in the work
		1.5	Effective strategies are formed to ensure solution development and implementation is carried out efficiently

ELEMENT	PERFORMANCE CRITERIA
2 Set up electronically controlled mechanically operated complex systems	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2 Knowledge of complex controls and integrated mechanical systems are applied to developing analytical solutions to machine parameters and operation
	2.3 Parameters, specifications and performance requirements in relation to each circuit and mechanical device are obtained in accordance with established procedures
	2.4 Approaches to setting up, maintenance and/or modification are carried out to provide the most effective solution
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy
	2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards
3 Document and report on the results of the set up and actions taken.	3.1 Solutions to set up, maintenance activity and/or modification are tested to determine their effectiveness and modified where necessary
	3.2 Set up, maintenance activity and/or modification is documented including details of all findings, calculations and assumptions
	3.3 Set up, maintenance activity and/or modification is reported to appropriate personnel to establish suitable action to be taken based on findings
	3.4 Justification for findings and any actions to be undertaken in relation to the work activity is documented for inclusion in work/project or development records in accordance with professional standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up electronically controlled mechanically operated complex systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI129A Electronic interfacing to mechanical systems

Evidence shall show an understanding of interfacing electronics with mechanical devices and systems to an extent indicated by the following aspects:

- Connection of sensors and actuators to an interface for communications with a discrete device electronic controller or programmable controller or computer for the operation of a process requiring continuously variable changes
- Description of the logic sequence for the integrated system including: operator actions, input signals, output actions, interlocks and safety and emergency requirements
- Transformation of the system logic into a program to carry out the desired task using a port address on a computer using programming software and codes
- Commissioning systems and perform fault diagnosis using computer automation
- Operation of circuits controlling hydraulics
- Technical specifications and data for the selection of hydraulic components for machine control
- Installation, commissioning and testing hydraulic systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set up electronically controlled mechanically operated complex systems as described in 8) and including:

- | | |
|---|---|
| A | Understanding the operation of electronic and mechanical controls |
| B | Forming effective strategies for analysing circuit and mechanical performance |
| C | Obtaining circuit control and mechanical |

- parameters, specifications and performance requirements appropriate to each situation.
- D Testing the results of the analysis
- E Documenting instruction for implementing any actions resulting from the analysis that incorporates risk control measure to be followed.
- F Documenting justification of actions to be implemented in accordance with professional standards
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry

practices in relation to setting up electronically controlled mechanically operated complex systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to set-up gas analysis measuring instruments	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.5 Measurement parameters are identified by reviewing process requirements and instrument manufacturer's service manual.
	1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct

ELEMENT	PERFORMANCE CRITERIA
	operation and safety
	1.7 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements
	1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	1.9 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
2 Set-up gas analysis measuring instruments	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular control system.
	2.3 Measuring instruments are set up and adjusted in accordance with process requirements and instrument manufacturer service manual.
	2.4 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6 Setting-up is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3 Completion and report set-up activities	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Adjustment settings are documented and appropriate person(s) notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up gas analysis measuring and control instruments.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies

KS01-EI131 Gas analysis measurement

A

Evidence shall show an understanding of gas analysis to an extent indicated by the following aspects:

Principle of operation of various indicators connected in remote measurement loop encompassing:

- reagent analysers (eg. Orsat),
- electrolytic,
- paramagnetic - wind- dumbbell,
- zirconia oxide,
- thermal conductivity,
- thermal reaction,
- infra-red and the like.
- Indicator calibration procedure

Types of recorder used in process measurement encompassing:

- sampling and conditioning systems.
- prescribed measuring elements.
- Operation of hygrometers.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set up gas analysis measuring and control instruments as listed as described in 8) and including:

- A Identifying measurement parameters
- B Setting-up and adjusting in accordance with process requirements and instrument manufacturer's service manual
- C Documenting adjustment settings with established

procedures

- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency setting up gas analysis measuring and control instruments.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

There are no concurrent assessment recommendations for this unit

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to setting up and adjusting two different types of gas analysis measuring instruments.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Instrumentation and Control

UEENEEI132A Set up water analysis measuring and control instruments

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the calibration of instruments for measuring water characteristics as it applies to the control of processes. It encompasses working safely and to standards, following set-up and calibration procedures, testing and reporting.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 Solve problems in d.c. circuits
04A

UEENEEI10 Use instrumentation drawings,
1A specification, standards and equipment
manuals

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

- | | |
|--|--|
| 1 Prepare to set-up water analysis measuring instruments | 1.1 OHS procedures for a given work area are identified, obtained and understood |
| | 1.2 Established OHS risk control measures and procedures are followed in preparation for the work. |

ELEMENT	PERFORMANCE CRITERIA
	1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.5 Measurement parameters are identified by reviewing process requirements and instrument manufacturer's service manual.
	1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety
	1.7 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements
	1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	1.9 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
2 Set-up water analysis measuring instruments	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular control system.
	2.3 Measuring instruments are set up and adjusted in accordance with process requirements and instrument manufacturer service manual.
	2.4 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.

ELEMENT	PERFORMANCE CRITERIA
	2.6 Setting-up is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3 Completion and report set-up activities	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Adjustment settings are documented and appropriate person(s) notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up water analysis measuring and control instruments.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI132A Water analysis measurement

Evidence shall show an understanding of water analysis to an extent indicated by the following aspects:

- Terms associated with industrial water analysis equipment.
- Industrial applications of specified water analysis equipment.
- Principle of operation of an analyser sensor.
- Principle of operation of an analyser measuring elements.
- Appropriate installation requirements for specified analysers
- In system checks and instrument calibration
- Water analyser maintenance procedures.
- Manufacturers' specifications.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set up water analysis measuring and control instruments as listed as described in 8) and including:

- A Identifying measurement parameters
- B Setting-up and adjusting in accordance with process requirements and instrument manufacturer's service manual
- C Documenting adjustment settings with established

procedures

- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency setting up water analysis measuring and control instruments.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the management of instrumentation and control projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses covers management of safety, budget variation, personnel, resources, critical path timelines and completion of documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|-------------------------------------|-----|---|
| 1 | Establish the scope of the project. | 1.1 | OHS processes and procedures for a given work area are identified, obtained and understood |
| | | 1.2 | Project deliverables and budget are established from project planning and other relevant documentation and from discussions with appropriate person(s). |
| | | 1.3 | Measurable outcomes are identified to evaluate the project on completion from project planning and other relevant documentation. |
| | | 1.4 | Plant, materials and skills needed to meet project outcome are established from project planning and other relevant documentation. |
| | | 1.5 | Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement. |
| 2 | Manage project. | 2.1 | OHS policies, procedures and programs are implemented and monitored. |
| | | 2.2 | Achievement of project outcomes is delegated to appropriately competent persons involved in the project. |
| | | 2.3 | Risk events are identified and project plan strategies implemented to ensure that outcomes are achieved to the required standard of quality specified in the contract and safety required by organisation policy. |
| | | 2.4 | Procurement processes and procedures are monitored to ensure on time supply of plant and |

ELEMENT	PERFORMANCE CRITERIA
	materials and in accordance with organisation policy.
	2.5 Project progress is monitored against schedule, quality requirements and budget.
	2.6 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation policy.
	2.7 Variations are managed in accordance with agreed processes and in accordance with the contract.
	2.8 Project records are maintained and progress reports written and forwarded to appropriate person(s).
3 Complete project.	3.1 Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget.
	3.2 Project completion acceptance is sought from appropriate person(s) and handover documented in accordance with organisation policy.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing control projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies

KS01-EI134 Instrumentation and control project management

A

Evidence shall show an understanding of instrumentation and control project management concepts to an extent indicated by the following

REQUIRED SKILLS AND KNOWLEDGE

aspects:

- Defining project parameters: Project scope; Project stakeholders and clients; Project phases and the relationship between phases; Time requirements and limitations; Resource requirements and limitations; Quality requirements and limitations.
- Time management: time management concepts; standard practices for ensuring a project runs to time and the like
- Financial management: Financial management concepts; Standard practices for managing project finances; Project budgets; Costs, variations and estimations; Invoicing against project phases/deliverables; Acquittals and the like.
- Quality management: Quality management concepts; Standard practices for managing quality within a project.
- Human Resource management: human resource management concepts; standard practices for managing personnel within a project
- Communication management: Communication management concepts; Standard practices for managing communication within a project and the like.
- Risk management and contingencies: risk management concepts; standard practices for managing risk within a project; Internal risks; External risks; Risk minimisation; Risk removal; Contingencies and the like.
- Procurement management: procurement management concepts; standard practices for managing procurement and the like.
- Physical Resource management: Types of physical resource, including; Equipment, Technology, Information, Facilities; Physical resource management concepts; Standard practices for managing physical resources
- Contracts: Understanding project contracts; Standard practices for working to contract specifications; Contract format; Contract content; Legal obligations of contract parties; Accompanying documentation including; Contract Schedules and the like.
- Performance assessment and continuous improvement: standard performance assessment practices; standard continuous improvement practices and the like
- Engineering ethics principles
- Customer/client relations encompassing:
 - Importance of customer/client relations
 - Interpersonal skills that enhance customer/client
 - Dispute resolution

REQUIRED SKILLS AND KNOWLEDGE

- Customer/client relations strategies
- Control system industry sector customs and practices encompassing:
 - Technical aspects of project planning and management -
 - Method of ensuring equipment meets specified performance requirements
 - Performance/cost benefit analysis
 - Equipment procurement
 - Typical approaches to planning and management
 - Successful planning techniques
 - Best practice management methods and styles

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the

most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or

licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Manage control projects as described in 8) and including:

- | | |
|---|---|
| A | Establishing the scope of the project accurately, |
| B | Ascertaining the input a project |
| C | Developing effective management processes, |
| D | Managing resources and variations effectively |
| E | Resolving conflicts |
| F | Adopting risk management strategies |
| G | Maintaining records and submitting progress reports |
| H | Meeting project outcomes |
| I | Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items |

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment **9.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to managing control projects.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized control project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Instrumentation and Control

UEENEEI135A Plan instrumentation and control projects

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers development and documentation of instrumentation control project proposals, milestones and completions. The unit encompasses establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--------------------------------|-----|--|
| 1 | Prepare to plan project. | 1.1 | OHS processes and procedures for a given work area are identified, obtained and understood |
| | | 1.2 | Established techniques for project planning are reviewed and adopted in accordance with organisation policies. |
| | | 1.3 | The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s). |
| 2 | Develop project plan proposal. | 2.1 | Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation policies and procedures. |
| | | 2.2 | Project budget is established from estimated plant, material, labour and other costs in accordance with organisation policies and procedures. |
| | | 2.3 | Knowledge of critical path analysis is applied to developing workflow strategies. |
| | | 2.4 | Sources and availability of materials and human resources needed for the project are established in accordance with organisation policies and procedures. |
| | | 2.5 | Risk management strategies are sought and obtained for incorporating in the project plan. |
| | | 2.6 | Project plan is reviewed against all inputs and |

ELEMENT**PERFORMANCE CRITERIA**

- adjusted to rectify any anomalies.
- 2.7 Project plan proposal is documented in accordance with organisation policies and procedures.
- 3 Obtain approval for project plan.
- 3.1 Project plan is presented and discussed with person(s) of higher authority.
- 3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.
- 3.3 Final project plan is documented and approval obtained from appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning control projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI135A Instrumentation and control project planning

Evidence shall show an understanding of instrumentation and control project planning to an extent indicated by the following aspects:

- a) Purpose of project planning
- b) Documents needed to plan a project
- c) Factors influencing sequence and restraints of project activities
- d) Critical path and project analysis encompassing:

Purpose of critical path analysis

Essential data

Relational sequence of work activities

Graphical representation methods

Methods of representing time/rates

Monitoring methods

- e) Control system industry sector customs and practices encompassing:

Technical aspects of project planning and management -

Method of ensuring equipment meets specified performance requirements

Performance/cost benefit analysis

Equipment procurement

Typical approaches to planning and management

Successful planning techniques

Best practice management methods and styles

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Plan control projects as described in 8) and including:

- A Determining the project requirements accurately,
- B Establishing a project budget
- C Developing effective work flow strategies,
- D Documenting project plan proposal
- E Negotiating alterations to the proposed project plan successfully
- F Obtaining approval of the final plan
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to planning control projects.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized control project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the management of automated control systems projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses management of safety, budget variation, personnel, resources, critical path timelines and completion of documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish the scope of the project.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 Project' deliverables and budget are established from project planning and other relevant documentation and from discussions with appropriate person(s).
	1.3 Measurable outcomes are identified to evaluate the project on completion from project planning and other relevant documentation.
	1.4 Plant, materials and skills needed to meet project outcome are established from project planning and other relevant documentation.
	1.5 Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement.
2 Manage project.	2.1 OHS policies, procedures and programs are implemented and monitored.
	2.2 Achievement of project outcomes is delegated to appropriately competent persons involved in the project.
	2.3 Risk events are identified and project plan strategies implemented to ensure that outcomes are achieved to the required standard of quality specified in the contract and safety required by organisation policy.
	2.4 Procurement processes and procedures are monitored to ensure on time supply of plant and

ELEMENT	PERFORMANCE CRITERIA
	materials and in accordance with organisation policy.
	2.5 Project progress is monitored against schedule, quality requirements and budget.
	2.6 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation policy.
	2.7 Variations are managed in accordance with agreed processes and in accordance with the contract.
	2.8 Project records are maintained and progress reports written and forwarded to all appropriate person(s).
3 Complete project.	3.1 Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget.
	3.2 Project completion acceptance is sought from appropriate person(s) and hand-over documented in accordance with organisation policy.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing automated systems projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI136A Automation and control project management

Evidence shall show an understanding of automation and control project management concepts to an extent indicated by the following aspects:

a) Defining project parameters: Project scope; Project stakeholders and clients; Project phases and the relationship between phases; Time requirements and limitations; Resource requirements and limitations; Quality requirements and limitations.

b) Time management: time management concepts; standard practices for ensuring a project runs to time and the like.

c) Financial management: Financial management concepts; Standard practices for managing project finances; Project budgets; Costs, variations and estimations; Invoicing against project phases/deliverables; Acquittals and the like.

d) Quality management: Quality management concepts; Standard practices for managing quality within a project.

e) Human Resource management: human resource management concepts; standard practices for managing personnel within a project

f) Communication management: Communication management concepts; Standard practices for managing communication within a project and the like.

g) Risk management and contingencies: risk management concepts; standard practices for managing risk within a project; Internal risks; External risks; Risk minimisation; Risk removal; Contingencies and the like.

h) Procurement management: procurement management concepts; standard practices for managing procurement and the like.

i) Physical Resource management: Types of physical resource, including; Equipment, Technology, Information, Facilities; Physical resource management concepts; Standard practices for managing physical resources

j) Contracts: Understanding project contracts; Standard practices for working to contract specifications; Contract format; Contract content; Legal obligations of contract parties; Accompanying documentation including; Contract Schedules and the like.

k) Performance assessment and continuous improvement: standard performance assessment practices; standard continuous improvement practices and the like

REQUIRED SKILLS AND KNOWLEDGE

l) Engineering ethics principles

Customer/client relations encompassing:

Importance of customer/client relations

Interpersonal skills that enhance customer/client

Dispute resolution

Customer/client relations strategies

b) Automated systems industry sector customs and practices encompassing:

Technical aspects of project planning and management -

Method of ensuring equipment meets specified performance requirements

Performance/cost benefit analysis

Equipment procurement

Typical approaches to planning and management

Successful planning techniques

Best practice management methods and styles

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Plan automated systems projects as described in 8) and including:

- A Determining the project requirements accurately,
- B Establishing a project budget
- C Developing effective work flow strategies,
- D Documenting project plan proposal
- E Negotiating alterations to the proposed project plan successfully
- F Obtaining approval of the final plan
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to planning automated systems projects.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized automated systems project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Instrumentation and Control

UEENEEI138A Provide solutions to extra low voltage (ELV) electro-pneumatic control systems and drives

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers developing and implementing control solutions for systems using electro-pneumatic elements operating at extra-low voltage and variable speed drives. It encompasses safe working practices, establishing required control functions, checking device installation, entering instruction into programmable devices, following written and oral instruction and procedures and completing necessary documentation.

Note:

Electrical connections referred to in this unit are confined to pre-assembled plug and socket sets. This unit does not cover competencies for installation and connection of electrical wiring.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work

environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|------------------------------------|-----|---|
| 1 Prepare to developing solutions. | 1.1 | OHS procedures for a given work area are identified, obtained and understood through established routines and procedures. |
| | 1.2 | Established OHS risk control measures and procedures are followed in preparation for the work. |
| | 1.3 | Safety hazards that have not previously been identified are reported and advice on risk control measures is sought from the work supervisor. |
| | 1.4 | The functions that the control and drive system is required to perform is established and documented from instruction from work supervisor or customer. |

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|------------------------------|--|---|
| | 1.5 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety. | |
| 2 | Provide solutions. | 2.1 | Established OHS risk control measures and procedures for carrying out the work are followed. |
| | | 2.2 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures. |
| | | 2.3 | The circuits for the electro-pneumatic control and drive system are developed to meet the required functions and documented. |
| | | 2.4 | Locations of control field devices are checked and adjusted to ensure they function correctly. |
| | | 2.5 | The circuits for the electro-pneumatic control and drive system component connections are checked against the developed circuits |
| | | 2.6 | The required functioning of the systems is entering into programmable components and parameters set in accordance with developed circuit and manufacturer programming instructions. |
| 3 | Test and document solutions. | 3.1 | Operation of the electro-pneumatic control and drive system is tested in strict accordance OHS requirements and procedures. |
| | | 3.2 | Operating anomalies are identified and corrected in accordance with established procedures. |
| | | 3.3 | OHS work completion risk control measures and procedures are followed. |
| | | 3.4 | Work site is cleaned and made safe in accordance with established procedures. |
| | | 3.5 | Work completion is reported and appropriate person(s) notified in accordance with established procedures |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and entering and verifying operating instruction in basic microprocessor equipped devices.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI138A Electrical and pneumatic control fundamentals

Evidence shall show an understanding of electrical and pneumatic control fundamentals to an extent indicated by the following aspects:

Electrical and pneumatic safety encompassing:

- Hazardous and safe working methods and procedures
- Pneumatic operating pressures
- Isolation procedures

Electrical/pneumatic drawing types and applications encompassing:

- Drawing layouts and conventions (electrical and pneumatic schematics, wiring and piping diagrams)
- Drawing symbols

Electrical and pneumatic control system components

Electrical components include power, HMIs, relays, plug and socket connectors; Pneumatic components include air supply systems, HMIs, valves, actuators, tubing and connectors.

Electrical relay types encompassing:

- Operation
- Contact configurations

Pneumatic control valves and actuators encompassing:

- Types and their operation
- Activated and deactivated configurations

Basic logic as applied to control systems

Logic confined to AND, OR, NOT and NOR functions

KS02-EI138A Variable speed drive (VSD) functions and configuration

Evidence shall show an understanding of variable speed drive (VSD) functions and set up to an extent indicated by the following aspects:

Basic function of a variable speed drive in controlling an induction motor.

REQUIRED SKILLS AND KNOWLEDGE

Configuring a variable speed drive encompassing:

Configuration includes setting rated motor voltage and current, digital and analogue inputs, speed range, ramp times and the like.

Testing procedures

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to

be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Enter and verify operating instructions in microprocessor equipped devices as described in 8) and including:
- A Establishing and documenting functions that the control and drive system is required to perform
- B Developing and documenting circuits for the electro-pneumatic control and drive systems that meet the required functions.
- C Checking location of control field devices and adjusting to ensure correct functioning.
- D Checking electro-pneumatic control and drive system components connections
- E Entering functions and parameters into programmable components correctly
- F Correcting programming anomalies.
- G Testing and verifying correct operation.
- H Reporting work completion to appropriate persons in accordance with established procedures
- I Dealing with unplanned events.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to provide solutions to ELV electro-pneumatic control systems and drives.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEI150 Develop, enter and verify discrete control
A programs for programmable controllers

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

An electro-pneumatic control system that includes:

- a drive system with VSD;
- programmable controller,
- proximity detection devices,
- operational indicators,
- electro-pneumatic control valves,
- actuators.

with emergency stop and stop/reset function and at least three of the following functions;

- Accelerating drive to set speed when started
- Decelerating drive when stopped
- Rejection/acceptance
- Counting
- Operation indication

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Instrumentation and Control

UEENEEI139A Diagnose and rectify faults in digital controls systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers diagnosing and rectifying faults in digital components of electronic control systems. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of digital systems to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

Application of the Unit

Application of the Unit **2)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational

License to practice

3)

health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG1 08A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

OR

UEENEEI11 2A Verify compliance and functionality of instrumentation and control installations

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and

Numeracy⁷

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|--|
| <p>1 Prepare to diagnose and rectify faults.</p> | <p>1.1 OHS procedures for a given work area are obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.</p> <p>1.4 The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel.</p> |
|--|--|

ELEMENT	PERFORMANCE CRITERIA
	1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
2 Diagnose and rectify faults.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Logical diagnostic methods are applied to diagnose electronic control system apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
	2.5 Suspected fault scenarios are tested as being the cause(s) of system fault.
	2.6 Cause of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of the digital subsystems.
	2.7 Faults in the electronic components of the system are rectified to raise apparatus and system to its operational standard.
	2.8 System is tested to verify that the system operates as intended and to specified requirements
	2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.

ELEMENT	PERFORMANCE CRITERIA
	2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Complete and report fault diagnosis and rectification activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is made safe in accordance with established safety procedures.
	3.3 Rectification of faults is documented in accordance with established procedures.
	3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in digital control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI139A Digital electronic control systems

Evidence shall show an understanding of digital electronic control systems to an extent indicated by the following aspects:

1. Digital control systems

Comparison between analogue and digital signals

Advantages of digital control systems

Digital/analog control system

Logic gates

Truth tables

Digital testing devices

2. Numbering systems

The binary number system

The Octal number system

The hexadecimal number system

Binary addition and subtraction

Conversion between numbering systems

Binary Coded Decimal (BCD)

Gray code

The American Standard Code for Information Interchange (ASCII)

3. Combinational Logic Networks

Precautions when handling electronic devices due to electrostatic discharge (ESD)

Truth tables

Basic operation and characteristics of logic devices

Logic probes

Verification of operation of logic circuits

4. Logic families and specifications

REQUIRED SKILLS AND KNOWLEDGE

Transistor-Transistor Logic (TTL)

Complementary Metal Oxide Silicone (CMOS) logic families

the 'unit load' concept

specifications and features of TTL, TTL low power Schottky (LS) and CMOS logic families.

three state and open collector logic

input and output voltage characteristics for CMOS and TTL

comparison of TTL with CMOS logic families

Unit load

noise margin

interfacing different logic families

Tri-state logic devices

5. Encoders and Decoders

weighted and unweighted codes.

