The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to solve problems in industrial refrigeration systems.	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
	1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures.

ELEMENT	PERFORMANCE CRITERIA
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Solve problems in industrial refrigeration systems	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Problems are approached methodically drawing on operational knowledge of industrial refrigeration systems using observation, measurement, calculations and comparison with normal operating values of system and components.
	2.5 Information needed to solve problems is gathered and evaluated against normal operating parameters. Note: Examples of information needed to solve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters.
	2.6 Problems are dealt with safely and with the approval of an authorised person.
	2.7 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Complete work and document problem solving activities.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to solve problems is documented
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in industrial refrigeration systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ120 **Industrial refrigeration systems**

A

Evidence shall show an understanding of industrial refrigeration systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

System characteristics, design features, applications, construction, components and typical layout arrangements.

- Operating and control principles
- Maintenance schedules
- System faults and testing methods
- Secondary refrigerants and systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in industrial refrigeration systems as described in 8) and including:
 - A Using methodical problem solving techniques
 - B Accessing relevant information
 - C Solving problems effectively
 - D Providing written justification for the solutions

used

- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in solving problems in industrial refrigeration systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE00 9B Comply with scheduled and preventative maintenance program processes

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in solving at least three operational problems related to industrial refrigeration systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Refrigeration and Air Conditioning

UEENEEJ121A Monitor and adjust refrigeration energy management systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the setting-up and adjusting energy management systems on refrigeration systems for effective energy use. It encompasses safe working practices, system parameter testing and analysis, adjusting equipment and controls, following procedures and documenting final operating parameters and settings.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology

Prerequisite Unit(s)	2)
	equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ104A Establish the basic operating conditions of air conditioning systems
	UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
	UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components
	UEENEEJ113A Commission air conditioning and refrigeration systems
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring
	UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures
	UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply
	UEENEEP025A Attach cords, cables and plugs to

Prerequisite Unit(s) 2)
 electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply
 For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)
 This unit contains Employability Skills
 The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to monitor and adjust energy management systems on refrigeration systems.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.

ELEMENT	PERFORMANCE CRITERIA
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
	1.5 System energy parameters are identified by reviewing system specifications and component technical data.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
	1.7 Preparatory work is checked to ensure no damage has occurred and complies with requirements
	1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	1.9 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
2 Monitor and adjust energy management systems on refrigeration systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular system.
	2.3 Monitoring and adjustments are made to equipment components and controls to provide effective energy use in accordance with system specifications and regulatory requirements.
	2.4 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.6 Monitoring and adjusting is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.

ELEMENT	PERFORMANCE CRITERIA
3 Completion and report monitoring adjusting activities.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Monitoring and adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and monitoring and adjusting energy management systems on refrigeration systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ121A Energy management systems for commercial refrigeration

Evidence shall show an understanding of energy management systems for commercial refrigeration, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Functions of a commercial refrigeration E.M.S.

- General control function
- Inputs
- Outputs
- Communications
- Graphing
- Supervising
- Data logging
- Scheduling
- Alarms
- Power consumption

T2 E.M.S. control components

- Identify components
- Pressure sensors
- Temperature sensors
- Time clocks
- Humidity sensors
- Liquid level sensors
- Leak detector sensor
- State the function and operating parameters of components
- Pressure sensors
- Temperature sensors
- Time clocks

REQUIRED SKILLS AND KNOWLEDGE

- Humidity sensors
- Liquid level sensors
- Leak detector sensors

T3 Installation requirements and consideration

- Installation of controller(s)
- Installation of refrigerant leak detector
- Systems
- Installation of accessory boards
- Installation of pressure transducers & wiring
- Installation of temperature sensors & wiring
- Control wiring considerations

T4 System design and applications

- Select control components to suit given applications
- Determine system operating parameters
- Pressure sensors
- Temperature sensors
- Time clocks
- Humidity sensors
- Liquid level sensors
- Leak detector sensors
- Defrost
- Alarm panel

T5 Programming a control system

- Display terminal and keypad functions
- Calibration of sensors
- Changing original settings
- Program a given set of parameters to suit an application

T6 Component testing and fault finding

- Trouble shooting
- Testing of components

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement

EVIDENCE GUIDE

and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria

EVIDENCE GUIDE

shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Monitor and adjust energy management systems on refrigeration systems as described in 8) and including:
 - A Identifying system energy parameters
 - B Monitoring and adjusting system components and controls to provide effective energy use
 - C Ensuring system energy use is accordance with requirements
 - D Documenting adjustment settings with established procedures
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

	<p>Note:</p> <p>Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified</p>

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers diagnosing and rectifying faults in complex heating, ventilation and air conditioning (HVAC) or refrigeration control systems. It encompasses safe working practices, interpreting technical data, applying knowledge of complex refrigeration or heating, ventilation and air conditioning (HVAC) control systems operating parameters to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ112A Diagnose and rectify faults in complex air conditioning/ refrigeration systems

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

Prerequisite Unit(s)**2)**

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to diagnose and rectify faults.	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
	1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.

ELEMENT**PERFORMANCE CRITERIA**

	1.6	Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
2 Diagnose and rectify faults.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4	Logical diagnostic methods are applied to diagnose control system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
	2.5	Suspected fault scenarios are tested as being the source of system problems.
	2.6	Causes of the faults are identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of the control system.
	2.7	Faults in system components of the system are rectified to raise the refrigeration or heating, ventilation air conditioning systems to its operation standard.
	2.8	System is tested to verify that the system operates as intended and to specified requirements.
	2.9	Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.10	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.11	Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to

ELEMENT**PERFORMANCE CRITERIA**

- apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work site is made safe in accordance with established safety procedures.
- 3.3 Rectification of faults is documented in accordance with established procedures.
- 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing faults in complex refrigeration or HVAC control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ122A Complex HVAC/Refrigeration control systems

Evidence shall show an understanding of complex HVAC/Refrigeration control system fault finding, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Control fundamentals

- control terminology
- refrigeration system characteristics
- HVAC system characteristics
- control system characteristics
- control system components
- control system diagrams and symbols
- product knowledge

T2 Types of control equipment

- electrical:
 - classification of circuits
 - two position control
 - floating control
 - sensors
 - controllers
 - flow control devices
 - control systems diagrams
- electronic:
 - operating principles
 - sensors
 - controllers
 - control system diagrams

T3 Digital Control Systems

- Computer based control fundamentals

REQUIRED SKILLS AND KNOWLEDGE

- Definitions
- Principles
- Controller configuration
 - Equipment
 - Zone level controllers
 - System level controllers
- Controller software
 - Operating software
 - Application software
- Controller programming
 - System diagrams
 - Control diagrams
 - Configuration
 - Programming
 - Initialisation
 - EMS, BMS
 - SCADA system
 - Lan, Bacnet

T4 Control systems applications

- refrigeration
- air conditioning
 - air handling system controls
 - ventilation
 - heating
 - building airflow system control
 - airflow control
 - singles and multi -zones
 - chiller/boiler and distribution system control (chilled water, boiler, distribution systems)

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

EVIDENCE GUIDE

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work

EVIDENCE GUIDE

function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose faults in complex refrigeration or HVAC control systems as described in 8) and including:
 - A Applying logical diagnostic methods
 - B Using fault scenarios to test the cause of system faults
 - C Identifying faults and competency needed to rectify them
 - D Rectifying faults in system controls
 - E Verifying that the system operates correctly
 - F Documenting fault rectification
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly

EVIDENCE GUIDE

identified

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in diagnosing faults in complex refrigeration or HVAC control systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to diagnosing and rectifying at least four faults in complex refrigeration or HVAC control systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ123A Commission complex (HVAC) heating, ventilation and air conditioning systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers the setting-up and adjusting complex (HVAC) heating, ventilation and air conditioning systems for optimum performance. It encompasses safe working practices, system parameter testing and analysis, adjusting equipment and controls, following procedures and documenting final operating parameters and settings.