Gray

BCD

ASCII

Half and full adder

Encoders, decoders

error detection.

decoder and encoder ICs.

multiplexer and demultiplexer ICs.

6. Flipflops

RS flipflops

D flipflops

JK flipflops

truth tables and operation

debouncing a switch

timing diagrams

Sequential logic

State tables and timing diagrams

7. Registers

REQUIRED SKILLS AND KNOWLEDGE

shift registers

data latches

8. Counters

ripple counters using JK flipflops

typical IC types

characteristics and operation.

Ripple counters

Use of feedback to modify count

Circuit verification of a ripple counter

Synchronous counters

Series and parallel data transfer

Multivibrators

Interconnecting digital circuits to perform an application

9. Digital to analog conversion

Industrial applications of D/A converters

Summing D/A converters

R-2R D/A converters

Verification of circuit operation of an IC D/A converter

10. Analog to digital conversion

Industrial applications of A/D converters

Digital ramp, dual slope, successive approximation and simultaneous (flash) A/D converters.

Verification of circuit operation of an IC A/D converters

11. Display devices

Liquid Crystal Display (LCD) devices

Light Emitting Diode (LED) devices.

Operation and Characteristics.

Seven segment LED displays

Drive requirements

Current limiting

Multiplexed displays

Seven segment encoding chips

REQUIRED SKILLS AND KNOWLEDGE

Emerging display technologies

12. Digital fault finding

General fault finding principles

Common digital faults

Digital test equipment

Locating a fault

13. Interfacing logic devices to external loads

Interfacing with a transistor

Interfacing with a relay

Solid state switches

Opto-isolator

Verification of circuit operation of an opto-coupler.

14. Programmable logic devices

Applications of programmable logic devices

Types of programmable logic devices

Comparison between different programmable logic devices

Programmable Array Logic (PAL)

Programmable Logic Devices (PLD)

Field Programmable Gate Arrays (FPGA)

Programming and verifying correct operation of a programmable array logic device

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose and rectify faults in digital subsystems of electronic controls as described in 8) and including:

- A Applying logical diagnostic methods.
- B Using fault scenarios to test the cause(s) of system faults.
- C Identifying faults and their cause and competency needed to rectify them.
- D Rectifying faults in system digital subsystems.
- E Verifying that the system operates correctly.
- F Documenting fault rectification.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in digital systems of electronic controls.

**Method of
assessment****9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units****9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four of the following faults in digital control systems.

- Open-circuit
- Short-circuit
- Incorrect or failed connections
- Insulation failure
- Unsafe condition
- Apparatus/component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Establish integrated system scenario	1.1	Customer requirements for scenes, events and controls in the integrated system are established from job specifications and discussion with appropriate persons
		1.2	The types and location of integrated system loads are determined from job specifications and customer requirements.
		1.3	Types and location of control (input) devices of integrated system are determining from job specifications and customer requirements.
		1.4	Budget for the integrated system is established from customer requirements and discussion with appropriate persons.
2	Plan integrated system	2.1	OHS procedures and risk control work measures are followed.
		2.2	Knowledge of integrated system devices and their

ELEMENT**PERFORMANCE CRITERIA**

- capabilities is applied in the plan.
- 2.3 Number and types of output devices to suit the established scenario are chosen for compatibility with the system loads
- 2.4 Number and types of control (input) devices to suit the established system scenario are chosen.
- 2.5 Integrated systems are planned to comply with bus system and supply voltage parameters.
- 2.6 Other control methods are considered in planning the integrated system plan.
- 2.7 Integrated systems are planned within the given budget.
- 2.8 Final plan is documented and submitted to an appropriate person for approval.
- Note. Documentation includes explanations of how the customers' requirement will be achieved; a material list with costs and a marked up floor plan showing relationship of load groups to input devices.
- 3 Implement an integrated system installation plan
- 3.1 OHS risk control work measures and procedures are followed.
- 3.2 Integrated systems are arranged using an acceptable topology.
- 3.3 A connection chart/diagram between all device in the integrated system is developed
- 3.4 Appropriate cable for the bus system is selected and connected at devices and accessories using the methods and the polarity specified by the manufacturer.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge and associated skills for planning installations of integrated systems have been acquired.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

- **KS01-EI140A** **Integrated systems installation requirements**
- Evidence shall show an understanding of integrated systems installation requirements to an extent indicated by the following aspects:
 -
 - T1 Bus system parameters encompassing:
 - How bus systems work
 - Network topology
 - Voltage and current limits
 - Cable type and length limits
 - Network impedance
 - Network and device status indication
 - T2 LV supply voltage parameters and quality.
 - Supply sources such as UPS and inverters may adversely effect voltage parameters and waveform.
 - T3 Cabling encompassing:
 - Insulation resistance testing precautions and prohibitions
 - LV cable terminations and conductor size
 - Bus cable polarity and pairing
 - Bus cable termination requirements and techniques
 - Field and enclosure segregation requirements (Segregation is required by both AS/NZS 3000 and AS/ACIF S009).
 - T4 Supply and load protection encompassing:
 - Conductors and protection device co-ordination (AS/NZS 3000:2007 Clause 2.5.3.1)
 - Use of residual current devices
 - Protection on supply and load side of system devices (IEC 60669-2-1 protection requirements).
 - T5 Output devices encompassing:
 - Relays connections for ELV and LV loads
 - Dimmer types
 - Supply and load connections for the various dimmer types
 - T6 Installation requirements for input devices encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Passive infrared detectors
- Light level control
- Key inputs
- Touch screens
- T7 Acceptable and unacceptable topologies for a single network
- T8 Devices and connections for other control methods encompassing:
 - DSI (Distributed Signaling Interface) Gateway dimming and control
 - Devices and connections DALI (Digital Addressable Lighting Interface) dimming and control
- Zero to 10 volts analogue control.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may

be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or

licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Planning and implementing integrated systems as described in 8) and including:

- A Establishing customer requirements for integrated system.
- B Determining system components and locations from job specifications and customer requirements.
- C Ensuring that the power source for the integrated system is suitable
- D Choosing integrated system component for compatibility with loads and established scenarios
- E Planning integrated systems to comply with bus system and supply voltage parameters
- F Considering other control methods in planning the integrated system
- G Keeping within a given budget
- H Documenting integrated system plan
- I Arranging an integrated system using an acceptable topology
- J Developing a connection chart/diagram
- K Selecting and terminating bus cable using specified methods and polarity.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to plan the installation of integrated systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to three integrated systems one of which has at least 4 separate scenes and 5 control requirements.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the development of integrated systems. It encompasses working safely, scrutinising and adapting project specifications, applying knowledge of the application for integrated systems, system topologies and devices applications and capabilities, system programming methods, using diagnostic tools and documenting the developed systems.

Application of the Unit

Application of the Unit 2)

This unit is intended as an elective or skill set at AQF 3 level. It is suitable for employment-based programs under an approved contract of training and may be aligned with a vendor training program that is shown to have the same competency outcomes as this unit.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practice in the workplace. However the skills and knowledge as they apply to working directly on the associated electrical power wiring and equipment require a licence to practise in the workplace where the operating voltage is above 50 V a.c. or 120 V d.c. subject to regulations to carry out electrical work. Practice in the

License to practice**3)**

workplace and during training is subject to occupational health and safety regulations and codes and obligation of 'contracts of training' such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEED1 Use computer applications relevant to a
01A workplace

AND

UEENEEEE1 Lay wiring/cabling and terminate
08A accessories for ELV circuits

OR

UEENEEEG1 Terminate cables, cords and accessories for
06A low voltage circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to develop an integrated system	1.1 The types and location of loads and control devices is determined from project specifications and customer requirements.
	1.2 The number of control bus networks and current requirements are determined from load calculations for devices on the system.
	1.3 Appropriate placement of system devices in the system scheme is determined from bus network power and load parameters and to maintain system stability.
	1.4 The integrated system is developed to comply with regulator, safety and manufacturer's requirements.
	1.5 A take-off of the number of devices and accessories required for the system is documented using manufacturer's title and ID for each.

ELEMENT	PERFORMANCE CRITERIA
	1.6 Programming and diagnostic tools needed for the project are down loaded to a compatible PC and checked for correct operation and safety.
2 Program integrated system devices	2.1 OHS risk control work measures and procedures are followed.
	2.2 Modes of programming are applied to developing the integrated system in accordance with manufacturers and programming software instructions.
	2.3 Manufacturer's instructions and recommendations are followed in programming system devices to project requirements.
	2.4 Parameters for operation of loads are programmed to project requirements and within manufacturer's designated range.
	2.5 The programmed system data base is saved and backed up in accordance with manufacturer's instructions.
3 Load and test integrated system	3.1 OHS risk control work measures and procedures are followed.
	3.2 Data base of integrated system program is transferred to the network.
	3.3 All functions of the integrated system are tested for compliance with project requirements and manufacturer's specifications.
	3.4 Diagnostic tools are used to locate any system faults, defects or anomalies.
	3.5 Defects or anomalies are corrected to comply with project requirements and manufacturer's specifications.
	3.6 A copy of the documentation of integrated system is given the client or client's representative.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge and associated skills of integrated systems have been acquired.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI141A and programming

Integrated systems operating parameters

Evidence shall show an understanding of integrated systems operating parameters and programming to an extent indicated by the following aspects:

T1 Applications and advantages of integrated systems

T2 System components encompassing:

- Support devices for control bus supply and control
- Support devices for programming, interconnection between networks and integration with third party systems.
- Types and capabilities of output devices.
- Lighting dimmer capabilities and selection
- Controlling DSI and communicating with DALI electronic ballasts
- Types and capabilities of input devices

T3 Network specifications encompassing:

- Bus system cable type, polarity, length and acceptable topologies.
- Importance of the location of output and input devices and control bus power supplies
- Ensuring control bus stability (stability can be effected by number of units on a network, current drawn by devices in relation to current output of power supplies).
- Multiple network connectivity
- LV supply overcurrent and surge protection.

T4 Software for system and device programming, monitoring and controlling

T5 System and device programming encompassing:

- Addressing conventions for networks, devices, applications, output groups, types of control and outputs (Output include 'on', 'off', a specific level, over a specific time and the like).
- PC programming tools and methods (programming includes configuring network data base using addressing tools and objects, function objects, editing, altering and transferring the data base to network)
- Importance of project documentation and backup

T6 System fault-finding processes

REQUIRED SKILLS AND KNOWLEDGE

- Fault-finding includes the use of multimeters, oscilloscope, system analysers and diagnostic software.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered

will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - as described in 8) and including:

- A Determining the types and location of loads and control devices
- B Using load calculations to correctly determine the number of network and current requirements.
- C Placing system devices appropriately in the system scheme.
- D Checking programming and diagnostic tools
- E Applying appropriate modes of programming to develop the integrated system.
- F Following manufacturer's instruction and recommendations in programming devices and setting load operating parameters.
- G Developing integrated system to comply with regulator, safety and project requirements.
- H Down loading program to network successfully
- I Using diagnostic tools to locate and correct any system defects, faults and anomalies
- K Documenting and (backing up) integrated system at development at the preparation, programming and completion of the project.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the

approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to integrated systems.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Developing an integrated system including at least 6 of the following functions:
- Direct Load Control
- Two Way Switching
- Multiple Load Control
- Energy Saving On Dimmers
- Panic Button
- Scenes
- Typical Master Bedroom
- PIR Enable/Disable
- Light Level Maintenance
- Corridor Linking
- Restrike Delays
- Using more than one programming mode
- Transferring a program data base to a network and testing functionality.
- Finding at least 5 hardware and 5 software faults

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop and integrated system touch screen interface	1.1 The areas and control to be accessed through the touch screen are determined from the integrated systems data base and customer requirements.
	1.2 Control parameters to be accessed through the touch screen are determined from the integrated systems data base and confirmed with the customer.
	1.3 Touch screen embellishments to be applied are discussed and confirmed with the customer.
	1.4 Touch screen programming and integrated system programming software and project data are down loaded to a compatible PC.
	1.5 Programming tools are and checked for correct operation.
	1.6 Manufacturer's instruction for installing and connecting touch screens are read and understood
2 Develop and integrated system touch screen interface	2.1 OHS risk control work measures and procedures are followed.
	2.2 Installation and connection for the touch screen are checked for compliance with manufacture's requirements.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|---|---|
| | 2.3 | Knowledge of integrated system and touch screen programming methods are used in developing a touch screen interface. |
| | 2.4 | Touch screen interface functions and embellishments are developed for compatibility with the integrated system and to customer requirements |
| | 2.5 | Network connectivity is implemented, where required, and web page content made available. |
| 3 | Back up, transfer and test touch screen interface | |
| | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | 3.2 | Touch screen interface program is backed up and transfer to the touch screen following manufacturer's instructions. |
| | 3.3 | Touch screen tests are conducted to verify compatibility and compliance with the integrated system and customer requirements. |
| | 3.4 | Non-compliance operations and anomalies are corrected to comply with manufacturer's and customer requirements. |
| | 3.5 | A copy of the documentation of the as-programmed touch screen specifications is given the client or client's representative. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge and associated skills for developing an integrated system interface for access through a touch screen have been acquired.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI142A Touch screen installation requirements and programming in integrated systems

Evidence shall show an understanding of the installation requirements and programming of touch screens in integrated systems to an extent indicated by the following aspects:

- T1 Integrated system touch screen types, features and parameters.
- T2 Touch screen mounting methods and manufacturer's instructions
- T3 Touch screen wiring and connection arrangements encompassing:
 - Power supply
 - Integrated network
 - Audio
 - Video
 - IR control
 - Programming
 - Network
- T4 Electrical protection requirements
- T5 Programming requirements and process
- T6 Programming software specifications and tools
- T7 HMI programming techniques with proprietary software encompassing
 - Component types
 - Component properties
 - Arranging visible properties and creating screen embellishment
 - Setting integrated system properties of components (components can be text, images, shapes, buttons, sliders, level indicators, clocks, monitors, HTML, web cam images and the like).
- T8 Methods for transferring and project data and backing up.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - as described in 8) and including:

- A Determining the areas and control parameters to be accessed through the touch screen
- B Confirming touch screen embellishments to be applied
- C Down loading to a PC and checking touch screen programming and integrated system programming software and project data.
- D Understanding manufacturer's instruction for installing and connecting touch screens
- E Checking that the installation and connections for the touch screen comply with manufacture's requirements.
- F Developing touch screen interface functions and embellishments in accordance for compatibility with the integrated system and to customer requirements
- G Backing up and transferring touch screen interface program following manufacturer's instructions.
- H Testing touch screen and correcting non-compliance operations and anomalies.
- I Documenting the as-programmed touch screen specifications

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to using manufacturer's designated software to:

- program a B/W touch screen for safe and effective operation.
- create and edit scenes, schedules and access control
- use templates to enhance a touch screen
- backup and restore program
- transfer the programmed access to a touch screen in an integrated system and
- program a colour touch screen for safe and effective operation.
- create and edit scenes, schedules and access control
- use templates to enhance a touch screen
- backup and restore program
- transfer the programmed access to a colour touch screen in an integrated system

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

1 Prepare to program integrated system access control	1.1 The functions of integrated system access is determined from the systems data base and customer requirements.
	1.2 Control parameters are determined from the integrated systems data base and confirmed with the customer.
	1.3 Programming software tools and project data are down loaded to a compatible PC and checked.
	1.4 Manufacturer's instruction for installing and connecting internet connectivity equipment are read and understood.
2 Program integrated system access control	2.1 OHS risk control work measures and procedures are followed.
	2.2 Knowledge of integrated system logic-based programming methods are used in programming access control.
	2.3 Integrated system functions and parameters are programmed for compatibly with the integrated system and to customer requirements
	2.4 Network connectivity is implemented in accordance with manufacturer's instruction and regulatory requirements.

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|--|
| 3 | Back up, transfer and test system access control | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | | 3.2 | Programmed functions and parameters are backed up and transfer to the system following manufacturer's instructions. |
| | | 3.3 | System access tests are conducted to verify compatibility and compliance with the integrated system and customer requirements. |
| | | 3.4 | Non-compliance operations and anomalies are corrected to comply with manufacturer's and customer requirements. |
| | | 3.5 | A copy of the documentation of the as-programmed access specifications is given the client or client's representative. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge and associated skills for developing access control of integrated systems using logic-based programming tools have been acquired.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

- **KS01-EI143A** **Logic-based programming for integrated systems**
- Evidence shall show an understanding of logic-based programming for integrated systems to an extent indicated by the following aspects:
 - T1 Integrated system hardware parameters and limitations
 - T2 Integrated system configuration software features and options.
 - Features include touch screen colours, file management, file import and export.
 - T3 Logic gates as they apply in integrated system control
 - T4 Logic-based software tools encompassing:
 - Functions, actions, variables and limitations
 - Basic code syntax
 - Compiling and editing
 - Exporting and archiving
 - Monitoring usage

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that

can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated

within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Programming integrated system controllers using logic-based programming tools as described in 8) and including:

- A Determining the functions and parameters of the integrated system
- B Down loading a PC and checking software tools and integrated system programming software and project data.
- C Checking that network equipment and connectivity comply with manufacture's requirements.
- D Developing integrated system functions and parameters in accordance for compatibility with the integrated system and to customer requirements
- E Backing up and transferring programmed functions and parameters following manufacturer's instructions.
- F Testing access and correcting non-compliance operations and anomalies.
- G Documenting the as-programmed access control specifications.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing access control of integrated systems using logic-based programming tools.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to programming integrated system access using logic-based programming tools with at least the following functions:

- Selectors
- Room Joining
- Counters and Drawing
- Logic Timer
- Run On Timer
- Corridor Linking
- Scene Storing
- System I/O Scheduling
- After Hours
- Enable / Disable functions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Instrumentation and Control

UEENEEI144A Develop interfaces for multiple access methods to monitor, schedule and control an electrical integrated system

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers programming for multiple access to integrated systems for a single dwelling. Such access includes mobile phones, computer networks, remote controls, touch screens and the like. It encompasses working safely and to manufacturer's instructions and regulatory requirements, installing and setting up gateway equipment, applying knowledge of the application of integrated system including remote reprogramming and monitoring, using proprietary programming tools, and documenting as-programmed access functions.

Application of the Unit

Application of the Unit 2)

This unit is intended as an elective or skill set at AQF 4 level. It may be aligned with a vendor training program that is shown to have the same competency outcomes as this unit.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practice in the workplace. However the skills and knowledge as they apply to working directly on the associated electrical power wiring and equipment

License to practice

3)

require a licence to practise in the workplace where the operating voltage is above 50 V a.c. or 120 V d.c. subject to regulations to carry out electrical work. Practice in the workplace and during training is subject to occupational health and safety regulations and codes and obligation of 'contracts of training' such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit has been confirmed.

UEENEEI14 2A Develop an electrical integrated system interface for access through a touch screen.

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills

5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability

Employability Skills 5)

Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to develop an interfaces for multiple access methods of integrated system	1.1	The extent of the various services in the integrated system determined from the systems data base and customer requirements.
	1.2	Control parameters are determined from the integrated systems data base and confirmed with the customer.
	1.3	Programming software tools and project data are down loaded to a compatible PC and checked
	1.4	Manufacturer's instruction for installing and connecting gateway equipment are read and understood.
2 Develop an interface for multiple access of integrated systems	2.1	OHS risk control work measures and procedures are followed.
	2.2	Knowledge of IT network accessing integrated system programming methods are used in programming multiple access control.
	2.3	Functions and parameters of integrated system services are programmed in accordance with manufacturer's instruction and to customer requirements.

ELEMENT

PERFORMANCE CRITERIA

	2.4	Gateway equipment installation and connectivity is implemented in accordance with manufacturer's instruction and regulatory requirements.
3	Back up, transfer and test system access	3.1 OHS work completion risk control measures and procedures are followed.
	3.2	Programmed access, functions and parameters are backed up and transfer to the system following manufacturer's instructions.
	3.3	Programmed access methods tests are conducted to verify compatibility and compliance with the integrated system and customer requirements.
	3.4	Non-compliance operations and anomalies are corrected to comply with manufacturer's and customer requirements.
	3.5	A copy of the documentation of the as-programmed multiple access specifications are given the client or client's representative.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge and associated skills for developing interfaces for multiple access methods to monitor, schedule and control an integrated system have been acquired.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI144A Multiple access to integrated systems programming

Evidence shall show an understanding of multiple access to integrated systems programming to an extent indicated by the following aspects:

T1 Gateway devices encompassing:

- Component
- Installation requirements
- Regulatory requirements

T2 Network set up encompassing:

- Terminology
- Network options
- Ethernet connectivity
- Wireless connectivity
- Router configuration

T3 Controller user interface

T4 Programming software and application

- Confined to proprietary software such as ‘wizards’, icons and widgets.

T5 Interface web browsers

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments.  - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - as described in 8) and including:

- A Determining extent of the various services and functions and parameters of the integrated system
- B Down loading a PC and checking software tools and integrated system programming software and project data.
- C Checking that network equipment and connectivity comply with manufacture's requirements.
- D Developing integrated system multiple access with manufacturer's instruction and to customer requirements.
- E Backing up and transferring programmed assess functions and parameters following manufacturer's instructions.
- F Testing multiple access and correcting non-compliance operations and anomalies.
- G Documenting the as-programmed access control specifications.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing interfaces for multiple access methods to monitor, schedule and control an integrated system.