Application of the Unit

Application of the Unit 4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ112A Diagnose and rectify faults in complex air conditioning/ refrigeration systems

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Prerequisite Unit(s)

2)

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical

Prerequisite Unit(s)

2)

equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills

3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to commission complex heating, ventilation and air conditioning systems	1.1	OHS procedures for a given work area are identified, obtained and understood
	1.2	Established OHS risk control measures and procedures are followed in preparation for the work.

ELEMENT

PERFORMANCE CRITERIA

- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.5 System operating parameters are identified by reviewing system specifications and component technical data.
- 1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.7 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
- 1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 1.9 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2 Commission complex heating, ventilation and air conditioning systems.
 - 2.1 OHS risk control measures and procedures for carrying out the work are followed.
 - 2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular system.
 - 2.3 Measurements and adjustments are made to equipment components and controls to provide optimum system performance in accordance with system specifications and regulatory requirements.
 - 2.4 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
 - 2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|-----|--|
| | 2.6 | Commissioning is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles. |
| 3 Completion and report commissioning activities. | 3.1 | OHS risk control work completion measures and procedures are followed. |
| | 3.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | 3.3 | Adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning complex heating, ventilation and air conditioning (HVAC) systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ123A **Complex HVAC system commissioning**

Evidence shall show an understanding of complex HVAC system commissioning, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Commissioning fundamentals

- building specifications/requirements/responsibilities
- design and as installed drawings
- building codes
- local government regulations
- design conditions
- pre – commissioning checks
- calibration of instruments
- commissioning procedures
- data collection and recording, documentation
- reporting procedures

T2 Air systems

- factors affecting the design of ductwork systems
- types of ductwork systems
- static, velocity and total pressure
- air testing and balancing
- air flow
- pressure
- temperature

T3 Fans

- types and characteristics
- fan laws
- fan and system curves

REQUIRED SKILLS AND KNOWLEDGE

- fan testing
- T4 Air balancing
- equipment, instruments and procedures
 - leakage testing
- T5 Overview of noise in duct systems
- noise sources in duct systems
 - attenuation
 - methods of control
- T6 System capacity calculations
- T7 Hydronic systems
- hydronic instruments
 - fluid flow
 - pumps: pump curves and system curves
 - pump testing
 - capacity calculations
- T8 Plant and equipment
- controls
 - heat exchangers
 - chillers
 - boilers
 - cooling towers

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over

EVIDENCE GUIDE

time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'.

Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able

EVIDENCE GUIDE

to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Commissioning complex heating, ventilation and air conditioning (HVAC) systems as described in 8) and including:
 - A Identifying system design operating parameters
 - B Measuring and adjusting system components and controls to provide optimum system performance
 - C Ensuring system operates within regulatory requirements
 - D Documenting adjustment settings with established procedures
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with

EVIDENCE GUIDE

performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in commissioning complex heating, ventilation and air conditioning (HVAC) systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to commissioning two different types of complex heating, ventilation and air conditioning systems, incorporating multiple major components (i.e. compressors, condenser or evaporators) circuits or systems and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ124A Commission refrigeration/ air conditioning hydronic systems

Modification History

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the setting-up and adjusting hydronic systems for refrigeration and/or air conditioning optimum performance. It encompasses safe working practices, system parameter testing and analysis, adjusting equipment and controls, following procedures and documenting final operating parameters and settings.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ112A Diagnose and rectify faults in complex air conditioning/ refrigeration systems

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage

Prerequisite Unit(s)	2)
	single path circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ104A Establish the basic operating conditions of air conditioning systems
	UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
	UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components
	UEENEEJ113A Commission air conditioning and refrigeration systems
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring
	UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures
	UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt

Prerequisite Unit(s)	2)
	supply
	UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply
	For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills	3)
	This unit contains Employability Skills
	The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to commission hydronic systems for refrigeration/air conditioning	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are noted and established risk control

ELEMENT	PERFORMANCE CRITERIA
	measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
	1.5 System operating parameters are identified by reviewing system specifications and component technical data.
	1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
	1.7 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
	1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	1.9 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
2 Commission hydronic systems for refrigeration/air conditioning.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular system.
	2.3 Measurements and adjustments are made to equipment components and controls to provide optimum system performance in accordance with system specifications and regulatory requirements.
	2.4 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.