Method of assessment **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing interfaces and program to monitor, schedule and control an integrated system by the following access methods

- Mobile phone
- Computer
- Touch screen
- Remote controller
- Manual input devices

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Instrumentation and Control

UEENEEI145A Diagnose and rectify faults in a.c. motor drive systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers diagnosing and rectifying faults in systems controlling starting, speed, torque, power output, efficient running and braking of a.c. motors. The unit encompasses safe working practices, interpreting technical data, applying knowledge of a.c. motors operating parameters to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to

License to practice**3)**

regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG0 06A Solve problems in single and three phase low voltage machines

UEENEE I149A Provide solutions to polyphase electronic power control problems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|---|-----|--|
| 1 | Prepare to diagnose and rectify faults. | 1.1 | OHS procedures for a given work area are identified, obtained and understood. |
| | | 1.2 | Established OHS risk control measures and procedures in preparation for the work are followed. |
| | | 1.3 | Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel. |
| | | 1.4 | The extent of faults is determined from reports and other documentation and from |

ELEMENT**PERFORMANCE CRITERIA**

- discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Diagnose and rectify faults.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Logical diagnostic methods are applied to diagnose a.c. motor control system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
- 2.5 Suspected fault scenarios are tested as being the source of system problems.
- 2.6 Causes of the faults are identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of the control system.
- 2.7 Faults in the control components of the system are rectified to raise a.c. motor control system to its operation standard.
- 2.8 System is tested to verify that the system operates as intended and to specified requirements.
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and

ELEMENT**PERFORMANCE CRITERIA**

- requirements.
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.11 Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work site is made safe in accordance with established safety procedures.
- 3.3 Rectification of faults is documented in accordance with established procedures.
- 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in a.c. motor drive systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI145A Variable speed drives for a.c. motors

Evidence shall show an understanding of a.c. variable speed drive to an extent indicated by the following aspects:

- a) Methods and operating principles
- b) Installation requirements
- c) Filtering
- d) Performance characteristics
- e) Set up and commissioning
- f) Common faults: their symptoms and causes.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment

is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace

procedures and practices including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose and rectify faults in a.c. motor drive systems as described in 8) and including:
 - A Applying logical diagnostic methods.
 - B Using fault scenarios to test the cause of system faults.
 - C Identifying faults and competency needed to rectify them.
 - D Rectifying faults in system controls.
 - E Verifying that the system operates correctly.
 - F Documenting fault rectification.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in a.c. motor drive systems

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to diagnosing and rectifying at least four faults and control a.c. motor drive system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

- with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Diagnose and rectify faults.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Logical diagnostic methods are applied to diagnose a.c. motor control system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
- 2.5 Suspected fault scenarios are tested as being the source of system problems.
- 2.6 Causes of the faults are identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of the control system.
- 2.7 Faults in the control components of the system are rectified to raise a.c. motor control system to its operation standard.
- 2.8 System is tested to verify that the system operates as intended and to specified requirements.
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate

ELEMENT	PERFORMANCE CRITERIA
	persons and job specifications and requirements.
	2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.11 Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Complete and report fault diagnosis and rectification activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is made safe in accordance with established safety procedures.
	3.3 Rectification of faults is documented in accordance with established procedures.
	3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in d.c. motor drive systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI146A Variable speed drives for d.c. motors

Evidence shall show an understanding of d.c. variable speed drive to an extent indicated by the following aspects:

REQUIRED SKILLS AND KNOWLEDGE

- Methods and operating principles
- Installation requirements
- Filtering
- Performance characteristics
- Set up and commissioning
- Common faults their symptoms and causes.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may

be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or

licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnosing and rectifying faults in d.c. motor drive systems as described in 8) and including:

- A Applying logical diagnostic methods.
- B Using fault scenarios to test the cause of system faults.
- C Identifying faults and competency needed to rectify them.
- D Rectifying faults in system controls.
- E Verifying that the system operates correctly.
- F Documenting fault rectification.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and

materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in d.c. motor drive systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to diagnosing and rectifying at least four faults in a d.c. motor control system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Instrumentation and control

UEENEEI147A Diagnose and rectify faults in servo drive systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers diagnosing and rectifying faults in systems controlling servo and drives. The unit encompasses safe working practices, interpreting technical data, applying knowledge of servo/stepper drives operating parameters to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and

License to practice**3)**

safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG0 06A Solve problems in single and three phase low voltage machines

UEENEE I149A Provide solutions to polyphase electronic power control problems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and

Numeracy⁷

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in servo drive systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI147 Servomechanism systems

A

Evidence shall show an understanding of servomechanism systems to an extent indicated by the following aspects:

REQUIRED SKILLS AND KNOWLEDGE

- Servomechanism terminology and concepts encompassing:
 - null, error signal, feedback and reference signal
 - damping: under, over, critical
 - hunting
 - overshooting
 - deadband
 - response time
 - time lag
- Difference between an open loop and a closed loop system encompassing:
 - the operation of a servomechanism system to block diagram level identifying the components:
 - command transmitter
 - error detector
 - amplifier
 - summing point/network
 - servo
 - position feedback
 - rate feedback
 - acceleration feedback
 - modulator/demodulator
- Differences in operation between types of servomechanism systems encompassing:
 - a.c., d.c. and hybrid types
 - advantages and limitations
- Causes of hunting.
- Inspection, testing, and alignment of a servomechanism system
- Common faults their symptoms and causes.
- Programming and configuration of a PLC driven servo system

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers solving problems with electronic aspects of single phase power control devices and circuits. The unit encompasses safe working practices, interpreting diagrams, applying knowledge of electronic power control devices and their application, using effective problem solving techniques, safety and functional testing and reporting work activities and outcomes.

Note.

Typical single phase electronic power control problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

Application of the Unit

Application of the Unit 2)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a

License to practice**3)**

license to practice in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

effectiveness and modified where necessary.

- 3.3 Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed. (See Note)
- 3.4 Justification for solutions used to solve single phase electronic power control problems are documented in accordance with established procedures.

Note:

A license to practice in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solve problems in single phase electronic power control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI148 Single phase electronic power control circuit

A

Evidence shall show an understanding of single phase electronic power control circuit to an extent indicated by the following aspects:

Introduction to Power Control

- Advantages and benefits of power control
- Need for power control and typical applications
- Power control methods
- Types of solid state switches
- Block diagram of a power converter
- Power control terminology

REQUIRED SKILLS AND KNOWLEDGE

- Modes of operation.

Single Phase Power Rectifiers

- Single Phase Rectifier Circuit Configurations
- Resistive/Inductive Loads
- Output Voltages/Waveforms
- Ripple Voltage/Frequency
- Peak Reverse Voltages
- Free Wheeling Diodes

Silicon Controlled Rectifiers (SCRs)

- Construction and Symbol
- Basic Operating Principles
- Characteristics
- Gate Requirements
- Commutation
- Electrical Ratings
- Testing SCRs
- Applications.

Triacs and Gate Turn Off (GTO) Thyristors

- Triac Construction and Symbol
- Triac Basic Operating Principles
- Triac Characteristics
- Triac Triggering Modes
- Triac Electrical Ratings
- Triac Testing
- GTO Construction and Symbol
- GTO Basic Operating Principles
- GTO Characteristics
- GTO Electrical Ratings
- Applications for Triac and GTOs

REQUIRED SKILLS AND KNOWLEDGE

Power Transistors (BJTs)

- BJT Construction and Symbol
- BJT Basic Operating Principles
- BJT Characteristics
- BJT Electrical Ratings
- BJT Testing
- Applications for BJTs

Power Field Effect Transistors (FET)

- Types of FETs used for power control
- Power FETs Construction and Symbol
- FET Basic Operating Principles and Characteristics
- IGBT Basic Operating Principles and Characteristics
- Power FET Electrical Ratings
- Power FET Testing
- Applications for Power FETs

Triggering Devices

Diac:

- construction and symbol
- operating principles
- breakover voltage.
- Unijunction transistors (UJTs)
- construction and symbol
- operating principles
- intrinsic standoff ratio and peak point voltage

Programmable Unijunction Transistors (PUTs)

- construction and symbol
- operating principles
- programmable standoff ratio
- peak point voltage

Triggering Circuits

- R-C Time Constant Circuits
- Diac Trigger Circuit Operation
- UJT Relaxation Oscillator Circuit Operation
- PUT Relaxation Oscillator Circuit

Half Wave Controlled Rectification

REQUIRED SKILLS AND KNOWLEDGE

- Phase shift control
- Controlled rectifiers
- Controlled rectifier power output control
- Single Phase Half-Wave Controlled Rectifier
- Circuit configuration
- circuit operation
- waveforms
- load voltage
- applications and limitations
- Problems Associated with Phase Shift Control

Full Wave Controlled Bridge Rectification

- Single phase full-wave controlled bridge rectifier circuit
- Output voltage
- Output waveforms
- Applications and limitations
- Advantages and disadvantages

Fully Controlled Bridge Rectification

- Single phase fully controlled rectifier bridge circuit
- Output voltage
- Output waveforms
- Applications and limitations
- Advantages and disadvantages

Single-Phase a.c. Voltage Control

- Phase control of a.c. power
- Circuit configurations - half and full control circuits
- Triggering circuits
- Circuit performance and operation on resistive and inductive loads
- Output voltage and waveform, determination of output voltage using circuit characteristics
- Range of control with inductive loads
- Triggering problems associated with inductive loads.
- Applications and limitations

Zero Voltage Switching (ZVS)

- Operating principles
- Circuit configuration – including trigger circuits

REQUIRED SKILLS AND KNOWLEDGE

- Circuit operation and waveforms – resistive loads only
- Relationship between load power and conduction time
- Solid state relays; types and ratings
- Applications and limitations

Fault Finding of Power Control Circuits

- Fault finding procedures
- Typical faults – power and trigger circuits
- Characteristics displayed by common faults
- Comparison of test data with expected data (voltage/current waveforms)
- Location and replacement of faulty components

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be

required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in single phase electronic power control systems as described in 8) and including:

- A Understanding the extent of the single phase electronic power control problem.
- B Obtaining electronic device and circuit parameters, specifications and performance requirements appropriate to each problem.
- C Testing and solutions to single phase electronic power control problems.
- D Documenting justification of solutions implemented in accordance with established procedures.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing solutions to single phase electronic power control problems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH11 Troubleshoot amplifiers in an electronic apparatus
3A

OR

UEENEEI124 Fault find and repair analogue circuits and

A components in electronic control systems

The critical aspects of occupational health and safety covered in unit UEENEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solve problems in at least four single phase electronic power control systems

Note.

Typical single phase electronic power control problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Instrumentation and Control

UEENEEI149A Solve problems in polyphase electronic power control circuits

Modification History

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers solving problems with electronic aspects of polyphase power control devices and circuits. The unit encompasses safe working practices, interpreting diagrams, applying knowledge of electronic power control devices and their application, using effective problem solving techniques, safety and functional testing and reporting work activities and outcomes.

Note.

Typical polyphase electronic power control problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

Application of the Unit

Application of the Unit 2)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace for work involving

License to practice**3)**

direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG1 Solve problems in low voltage a.c. circuits
02A

UEENEEI14 Solve problems in single phase electronic
8A power control circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT**PERFORMANCE CRITERIA**

- work.
- 1.3 The extent of polyphase electronic power control problem is determined from performance specifications and situation reports and in consultations with relevant persons.
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Solve problems in polyphase electronic power control circuits
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of polyphase electronic power control device and circuit operation, characteristics and applications are applied to developing solutions to control problems.
- 2.3 Parameters, specifications and performance requirements in relation to each polyphase electronic power control problem are obtained in accordance with established procedures.
- 2.4 Approaches to resolving polyphase electronic power control problems are evaluated to provide most effective solutions.
- 2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.6 Problems are solved efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Test and document solutions to polyphase electronic power control.	<p>3.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>3.2 Solutions to polyphase electronic power control problems are tested to determine their effectiveness and modified where necessary.</p> <p>3.3 Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed. (See Note)</p> <p>3.4 Justification for solutions used to solve polyphase electronic power control problems are documented in accordance with established procedures.</p>

Note:

A license to practice in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solve problems in polyphase electronic power control circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI149A Polyphase electronic power control circuit

Evidence shall show an understanding of polyphase electronic power control circuit to an extent indicated by the following aspects:

T1 Three Phase Rectifier Circuits encompassing:

- Three-Phase Circuit Configurations
- Resistive/Inductive Loads
- Output Voltages/Waveforms
- Ripple Voltage/Frequency
- Peak Reverse Voltages
- Free Wheeling Diodes
- Measurement of rectifier output parameters.

T2 Three-Phase Half Wave Controlled Rectifiers encompassing:

- Phase control
- Purpose/operation of half controlled rectifiers
- Circuit configuration
- Rectifier performance and operation - resistive loads
- Output voltage – resistive load
- Rectifier performance and operation - inductive loads
- Rectifier output waveforms
- Applications and limitations
- Advantages and disadvantages three-phase controlled rectifiers.

T3. Three-Phase Half Controlled Bridge Rectifier encompassing:

- Purpose/operation of a half controlled bridge rectifiers
- Circuit configuration and connections
- Rectifier output - resistive loads
- Output voltage – resistive loads
- Rectifier output - inductive loads
- Output voltage - inductive loads
- Flywheel diode
- Output voltage calculations
- Applications and limitations

REQUIRED SKILLS AND KNOWLEDGE

- Advantages and disadvantages three-phase half controlled bridge rectifiers.

T4. Three-Phase Fully Controlled Bridge Rectifier encompassing:

- Purpose/operation of a fully controlled bridge rectifiers
- Circuit configuration and connections
- Rectifier output - resistive loads
- Output voltage – resistive loads
- Rectifier output - inductive loads
- Output voltage - inductive loads
- Flywheel diode
- Output voltage calculations
- Applications and limitations
- Advantages and disadvantages three-phase fully controlled bridge rectifiers.

T5. Three-Phase a.c. Controllers encompassing:

- Circuit configurations
- Circuit operation
- Triacs and SCRs circuits
- Triggering requirements
- Output voltage and waveforms
- Determination of output voltage
- Applications
- Advantages and disadvantages

T6. DC Converters encompassing:

- Purpose and operation of d.c. converters
- Circuit configurations
- Voltage control methods
- Forced commutation methods
- Calculation of load voltage
- Output voltage/waveforms
- Applications
- Advantages and disadvantages

T7. Cycloconverters encompassing:

- Purpose/operation of a cycloconverter
- Basic circuit configurations
- Measurement of output voltage
- Calculation of load voltage
- Output voltage/waveforms
- Applications and limitations
- Advantages and disadvantages

REQUIRED SKILLS AND KNOWLEDGE

T8. Invertors encompassing:

- Purpose/operation of a inverter
- Basic circuit configurations
- Measurement of inverter outputs
- Output voltage
- Applications and limitations
- Advantages and disadvantages

T9. Thyristor Protection encompassing:

- Power Control Devices Failure
- Protection Techniques
- Snubber Networks
- Series Inductors
- Amp Trap (HRC) fuses
- Gate Pulse Suppression

10. Installation of Thyristor Devices and Circuits encompassing:

- Need for heat sinking of power thyristor devices
- Heat sink features and types
- Installation methods for all types of thyristor packages
- Basic thermal model, only to demonstrate the effect of different heat sink
- Types and profiles and installation methods on thyristor junction temperature.

T11. Series and Parallel Thyristor Connections encompassing:

- Purpose of Series/Parallel Connection
- Series Connections
 - Reasons
 - Operational Problems
- Parallel Connections
 - Reasons
 - Operational Problems

T12. Fault Finding Three Phase Thyristor Circuits encompassing:

- Fault finding procedures
- Typical faults – power and trigger circuits
- Characteristics displayed by common faults
- Comparison of test data with expected data (voltage/current waveforms)
- Location and replacement of faulty components

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in polyphase electronic power control circuits as described as described in 8) and including:

A	Understanding the extent of the polyphase electronic power control problem.
B	Obtaining electronic device and circuit parameters, specifications and performance requirements appropriate to each problem.
C	Testing and solutions to polyphase electronic power control

problems.

- D Documenting justification of solutions implemented in accordance with established procedures.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing solutions to polyphase electronic power control problems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers development, installation and testing of programs for programmable controllers (PLC) for a system requiring discrete control functions. It encompasses working safely, applying knowledge of control systems, control system development methods, using ladder diagrams/statement list/function block diagram instruction sets, following written instructions and documenting program development and testing activities.

Application of the Unit

Application of the Unit **2)**

This unit is intended to augment formally-acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1 Prepare to develop enter and verify program. | 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures. |
| | 1.2 Established OHS risk control measures and procedures are followed in preparation for the work. |
| | 1.3 Safety hazards that have not previously been identified are reported and advice on risk control measures is sought from the work supervisor. |
| | 1.4 Control system scenario is determined from job specifications of the process/plant/machine to be controlled, and through consultation with appropriate person(s). |
| | 1.5 Equipment, software and testing devices needed to carry out the work are obtained and checked for correct operation and |

ELEMENT	PERFORMANCE CRITERIA
	safety.
	1.6 Installation of programmable controller is checked for compliance with regulations and job specification.
2 Develop control system and enter and test program.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.3 Control solutions are developed and documented based on the specified control mode and using acceptable methods for designing control systems.
	2.4 Developed control system is converted to an appropriate form, such as flow, state and ladder diagrams(See Note 1)
	2.5 Program is entered into the programmable control using a personal computer and appropriate software.
	2.6 Entered instructions and settings are tested as meeting those specified in by the control system scenario.
	2.7 Appropriate methods and tools are used to test control systems and operating faults and anomalies are identified and rectified. (See Note 2)
	2.8 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
3 Verify, document and report programming activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Program is transferred from a programmable controller to an external medium for storage. (See Note 3)

ELEMENT

PERFORMANCE CRITERIA

- 3.3 Control system specification and program are documented in accordance with established procedures.
- 3.4 Work completion is reported and appropriate personnel notified in accordance with established procedures.

Note.

1. Example of control functions are derived timers (off delay, self resetting, constant duty cycle), reversible counters, cascading timers, cascading counters, combining timers and counters, internal relays/flags/markers, latching relays (set/reset), jump instructions, master control instructions, bit shift registers, scan time considerations, one shot, retentive (power fail) functions, simple step sequence instructions
2. Examples of control system testing methods and tools are monitor mode as an aid to fault finding, inbuilt hardware/software diagnostics and use of error codes.
3. Examples of storage mediums are IC storage, hard disks, servers.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing, entering and verifying discrete control programs for programmable logic controllers.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

- **KS01-EI150A Programmable controller**
- Evidence shall show an understanding of programmable controller to an extent indicated by the following aspects:
 - T1. PLC Introduction encompassing:
 - Evolution of the programmable controller and applications
 - Relay control, static logic control and programmable control
 - Programmable controller block diagram (Inputs and Outputs)
 - Programmable controller advantages
 - Programmable controller symbols
 - Programmable controller functions
 - Numbering systems start-up procedures
 - Programming inputs and outputs
 - Operation of programmable controller inputs
 - PLC operation: scan cycle
 - Basic programming
 - T2. Types of PC programs encompassing:
 - Ladder diagrams
 - Basic Programming
 - Program modification
 - Ladder diagram development
 - Connecting the programmable controller.
 - T3. Programming Timers encompassing:
 - Purpose of timers
 - Timer instructions
 - On-delay timer instruction
 - Off-delay timer instruction
 - Programming timers
 - Retentive and non-retentive timers
 - Cascading timers
 - The self-resetting timer
 - Monitoring timers
 - Circuit conversion

REQUIRED SKILLS AND KNOWLEDGE

- T4. Programming Counters encompassing:
 - Counter instructions
 - Retentive and non-retentive counter
 - Programming counters
 - Up/down counters
 - Self resetting counter
 - Cascading counters
 - Circuit conversion
- T5. Program Storage encompassing:
 - PLC terms
 - Memory
 - Using the PROM pack
 - Printing ladder diagrams
- T6. PLC Input and Output Modules encompassing:
 - Purpose of modules
 - PLC input modules: dry contact input modules; AC input modules, DC input modules; Analog input modules
 - Output modules: relay output; Triac output; transistor output; analog output modules
- T7. PLC Installation Requirements encompassing:
 - Installation precaution
 - Safety systems
 - AS/NZS requirements
 - Mounting the PLC
 - Installation documentation
 - Routing signal and power cables
 - Locating PLCs and I/O
 - Earthing Requirements
- T8. Master Control encompassing:
 - Master control relay
 - Master control relay ladder diagram
 - Programming master control relays
- T9. Jump Function encompassing:
 - Jump function
 - Jump function ladder diagram
 - Programming jump functions
- T10. The Shift Register encompassing:
 - Purpose of Registers
 - The shift register
 - Shift register operation
 - Clock input

REQUIRED SKILLS AND KNOWLEDGE

- Shift register requirements
- Programming shift registers
- T11. The Step Sequencer encompassing:
 - Step Sequencers
 - Step sequencer operation
 - Clock input
 - Step Sequencer requirements
 - Programming step sequencer
- T12. PLC Diagnostics and Fault Finding encompassing:
 - PLC Fault Finding
 - Controller Status
 - I/O Faults
 - Program Faults

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be

required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop, enter and verify programs for programmable controllers as described in 8) and including:

- A Developing a control system solution to the required operating functions and parameters.
- B Identifying non-compliance conditions of device installation.
- C Converting control system to a PLC program.
- D Entering programming functions and parameters correctly.
- E Transferring programs to a PLC.
- F Correcting programming anomalies.
- G Testing and verify control system operation.
- H Transferring program to external storage.
- I Documenting control system and programming clearly.
- J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice

using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing, entering and verifying programs for programmable logic controllers using ladder instrument set.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing, entering and verifying programs for programmable logic controllers. The program shall include at least five of the following functions/controls:

- Derived timers (off delay)
- Self resetting
- Constant duty cycle
- Reversible counters
- Cascading timers
- Cascading counters
- Combining timers and counters
- Internal relays/flags/markers
- Latching relays (set/reset)
- Jump instructions
- Master control instructions
- Bit shift registers
- Scan time considerations
- One shot
- Retentive (power fail) functions
- Simple step sequence instructions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers development, installation and testing of programs for an industrial system requiring advance control functions. It encompasses working safely, using structure logic, acceptable design techniques, applying knowledge of high level instructions, and documenting development and programming activities.

Application of the Unit

Application of the Unit 2)

This unit is intended to augment formally-acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI15 0A Develop, enter and verify discrete control programs for programmable logic controllers

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to develop industrial control systems programs.	1.1	OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3	Mode of operation of the control system is determined from job specifications of the process/plant/machine to be controlled, and through consultation with appropriate person(s).
	1.4	Equipment, software and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
	1.5	Installation of programmable controller is checked for compliance with regulations and job specification.

ELEMENT	PERFORMANCE CRITERIA
2 Develop and enter and programs for industrial control systems.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Control solutions are developed and documented based on the operational mode and using acceptable methods for designing control system that contain numeric variables and values.
	2.3 Developed control solution is entered using a personal computer and software applicable to the programmable controller.
	2.4 Programming elements are written and used to manipulate word data. (See Note 1)
	2.5 Program control values are assigned using applicable numbering systems and codes. (See Note 2)
	2.6 Programs are written to read and write analogue signals, both with and without.
	2.7 Arithmetic functions are used to scale analogue inputs to a specified engineering span.
	2.8 Arithmetic functions are used to un-scale an engineering value to drive an analogue output.
	2.9 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
3 Monitor, verify and document programming activities.	3.1 Device operation is tested in strict accordance OHS requirements and procedures.
	3.2 Entered instructions and settings are tested as meeting those specified for the control mode requirements.
	3.3 Appropriate methods and tools are used to test and monitor control programs and operating faults, anomalies are identified and

ELEMENT

PERFORMANCE CRITERIA

rectified. (See Note 3)

- 3.4 OHS work completion risk control measures and procedures are followed.
- 3.5 Control system specification and program are documented in accordance with established procedures.

Notes.

1. Example of programming elements are loading data from discrete input switches to an internal register; manipulating internal registers using arithmetic, logical and other functions; driving outputs from internal registers; utilizing thumbwheel switches and displays; manipulating double registers with mathematical operations; loading constants, variables and presets in and out of memory; using masking of registers to obtain desired data; using tables for the storage of data.

2. Examples are binary, integer, signed integer and REAL numbering systems and codes such as BCD or ASCII

3. Examples of control program testing and monitoring methods and tools are locating status bits (flags); examining and modifying watchdog timer; investigating the implications of rung positioning in relation to scan and interrogating error codes.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing, entering and verifying programs for industrial control systems using high level instructions.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI151A PLC analogue and word programming

Evidence shall show an understanding of PLC analogue and word programming to an extent indicated by the following aspects:

T1. Numbering systems and codes encompassing:

- Types of numbering systems
- Codes
- Application of Codes
- Conversion between codes and numbering systems

T2. Use PLC software encompassing:

- Install programming software
- Memory mapping
- Computer software
- Manufacturers' Instruction Manuals

T3. PLC Hardware encompassing:

- Selection
- Installation
- Configuration
- Signals
- Resolution

T4. Analogue Modules encompassing:

- Comparison of signals
- Resolution of analogue signals
- Connection of analogue field
- Programming
- Loop fault

T5 Data manipulation encompassing:

- IEC data types
- Word Structure
- Select Bits Transfer

REQUIRED SKILLS AND KNOWLEDGE

- Move
- Block Transfer
- Compare
- Block Compare
- And Words
- Mask
- Maths Function
- Scaling and Un-scaling
- Special registers
- Shift Register
- Multiplexing

T6 Sequencer encompassing:

- Application
- Event and Time Driven
- Programming Application

T7 Languages encompassing:

- Ladder
- CSF
- STL

T8 Diagnostic encompassing:

- Special Register
- Software Diagnostics
- Edits
- Rung Scan Faults

T9 Complex Industrial Process encompassing:

- Describe Process
- Write Program
- Edit Program
- Connect and Run Program
- Documentation

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Developing, entering and verifying programs for industrial control systems using instructions as described in 8) and including:

- A Developing a control system to the required operating functions and parameters.
- B Identifying non-compliance conditions of device installation.
- C Entering programming functions and parameters correctly.
- D Correcting programming anomalies.
- E Testing and verify device operation.
- F Documenting control system and programming clearly.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing, entering and verifying programs for industrial control systems using high level

instructions.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing, entering and verifying word and analogue control programs for programmable logic controllers applied to representative range of at least five of the following:

- Hardware/Software configuration
- Number systems and converting between systems
- Basic diagnostics
- Binary word structure
- INT, DINT and REAL arithmetic operations
- Scaling and unscaling engineering units

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Instrumentation and Control

UEENEEI152A Develop, enter and verify programs in Supervisory Control and Data Acquisition systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers development, installation and testing of programs for supervisory control and data acquisition. It encompasses working safely, process analysis, developing process condition database and Human-Machine Interface (HMI) using SCADA software package and documenting programming activities.

Application of the Unit

Application of the Unit 2)

This unit is intended to augment formally recognised competencies. It is suitable for employment-based programs under an approved contract of training.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI15 1A Develop, enter and verify word and analogue control programs for programmable logic controllers.

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to develop programs for supervisory control and data acquisition systems.	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the SCADA system is determined from design brief and process specifications.
	1.4 Process data are analysed for development of graphical design/mimic diagrams.
	1.5 PLC analogue and digital addresses are related to tag database.
	1.6 Tag data types are configured in the database.
	1.7 Graphic objects are created and where appropriate are added to a graphic library. (See Note 1)

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|---|---|
| | 1.8 | Consideration is give to the security requirements for the SCADA system to prevent access by unauthorised personnel. |
| | 1.9 | The SCADA system is configured to provide appropriate reporting mechanisms. |
| | 1.10 | Equipment, software and testing devices needed to carry out the work are obtained and checked for correct operation and safety. |
| 2 | Develop and enter programs using dedicated supervisory control and data acquisition software. | |
| | 2.1 | Established OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | SCADA software is used to develop human-machine interface (HMI) of processes. |
| | 2.3 | Supervisory control functions, data acquisition components and automated tasks are programmed using SCADA software. |
| | 2.4 | Data is manipulated within the SCADA software. |
| | 2.5 | Alarms and limits for process variables are identified and programmed accordingly. |
| | 2.6 | Trends for process variables and limits are programmed accordingly. |
| | 2.7 | Reports are configured to display/print appropriate information. |
| | 2.8 | User rights/security is configured to provide appropriate access to the different sections/controls of the SCADA system. |
| | 2.7 2.9 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes. |
| 3 | Monitor, verify and document programming activities. | |
| | 3.1 | Device operation is tested in strict accordance OHS requirements and procedures. |
| | 3.2 | Entered objects and settings are tested as meeting those specified in the design brief. |

ELEMENT

PERFORMANCE CRITERIA

- 3.3 SCADA software tools are used to test and monitor programs and operating faults, anomalies are identified and rectified.
- 3.4 OHS work completion risk control measures and procedures are followed.
- 3.5 SCADA system specification and program are documented in accordance with established procedures.
- 3.6 Work completion is reported and appropriate personnel notified in accordance with established procedures.

Note.

1. Graphic libraries are typically part of vender software for SCADA systems.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing, entering and verifying programs in Supervisory Control and Data Acquisition systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies..

KS01-EI152A Supervisory control and data acquisition systems programming

Evidence shall show an understanding of supervisory control and data acquisition systems programming to an extent indicated by the following aspects:

T1. SCADA system communications and networking encompassing:

- PLC Interface requirements
- Networking requirements of the system
- SCADA system differences from DCS Process Control systems
- SCADA HMI software package costing
- Types of networks available with SCADA HMI
- Coordinate and access of networking to factory network
- Understands the difference between SCADA and Process Control systems

T2. Mimics and animated graphics encompassing:

- Graphic designs, balance clarity of layout and navigation
- Assessment of data required to be entered in software package
- Validation of entered data

T3. Trending encompassing:

- Analysis of process to select data, i.e., sampling of the process
- Viewing data and graphical representation of selected information
- Trend graphs and data matching
- Understands the difference between real time trends and historic trends.

T4. Alarm logging encompassing:

- Analysing selected data and applying limits to processes
- Corrective actions and notifications of alarm status
- Alarm data availability for third party software systems

T5. Recipes and scheduling encompassing:

- Methods of producing libraries for different process parameters required for varied production runs
- Analysis of different production runs, i.e., amounts of materials, pressure,

REQUIRED SKILLS AND KNOWLEDGE

temperature, weights etc.

- Alarm limits/material specifications
- Understands where & when scheduling is used
- Scheduling, setting limits and evoking program changes

T6. Data collection and databases encompassing:

- Produce a database of variable tags and range specifications involved in the process
- Conversion Export of raw data into appropriate forms for data management and report creation, e.g., Excel, Paradox
- Types and layout of reports
- Aims of customer, management, statistical and account reports
- Analysis of data in reports: Design and graphical data representations
- Assessment of data required for the report

T7. Programming language encompassing:

- Scripting languages in SCADA HMI software
- Automate tasks within the software PLC or SCADA?
- Provide complex processing of process data where field equipment i.e. PLC!! does not have the capability or to minimise control lag

T8. Implementation and applications encompassing:

- Typical applications in manufacturing and process control, e.g., food processing, packaging, automotive industry, energy management and steel production and mining

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment,

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Developing, entering and verifying programs in Supervisory Control and Data Acquisition systems as described in 8) and including:

- A Collecting and analysing data accurately.
- B Converting data to an appropriate database.
- C Creating appropriate graphic objects.
- D Adding graphic objects to a library.
- E Developing effective HMI.
- F Programming SCADA functions and data acquisition components correctly.
- G Producing a report by the SCADA system
- H Correcting programming faults and anomalies.
- I Configuring user access rights.
- J Documenting SCADA system and programming clearly.
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to develop, enter and verify programs in Supervisory Control and Data Acquisition systems.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing entering and verifying programs in Supervisory Control and Data Acquisition systems.

The program shall include the following programming activities:

- Configuring tag data type
- Creating at least five graphic objects
- Adding graphic objects to the graphic library
- Developing a HMI for a given system
- Incorporating alarms and limits for process variables
- Incorporating trends for process variables and limits.
- Entering objects and testing
- Rectifying operating faults and anomalies
- Configure user rights for access/security.
- Configure and output at least one report.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

 Instrumentation and Control

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers monitoring and maintaining the operation of distributive and central control system networks. It encompasses safe working practices, installing and configuring controllers and devices, monitoring system operations, diagnosing malfunctions and faults and documenting development activities.

Application of the Unit

Application of the Unit **2)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 6 or higher.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

UEENEEI15 1A Develop, enter and verify word and analogue control programs for programmable logic controllers.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element.

Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design control system networks.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of control system networks is determined from network specifications/design brief and in consultation with relevant persons.
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5 Appropriate management tools and software are selected based on specified requirements and performance standard.
	1.6 Strategies are implemented to ensure network development is carried out efficiently.
2 Install, configure and manage control system networks.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge and complexities of control system networks infrastructure are applied to managing network services.
	2.3 Network infrastructure components are installed and configured in compliance with industry standards and variants as specified for the network.
	2.4 Structural components of directory services are installed and configured in compliance with industry standards and variants as specified for the network.
	2.5 Management components of network control system are configured in compliance with industry standards and requirements specified for the network.
	2.6 Security components of network control system are created in compliance with industry

ELEMENT**PERFORMANCE CRITERIA**

- standards and requirements specified for the network.
- 2.7 Network malfunctions are identified and rectified using logical techniques and drawing knowledge of complex network control system infrastructure.
- 2.8 Network is monitored and solutions are developed to optimise network performance and reliability in accordance with established procedures.
- 2.9 Security events are analysed and actions taken in accordance with established policy.
- 2.10 Approaches to issues/problems are analysed to provide most effective solutions.
- 2.11 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.
- 3 Report network administration activities.
- 3.1 Written justification is produced for network services development activities and appropriate person/s notified in accordance with established procedures.
- 3.2 Network service development records are maintained in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and configuring Human-Machine Interface networks.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI153A

Control system network

Evidence shall show an understanding of control systems networks to an extent indicated by the following aspects:

a) Purpose and application of control system networks systems

b) Open and common proprietary control system networks models (layers) and protocols - CANopen, ControlNet, Devicenet, Ethernet, Foundation Fieldbus, Interbus, Modbus, Profibus.

c) Control system networks interface.

a) Domain Name Service (DNS) encompassing:

DNS Server Service

Root name server

Configuring zones - configuring for dynamic updates and delegating zone for DNS

Caching – only server

DNS client

Testing DNS Server service

Manually creating DNS source

Managing and monitoring DNS

b) Dynamic Host Configuration Protocol (DHCP)

Installation of DHCP Server Service

DHCP scopes, superscopes and multicast scopes

DHCP – DNS integration

Active Directory™

Managing and monitoring DHCP

c) Network Infrastructure encompassing:

Configuring and troubleshooting remote access - remote access policy, configuration of remote access profile, Virtual Private Network (VPN), multi link connection, routing and remote access for DHCP

REQUIRED SKILLS AND KNOWLEDGE

Managing and monitoring remote access

Remote access security - authentication protocols, encryption protocols and access policy

d) Network Protocols encompassing:

Installation, configuration and troubleshooting of network protocols - Transmission Control Protocol / Internet Protocol (TCP/IP), NWLink and network bindings

Configure TCP/IP packets

Configuring and troubleshooting network protocol security and IP Security (IPSec)

Managing and monitoring network traffic

e) Internet Naming Services in a network encompassing:

Installation, configuring and troubleshooting

Configuring Internet Naming Services replication

Configuring an application networking interface

Managing and monitoring Internet Naming Services

f) IP Routing encompassing:

Installation, configuring and troubleshooting of IP routing protocols - updating routing tables, and implementing demand-dial routing

Managing and monitoring IP routing - border routing, internal routing and IP routing protocols

g) Network Address Translation (NAT) encompassing:

Installing Internet connection sharing

Installing NAT

Configure NAT properties and interfaces

h) Certificate Services encompassing:

Installing and configuring Certificate Authority

Issuing and revoking certificates

Removing the Encrypted File System recovery keys

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design and configure Human-Machine Interface networks as described in 8) and including:

- A Establishing network services to be developed.
- B Installing and configuring network infrastructure components.
- C Installing and configuring structural components of directory services.
- D Configuring management components of network services.
- E Creating security components of network services.
- F Identifying and rectifying network malfunctions.
- G Developing solutions to optimise network performance.
- H Documenting network services development activities.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing and configuring Human-Machine Interface networks.

Method of assessment**9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units**9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to safe working practices and designing and configuring a representative range of Human-Machine Interface networks with the following attributes:

- operation of distributive and central control system networks monitoring and maintenance
- safe working practices
- controllers and devices installation and configuration
- system operations monitoring
- malfunctions and faults diagnostics
- development activities documentation

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Instrumentation and Control

UEENEEI154A Design and use advanced programming tools PC networks and HMI Interfacing

Modification History

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the design of computer application for control processes. It encompasses apply knowledge of control devices, control systems, programmable logic controllers, supervisory control and data acquisition systems and control programming methods, developing alternative design schemes based on design brief, customer relations and documenting designs.

Application of the Unit

Application of the Unit 2)

This unit is intended to augment formally-acquired competencies. It is suitable for employment-based programs under an approved contract of training. It applies to any formal recognition for this standard at the aligned AQF 6 level.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI15 1A Develop, enter and verify word and analog control programs for programmable logic controllers.

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design engineering computer applications.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the proposed control system is determined from the design brief or in consultation with appropriate person(s).
	1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
2 Develop engineering computer applications design.	2.1 Knowledge of control devices, control systems and control programming methods are applied to the design.
	2.2 Alternative concepts for the design are tested based on the requirements outlined in the design brief. (Note)
	2.3 Safety, functional and budget considerations are incorporated in the design.
	2.4 System design draft is checked for compliance with the design brief and regulatory requirements.
	2.5 System design is documented for submission to appropriate person(s) for approval.
	2.6 Solutions to unplanned situation are provided consistent with organisation's

ELEMENT

PERFORMANCE CRITERIA

- policy.
- | | | | |
|---|---|-----|--|
| 3 | Obtain approval for engineering computer applications design. | 3.1 | System design is presented and explained to client representative and/or other relevant person(s). |
| | | 3.2 | Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy. |
| | | 3.3 | Final design is documented and approval obtained from appropriate person(s). |
| | | 3.4 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards. |

Note.

Design concepts should be tested by real or virtual prototyping where it cannot be shown easily by other means that particular aspects of the design meet specified requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing a computer based control system.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI154A PLC system applications

Evidence shall show an understanding of PLC system applications to an extent indicated by the following aspects:

a) Alternative/enhancing programming methods

b) System diagnostics techniques.

c) Control loops encompassing:

Regulated loop control

Proportional / integral /derivative (PID) control

Applications of PID control

Methods used to achieve PID control using a PLC

d) Specialist instructions - interrupt driven applications, high speed counters, positional encoders

e) Communications methods and requirements encompassing:

Common protocols and interface standards

Requirements when networking/interfacing PLC's

Communication mediums

Network types and topologies

Hierarchal networks

Peer to peer networks

Handshaking

Open architecture communications

Remote I/O

f) Intelligent terminals/graphic interfaces installation and communication requirements

a) Data link layer encompassing:

Device types

Bus arbitration

REQUIRED SKILLS AND KNOWLEDGE

Device initialisation

Synchronous / Asynchronous messaging.

Time management

Link active scheduler specific functions

b) Bus monitor encompassing:

capturing

filtering

c) Fieldbus message specification encompassing:

Virtual field device

Object dictionary

Communicate objectives

Communicate services

d) High speed Ethernet encompassing:

Protocols

FDA agents

Messaging

Sessions

Time synchronisation

Redundancy

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design a PLC computer based control system as described in 8) and including:

- A Develop and test PLC code using advanced programming tools
- B Program and test a continuous control loop (such as PID) using a PLC.
- C Configure and test a PLC network enabling data to be shared between PLC's.
- D Configure and test a field bus style network (remote I/O)
- E Configure a HMI using software applicable to the PLC available.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to design a computer based control system.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEE01 Manage risk in electrotechnology activities
1C

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing a computer based control system incorporating at least five interacting subsystems modes.

- Configure and test a PLC Peer to Peer network
- Configure and test a PLC Hierarchical network
- Configure and test a PLC field bus style network
- Develop PLC code using a structured text programming tool
- Develop PLC code using a sequential function chart programming tool
- Design a simple HMI interface using a typical touch screen device
- Use system diagnostics to fault find hardware/software issues
- Program and test a PID functional control/program block

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field **11)**
Instrumentation and Control

UEENEEI155A Develop structured programs to control external devices

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This competency standard unit covers programming of microprocessor/microcontroller devices to access external devices. The unit encompasses working safely, applying knowledge of control applications, and analogue and digital input/output signals, programming fundamentals, writing and testing program and documenting programming activities.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and the like.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop structured programs for control sub systems.	1.1 OHS processes and procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The extent of structure programming to be developed is determined from job performance specifications and in consultations with relevant persons.
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved on the work.
	1.5 Appropriate development kit and software are selected based on specified requirements and performance standard.
	1.6 Strategies are implemented to ensure programming is carried out efficiently.
2 Develop structured programs for control sub systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of computer functions and features are applied to developing structure program.
	2.3 Correct structure and syntax is applied to developing structure program.
	2.4 Key features of the programming language are applied to develop and test solutions.

ELEMENT**PERFORMANCE CRITERIA**

(Note)

- | | | |
|---|--|---|
| | 2.5 | Approaches to issues/problems are analysed to provide most effective solutions. |
| | 2.6 | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards |
| 3 | Test and document structured program for control subsystems. | |
| | 3.1 | Testing procedures are developed to test developed program. |
| | 3.2 | Problems and bugs in program are rectified to ensure specification the creation of the code is met. |
| | 3.3 | Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person or persons. |

Note:

Although programming in 'C' is preferred any other structured language in current use by industry may be used.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing structured programs to control external devices.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI155A Control programming fundamentals

Evidence shall show an understanding of control programming fundamentals to an extent indicated by the following aspects:

- a) Control applications of software
- b) Software terminology
- c) Programming languages currently used by industry
- d) Program development - flowcharts, pseudocode, algorithms
- e) Programming concepts encompassing:

programming structure

documentation

compiling source code

generating executable files

scalar and structured data types

constants and variables

reading from keyboard and writing to screen

arithmetic, relational and logical operations

making decisions

looping operations

programming to access external devices via I/O boards

functions - macros; global and local variables, auto and static variables; Intrinsic functions used in control; Writing functions; Linking in external functions to control hardware

numerical and character arrays

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the “Assessment Guidelines – UEE11”. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements; and
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - developing structured programs to control external devices as described in 8) and including:

- A Using key features of an appropriate programming language.
- B Developing testing procedures.
- C Identifying problem and bugs in program.
- D Rectifying problem and bugs in program.
- E Writing and presenting relevant documentation to an acceptable standard.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing structured programs to control

external devices.

**Method of
assessment**

9.4)

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to developing structured programs to control external devices for a given representative range of programs and control devices with the following attributes:

- safe working practices
- control applications knowledge application
- analogue and digital input/output signals
- programming
- program writing and testing
- programming activities documentation

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop and test basic specifications.	1.1 OHS processes and procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The extent of specifications to be developed is determined from job performance requirements and in consultations with relevant persons.
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved on the work.
	1.5 Appropriate development kit and software are selected based on specified requirements and performance standard.
	1.6 Strategies are implemented to ensure programming is carried out efficiently.
2 Develop basic specification.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of micro controller functions and features are applied to developing specifications.
	2.3 Correct structure and syntax is applied to developing program specification for target micro controller function.
	2.4 Key features of the assembler programming language are applied to develop and test

ELEMENT	PERFORMANCE CRITERIA
	solutions.
	2.5 Approaches to issues/problems are analysed to provide most effective solutions.
	2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.
3 Test and document the basic specification.	3.1 Testing procedures are developed to analyse code developed.
	3.2 Problems and bugs are rectified to ensure specification the creation of the code is met.
	3.3 Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person or persons.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) 7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing and testing code for microcontroller devices.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI156A Microcontroller programming

Evidence shall show an understanding of microcontroller control system programming methods to an extent indicated by the following aspects:

Microcontroller architecture encompassing:

Program storage types

Data storage types

I/O Ports: analogue/ digital

Integrated Peripherals: timers, interrupts etc

Control circuitry: system clock, reset etc

Industry standard programming environment

Programming terms encompassing:

Language levels and their features

Language simulators and emulators

Language programming basics encompassing:

Programming input/output functions

Timing loops

Memory organisation, operation and addressing methods encompassing:

Programmer's model encompassing:

- register structure
- instruction register/decoder
- arithmetic logic unit (ALU)
- accumulator and flags
- instruction cycle timing
- control lines
- stack pointer
- index register

System clock circuits fetch and execute encompassing:

- timing cycle

REQUIRED SKILLS AND KNOWLEDGE

- timing relationship to system clock
- logic levels of system buses for each clock period of an instruction cycle

Input/output port programming

Structured assembly programming

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence

need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UEE11". Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.; and
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures;

and

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop and test code for microcontroller devices as described in 8) and including:

A	Using all key features of an appropriate assembler language.
B	Developing testing procedures.
C	Identifying problem and bugs in program.
D	Rectifying problem and bugs in program.
E	Writing and presenting work reports to an acceptable standard.
F	Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry

practices in relation to developing and testing code for microcontroller devices.