ELEMENT	PERFORMANCE CRITERIA
	2.6 Commissioning is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3 Completion and report commissioning activities.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning hydronic systems for refrigeration and/or air conditioning.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ124A

Hydronic system commissioning

Evidence shall show an understanding of hydronic system commissioning, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Commissioning fundamentals

- building specifications/requirements/responsibilities
- design and as installed drawings
- building codes
- local government regulations
- design conditions
- pre – commissioning checks
- calibration of instruments
- commissioning procedures
- data collection and recording, documentation
- reporting procedures

T2 Hydronic systems operation

- closed/open systems
- pump head/lift, static head (high rise building)
- system friction losses
- nett positive suction head
- system curves

T3 Pumps

- types
- selection criteria
- performance characteristics
- pump curves and system curves
- pump testing

REQUIRED SKILLS AND KNOWLEDGE

- capacity calculations
- bladder tanks
- coil characteristics
- heat exchangers: plate, shell and tube, tube in tube
- flow measurements: types
- flow switchers
- cooling towers: elementary cooling thermodynamics and types

T4 Valves - flow control devices

- types and applications
- balancing valves
- throttling characteristics
- flow measurements
- selection and applications

T5 Piping systems

- balancing and commissioning
- air venting
- water treatment
- vacuum breaking and air breaks

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum,

EVIDENCE GUIDE

the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Commission hydronic systems for refrigeration and/or air conditioning systems as described in 8) and including:
 - A Identifying system operating parameters
 - B Measuring and adjusting system components and controls to provide optimum system performance
 - C Ensuring system operates within regulatory requirements
 - D Documenting adjustment settings with established procedures
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in commissioning hydronic systems for refrigeration and/or air conditioning.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to commissioning two different hydronic systems for refrigeration and/or air conditioning systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the setting-up and adjusting complex refrigeration systems for optimum performance. It encompasses safe working practices, system parameter testing and analysis, adjusting equipment and controls, following procedures and documenting final operating parameters and settings.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ112A Diagnose and rectify faults in complex air conditioning/ refrigeration systems

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage

Prerequisite Unit(s)	2)
	single path circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ104A Establish the basic operating conditions of air conditioning systems
	UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
	UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components
	UEENEEJ113A Commission air conditioning and refrigeration systems
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring
	UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures
	UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt

Prerequisite Unit(s)	2) supply UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2
-----------------------------	---

Employability Skills Information

Employability Skills	3) This unit contains Employability Skills The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.
-----------------------------	--

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to commission complex refrigeration systems.	1.1 OHS procedures for a given work area are identified, identified, obtained and understood 1.2 Established OHS risk control measures and procedures are followed in preparation for the work. 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are

ELEMENT	PERFORMANCE CRITERIA
	implemented.
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
	1.5 System operating parameters are identified by reviewing system specifications and component technical data.
	1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
	1.7 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
	1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	1.9 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
2 Commission complex refrigeration systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular system.
	2.3 Measurements and adjustments are made to equipment components and controls to provide optimum system performance in accordance with system specifications and regulatory requirements.
	2.4 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.6 Commissioning is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy

ELEMENT	PERFORMANCE CRITERIA
3 Completion and report commissioning activities.	<p data-bbox="584 293 711 329">principles.</p> <p data-bbox="461 360 1305 439">3.1 OHS risk control work completion measures and procedures are followed.</p> <p data-bbox="461 539 1305 618">3.2 Work site is cleaned and made safe in accordance with established procedures.</p> <p data-bbox="461 651 1305 757">3.3 Adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning complex refrigeration systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01_EJ125A commissioning

Complex refrigeration systems

Evidence shall show an understanding of complex refrigeration systems commissioning, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Commissioning fundamentals