Method of assessment

9.4)

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to developing and testing code for microcontroller devices including at least three of the following:

- Selecting an appropriate micro for a given task
- Setting up and using basic input/output functions
- Using assembler/simulator software packages to debug program
- Finding system faults.

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers installing, configuring and maintaining communication service on a control network. It encompasses safe working practices, applying knowledge of industrial control network topology and protocols, configuring data links, bus monitoring and system management and access, network testing and documenting system settings.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However,

License to practice 3)

practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s) 4)****Competencies 4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged

Employability Skills

5)

will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1 Prepare to configure and maintain industrial control system networks.	1.1	OHS procedures for a given work area are identified, obtained and understood.
	1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3	The nature of the industrial control system and network is established from control system specifications and in consultation with appropriate person(s).
	1.4	Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5	Network operating system versions and updates needed to configure and maintain the network are obtained in accordance with established procedures and checked against job requirements.
2 Configure and maintain industrial control system networks.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	Control application network components are installed, upgraded and configured in accordance with developer's instructions and network

ELEMENT**PERFORMANCE CRITERIA**

- requirements.
- 2.3 Devices, desktop environment, network protocols and services and system security are implemented in accordance with requirements.
- 2.4 Access to control data and resources is configured within the limitations specified for each user.
- 2.5 Network malfunctions are identified and rectified using logical techniques and drawing knowledge of control devices, storage, network protocols, connections and services and system security configuration processes.
- 2.6 Network performance and reliability is monitored and optimised in accordance with established procedures.
- 2.7 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.8 Network administration is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services.
- 3 Document control system network configuration and maintenance activities.
- 3.1 Written justification is produced for network maintenance and upgrading and appropriate person(s) notified in accordance with established procedures.
- 3.2 Network maintenance documentation is maintained in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and to configure and maintain industrial control system networks.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EI157A Industrial control system networks

Evidence shall show an understanding of industrial control systems networks to an extent indicated by the following aspects:

a) Purpose and application of control system networks systems

b) Open and common proprietary control system networks models (layers) and protocols - CANopen, ControlNet, Devicenet, Ethernet, Foundation Fieldbus, Interbus, Modbus, Profibus.

c) Control system networks interface.

a) Data link layer encompassing:

Device types

Bus arbitration

Device initialisation

Synchronous / Asynchronous messaging.

Time management

Link active scheduler specific functions

b) Bus monitor encompassing:

capturing

filtering

c) Fieldbus message specification encompassing:

Virtual field device

Object dictionary

Communicate objectives

Communicate services

d) High speed Ethernet encompassing:

Protocols

FDA agents

Messaging

REQUIRED SKILLS AND KNOWLEDGE

Redundancy

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

- Configure and maintain industrial control system networks as described in 8) and including:
 - A Establishing industrial control system and network requirements and operating system versions and updates.
 - B Installing, upgrading and configuring control application network components correctly.
 - C Configuring access to control data and resources for each user.
 - D Identifying network malfunctions.
 - E Rectifying network malfunctions.
 - F Documenting network configuration and maintenance activities.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the

approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to configuring and maintaining industrial control system networks.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEI151 Develop, enter and verify word and analogue
A control programs for programmable logic
controllers.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to configuring and maintaining an industrial control system networks with at least three distributive control loops, two programmable controllers and one HMI system controller.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Prerequisite Unit(s) 2)

2.1) Competencies

There are no prerequisite competencies for this unit.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish the scope of the project.	1.1 OHS processes and procedures for a given work area are identified, identified, obtained and understood
	1.2 Project' deliverables and budget are established from project planning and other relevant documentation and from discussions with appropriate person(s).
	1.3 Measurable outcomes are identifies to evaluate the project on completion from project planning and other relevant documentation.
	1.4 Plant, materials and skills needed to meet project outcome are established from project planning and other relevant documentation.
	1.5 Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement.
2 Manage project.	2.1 OHS policies, procedures and programs are implemented and monitored.
	2.2 Achievement of project outcomes is delegated to appropriately competent persons involved in the project.
	2.3 Risk events are identified and project plan strategies implemented to ensure that outcomes are achieved to the required standard of quality specified in the contract and safety required by organization's policy.
	2.4 Procurement processes and procedures are monitored to ensure on time supply of plant and materials and in accordance with organisation's policy.
	2.5 Project is progress is monitored against schedule, quality requirements and budget.
	2.6 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation's

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing refrigeration and air conditioning projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ040B Refrigeration and air conditioning project management

Evidence shall show an understanding of managing refrigeration and air conditioning project methods and techniques, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Defining project parameters

Note:

Examples may include: Project scope; Project stakeholders and clients; Project phases and the relationship between phases; Time requirements and limitations; Resource requirements and limitations; Quality requirements and limitations.

T2 Time management

Note:

Examples may include: time management concepts; standard practices for ensuring a project runs to time and the like.

T3 Financial management

Note.

Examples may include: Financial management concepts; Standard practices for managing project finances; Project budgets; Costs, variations and estimations; Invoicing against project phases/deliverables; Acquittals and the like.

T4 Quality management

Note.

Examples may include: Quality management concepts; Standard practices for managing quality within a project.

T5 Human Resource management

Note.

Examples may include: human resource management concepts; standard practices for

REQUIRED SKILLS AND KNOWLEDGE

managing personnel within a project

T6 Communication management

Note.

Examples may include: Communication management concepts; Standard practices for managing communication within a project and the like.

T7 Risk management and contingencies

Note.

Examples may include: risk management concepts; standard practices for managing risk within a project; Internal risks; External risks; Risk minimisation; Risk removal; Contingencies and the like.

T8 Procurement management

Note.

Examples may include: procurement management concepts; standard practices for managing procurement and the like.

T9 Physical Resource management

Note.

Examples may include: Types of physical resource, including; Equipment, Technology, Information, Facilities; Physical resource management concepts; Standard practices for managing physical resources

T10 Contracts

Note.

Examples may include: Understanding project contracts; Standard practices for working to contract specifications; Contract format; Contract content; Legal obligations of contract parties; Accompanying documentation including; Contract Schedules and the like.

T11 Performance assessment and continuous improvement

Note.

Examples may include: standard performance assessment practices; standard continuous improvement practices and the like

T12 Engineering ethics principles

T13 Customer/Client relations

- Importance of customer/client relations
- Interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

REQUIRED SKILLS AND KNOWLEDGE

KS02-EJ040B Refrigeration and air conditioning industry sector customs and practices

Evidence shall show an understanding of refrigeration and air conditioning industry sector customs and practices, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

Technical aspects of project planning and management encompassing:

- Method of ensuring equipment meets specified performance requirements
- Performance/cost benefit analysis
- Equipment procurement

- D Documenting project plan proposal
- E Negotiating alterations to the proposed project plan successfully
- F Obtaining approval of the final plan
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in planning refrigeration and air conditioning projects.

EVIDENCE GUIDE

Method of assessment	9.4) This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'. Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.
Concurrent assessment and relationship with other units	9.5) There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized refrigeration or air conditioning project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the basic connection of refrigeration and air conditioning piping/tubing and fittings. It encompasses the safe use of hand, fixed and portable power tools for cutting, flaring, bending, swaging, silver brazing copper tube to copper tube, Bundy tube and brass and steel fittings, measurement and reading drawings and diagrams.

Application of the Unit

Application of the Unit

4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher. The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Application of the Unit 4)

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to fabricate tubing and attach fittings for refrigeration and/or air conditioning systems	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.
	1.4 The nature of work is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.

ELEMENT	PERFORMANCE CRITERIA
	1.6 Sources of materials that may be required for the work are accessed in accordance with established routines and procedures.
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Fabricate tubing and attach fittings for refrigeration and/or air conditioning systems	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Work in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Established methods used to cut, flare, swage, bend, silver braze tubing and fittings as they apply to the refrigeration/air conditioning equipment arrangements.
	2.4 Refrigerant tubing and fittings are silver brazed with the use of dry nitrogen to prevent contamination.
	2.5 Fabricate tubing and attach fittings are prepared efficiently without waste of materials or damage/contamination to apparatus and the surrounding environment or services and using sustainable energy practices.
	2.6 Routine quality checks are carried out in accordance with work instructions/or specifications including dimensions and pressure testing.
3 Complete work and report	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Work supervisor is notified of the completion of the work in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and preparing refrigerant tubing and fittings.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ102A Refrigerant tubing and fittings techniques

Evidence shall show an understanding of cutting, bending and joining refrigeration piping and tubing tools, equipment and techniques, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Piping

- Refrigeration & water grade copper tube
- Maintaining cleanliness (always capped, do not blow out with mouth etc)
- Soft and hard drawn tube
- Tubing applications (soft, hard, pair coil, water grade etc)
- Tube qualities - diameter, wall thickness (gauge) and pressure ratings (R410A etc)
- Pipe insulation (types - tube, slit tube, sheet etc and joining methods - glue, tape etc)
- Other tube materials (Bundy, steel, aluminum, brass)

T2 Cutting

- Cutting tools (Imps, normal & large pipe cutters, tube cutting rings etc)
- Precautions while cutting (sharp burrs, sharp blades etc)
- Deburring tools (reamers, deburrers etc)

T3 Bending

- Bending tools (springs, levers, presses etc)
- Precautions while bending (work hardening, collapsing etc)
- Bending hard drawn tube - the process of annealing

T4 Joining

- Flare nuts (plain, short barrel, frost proof, reducing)
- Flaring tools (flare block, eccentric with clutch for high pressure tube)
- Precautions while flaring (deburred, length past block face, cleanliness)
- Swaging tools (punch, flare block, expander etc)

REQUIRED SKILLS AND KNOWLEDGE

- Precautions while swaging (length past block face, tube shortening effect, cleanliness etc)
- Other tube fittings (BSP to flare elbows, tees, unions, plugs, flare washers, Lokrings etc)
- Thread sealants (tapes, pastes etc)
- Access valves (Schrader, piercing, cut-away of service valve/s)
- Precautions using access valves (refrigerant leakage, core removal, limitations on piercing valves etc)

T5 Soldering and brazing equipment

- Gas types (oxy acetylene, air acetylene, propane, Mapp gas)
- Hazards associated with their use (cylinder transport, remove regulator, oil & oxy = bang)
- Personal safety (MSDS - oxy, acetylene, propane, MAPP gas)
- Flash back arrestors
- Setting up equipment (fitting regulator, adjusting pressures, tip selection)
- Igniting and flame types (flint guns, oxidising, neutral, carburising)
- Care and maintenance of equipment (hoses, regulator, tips, cylinders, flash back arrestors)

T6 Silver solder

- Types (yellow, brown, blue and their metal components)
- Personal safety (MSDS - silver brazing alloys)
- Flux and its use (dissimilar metals)
- Personal safety (MSDS - flux)
- Preparing surfaces (removing oxides, oils, applying flux)

T7 Soldering techniques

- Dry nitrogen
- Personal safety (MSDS - nitrogen)
- Applying dry nitrogen to a piping circuit
- Silver soldering copper to copper
- Silver soldering copper to dissimilar metals
- Annealing copper tube

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement

EVIDENCE GUIDE

and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria

EVIDENCE GUIDE

shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Prepare refrigerant tubing and fittings as described in 8) and including:
 - A Applying tubing and fitting appropriately to equipment layout
 - B Using established methods to cut, flare, bend, swage and silver brazing copper tube
 - C Attaching fittings correctly
 - D Conducting component routine quality checks
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in preparing refrigerant tubing and fittings.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to preparing refrigerant tubing and fittings for at least two basic different refrigeration/air conditioning equipment layouts, which require cutting, flaring, bending, swaging, silver brazing copper tube to copper tube, Bundy tube, brass and steel fittings.

Note:

This includes piping/tubing and fittings for high pressure refrigerants.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

Modification History

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers the determination of the operating conditions of vapour compression systems. It encompasses working safely, determining refrigerant pressures and temperatures and relevant air and water temperatures using measurement and basic calculation methods.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Application of the Unit 4)

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to determine the basic operating conditions of vapour compression systems	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work
	1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
	1.4 Expected operating conditions are obtained from documentation or from work supervisor to establish the scope of work to be undertaken
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with

ELEMENT	PERFORMANCE CRITERIA
	others
	1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
	1.7 Tools, equipment and testing devices needed to determine the basic operating conditions are obtained and checked for correct operation and safety
2 Determine the basic operating conditions of vapour compression systems	<p>2.1 Established OHS risk control measures and procedures for carrying out the work are followed</p> <p>2.2 Measuring system operating parameters is conducted in strict accordance with OHS requirements and established safety procedures</p> <p>2.3 System is checked and isolated where necessary, in strict accordance OHS requirements and procedures</p> <p>2.4 Established procedures are used to determine actual and specified range of operating conditions from measured and calculated values as they apply to particular vapour compression systems.</p> <p>2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.</p> <p>2.6 Unexpected situations are dealt with safely and with the approval of an authorised person</p> <p>2.7 Operating conditions are determined without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices</p>
3 Complete work and report	<p>3.1 OHS work completion risk control measures and procedures are followed</p> <p>3.2 Work site and equipment is cleaned and made safe in accordance with established procedures</p>

ELEMENT

PERFORMANCE CRITERIA

- 3.3 Operation conditions are documented, including identification of any parameter that is not within the specified range for the system
- 3.4 Work supervisor is notified of the completion of the work in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining the basic operating conditions of vapour compression systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ103A Basic operating conditions of vapour compression systems

Evidence shall show an understanding of basic operating conditions of vapour compression systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Refrigeration Industry

- The history of the refrigeration industry (note that A/C is covered in another unit)
- Applications, classifications and equipment used in the refrigeration industry

T2 Introduction to the Vapour Compression System

- Basic Operation
- Major Components

T3 Heat

- Matter (atoms, molecules, energy and its different forms)
- Heat energy (definition, unit of measurement)
- Enthalpy (definition, unit of measurement)
- Heat flow (hot to cold)
- Heat transfer
 - methods (conduction, convection, radiation)
 - requirements
 - effects

T4 Temperature and relative humidity

- Temperature
- Scale types (imperial, metric, absolute) and their units of measurement
- Conversion to/from absolute values
- Temperature difference/change (td, Δt , unit of measurement)
- Relative humidity
- Thermometer types and applications (digital, stem, dial, max/min, non-contact,

REQUIRED SKILLS AND KNOWLEDGE

data loggers)

- Relative Humidity measurement devices and applications (dry bulb/wet bulb, sling, digital)
- Hazards and related safe working practices (working near rotating machinery - fans, pulleys, belts etc)
- Care and maintenance (bending stems, overheating, removing batteries after use, uncoiling capillary)
- Calibration (boiling water, iced water, send to a specialist etc)
- Appropriate and safe methods of use
- Typical locations on a system
- Fitting temperature and relative humidity instruments

T5 Sensible and Latent Heat

- Definition of specific heat capacity, latent heat and sensible heat (including units of measurement)
- Types of latent heat
- Heat calculations

T6 Pressure

- Define
- Scale types (imperial, metric, absolute) and their units of measurement
- Vacuum scales (Pascals, microns)
- Conversion to/from absolute values
- The basic Gas Laws – Boyles, Charles and Daltons (excl combined or general gas law)
- Pressure gauge types and applications (pressure, compound, vacuum, manometer, magnehelic, barometer)
- Hazards and related safe working practices (dangerous system pressures)
- Care and maintenance (ingress of oil and contaminants (dirt), avoiding needle bounce (esp. HP) etc)
- Calibration (atmospheric pressure, send to a specialist etc)
- Appropriate and safe methods of use
- Typical locations

T7 Refrigerant conditions

- Saturation temperature
- Saturated liquid / saturated vapour
- Superheated vapour
- Sub-cooled liquid
- Pressure temperature relationships
- P/T charts
- Enthalpy

REQUIRED SKILLS AND KNOWLEDGE

T8 The vapour compression cycle

- Primary system components
- High and low pressure sides
- Basic system operation

T9 Working safely with refrigeration vapour compression systems

- Risk management principles and processes
- Hazards and risk control measures associated with:
 - refrigeration vapour compression systems and components
 - refrigerants
 - measuring and testing equipment

T10 Leak detectors

- Detector types and applications (electronic, halide, bubble, ultra violet)
- Hazards and related safe working practices (working around rotating machinery, open flame, ultra violet light etc)
- Care and maintenance (delicate electronic equipment, changing sensor tip filters, changing gas cartridges etc)
- Calibration (auto calibrating , send to a specialist etc)
- Leak detection procedures

T11 Service gauges

- Service Gauges
 - Types (dial gauges or electronic, manifolds with additional vacuum and charging ports & sight glasses)
 - Typical uses for service gauges (high & low side pressure readings, charging, evacuating)
 - Care and maintenance (oil and contaminants (dirt) in hoses, avoiding needle bounce, changing hose seals)
 - Calibration (hoses open to atmosphere, adjusting screw etc)
 - Hose shut-off valves and adaptors (access control valves, kwik couplers, Hansen lines etc)
- System Access Fittings
 - Types (Schrader, piercing, service valve, post valve, quick couplers etc)
 - Typical applications for each
 - Hazards and related safe working practices (oil or liquid spray, keeping clean, leaks etc)
 - Care and maintenance (gland nuts loosened/tightened, seal caps fitted, regulations on piercing valves)
- Using Service Gauges
 - Service gauge manifold hose fitting

REQUIRED SKILLS AND KNOWLEDGE

- Purging
- Pressure readings
- Service gauge manifold hose removal
- Pressure to temperature conversion

T12 Refrigeration Compressors

- Function of the compressor
- Compressor styles (open drive, semi-hermetic, hermetic)
- Types, construction and their applications (reciprocating, rotary, centrifugal, screw, scroll)
- Basic types of compressor oil (Mineral, Polyolester (POE), Alkyl Benzene, Polyalkylene Glycols (PAG)) (brief overview - covered in more detail in J8)
- Methods of lubrication (splash, forced)
- Safe handling (MSDS - POE's, PAG's, Mineral, AB's - Residual acid's in used oil)

T13 Condensers and related components

- Function of the condenser
- Types, construction and their applications (static, forced draught, water cooled)
- Function of a cooling tower
- Types, construction and their applications (natural, induced, forced, evaporative)
- Function of water pumps
- Basic Types and their applications
- Function of liquid receivers
- Types, construction and their applications (horizontal, vertical, combined condenser/receivers)

T14 Evaporators and related components

- Function of the evaporator
- Evaporator styles (direct expansion, flooded)
- Types, construction and their applications (static, forced draught, water cooling)
- Refrigerant/air/water flow paths (forced/induced draft, parallel/counter flow)
- Need for water treatment in water systems
- Methods used to provide water treatment (brief overview)
- Regulations governing water treatment (brief overview)
- Secondary refrigerants (brief overview)
- Properties & applications of secondary refrigerants (water, sodium/calcium chloride, ethylene/propylene glycol)
- Hazards associated with their use (MSDS)

T15 Common Refrigerant Metering Devices

- Function of a refrigerant metering device
- Overview of common types and their applications (capillary tube and TX Valve)

REQUIRED SKILLS AND KNOWLEDGE

T16 Basic Operating Conditions

- Ambient conditions
- Common climate values (highest max temp, lowest min temp, mean daily temp, mean highest/lowest)
- Typical climates for various common localities
- Evaporator Td
- Effect of changes in Evap. Td and typical industry reference values for water cooled, forced draught and static coils
- Condenser Td
- Effect of changes in Cond. Td and typical industry reference values for water cooled, forced draught and static coils
- Typical storage conditions (temp & RH) for common products (dairy, produce, meat and frozen food rooms)
- Typical high and low side system operating values (pressures and temperatures allowing 1K equivalent PD)

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced

EVIDENCE GUIDE

by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Determine the basic operating conditions of vapour compression systems as described in 8) and including:
 - A Selecting and using appropriate measuring devices correctly
 - B Recording measurements
 - C Using calculation methods accurately
 - D Identifying the conditions of a refrigerant at various locations in the vapour compression system
 - E Documenting operating conditions correctly
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in determining the basic operating conditions of vapour compression systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining operating conditions using measurement and basic calculation methods of vapour compression systems whether used for refrigeration or air conditioning. These conditions include suction and discharge pressures, ambient, evaporator and condensing temperatures, evaporator, and condenser temperature difference.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the determination of basic operating conditions of air conditioning systems. It encompasses working safely, determining air temperature, air flow rates and relative humidity using measurement and basic calculation methods.

Application of the Unit

Application of the Unit

4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also

Application of the Unit 4)

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to determine the basic operating conditions of air conditioning systems	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed
	1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
	1.4 Expected operating conditions are obtained from documentation or from work supervisor to establish the scope of work to be undertaken
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others

ELEMENT	PERFORMANCE CRITERIA
	1.6 Sources of materials that may be required for the work are accessed in accordance with established routines and procedures
	1.7 Tools, equipment and testing devices needed to determine the basic operating conditions are obtained and checked for correct operation and safety
2 Determine the basic operating conditions of air conditioning systems	2.1 Established OHS risk control measures and procedures for carrying out the work are followed
	2.2 Measuring system operating parameters is conducted in strict accordance with OHS requirements and established safety procedures
	2.3 System is checked and isolated where necessary, in strict accordance OHS requirements and procedures
	2.4 Established procedures are used to determine actual and specified range of operating conditions from measured and calculated values as they apply to particular air conditioning systems
	2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented
	2.6 Unexpected situations are dealt with safely and with the approval of an authorised person
	2.7 Operating conditions are determined without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices
3 Complete work and report	3.1 OHS work completion risk control measures and procedures are followed
	3.2 Work site and equipment is cleaned and made safe in accordance with established procedures
	3.3 Operation conditions are documented, including identification of any parameter that is not within the specified range for the system
	3.4 Work supervisor is notified of the completion of the work in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining the basic operating conditions of air conditioning systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ104A Basic air conditioning operating conditions

Evidence shall show an understanding of basic air conditioning operating conditions, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 The Air Conditioning Industry

- Industry classifications (Domestic, Commercial, Industrial and Transport)
- Applications (shopping centres, housing, offices) and typical equipment used in each classification (split systems, central plant, chemical production etc)
- Types of systems commonly used such as self-contained units (RAC's), split systems, ducted systems, package units and central plant systems.

T2 Working safely with air conditioning systems

- Risk management principles and processes
- Hazards and risk control measures associated with:
 - air conditioning systems and components
 - measuring and testing equipment

T3 Temperature & relative humidity measuring devices

- Thermometer types and applications (digital, stem, dial, max/min, non-contact, data loggers)
- Relative Humidity measurement devices and applications (dry bulb/wet bulb, sling, digital)
- Hazards and related safe working practices (working near rotating machinery - fans, pulleys, belts etc)
- Care and maintenance (bending stems, overheating, removing batteries after use, uncoiling capillary line)
- Calibration (boiling water, iced water, send to a specialist etc)
- Typical locations where values are commonly obtained (temp, RH %)
- Obtaining temperature and relative humidity readings
- Recording temperature and relative humidity readings (using DB/WB method and/or

REQUIRED SKILLS AND KNOWLEDGE

electronic)

T4 Air velocity measuring devices (Anemometers only)

- Anemometer types (digital vane, hot wire)
- Typical applications for each
- Air speed (velocity and its units of measurement)
- Air flow rate (volume flow rate and its units of measurement)
- Methods for setting up and using anemometers (hood, patch, sweep)
- Hazards & safe working practices (working near rotating machinery - fans, pulleys, belts / working at height)
- Care and maintenance (maintaining vane balance (bent blades), removing batteries after use etc)
- Calibration requirements (by specialists)
- Typical locations where air velocity measurements values are commonly obtained (grilles and outlets etc)
- Obtaining and recording air velocity readings (using the patch method and/or sweep method)
- Calculating volume flow rate from an outlet/grille

T5 Psychrometrics

- Composition of air
- Psychrometric chart
- Terms used in the study of air (and their units of measurement) (DB, WB, RH%, dew point, enthalpy, moisture content)
- Sensible heat, latent heat and total heat
- Sensible heat ratio
- Plotting basic points on a chart (supply air, return air)
- Reading additional information (dew point, moisture content, RH%, specific heat capacity, enthalpy)
- Values relevant to a plotted process and plotting a simple process on a psychrometric chart

T6 Basic air conditioning processes

- Factors effecting human comfort (temp, RH%, air velocity, noise, cleanliness, fresh air)
- Industry recognised human comfort conditions
- The comfort zone
- Basic processes used to obtain comfort conditions (sensible cooling, dehumidifying, humidifying etc)

T7 Ventilation

- Basic needs for ventilation (removal of stale air, removal of toxic gases e.g. car parks, welding bays etc)
- Methods used to ventilate an area (natural, supply, exhaust)

REQUIRED SKILLS AND KNOWLEDGE

- Typical applications for ventilation systems (car parks, kitchens, toilets etc)

T8 Regulations

- Covering ventilation (AS1668 parts 1 & 2)
- Common council requirements/regulations (no DA required, noise levels not exceeding 5dBA above background, fresh air in residential situations etc)
- Fresh air requirements for typical situations (calculate using floor area method and air change method)

T9 Heat loads

- Sources of sensible heat in an air conditioned space
- Sources of latent heat in an air conditioned space
- Changes in sensible/latent ratios and their effect on operating system capacity
- Industry check figures
- Basic room heat load calculation using check figures
- Basic RAC/split system unit selection

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

EVIDENCE GUIDE

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Determine the basic operating conditions of air conditioning systems as described in 8) and including:
 - A Selecting and using appropriate measuring devices correctly
 - B Interpreting measurements
 - C Using calculation methods accurately
 - D Identifying parameters not within the specified range
 - E Documenting operating conditions correctly
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in determining the basic operating conditions of air conditioning systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining the basic operating conditions using measurement and basic calculation methods of air side components of air conditioning systems. These conditions include air dry and wet bulb temperatures, relative humidity, air velocity and volume flow rates across a grille/register.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ105A Position, assemble and start up single head split air conditioning and water heating heat pump systems

Modification History

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the assembly, installation and starting up and de-commissioning of single head split air conditioning systems and split water heating heat pump systems up to a maximum of 18kW_r refrigeration capacity. It encompasses working safely and to standards, following routine procedures to install equipment, connecting pipe work, pressure testing, evacuating, perform functional checks and complete installation / regulatory documentation.

Note: The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also be used to augment previously acquired competencies.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.
2. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
3. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ172A Recover, pressure test, evacuate, charge and leak test refrigerants split systems

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

For the full prerequisite chain details for this unit please

Prerequisite Unit(s) 2)
refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)
This unit contains Employability Skills
The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to assemble, install and start up split air conditioning and water heating heat pump systems	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented
	1.4 The work is appropriately sequenced in accordance with job schedule
	1.5 Appropriate personnel are consulted to ensure

ELEMENT

PERFORMANCE CRITERIA

- the work is coordinated effectively with others involved on the work site
- 1.6 The layout of the pipe work to be installed is determined from job/manufacture specifications and diagrams
- 1.7 Materials needed to carry out the work are obtained in accordance with established procedures and checked against job requirements
- 1.8 Tools, equipment and testing devices needed to conduct the work are obtained in accordance with established procedures and checked for correct operation and safety
- 1.9 Appropriately licensed electrician is engaged to carry out all electrical work for the air conditioning and water heating heat pump system
- 1.10 Appropriately licensed plumber is engaged to carry out all mains water piping work for the heat pump hot water system
- 1.11 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
- 2 Assemble, install and start up split air conditioning and water heating heat pump systems
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 System components are positioned in the specified location and assembled in strict accordance with manufacturer instructions and industry standards
- 2.3 Interconnecting refrigerant piping/tubing is prepared and assembled in strict accordance with manufacturer instructions and industry standards.
- 2.4 Components are pressure tested and evacuated in strict accordance with manufacturer instructions and industry standards
- 2.5 Established methods for dealing with unexpected situations are discussed with appropriate person

ELEMENT

PERFORMANCE CRITERIA

- or persons, documented are dealt with safely and with the approval of an authorised person
- 2.6 Ongoing checks of the quality of installation and start up are undertaken in accordance with established procedures
- 2.7 Notification is given to appropriate person(s) that the system is ready for electrical and mains water connection in accordance with established procedures. (see note 1)
- 2.8 The work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles
- 3 Decommission split air conditioning and water heating heat pump systems
- 3.1 OHS risk control measures and procedures for carrying out the work are followed.
- 3.2 Refrigerant is pump down and/or recovered from the indoor unit. Interconnecting refrigerant piping/tubing is removed and the indoor and outdoor refrigerant circuits are sealed in accordance with manufacturer instructions and industry standards/codes of practice
- 3.3 Appropriately licensed electrician is engaged to isolate and disconnect electrical supply and cabling from the air conditioning and water heating heat pump system
- 3.4 Indoor and outdoor unit, refrigerant pipework, water pipework condensate drains and electrical conduits/cables are un-mounted.
- 3.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons, documented are dealt with safely and with the approval of an authorised person
- 3.6 The work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles

ELEMENT	PERFORMANCE CRITERIA
4 Test single head split air conditioning and water heating heat pump systems and document	4.1 OHS risk control work completion measures and procedures are followed
	4.2 The system performance is tested to ensure compliance with technical standards, manufacturer/ job specifications and requirements (Note 2)
	4.3 Work site and equipment is cleaned and made safe in accordance with established procedures. (Note 3)
	4.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures

Note.

1. a. Electrical connection shall be carried out by an appropriately licensed electrician.
b. Mains water connection shall be carried out by an appropriately licensed plumber.
2. Unit performance is completed after associated electrical work is carried out by an appropriate electrically licensed person.
3. Making safe includes leak testing and fitting of caps to all refrigerant access ports, which could allow refrigerant to escape into the environment. It includes de-commissioning.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and positioning, assembling and starting up split air conditioning and water heating heat pump systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ105A Split air conditioning and water heating heat pump system installation

Evidence shall show an understanding of split air conditioning and water heating heat pump system installation, start-up and decommissioning, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Sustainable energy

- The earth's atmosphere
- The greenhouse effect
- Energy usage in Australia (gases, coal, fuel oil etc)
- Projected population increase and its effects
- International and national greenhouse imperatives: the role of regulators and similar bodies (Kyoto Protocol)

T2 Sustainable energy work practices

- Definitions
- Renewable energy technologies (solar, wind, biomass, geothermal, tidal, hydro, nuclear)
- The concept of co-generation
- Economic benefits of sustainable energy initiatives

T3 Heritage awareness

- Heritage listings (concept and types (world, national, commonwealth etc))
- Purpose of regulations related to maintenance of listed sites
- Responsibilities while working in and around listed sites

REQUIRED SKILLS AND KNOWLEDGE

- Environmental protection
- Government agencies (AGO, EPHC, DEC etc)
- Environmental protection (land, water, atmosphere, human settlement, biodiversity etc)
- Purpose of regulations related to environmental protection
- Responsibilities while working in and around environmentally protected sites
- Protocols for working in and around protected sites (legislated acts - ozone protection etc)

T4 Relevant installation codes

- Applicable standards and codes (building, electrical, health, environmental – OH&S act, ozone protection act, Refrigerant Handling Code of Good Practice
- Introduction to MEPS (minimum energy performance standards) and the star rating

T5 Split air conditioning systems

T6 Types and applications

- categories (high wall, floor mounted, ceiling mounted, cassette, ducted)
- sub categories (single head, multi head)
- types (cooling only, reverse cycle, inverter, dc)
- typical applications for each category / type
- system ratings (hp vs kw, standard ambient conditions for capacity ratings ,actual star rating examples)
- Components, construction and operation
- evaporators (finned induced and forced draught)
- metering devices (capillary, restrictor)
- service ports (ball valves, post valves, schrader valves)
- reverse cycle (reversing valves)
- air distribution – non-ducted (fans, filters, swing louvers etc)
- air distribution - ducted (ducting types, bto's, dampers, outlets, grilles, plenums, filters etc)
- typical ducting layouts (maps)
- typical mechanical system layouts (cooling only, reverse cycle)
- evaporating and condensing temperatures / pressures - design and typical operating values
- controls - operating and safety (encapsulated lp & hp sensors, compressor overload, de-ice stat etc)

T7 Split water heating heat pump systems

- Types and typical applications. including hot water heating and swimming pool heating
- Components, construction and operation
- Cooling coil
- Heating coil
- Metering devices (capillary, restrictor)

REQUIRED SKILLS AND KNOWLEDGE

- Service ports (ball valves, post valves, Schrader valves)
- Typical mechanical system layouts
- Evaporating and condensing temperatures / pressures - design and typical operating values
- Controls - operating and safety (encapsulated LP & HP sensors, compressor overload, etc)

T8 Installation of unit and pipework

- Respect for customers premises (on-time, respectful language, private commodities, toilets, clean-up etc)
- Noise and vibration (problems for neighbours, typical council requirements)
- Location & mounting - outdoor unit (suitable locations, slabs, brackets (wall/roof), machine pads (e.g. waffle) etc)
- Location & mounting - indoor unit/water heater (suitable locations, penetrations, hanging, mounting methods)
- Refrigerant piping (layout, installation, insulation, pair coil, protection (steel trunking, plastic pipe duct))
- Condensate drains and pumps (correct drainage, safety drain on FCU, condensate pumps)
- Personal safety (safe lifting, correct use of ladder and platforms)
- Manufacturers installation instructions (examples of typical manufacturers installation guides)
- Electrical connections by electrician
- Mains water connections by plumber

T9 System start up

- Manufacturers start-up instructions (examples of typical manufacturers guides)
- Pressure testing refrigerant pipework and system (nitrogen)
- Evacuation
- Opening outdoor unit valves
- Checking refrigerant charge (pressures, temperatures, sweat line, evaporator superheat etc)
- Adding refrigerant (manufacturers recommended top-up values for longer pipework runs)
- Leak detection
- Customer familiarisation (completing warranty card, operating instructions, general maintenance instructions)

T10 De-commission split air conditioning systems

- Closing isolation valves on outdoor unit.
- Indoor unit pump down and recovery
- Sealing refrigerant components
- Electrical isolation and disconnection by electrician

REQUIRED SKILLS AND KNOWLEDGE

- Mains water isolation and disconnection by plumber
- Unit, piping, drain and electrical cable removal

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment

EVIDENCE GUIDE

instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Position, assemble and start up split air conditioning and water heating heat pump systems as described in 8) and including:
 - A Determining job requirements correctly
 - B Positioning and assembling system components to specifications
 - C Assembling piping and tubing to specifications
 - D Pressure testing an evacuating the system in accordance

EVIDENCE GUIDE

with manufacturer's instructions and industry standards, codes and regulations.

Note:

Refrigerant purging is not permitted in Australia

- E Giving notification to appropriate person for electrical connections to be completed
- F De-commissioning single head split air conditioning and water heating heat pump units
- G Testing system performance correctly to manufacturer design specifications
- H Documenting work activities
- I Demonstrating a basic understanding of system performance outside manufacturers design specifications
- J Demonstrating a basic understanding of the compressor, condenser, evaporator and flow control types and their function relevant to single head split system installation
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in positioning, assembling and starting up split air conditioning and water heating heat pump systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the assembly, installation and starting up and de-commissioning of single head split air conditioning and water heating heat pump systems (hot water or swimming pool) up to a maximum of 18kW_r 'refrigeration' capacity with the following attributes:

- safe working
- Australian/New Zealand standards applied
- routine procedures followed
- equipment installation
- pipe work connection
- pressure test
- evacuation
- functional performance checks
- installation/regulatory documentation completion

Note:

1. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill and the Ozone Protection and Synthetic Gas Management Regulations apply to this qualification. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.
2. This includes the installation, commissioning and de-commissioning of single head wall hung split air conditioning and water heating heat pump systems. The maximum plant capacity for each system is 18 kW_r.
3. This unit DOES NOT COVER COMPETENCIES FOR service, repair, maintenance, diagnostic/fault finding and electrical work and the safe and proper installation of commercial refrigeration and air conditioning and water heating heat pump plant and equipment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers the installation, in buildings and premises, of refrigerant piping/tubing, fittings, flow controls and accessories for refrigeration and air conditioning systems. It encompasses working safely and to installation standards, routing pipe work to specified locations, connecting components and accessories and documenting installation work.

Application of the Unit

Application of the Unit 4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It is suitable for augmenting previously acquired competencies.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

Prerequisite Unit(s) 2)

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information**Employability Skills** 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install pipe work, flow controls and accessories	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented

ELEMENT	PERFORMANCE CRITERIA
	1.4 Pipe work, flow control and accessory installation is appropriately sequenced in accordance with job schedule
	1.5 The nature and location of the work is determined from documentation or appropriate person(s) to establish the scope of work to be undertaken
	1.6 Pipe work routes are planned within the constraints of the building structure, (heritage) significant, specifications and regulations
	1.7 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.8 Materials needed install pipe work, flow controls and accessories are obtained in accordance with established procedures and checked against job requirements
	1.9 Tools, equipment and testing devices needed to install the pipe work, flow controls and accessories are obtained in accordance with established procedures and checked for correct operation and safety
	1.10 Preparatory work is checked to ensure no damage has occurred and complies with requirements
2 Install pipe work, flow controls and accessories	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OH&S requirements and procedures
	2.3 Pipework, flow controls and accessories are installed to comply with technical standards and job specifications and requirements with sufficient access to affect connections and maintenance
	2.4 Pipework, flow controls and accessories are installed straight and square in the required locations and within acceptable tolerances
	2.5 Refrigerant tubing and fittings are silver brazed with the use of dry nitrogen to prevent contamination

ELEMENT	PERFORMANCE CRITERIA
	2.6 Problematic situations that arise from the installation of the pipe work, flow controls and accessories are dealt with in an appropriate manner.
	2.7 Ongoing checks of the quality of pipe work, flow controls and accessories are undertaken including pressure testing and repair of leaks in accordance with the relevant technical standards and specifications and established procedures
	2.8 Checking operation, adjusting settings and replacement of flow controls
	2.9 Pipe work, flow controls and accessories are installed efficiently without waste of materials, damage or contamination to apparatus and the surrounding environment or services and using sustainable energy practices
3 Completion of pipe work, flow controls and accessories installation.	3.1 OHS risk control measures and procedures at the completion of work are followed
	3.2 Work site is cleaned and made safe in accordance with established procedures
	3.3 Final check of the installed pipe work is made to verify that it complies to all requirements
	3.4 'As-installed' pipe work, flow controls and accessories are documented and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing pipe work for refrigeration and air conditioning systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ106A Refrigerant pipework, flow controls and accessories

Evidence shall show an understanding of refrigerant pipework, flow controls and accessories, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Environmental and building regulation

- types of heritage listings
- purpose and principles of regulations related maintaining heritage sites
- responsibilities of those working in and around heritage sites
- scope of environmental protection and related regulations
- purpose and principles of regulations related to environmental protection
- responsibilities of those working in and around environmentally protected sites
- the protocols for working in and around protected environments and heritage sites.

T2 Refrigeration pipework

- appropriate piping arrangements for refrigerant lines including discharge lines, liquid lines, suction lines
- position of equipment in relation pipework
- requirements for vertical and horizontal pipe runs.
- requirements for oil return and prevention of flood back
- techniques for the prevention of noise and vibration
- insulation requirements and materials
- pipework insulation requirements, including relevant technical standards, regulations and codes
- pipe work installation techniques
- insulation requirements and materials

T3 Refrigerant pipework accessories

- types
 - including pipe work fittings, hand valves, isolation valves, solenoid valves,

REQUIRED SKILLS AND KNOWLEDGE

check valves, reversing valves, filter/dryers, sight glasses, accumulators, oil separators, pressure relief devices

- applications
- operation
- location and installation
- testing
- replacement

T4 Refrigerant liquid flow controls and distributors

- types
 - including capillary, hand expansion valve, thermostatic expansion valve, thermo-electric expansion valve, electronic expansion valve, low side floats, high side floats, liquid level controllers
- applications
- operation
- location and installation
- testing and adjusting settings
- replacement

T5 Refrigerant vapour flow controls

- types
 - including evaporator pressure regulators, crankcase pressure regulators, condenser bypass valves, electronic valves/controllers
- applications
- operation
- location and installation
- testing and adjusting settings
- replacement

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

EVIDENCE GUIDE

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

EVIDENCE GUIDE

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install refrigerant pipe work, flow controls and accessories for refrigeration and air conditioning systems as described in 8) and including:
 - A Reading and interpreting drawings related to pipe work layouts and apparatus locations
 - B Routing, placing and securing pipe work to comply with requirements
 - C Placing and securing flow controls and accessories accurately
 - D Connecting pipe work, flow controls and accessories to comply with requirements
 - E Cleaning pipe work of contaminants
 - F Ensuring pipe work, flow controls and accessories will not leak under pressure

EVIDENCE GUIDE

- G Checking operation, adjusting settings and replacement of flow controls
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in installing pipe work for refrigeration and air conditioning systems.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ007B Install refrigeration and air conditioning systems, major components and associated equipment

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the installation of pipe work, flow controls and accessories for at least two different types of refrigeration and/or air conditioning systems.

The pipe work shall include suction lines, liquid lines, discharge lines and control lines. Accessories shall include pipe work fittings, hand valves, isolation valves, solenoid valves, check valves, reversing valves, filter/dryers, sight glasses, accumulators, oil separators. Flow controls shall include both liquid and vapour flow controls, mechanical and electronic.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the installation of refrigeration and air conditioning systems including unitary equipment, compressors, condensers, evaporators, liquid receivers, pipework, ventilation and air handling (excluding central plant) and associated equipment. It encompasses working safely and to installation standards to match equipment with that specified for a given specification and location, connecting pipe work and components, and complete the necessary installation documentation.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training and may be used to augment other electrotechnology qualifications at AQF 3 level or higher.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules,

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing refrigeration and air conditioning systems, major components and associated equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ107A Refrigeration and air conditioning refrigeration systems, major components and associated equipment installation

Evidence shall show an understanding of refrigeration and air conditioning refrigeration systems, major components and associated equipment installation, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Refrigeration equipment installation requirements and procedures

- Standards, codes and requirements applicable to installing refrigeration equipment
- Environmental and building regulations
- Major components and associated equipment including condensing units, compressors, condensers, cooling towers, liquid receivers, evaporators, fan coil units, package units, fans and air distribution equipment, pumps
 - Functions, types, operation and applications
 - Installation techniques encompassing: manufacturers specifications and installation instructions; locating and placing major components
- Accessories installation
- Connecting piping
- Maintenance of fire rating integrity.