- building specifications/requirements/responsibilities
- design and as installed drawings
- building codes
- local government regulations
- design conditions
- pre – commissioning checks
- calibration of instruments
- commissioning procedures
- data collection and recording, documentation
- reporting procedures

T2 Air Systems (excluding air balancing)

- instruments
- air flow
- pressure
- temperature
- fan testing
- leakage testing
- system capacity calculations

T3 Hydronic systems

- hydronic instruments
- fluid flow
- pumps: pump curves and system curves

REQUIRED SKILLS AND KNOWLEDGE

- pump testing
- capacity calculations

T4 Refrigeration Systems

- AS1677
- Code of practice
- pressure testing
- evacuation
- charging
- control setting
- commissioning reports
- system performance and capacity

T5 Plant and equipment

- controls
- heat exchangers
- chillers
- boilers
- cooling towers

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the

EVIDENCE GUIDE

competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'.

Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Commission complex refrigeration systems as described in 8) and including:
 - A Identifying system operating parameters
 - B Measuring and adjusting system components and controls to provide optimum system performance
 - C Ensuring system operates within regulatory requirements
 - D Documenting adjustment settings with established procedures
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in commissioning complex refrigeration systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to commissioning two different types of complex refrigeration systems, incorporating multiple major components (i.e. compressors, condenser or evaporators) circuits or systems and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ126A Commission complex refrigeration/air conditioning control systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the setting-up and adjusting complex control systems for refrigeration or air conditioning optimum performance. It encompasses safe working practices, system parameter testing and analysis, adjusting equipment and controls, following procedures and documenting final operating parameters and settings.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ122A Diagnose faults in complex HVAC /refrigeration control systems

UEENEEJ112A Diagnose and rectify faults in complex air conditioning/ refrigeration systems

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle

Prerequisite Unit(s)

2)

utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

Prerequisite Unit(s)

2)

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills

3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to commission complex control systems for refrigeration and air conditioning.	1.1	OHS procedures for a given work area are identified, identified, obtained and understood
	1.2	Established OHS risk control measures and procedures are followed in preparation for the work.

ELEMENT

PERFORMANCE CRITERIA

- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.5 System operating parameters are identified by reviewing system specifications and component technical data.
- 1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.7 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
- 1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 1.9 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2 Commission complex control systems for refrigeration and air conditioning.
 - 2.1 OHS risk control measures and procedures for carrying out the work are followed.
 - 2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular system.
 - 2.3 Measurements and adjustments are made to equipment components and controls to provide optimum system performance in accordance with system specifications and regulatory requirements.
 - 2.4 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
 - 2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|---|--|---|
| | 2.6 | Commissioning is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles. | |
| 3 | Completion and report commissioning activities. | 3.1 | OHS risk control work completion measures and procedures are followed. |
| | | 3.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | | 3.3 | Adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning complex control systems for refrigeration/air conditioning.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ126A **Complex refrigeration/HVAC control system commissioning**

Evidence shall show an understanding of complex HVAC/Refrigeration control system commissioning, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Commissioning fundamentals

- building specifications/requirements/responsibilities
- design and as installed drawings
- building codes
- local government regulations
- design conditions
- pre – commissioning checks
- calibration of instruments
- commissioning procedures
- data collection and recording, documentation
- reporting procedures

T2 Control fundamentals

- control terminology
- refrigeration system characteristics
- HVAC system characteristics
- control system characteristics
- control system components
- control system diagrams and symbols
- product knowledge
- T3 Commissioning various types of control equipment
- electrical:
 - sensors
 - controllers

REQUIRED SKILLS AND KNOWLEDGE

- flow control devices
- control systems diagrams
- electronic:
 - sensors
 - controllers
 - control system diagrams

T4 Digital Control Systems

- System diagrams
- Control diagrams
- Configuration
- Programming
- Initialisation
- EMS, BMS
- SCADA system
- Lan, Bacnet

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry

EVIDENCE GUIDE

and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Commission complex control systems for refrigeration/air conditioning as described in 8) and including:
 - A Identifying system operating parameters
 - B Measuring and adjusting system components and controls to provide optimum system performance
 - C Ensuring system operates within regulatory requirements
 - D Documenting adjustment settings with established procedures
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in commissioning complex control systems for refrigeration/air conditioning.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to commissioning two different complex control systems for refrigeration or air conditioning.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the determination of the thermodynamic parameters of refrigeration and air conditioning systems. It encompasses working safely, determining thermodynamic parameters of using measurement and basic calculation methods and documenting results.