T2 Cool room and freezer room systems installation requirements and procedures

- Food spoilage encompassing; Effects of storage conditions, Controlled atmosphere, Relative humidity, Evaporator temperature difference, Room design conditions
- Room types and construction encompassing; Pre-fabricated and permanent type walk-in cool rooms and freezer rooms, Construction, Insulation, Vapour barrier, Frost heave, Interior fittings
- Layouts and installation encompassing; Location of equipment, Equipment site arrangements and building services, Access and obstructions, Power supply and electrical services, Arrangement of piping

REQUIRED SKILLS AND KNOWLEDGE

- Components and features encompassing; Refrigerant controls, Evaporators, Solenoid valves, Crankcase pressure regulators, Defrosting method and mullions, Drain facilities and heaters, Pressured relief valves, Door hardware, Lighting and germicidal lamps
- System and defrost controls encompassing; Operating conditions, Thermostat and pressure controls, Defrost timers and controllers, Overloads and safety control, Electrical power and control circuits
- Manufacturers specifications and installation instructions
- Relevant Standards, codes and Regulation requirements
- Relevant Public Health requirements

T3 Merchandising and display cabinets installation requirements and procedures

- Types and construction encompassing: Deep freeze meat, dairy, and fruit and vegetables, Multi deck display type, Single deck, well type and island cases, Glass door/reach-in merchandiser
- Components and features encompassing: Condensing units, Refrigerant controls, Evaporators and fans, Defrosting method and mullions, Drain facilities and drain heaters, Air distribution and air-flow, curtains, Cabinet air temperature, velocity and direction, Accessories, Lighting
- Layouts and installation encompassing: Location of equipment, Equipment site arrangements and building services, Access and obstructions, Power supply and electrical services, Arrangement of piping
- System and defrost controls encompassing: Operating conditions, Alarm systems, Thermostats and pressure controls, Defrost timers and controllers, Electrical power and control circuits
- Multiple systems encompassing: Multiple compressors, Multiple evaporators, Heat reclaim systems, Multi-temperature accessories, Controls and sequencing,
- Manufacturers specifications and installation instructions
- Relevant Standards, codes and Regulation requirements
- Relevant Public Health requirements

T4 Residential air conditioning systems installation requirements and procedures

- Types, components, construction, operation and application of residential air conditioners encompassing: Types: window mounted, high wall, floor and ceiling mounted, cassette and ducted, Typical applications for various types of systems, Components, Construction and Operation of the major components within a system. air distribution, Flexible ducting and associated fittings, fans, filters, noise and vibration, Control systems, Operation of a typical system including reverse cycle
- Procedures for selecting a system for a specific application encompassing; Determining heat load sources using estimating methods and manufacturers data, unit and associated equipment selection
- Installation of unit and pipework encompassing: Respect for customers premises, Unit location and mounting, Flexible ducting and associated fittings, Fixing, securing and mounting methods, Safe lifting, use of ladders and platforms,

REQUIRED SKILLS AND KNOWLEDGE

Manufacturers installation, Refrigerant piping: layout, installation, insulation, fastening and covering, Condensate drains and pumps

- Starting up system encompassing: Manufacturers start up instructions - pressure testing, evacuation, opening outdoor unit valves, checking refrigerant charge: pressures, temperature, sweat line and evaporator superheat, adding refrigerant, leak detection, controls - operating and safety, customer familiarisation
- Relevant Standards, codes and Regulation requirements

T5 Package air conditioning systems installation requirements and procedures

- Air conditioning design conditions encompassing temperature, humidity and ventilation
- Package air conditioning systems types, construction, components, ancillary equipment, applications and operating conditions
- Layouts and installation encompassing; Location of equipment, Equipment site arrangements and building services, Access and obstructions, Power supply and electrical services, Arrangement of piping
- System controls encompassing; Thermostat and pressure controls, timers and controllers, overloads and safety control, electrical power and control circuits
- Manufacturers specifications and installation instructions
- Relevant Standards, codes and Regulation requirements
- Relevant Public Health requirements

1)

1.1) Descriptor

This unit covers recovery, pressure testing, evacuating, charging and leak testing recovery of refrigerants and lubricants from refrigeration systems and air conditioning systems. It encompasses working safely and to standards, following regulations and industry practices for handling refrigerants and lubricants, and completing the necessary documentation.

Note:

Refrigeration systems may be those used for refrigerating or for air conditioning.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training and may be used to augment other electrotechnology qualifications at AQF 3 level or higher.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some States/Territories, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEE101A: Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to recover refrigerants, pressure test, evacuate, charge and leak test refrigeration systems.	1.1 OHS procedures including codes of practice for a given work area are obtained and understood
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented
	1.4 The nature and location of the work is determined from documentation or appropriate person(s) to establish the scope of work to be undertaken
	1.5 The work is appropriately sequenced in accordance with job schedule

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|--|---|
| | 1.6 | Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site |
| | 1.7 | Refrigerants, lubricants and cleaning materials needed for the work are obtained in accordance with established procedures and checked against job requirements |
| | 1.8 | Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety |
| | 1.9 | Preparatory work is checked to ensure no damage has occurred and complies with requirements |
| 2 | Recover refrigerants, pressure test, evacuate, charge and leak test refrigeration systems. | 2.1 OHS risk control measures and procedures for carrying out the work are followed |
| | | 2.2 Checks are carried out to ensure the system or component parts are isolated, when necessary, in strict accordance with OHS requirements and procedures |
| | | 2.3 Circuits/machines/plant are checked as being electrically isolated where necessary in strict accordance OHS requirements and procedures |
| | | 2.4 The systems refrigerant and lubricant are tested for contamination |
| | | 2.5 Refrigerants are removed from a system safely into suitably labelled containers in accordance with regulatory requirements and industry practices, using appropriate recovery/reclaim equipment |
| | | 2.6 Precautions are taken to prevent damage to components while pressure testing the system |
| | | 2.7 Pressure testing is conducted at a pressure compatible with the refrigerant to be used |
| | | 2.8 Leaks are located and rectified using testing methods appropriate to the system under test and |

ELEMENT	PERFORMANCE CRITERIA
	in accordance with industry practices
	2.9 Systems are evacuated to the required level and cleaned of all moisture and other containments in accordance with industry practices
	2.10 A 'Drop test' is used to prove effectiveness of the evacuation in accordance with industry practice
	2.11 The system, vacuum pump and recovery/reclaim unit lubricants are checked and maintained in accordance with manufacturer requirements
	2.12 Systems are charged or retrofitted with the appropriate refrigerant in accordance with manufacturer requirements and industry practices. This includes recording refrigerant usage in an auditable recording system, e.g. logbook.
	2.13 Problematic situations that arise during the work are dealt with in an appropriate manner
	2.14 Systems are pressure and leak tested, evacuated and charged efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices
3 Complete and report refrigerants recovery, pressure test, evacuate, charge and leak test work	<p>3.1 OHS work completion risk control measures and procedures are followed</p> <p>3.2 Work site and equipment is cleaned and made safe in accordance with established procedures</p> <p>3.3 Contaminated refrigerant and lubricant is dealt with in accordance with legislative/regulatory requirements</p> <p>3.4 Completion of the work is documented and recorded, including refrigerant usage in an auditable logbook and an appropriate person or persons notified in accordance with established procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and recovering, pressure and leak testing, evacuating and charging refrigerants.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ108A

Refrigerants and lubricants

Evidence shall show an understanding of refrigerants and lubricants, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Introduction to refrigerants

- Purpose of refrigerant
- Primary, secondary and expendable refrigerants
- Ideal properties
- Pure, azeotropic, zeotropic and blend refrigerants
- General safety requirements and personal protection equipment

T2 Relevant Acts, Regulations, Codes and Standards

- The ozone layer (function, ozone depleting substances)
- The ozone protection act and regulation
- State and federal agencies (Dept of the environment, water, heritage and the arts; Dept of climate change; Australian Refrigeration Council Ltd etc)
- State and federal licensing requirements
- Refrigerant handling code of practice 2007
- Relevant Standards
 - Standards philosophy and format
 - How to read and apply a standard
- Equipment manufactures specifications

T3 Refrigerant properties

- Commonly used types, including CFC, HCFC, HFC, high pressure and natural refrigerants
- Terms (blend, azeotrope, zeotrope, glide, CFC, HCFC, HFC, HC, bubble point, dew point, critical point, ODP, GWP etc)
- Typical properties and applications of the current refrigerants used in systems (boiling point, glide, composition (components), comparative latent heat

REQUIRED SKILLS AND KNOWLEDGE

performance etc)

T4 Safe handling of refrigerants

- Refrigerant identification and the numbering system (AS 1677 part 1 sect 3)
- System refrigerant identification (labeling requirements, Code of Practice)
- Typical hazards (classification groups - AS 1677 part 1 sect 2 and handling precautions - inhalation, skin contact, cardiac sensitization, decomposition, reaction with moisture etc)
- Personal safety (MSDS - all common refrigerants plus phosgene, recommended PPE)
- Cylinders (cylinder terminology (WC, tare etc), transporting safely)
- Safe Filling (density and water capacity methods)
- Decanting methods (pumping, temperature differential etc)
- Recovery cylinders and their safe filling.
- Disposal of recovered refrigerants (including RRA)

T5 Refrigeration oil

- Types (mineral, POE, AB etc) and their applications
- Basic properties (miscibility, dielectric strength, viscosity and hygroscopic abilities)
- Typical issues regarding compatibility (neoprene and POE, POE and mineral etc)
- Safe handling (MSDS - POE's, Mineral, AB's - Residual acid's in used oils)
- Applications for the various compressor lubricants used in the trade

T6 Recovery and reclaim procedures

- Refrigerant recovery systems and procedures
 - Vapour
 - Liquid
- Recovery cylinders
- Disposing of recovered refrigerants
- Safety and general issues when recovering refrigerant

T7 Pressure testing

- Define
- Pressure testing procedures and test pressures per Standards,
- Codes, Regulations and manufacturers requirements
- Safety and general issues when pressure testing refrigeration systems

T8 Leak detection

- Leak detector types and applications (electronic, halide, bubble, ultra violet, Sulphur stick, litmus paper etc)
- Hazards and related safe working practices (working around rotating machinery, open flame, ultra violet light etc)
- Care and maintenance (delicate electronic equipment, changing sensor tip filters,

REQUIRED SKILLS AND KNOWLEDGE

changing gas cartridges etc)

- Calibration (auto calibrating , send to a specialist etc)
- Leak testing methods

T9 Evacuation and dehydration

- Evacuation and dehydration
 - Deep vacuum methods
 - Triple evacuation
- Vacuum Measurement
 - Instruments
 - Drop test
- Vacuum Pumps
 - Types, size and applications
 - Use and connections
 - Care and maintenance
- Safety and general issues when evacuating refrigeration systems

T10 Refrigerant and oil charging

- Refrigerant cylinders, storage and safe handling
- Refrigerant charging methods
 - Vapour
 - Liquid
- Safety and general issues when charging refrigeration systems including personal protection equipment
- Refrigerant oil removal and addition tools, procedures and safety

T11 System contamination

- Contaminants (Non-condensables, moisture, acids, carbon, copper etc)
- Effects of contamination (Acid, motor burnout, oil contamination, copper plating, seizing, RMD blockage, excessive condensing temps etc)
- Practices/procedures that cause contamination
- Methods and components use to remove contamination
 - Filter dryers – liquid, suction, burnout
 - Dry nitrogen
 - Flushing agents
- Evacuation

T12 Basic refrigeration component replacement

- Risks of working with refrigerants and rotating equipment
- Refrigerant isolation/pump down/recovery
- Prevention of system contamination
- Protection of damage to surrounding equipment/ environment

REQUIRED SKILLS AND KNOWLEDGE

- Replace basic components on a refrigeration system, for example filter dryer, sight glass.
- Pressure testing, evacuation, checking refrigerant charge, refrigerant charging and leak detection

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will

EVIDENCE GUIDE

contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Recover, pressure and leak test, evacuate and charge refrigerants and lubricants as described in 8) and including:
 - A Selecting appropriate materials and equipment
 - B Testing refrigerant and lubricant for contamination
 - C Removing and storing refrigerant correctly
 - D Conducting pressure testing at the appropriate pressure level and without damaging components
 - E Locating and rectifying leaks
 - F Decontaminating and evacuating the system to the required level
 - G Charging the system with the appropriate refrigerant
 - H Completing the necessary documentation
 - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic

EVIDENCE GUIDE

assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in recovering, pressure and leak testing, evacuate and charging refrigerants.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ007B Install refrigeration&air conditioning systems, major components and associated equipment

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to recovery, testing and charging refrigeration systems used for refrigeration or air conditioning encompassing the following:

- recovering refrigerant and lubricant from an existing system that may contain contaminants
- pressure and leak testing a newly installed or repaired system
- evacuating a system in preparation for charging with refrigerant
- selection of a suitable refrigerant and lubricant for a given application
- charging a system with refrigerant and lubricant with minimal loss

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

Modification History

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers testing and visual inspection for verifying that a refrigeration and air conditioning system and components are safe, comply with requirements and functions as intended. It encompasses working safely, conducting compliance tests, conducting visual inspections, identifying non-compliance defects and mandatory reporting requirements.

Application of the Unit

Application of the Unit 4)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle electrotechnology components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, codes and manuals

UEENEEE137A Document occupational hazards and risks in an electrotechnology environment

UEENEEJ102A Prepare and connect refrigeration tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions

Prerequisite Unit(s)

2)

of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults in motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits
UEENEEP012A *Disconnect / reconnect composite appliances connected to low voltage installation wiring*

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to verify refrigeration and air conditioning installations	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.5 Location of system components is determined from specifications and diagrams
	1.6 Inspection and tests are appropriately sequenced in accordance with job schedule

ELEMENT

PERFORMANCE CRITERIA

	1.7	Materials needed for the tests and verification are obtained in accordance with established procedures and checked against job requirements
	1.8	Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety
Visually inspect the installation	2.1	OHS risk control measures and procedures for carrying out the work are followed
	2.2	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.3	Pipe work is checked for appropriate type and size
	2.4	Pipe work, accessories and components are validated as being suitably located, securely fixed and suitably protected from damage or corrosion
	2.5	System components and accessories are validated as being appropriately rated per manufacture and design specifications
	2.6	Evidence that equipment complies with safety and functional requirements is cited
	2.7	Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented
	2.8	Unexpected situations are dealt with safely and with the approval of an authorised person
	2.9	Inspection is carried out efficiently without waste of materials, damage to, or contamination of apparatus and the surrounding environment or services and using sustainable energy practices
2 Conduct tests	3.1	OHS risk control measures and procedures for carrying out the work are followed
	3.2	Testing or measuring on a live and operating system in strict accordance with OHS requirements and within established safety procedures

ELEMENT

PERFORMANCE CRITERIA

- 3.3 Circuits/machines/plant are checked as being isolated in strict accordance OHS requirements and procedures
- 3.4 Electrical tests are conducted to verify that the electrical circuit within the refrigeration installation are safe and function as intended
- 3.5 Refrigeration tests are conducted to verify that the refrigeration equipment and pipe work within the refrigeration installation is safe and functions as intended
- 3.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented
- 3.7 Unexpected situations are dealt with safely and with the approval of an authorised person
- 3.8 Testing is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices
- 4 Report inspection and verification findings
 - 4.1 OHS work completion risk control measures and procedures are followed
 - 4.2 Work site and equipment is cleaned and made safe in accordance with established procedures
 - 4.3 Non-compliance defects are identified and reported in accordance with established procedures
 - 4.4 Recommendations for rectifying defects are made in accordance with established procedures
 - 4.5 Work completion is documented and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of refrigeration and air conditioning installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ109A Refrigeration and air conditioning installation functionality testing and verification methods

Evidence shall show an understanding of refrigeration and air conditioning installation functionality testing and verification methods, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Refrigeration and air conditioning installations, testing and verification methods

- Mandatory testing and verification requirements.
- Optional testing and their appropriate use
- Testing techniques
- Visual inspection methods

T2 Electrical safe working practices

- Hazards associated with low-voltage, extra-low voltage and high-currents
 - Arrangement of power distribution and circuits in an electrical installations
 - Risks and control measures associated an electrical system and equipment that operate at low-voltage and extra-low voltage, and where high-currents are likely.
 - Risks and control measures associated fault finding, maintenance and repair.
 - Isolation and tagging-off procedures.
 - Risks, restrictions and control measures in testing live.
- Risks and control measures associated with harmful dusts and airborne contaminants.

Note: Sources include thermal insulation, fibrous cement materials and asbestos and other fibre reinforced switchboard materials.

- Safety, selection, use, maintenance and care of test equipment:
 - Safety characteristics of electrical testing devices,
 - Safe use of electrical testing device, and
 - Checks and storage methods for maintaining the safety of testing devices.

REQUIRED SKILLS AND KNOWLEDGE

T3 Refrigeration and air conditioning safe working practices

- Hazards and risk control measures associated with refrigeration/air conditioning components and systems
- Harmful effects of refrigerants
- Control measures for the use, handling and storage of refrigerants
- Risks associated with modifying refrigeration/air conditioning installations, fault finding, maintenance and repair.
- Control measures before, while and after working on refrigeration/air conditioning components and systems.
- Safety, selection, use, maintenance and care of test equipment encompassing:
 - Safety characteristics of refrigeration/air conditioning testing/measuring devices,
 - Safe use of testing/measuring device, and
 - Checks and storage methods for maintaining the safety of testing/measuring devices.

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Verify compliance and functionality of refrigeration and air conditioning installations as described in 8) and including:
 - A Identifying visual defects
 - B Conducting all electrical tests safely and correctly
 - C Conducting all refrigeration tests safely and correctly
 - D Identifying non-compliant defects from test results
 - E Recommending appropriate corrective actions
 - F Acting within regulatory limits
 - G Reporting legibly and accurately
 - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in verifying compliance and functionality of refrigeration and air conditioning installations.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to at least two different new or existing refrigeration and air conditioning installations.

Verification shall include:

- Visual inspection of the system, its components pipe work controls and accessories
- Conducting all electrical tests

Note:

1. Electrical testing include isolation testing; insulation resistance of equipment; resistance of the internal circuits of equipment; polarity of supply and equipment; continuity of earthing; correct electrical connections load current.

2. Electrical testing may be limited by the scope permitted under restricted electrical work

- Conducting all refrigeration tests

Note:

Refrigeration testing includes pressure test apparatus/circuits; leak test apparatus/circuits; evacuation test apparatus/circuits; compressor efficiency; controls tests; refrigerant charge; operating pressures; system operation system capacity

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the selection of refrigerant piping, accessories and controls for refrigeration and air conditioning installations to comply with regulations, standards and specifications. It encompasses developing refrigerant pipe work arrangements, selecting pipe work and fittings, refrigerant flow controls and accessories, and mechanical and electrical control devices based on specifications, standards and manufacturer catalogues to determine calculated and deemed to comply solutions and documenting all selection information.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It is suitable for augmenting previously acquired competencies.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to select piping, accessories and associated controls	1.1 The extent and nature of the refrigeration installation is determined from job specifications.
	1.2 Safety and other regulatory requirements to which the refrigeration system shall comply, are identified, obtained and understood
2 Develop pipe work arrangements	2.1 The intended location of refrigeration equipment is determined from job specifications and site drawings or deemed to comply arrangements.
	2.2 Pipe work arranged to ensure safe and functional operation of the system.
	2.3 Pipe work is arranged to comply with technical standards and job specifications and requirements.

ELEMENT	PERFORMANCE CRITERIA
3 Select piping, accessories and associated controls	3.1 Pipe and tubing is selected for suitability for the environments in which it is to be installed
	3.2 Pipe and tubing is sized to meet refrigeration parameters and capacity requirements for the refrigerant to be used.
	3.3 Pipe and tubing quantities are determined from equipment location diagrams and job specifications.
	3.4 Refrigeration controls and accessories are selected to meet load requirements based on calculated or deemed-to-comply solutions.
	3.5 Control devices are selected to meet functional, specified and regulatory requirements.
	3.6 Electrical control devices are selected to meet current, voltage and IP ratings.
	3.7 Evidence is obtained that the selected refrigeration equipment and control devices comply with all requirements.
4 Document piping, accessories and associated controls selections	4.1 Reasons for selections made, including calculations, are documented in accordance with established procedures.
	4.2 Refrigeration installation arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting refrigerant pipe/tube, accessories and associated controls.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ110A Refrigerant pipe/tube, accessories and associated controls selection

Evidence shall show an understanding of refrigerant pipe/tube, accessories and controls selection for refrigeration and air conditioning installations, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Drawings, Specifications, Regulations & Codes.

- Equipment layouts & drawings
- Site drawings
- Piping diagrams
- Wiring diagrams
- Control diagrams
- Job specifications
- Equipment manufacture's specifications & symbols
- SAA/NZ standards
- SAA/NZ standard symbols
- Regulations & Codes

T2. Equipment Installation Requirements

- Installation Equipment requirements:
- Standards, Codes, and Regulations
- Installation techniques
- Specifications
- Manufacturer's Specifications

T3. Refrigerant Piping and Accessories

- Equipment location
- Piping arrangements
- Pipework accessories and location
- Mounting methods
- Noise and vibration prevention
- Pipework mounting and fastening

REQUIRED SKILLS AND KNOWLEDGE

- Insulation
- Pipework installation techniques

T4. Pipe Selection and Sizing

- Sizing charts
- Correction factors
- Equivalent lengths
- Pressure drop
- Oversized & undersized pipe
- Refrigerant velocity
- Oil return
- Effect of system capacity

T5. Refrigerant Liquid Flow Controls

- Types
- Construction
- Operation
- Applications
- Selection

T6. Refrigerant Vapour Flow Controls

- Types
- Construction
- Operation
- Applications
- Selection

T7. Refrigeration System Controls

- Types
- Construction
- Operation
- Applications
- Selection

T8. System Capacity Controls

- Methods
- Components
- Operation
- Applications

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically.

EVIDENCE GUIDE

Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Select refrigerant pipe/tube, accessories and associated controls as described in 8) and including:
 - A Arranging pipe work to comply with regulatory and functional requirements.
 - B Selecting appropriate type, size and quantity of piping and tubing
 - C Selecting refrigeration accessories that meets load requirements
 - D Selecting control devices that meet functional and regulatory requirements.
 - E Documenting pipe work arrangement, specification for items selected and reasons for the selections made
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in selecting refrigerant pipe/tube, accessories and associated controls.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED001B Use basic computer applications relevant to a workplace'

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the selection of refrigerant pipe/tube, accessories and associated controls for two different refrigeration systems.

These include the following; refrigerant pipe (quick selection method) and fittings, refrigeration flow controls, isolation/access valves, filter-dryers, sight glasses, accessories, thermostats, pressure controls and humidity controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers diagnosing, repairing faults and replacing faulty components in refrigeration and air conditioning systems, components, interconnecting circuits and equipment operating at voltages up to 1,000 V a.c. It encompasses working safely, reading electrical circuit diagrams, refrigeration, hydronic and air distribution system diagrams and manufacturers reference material, sketching diagrams from traced wiring and piping systems, applying logical fault finding procedures, conducting repairs, replacing components and completing the necessary service documentation.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEPP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle

Prerequisite Unit(s)

2)

utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to find and rectify faults	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The nature of the fault is obtained from documentation and/or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are accessed in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to

ELEMENT

PERFORMANCE CRITERIA

ELEMENT	PERFORMANCE CRITERIA
	carry out the work are obtained in accordance with established procedures and checked for correct operation and safety
2 Find faults	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live and operating system is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.4 Fault finding is approached methodically drawing on knowledge of refrigeration and air conditioning systems using observation, measurement, calculations and comparison with normal system and component parameters/values.</p> <p>2.5 Faults beyond the scope of refrigeration and air conditioning work are identified.</p> <p>2.6 System components are removed/dismantled where necessary and parts stored to protect them against loss or damage</p> <p>2.7 Faulty components are rechecked and their fault status confirmed.</p> <p>2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.</p> <p>2.9 Fault finding activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.</p>
3 Repair fault	<p>3.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>3.2 Arrangements are made for appropriately competent and authorised person to rectify faults that are beyond the scope of refrigeration and air</p>

ELEMENT

PERFORMANCE CRITERIA

- conditioning work.
- 3.3 Equipment is checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 3.4 Materials required to rectify faults are sourced and obtained in accordance with established procedures.
- 3.5 Repairs are affected efficiently without damage to other components or apparatus and using sustainable energy principles.
- 3.6 Effectiveness of the repair is tested in accordance with established procedures.
- 3.7 System is reassembled and finally tested to ensure it is operating safely, effectively and complies with relevant requirements.
- 4 Completion and report fault finding and rectification activities
- 4.1 OHS work completion risk control measures and procedures are followed.
- 4.2 Work area is cleaned and made safe in accordance with established procedures.
- 4.3 Written justification is made for repairs to circuits/apparatus.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in refrigeration and air conditioning systems and components.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ111A Refrigeration and air conditioning systems fault diagnosis and repair

Evidence shall show an understanding of refrigeration and air conditioning system fault diagnosis and repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Preventative maintenance schedules and procedures.

T2 Normal and abnormal system and component operations including:

- Systems design operating conditions
- Overcharge and undercharge
- High and low evaporator superheat
- High and low condensing pressure
- High and low evaporation pressure
- High and low liquid sub-cooling
- Low air/water flow rate through condenser and evaporator
- Inefficient compressor
- Open, closed and short circuits in motors and controls

T3 Finding and rectify system faults

- Factors to consider in clarifying the nature of a fault including; initial fault report, confirmation of symptoms of the fault, comparison of symptoms with normal operation
- Effect to cause reasoning — assumptions of possible causes
- Methods for testing assumptions including; visual inspection, sectional testing, split-half tests, component isolation
- Dealing with intermittent faults caused by vibration, shock, changes in temperature and electromagnetic interference.
- Rectifying control system faults including adjustments, repairs and replacement of components, controls and accessories

REQUIRED SKILLS AND KNOWLEDGE

T4 Diagnosing and rectifying faults on refrigeration and air conditioning systems including;

- Appliance refrigerated systems
- Cool room and freezer room systems
- Merchandising and display cabinets
- Residential air conditioning systems
- Package air conditioning systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence

EVIDENCE GUIDE

need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose and rectify faults in refrigeration and air conditioning systems and components as described in 8) and including:
 - A Using methodical fault finding techniques
 - B Finding faults efficiently
 - C Rectifying faults without damage
 - D Providing written justification for the rectifications undertaken
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in diagnosing and rectifying faults in refrigeration and air conditioning systems and components.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ113A Commission air conditioning and refrigeration systems

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to diagnosing and rectifying faults in the following refrigeration air conditioning systems and components:

- Compressors
- Condensers
- Evaporators/cooling coils
- Refrigerant flow controls
- Refrigerant piping and accessories
- Refrigeration systems
- Cycling controls
- Safety controls
- Motors

At least one of the following apparatus:

- Water systems, which includes cooling towers, evaporative condensers, evaporative coolers, hot water systems, chilled water systems, pumps, piping and associated equipment
- Air distribution systems

At least three of the following systems

- cool rooms
- freezer rooms
- merchandising and display cabinets
- residential air conditioning systems
- packaged or commercial air conditioning systems
- industrial air conditioning systems
- domestic refrigerators and freezers

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ112A Diagnose and rectify faults in complex air conditioning/ refrigeration systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers diagnosing and rectifying faults in complex refrigeration/air conditioning systems. It encompasses safe working practices, interpreting technical data, applying knowledge of complex refrigeration/air conditioning systems operating parameters to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

Prerequisite Unit(s)

2)

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500

Prerequisite Unit(s) 2)

Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to diagnose and rectify faults.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	1.4 The extent of faults is determined from reports and other documentation and from discussion with

ELEMENT

PERFORMANCE CRITERIA

- appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Diagnose and rectify faults.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Logical diagnostic methods are applied to diagnose complex refrigeration/air conditioning systems faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
- 2.5 Suspected fault scenarios are tested as being the source of system problems.
- 2.6 Causes of the faults are identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of the refrigeration and air-conditioning system.
- 2.7 Faults in system components of the system are rectified to raise the refrigeration/air conditioning systems to its operation standard.
- 2.8 System is tested to verify that the system operates as intended and to specified requirements.
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.

ELEMENT	PERFORMANCE CRITERIA
	2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Complete and report fault diagnosis and rectification activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is made safe in accordance with established safety procedures.
	3.3 Rectification of faults is documented in accordance with established procedures.
	3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

REQUIRED SKILLS AND KNOWLEDGE

- expansion process
- vaporising process
- compression process
- condensing process
- compression ratio
- Enthalpy processes
 - co-efficient of performance
 - effect of suction temperature on cycle efficiency
 - effect of condensing temperature on cycle efficiency
- Actual refrigerating cycles
 - design operating conditions
 - effects of superheating suction vapour
 - superheating without useful cooling
 - superheating that produces useful cooling
 - superheating in suction piping outside the refrigerated space
 - superheating the vapour inside the refrigerated space
 - effects of subcooling the liquid
 - effects liquid - suction heat exchangers
 - effects of pressure losses resulting from friction
- Refrigeration cycle faults
 - symptoms and causes
 - measurements and fault confirmation tests

T3 Air conditioning system analysis

- Psychrometric chart
 - properties, definitions and units
 - plotting conditions
 - RA, SA, OA, MA
- Psychrometric processes
 - heating
 - cooling only
 - cooling and dehumidification
 - cooling , dehumidification and reheat
- Design operating conditions
 - indoor and outdoor wet and dry bulb temperatures
 - volume flow rate supply, return and outdoor air
- Air conditioning system faults
 - symptoms and causes
 - measurements and fault confirmation tests

REQUIRED SKILLS AND KNOWLEDGE

T4 Power and control system analysis

- power and control circuit diagrams
- sequence of operation
- manufacturers diagrams, specifications and instructions
- power and control circuit faults
 - symptoms and causes
 - measurements and fault confirmation tests

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material

EVIDENCE GUIDE

carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose and rectify faults in complex refrigeration/air conditioning systems as described in 8) and including:
 - A Applying logical diagnostic methods
 - B Using fault scenarios to test the cause of system faults
 - C Identifying faults and competency needed to rectify them
 - D Rectifying faults in system controls
 - E Verifying that the system operates correctly
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in diagnosing and rectifying faults in complex refrigeration/air conditioning systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to diagnosing and rectifying at least four faults in complex refrigeration/air conditioning systems, incorporating multiple major components (i.e. compressors, condenser, or evaporators) circuits or systems and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ113A Commission air conditioning and refrigeration systems

Modification History

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers commissioning of refrigeration and air conditioning systems. It encompasses working safely and to standards to commission the whole system and includes pre-commissioning tests, starting up the system, optimizing the refrigerant charge, basic air and water balancing and adjustment, checking and adjusting components and controls to ensure its efficient and balanced operation, and completing commissioning documentation.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Prerequisite Unit(s)

2)

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to commission refrigeration and air conditioning systems	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
	1.4 Commissioning work is appropriately sequenced in accordance with job schedule
	1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.6 The extent of the system and location of system

ELEMENT**PERFORMANCE CRITERIA**

- components is determined from site inspection and/or job specifications and diagrams
- 1.7 System control setting and operating parameters are determined from job specifications and requirements.
- 1.8 Tools, equipment and testing devices needed to commission the system are obtained in accordance with established procedures and checked for correct operation and safety
- 1.9 Pre commissioning checks are undertaken to ensure all components are in place and secure.
- 1.10 The need to test or measure a live and operating system is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2 Commission refrigeration systems
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.3 Refrigeration system pressure controls, valves and regulators are adjusted to their required settings.
- 2.4 Testing/measuring devices are used to observe the operation of refrigeration system and fine adjustments of controls are made as necessary.
- 2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
- 2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.7 Commissioning is conducted efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Commission air handling systems	<p>3.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>3.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>3.3 Air distribution system dampers are adjusted to avoid air restrictions and allow maximum return volumes.</p> <p>3.4 Balancing the air distribution system is carried out methodically drawing on knowledge of air distribution requirements using measured and calculated values of system parameters.</p> <p>3.5 Air distribution system is balanced to ensure the flow rates meet the specified requirements for each outlet.</p> <p>3.6 Testing/measuring devices are used to observe the operation of air conditioning system components and fine adjustments of controls are made as necessary.</p> <p>3.7 Testing/measuring devices are used to observe the operation of refrigeration system and fine adjustments of controls are made as necessary. Note: Components can include fans, chillers, condensers, coils and heat exchangers, boilers and controls</p> <p>3.8 Testing/measuring devices are used to observe the operation of the hydronic system and fine adjustments of controls are made as necessary. Note: Components can include chillers, condensers, coils and heat exchangers, boilers, cooling towers, pumps and controls</p> <p>3.9 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.</p> <p>3.10 Unexpected situations are dealt with safely and</p>

ELEMENT	PERFORMANCE CRITERIA
	with the approval of an authorised person.
	3.11 Commissioning is conducted efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
4 Complete and document commissioning work	4.1 OHS work completion risk control measures and procedures are followed.
	4.2 Work site is cleaned and made safe in accordance with established procedures.
	4.3 Results of commissioning are documented including final operating parameters and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning refrigeration and air conditioning systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ113A Refrigeration and air conditioning commissioning procedures and requirements

Evidence shall show an understanding of commissioning refrigeration and air conditioning systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Refrigeration systems operation and performance including refrigeration effect; flow rate; specific volume; system capacity; discharge temperature; total heat rejection; heat of compression and refrigerant properties and effects

T2 Compressor operation and performance including:

- Compressor drive methods including belt drives; direct drives; speed vs. pulley size and alignment requirements.
- Compressor piston displacement; compressor displacement; compression ratio; compressor efficiency
- Methods of system capacity control including compressor unloading; refrigerant bypass; air flow; water flow; multiple units and compressor speed.

T3 Air conditioning testing/measuring devices applicable to air volume, air velocity, air pressure, air temperature, air relative humidity and sound levels.

T4 System design cooling/heating capacity and conditions from:

- System design specifications and drawings
- Manufacturers specifications and manuals

T5 Pre-commissioning inspections and checks

T6 Testing, measurements and adjustments of the system

- Major components
- Refrigerant flow controls and accessories
- Safety and cycling controls
- Refrigerant charge
- Air/water flow quantities

REQUIRED SKILLS AND KNOWLEDGE

T7 System operating conditions and cooling/heating capacity vs system design conditions and cooling/heating capacity

T8 Marking up “as installed” drawings

T9 Commissioning reports

T10 Commissioning refrigeration and air conditioning systems including;

- Appliance refrigerated systems
- Cool room and freezer room systems
- Merchandising and display cabinets
- Residential air conditioning systems
- Package air conditioning systems

T11 Retrofitting systems with a replacement refrigerant

- Systems and refrigerants suitable for retrofitting
- Retrofitting a refrigerant into a system
- Procedures for modify an existing system to meet the requirements of the alternative refrigerant encompassing:
 - Evaluating performance of a system prior to being retrofitted.
 - Testing refrigerant oil in accordance with industry standard.
 - Reclaiming and evacuate system.
 - Removing and replacing components.
 - Pressure testing, evacuating and charging.
- Procedures for commissioning a retrofitted system to the prescribed standard
- Evaluating key performance factors of a system before and after a retrofit.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over

EVIDENCE GUIDE

time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Commission refrigeration and air conditioning systems and components as described in 8) and including:
 - A Using methodical commissioning techniques
 - B Commissioning efficiently
 - C Optimising system performance and efficiency
 - D Providing written commissioning reports
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in commissioning refrigeration and air conditioning systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to commissioning the following refrigeration and air conditioning systems and components:

- Compressors
- Condensers
- Evaporators/cooling coils
- Refrigerant flow controls
- Refrigerant piping and accessories
- Refrigeration systems
- Cycling controls
- Safety controls
- Motors

At least one of the following apparatus:

- Water systems, which includes cooling towers, evaporative condensers, evaporative coolers, hot water systems, chilled water systems, pumps, piping and associated equipment
- Air distribution systems

At least three of the following systems

- cool rooms
- freezer rooms
- merchandising and display cabinets
- residential air conditioning systems
- packaged or commercial air conditioning systems
- industrial air conditioning systems
- domestic refrigerators and freezers

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring
	UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures
	For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to resolve problems in hydronic systems	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
	1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.6 Sources of materials that may be required for the work are accessed in accordance with established

ELEMENT	PERFORMANCE CRITERIA
	procedures.
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Resolve problems in hydronic systems	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Problems are approached methodically drawing on operational knowledge of hydronic systems using observation, measurement, calculations and comparison with normal operating values of system and components.
	2.5 Information needed to resolve problems is gathered and evaluated against normal operating parameters. Note: Examples of information needed to resolve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters.
	2.6 Problems are dealt with safely and with the approval of an authorised person.
	2.7 Problems are resolved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document problem solving activities in hydronic systems	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to resolve problems is documented

ELEMENT**PERFORMANCE CRITERIA**

- 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in hydronic systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ114A

Hydronic systems

Evidence shall show an understanding of hydronic systems used for refrigeration and/or air conditioning applications, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 System characteristics, design features, applications, construction, components and typical layout arrangements.
- T2 Operating and control principles
- T3 Maintenance schedules
- T4 System faults and testing methods

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Resolve problems in hydronic systems as described in 8) and including:
 - A Using methodical fault finding techniques
 - B Assessing relevant information
 - C Solving problems effectively
 - D Providing written justification for the solutions used
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in solving problems in hydronic systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ111A	Diagnose and rectify faults in air conditioning and refrigeration systems and components
-------------	--

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in solving at least three operational problems related to hydronic systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers resolving problems in beverage dispensers. It encompasses working safely and to standards, applying knowledge of the components and operation of beverage dispensers, using effective problem resolving techniques and documenting solutions.

Application of the Unit

Application of the Unit 4)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage

Prerequisite Unit(s)	2)
	single path circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ104A Establish the basic operating conditions of air conditioning systems
	UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
	UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring
	UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures
	For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to resolve problems in beverage dispensers	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
	1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.

ELEMENT	PERFORMANCE CRITERIA
	1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures.
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Resolve problems in beverage dispensers	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Problems are approached methodically drawing on operational knowledge of beverage dispensers systems using observation, measurement, calculations and comparison with normal operating values of system and components.
	2.5 Information needed to resolve problems is gathered and evaluated against normal operating parameters. Note: Examples of information needed to resolve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters.
	2.6 Problems are dealt with safely and with the approval of an authorised person.
	2.7 Problems are resolved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Complete work and document problem resolving activities	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to resolve problems is documented
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in beverage dispensers.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ115 Beverage dispensers

Evidence shall show an understanding of refrigerated beverage dispensers, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 System characteristics, design features, applications, construction, components, and typical layout arrangements.
- T2 Operating and control principles
- T3 Maintenance schedules) System faults and testing methods
- T4 Pure food act and HACCP
- T5 Dispensed beverage product knowledge:

Note: Examples are beer, wine, spirits, soft drinks, and the like

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably

EVIDENCE GUIDE

gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Resolve problems in beverage dispensers as described in 8) and including:
 - A Using methodical problem resolving techniques
 - B Accessing relevant information
 - C Resolving problems effectively
 - D Providing written justification for the solutions used
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in resolving problems in beverage dispensers.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in resolving at least three operational problems related to refrigerated beverage dispensers.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to Resolve problems in ultra-low temperature refrigeration systems.	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
	1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|---|--|
| | 1.6 | Sources of materials that may be required for the work are accessed in accordance with established procedures. |
| | 1.7 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety |
| 2 | Resolve problems in ultra-low temperature refrigeration systems | |
| | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures |
| | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures |
| | 2.4 | Problems are approached methodically drawing on operational knowledge of Ultra-low temperature refrigeration systems using observation, measurement, calculations and comparison with normal operating values of system and components. |
| | 2.5 | Information needed to resolve problems is gathered and evaluated against normal operating parameters.

Note:
Examples of information needed to resolve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters. |
| | 2.6 | Problems are dealt with safely and with the approval of an authorised person. |
| | 2.7 | Problems are resolved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices. |

ELEMENT	PERFORMANCE CRITERIA
3 Complete work and document problem resolving activities.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to resolve problems is documented
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and resolving problems in Ultra-low temperature refrigeration systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ117A systems

Ultra-low temperature refrigeration

Evidence shall show an understanding of ultra-low temperature refrigeration systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 System characteristics, design features, applications, construction, components and typical layout arrangements.
- T2 Operating and control principles
- T3 Maintenance schedules
- T4 System faults and testing methods
- T5 Suitability of refrigerants for each application

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over

EVIDENCE GUIDE

time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Resolve problems in ultra-low temperature refrigeration systems as described in 8) and including:
 - A Using methodical problem resolving techniques
 - B Accessing relevant information
 - C Resolving problems effectively
 - D Providing written justification for the solutions used
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in resolving problems in Ultra-low temperature refrigeration systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in resolving at least three operational problems related to ultra-low temperature refrigeration systems.

Ultra-low temperature refrigeration systems cover compound and cascade systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ118A Resolve problems in post mix refrigeration systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers resolving problems in post mix refrigeration systems. It encompasses working safely and to standards, applying knowledge of the components and operation of post mix refrigeration systems, using effective problem resolving techniques and documenting solutions.

Application of the Unit

Application of the Unit 4)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage

Prerequisite Unit(s)	2)
	single path circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ104A Establish the basic operating conditions of air conditioning systems
	UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
	UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring
	UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures
	or
	UEENEEJ155A Service refrigeration appliances
	UEENEEJ154A Find and rectify faults in appliance control systems and devices
	UEENEEJ162A Recover, pressure test, evacuate, charge and leak test refrigerants appliances

Prerequisite Unit(s)	2)
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ195A Establish the basic operating conditions of vapour compression systems - appliances
	and
	UEENEEG006A Solve problems in single and three phase low voltage machines
	UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace
	UEENEEE102A Fabricate, assemble and dismantle utilities industry components
	UEENEEE104A Solve problems in d.c. circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEG101A Solve problems in electromagnetic devices and related circuits
	UEENEEG102A Solve problems in low voltage a.c. circuits
	UEENEEG106A Terminate cables, cords and accessories for low voltage circuits
	or
	UEENEEJ155A Service refrigeration appliances
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace
	UEENEEE003B Solve problems in extra-low voltage

Prerequisite Unit(s) 2)

single path circuits For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information**Employability Skills** 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1 Prepare to resolve problems in post mix refrigeration systems.	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
	1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

ELEMENT**PERFORMANCE CRITERIA**

- | | | | |
|---|--|-----|--|
| 2 | Resolve problems in post mix refrigeration systems | 1.5 | Advice is sought from the work supervisor to ensure the work is coordinated effectively with others. |
| | | 1.6 | Sources of materials that may be required for the work are accessed in accordance with established procedures. |
| | | 1.7 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety |
| | 2.1 | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures |
| | 2.3 | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures |
| | 2.4 | 2.4 | Problems are approached methodically drawing on operational knowledge of post mix refrigeration systems using observation, measurement, calculations and comparison with normal operating values of system and components. |
| | 2.5 | 2.5 | Information needed to resolve problems is gathered and evaluated against normal operating parameters.

Note:
Examples of information needed to resolve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters. |
| | 2.6 | 2.6 | Problems are dealt with safely and with the approval of an authorised person. |
| | 2.7 | 2.7 | Problems are resolved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy |

ELEMENT	PERFORMANCE CRITERIA
3 Complete work and document problem resolving activities.	practices. 3.1 OHS risk control work completion measures and procedures are followed. 3.2 Work site is cleaned and made safe in accordance with established procedures. 3.3 Justification for solutions used to resolve problems is documented 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and resolving problems in post mix refrigeration systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ118A **Post mix refrigeration systems**

Evidence shall show an understanding of post mix refrigeration systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 System characteristics, design features, applications, construction, components and typical layout arrangements.

T2 Operating and control principles

T3 Maintenance schedules

T4 System faults and testing methods

T5 Pure food act and HACCP

T6 Dispensed beverage product knowledge:

Note: Examples are wine, spirits, soft drinks, and the like

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably

EVIDENCE GUIDE

gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Resolve problems in ice making systems as described in 8) and including:
 - A Using methodical problem resolving techniques
 - B Accessing relevant information
 - C Resolving problems effectively
 - D Providing written justification for the solutions used
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in resolving problems in ice making systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ111A	Diagnose and rectify faults in air conditioning and refrigeration systems and components
-------------	--

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in resolving at least three operational problems related to ice making systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Refrigeration and Air Conditioning

UEENEEJ120A Resolve problems in industrial refrigeration systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers solving problems in industrial refrigeration systems. It encompasses working safely and to standards, applying knowledge of the components and operation of industrial refrigeration systems, using effective problem solving techniques and documenting solutions.

Application of the Unit

Application of the Unit **2)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and

License to practice**3)**

safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 02A	Fabricate, assemble and dismantle utilities industry components
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEJ10 2A	Prepare and connect refrigerant tubing and fittings
UEENEEJ10 3A	Establish the basic operating conditions of vapour compression systems
UEENEEJ10 4A	Establish the basic operating conditions of air conditioning systems
UEENEEJ10 6A	Install refrigerant pipe work, flow controls and accessories

Prerequisite Unit(s)	4)
	<p>UEENEEJ10 7A Install air conditioning and refrigeration systems, major components and associated equipment</p> <p>UEENEEJ10 8A Recover, pressure test, evacuate, charge and leak test refrigerants</p> <p>UEENEEJ11 1A Diagnose and rectify faults in air conditioning and refrigeration systems and components</p> <p>UEENEEJ11 3A Commission air conditioning and refrigeration systems</p> <p>UEENEEJ15 3A Find and rectify fault motors and associated controls in refrigeration and air conditioning</p> <p>UEENEEJ17 0A Diagnose and rectify faults in air conditioning and refrigeration control systems</p> <p>UEENEPE01 3A Disconnect / reconnect control devices connected to low voltage installation wiring</p> <p>UEENEPE01 6A Locate and rectify faults in low voltage appliances using set procedures</p>

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3