Application of the Unit

Application of the Unit

4)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training or institutional based delivery at the aligned AQF 4 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

OR

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Prerequisite Unit(s)

2)

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage

Prerequisite Unit(s)

2)

composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

ELEMENT	PERFORMANCE CRITERIA
air conditioning systems	<p>1.3 The expected operating conditions are obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Tools, equipment and testing devices needed to determine the basic operating conditions are obtained and checked for correct operation and safety</p> <p>1.6 The expected operating conditions are obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p>
2 Determine thermodynamic parameters of refrigeration and air conditioning systems	<p>2.1 Established OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Measurement of thermodynamic system operating parameters is conducted in strict accordance with OHS requirements and established safety procedures</p> <p>2.3 System is checked and isolated where necessary, in strict accordance OHS requirements and procedures</p> <p>2.4 Established procedures are used to determine actual and specified range of thermodynamic parameters from measured and calculated values as they apply to particular refrigeration or air conditioning systems.</p> <p>2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.</p> <p>2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.</p> <p>2.7 Thermodynamic parameters are determined without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.</p>

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|--|
| 3 | Document determined thermodynamic parameters | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | | 3.2 | Work site and equipment is cleaned and made safe in accordance with established procedures. |
| | | 3.3 | Thermodynamic parameters are documented including identification of any parameter that is not within the specified range for the system. |
| | | 3.4 | Work supervisor is notified of the completion of the work in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining thermodynamic parameters of refrigeration and air conditioning systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ127A Thermodynamic parameters of refrigeration and air conditioning systems

Evidence shall show an understanding of engineering mathematics fundamentals and refrigeration science to an extent indicated by the following aspects:

T1 Arithmetic

- Rational and irrational numbers, surds
- SI units, conversion using unity brackets
- Laws of indices (base 10), scientific and engineering notation
- Estimations, errors and approximations, significant figures

T2 Algebra

- Substitution
- +, -, x on simple polynomials. Simple indices
- Expanding brackets
- Factorising quadratics. Common factors, difference of two squares
- Simplifying algebraic fractions
- Transposition of engineering formulae
- Solving one variable equations
- Simple algebraic division.

T3 Geometry

- Pythagoras Theorem
- Angles: degrees, radians. Parallel lines cut by a transverse
- Triangles: sum of angles, properties of equilateral and isosceles triangles
- Congruent triangles
- Similar triangles: ratio of corresponding sides
- Sin, cos, tan: ratios of a right angled triangle
- Sine and cosine rules
- Circles: circumference, arcs, chords, tangents, circle theorems

REQUIRED SKILLS AND KNOWLEDGE

- Area and perimeter mensuration on above figures.

T4 Coordinate geometry

- 2D plane; x-y axes, s-t axes
- Graph of linear function, $y = ax + b$. Functional notation, $y = f(x)$
- Straight line given slope and one point or given two points
- Linear equations: solving algebraically and geometrically
- Solving 2 linear functions simultaneously, algebraically and geometrically
- Line segment: length and mid point.

T5 Engineering mechanics

- mass/density
- weight
- forces
- specific gravity
- equilibrium
- momentum
- friction loss
- velocity and speed
- energy in all forms
- mechanical advantage
- efficiency
- pressure/stress

T6 Molecular theory

- changes of state
- sublimation
- expansion and contraction
- electron flow
- state of aggregation
- internal potential energy
- phase change diagrams

T7 Thermodynamics

- temperature scales
- conservation of energy
- specific heat
- sensible, latent and super heat
- properties of steam
- enthalpy
- heat energy/temperature relationship
- heat balance on a body

REQUIRED SKILLS AND KNOWLEDGE

- heat transfer
- conductivity
- calorimetry
- Peltier effect
- 1st and 2nd law of thermodynamics

T8 Gas laws and liquids

- pressure
- Boyles law
- Charles law
- Volumetric relationship
- psychrometrics
- latent heat of vaporisation
- relative humidity
- air conditioning processes
- dynamic pressure loss
- velocity and static pressure
- bourdon tubes
- density and relative density
- Archimedes principle
- Bernoulli's Equation
- manometers
- absorption refrigeration
- centrifugal compression
- external work of a liquid
- pressure volume diagrams
- isothermal and adiabatic processes
- polytropic processes
- Dalton's law of partial pressure

T9 Vapour compression

- pressure/enthalpy relationship
- entropy
- characteristics of the evaporation, condensation,
- compression and pressure drop phases
- co-efficient of performance
- theoretical/practical cycles
- characteristics of refrigerants
- theoretical power input
- pressure losses
- heat exchange

REQUIRED SKILLS AND KNOWLEDGE

- effects of condensing condition changes
- sub-cooling and super-heating

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or

EVIDENCE GUIDE

less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Determine thermodynamic parameters of refrigeration and air conditioning systems as described in 8) and including:
 - A Selecting and using appropriate measuring devices correctly

EVIDENCE GUIDE

- B Interpreting measurements
- C Using calculation methods accurately
- D Identifying parameters not within the specified range
- E Documenting thermodynamic parameters correctly
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in determining thermodynamic parameters of refrigeration and air conditioning systems.

EVIDENCE GUIDE

Method of assessment	9.4) This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'. Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.
Concurrent assessment and relationship with other units	9.5) There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining thermodynamic parameters using measurement and calculation methods of a refrigeration or air conditioning system, including temperature, pressure, relative humidity and enthalpy.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ128A Produce HVAC/R system design drawings

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers interpreting technical data and project specifications and produce HVAC/R system design drawings. It encompasses safe working practices, interpreting technical data and specifications, applying knowledge heating, ventilation, air conditioning and/or refrigeration systems design drawing protocols, using appropriate drawing tools and documenting design.

Application of the Unit

Application of the Unit 4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

OR

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

Prerequisite Unit(s)	2)
	UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace
	UEENEEE102A Fabricate, assemble and dismantle utilities industry components
	UEENEEE003B Solve problems in extra-low voltage single path circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ104A Establish the basic operating conditions of air conditioning systems
	UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
	UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components
	UEENEEJ113A Commission air conditioning and refrigeration systems
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect / reconnect composite

Prerequisite Unit(s)

2)

appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information**Employability Skills**

3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to produce HVAC/R design drawings.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed
	1.3 The extent of the work is determined from project specifications and discussion with appropriate personnel
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.5 Software tools and equipment a needed for the work are obtained in accordance with established procedures
2 Produce HVAC/R design drawings	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2 The types of design drawings and layouts required are determined from project specifications
	2.3 Technical data of system components is interpreted to determine parameters that are to be included in the drawings
	2.4 Appropriate software tools are used to produce drawing based on standard protocols
	2.5 Drawings are checked for accuracy are compliance with project specifications
	2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
3 Complete and report HVAC/R design drawings	3.1 Completed drawings are submitted to an appropriate person to be checking for accuracy and compliance with project specifications.
	3.2 Any alterations, additions or correction instructions are followed and drawings are re-submitted for final approval

ELEMENT

PERFORMANCE CRITERIA

- 3.3 Copies of completed drawings are filed securely in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and producing HVAC/R design drawings.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ128A

HVAC/R system drawing

Evidence shall show an understanding of air conditioning drawing, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Standards, regulations and codes

T2 Architectural and mechanical drafting conventions encompassing:

- Fire, hydraulic, electrical layout diagrams,
- Sketching of pipework circuits and mechanical services,
- Drawing standards and symbols,
- Working, detail and assembly drawings,
- Ductwork layouts and conventions,
- Pipework layouts and conventions,

T3 Computer aided drawing techniques

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to determine the heat loads for commercial refrigeration and/or air conditioning applications.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work
	1.3 The extent of the heat load analysis is determined from project specifications and discussion with appropriate personnel
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work
	1.5 Effective strategies are determined to ensure solution development and implementation is carried out efficiently
2 Determine the heat loads for commercial refrigeration and/or air conditioning applications.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of commercial refrigeration and/or air conditioning system operating parameters is applied when performing heat loads estimation
	2.3 Parameters, specifications and performance requirements in relation to commercial refrigeration and/or air conditioning system are set in accordance with established procedures
	2.4 Approaches to determine the heat loads are carried out to provide most effective solutions
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy
	2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards

ELEMENT	PERFORMANCE CRITERIA
3 Complete and report heat loads for commercial refrigeration and /or air conditioning applications.	3.1 Heat load estimations is documented including details of all findings, calculations and assumptions
	3.2 Completed heat loads are submitted to an appropriate person to be checked for accuracy and compliance with project specifications and evaluated to determine whether performance requirements are met
	3.3 Heat loads estimation is reported to appropriately personnel to establish appropriate action to be taken based on findings
	3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining the heat loads for commercial refrigeration and/or air conditioning applications.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ129A Commercial refrigeration heat load estimating

Evidence shall show an understanding of heat load estimating for commercial refrigeration applications, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Heat transfer

- factors affecting heat transfer
- insulation material characteristics
- vapour barriers (seals)
- ambient conditions
- composite walls (heat flows)
- types of common insulation
- thermal conductivity
- film factors

T2. Cabinet construction and design

- deep freeze case
- meat case
- dairy case
- fruit and vegetable case
- drink cabinets

T3. Air change load

- room volumes
- room usage (average, medium, heavy)
- heat removed from cooling air to refrigerated conditions
- air curtains
- temperature differences
- door opening sizes
- Tamm's equation

T4. Product load

- sensible heat

REQUIRED SKILLS AND KNOWLEDGE

- latent heat
- heat of respiration
- storage temperatures
- unit running times
- humidity
- air flows
- stacking of products
- freeze, chill, thaw times

T5. Total freezer/cool room loads

- wall load
- air change load
- product load
- miscellaneous
- total load, safety factor and unit running times
- floor loads in cool rooms
- door opening loads (ASHRAE & RADS methods)
- door opening loads (for trucks)

T6. Process cooling loads

- cooling chemical reactions
- energy balance methods
- sensible & latent cooling of gases
- sensible & latent cooling of water vapour in gas streams

T7. Computer programs

KS02-EJ129A Commercial air conditioning heat load estimating

Evidence shall show an understanding of heat load estimating for commercial air conditioning applications, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Heat flow in buildings

- conduction
- convection
- radiation
- heat paths

T2. Thermal storage

T3. Different methods of calculations

- ASHRAE
- Carrier
- finite difference

REQUIRED SKILLS AND KNOWLEDGE

T4. U Values.

T5. Film coefficients.

T6. Solar heat

- direct
- diffuse
- sol air temperature
- sun position calculations

T7. Design conditions

- outdoor
- monthly/daily corrections
- comfort/critical
- indoor
- effective temperature

T8. Thermal comfort.

T9. Space characteristics.

T10. Equipment location.

T11. Zoning

T12. Internal loads

- lighting
- equipment
- people
- load profiles
- internal partitions

T13. Fresh air/AS 1668

T14. Calculation of fabric loads

- walls
- roofs
- floors

T15. Windows

- glass types and factors
- shade factors
- internal and external shading
- shading from adjacent structures

T16. Air quantity calculation

- psychrometrics
- by-pass factor

REQUIRED SKILLS AND KNOWLEDGE

- coil load
 - VAV air quantities
- T17. Piping and other losses.
- T18. Refrigeration plant load.
- T19. Computer software
- responsible use

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence

EVIDENCE GUIDE

need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Determine the heat loads for commercial refrigeration and/or air conditioning applications as described in 8) and including:
 - A Establishing system parameters for heat load
 - B Select appropriate head load calculation tools
 - C Identifying heat loads accurately
 - D Using calculation methods accurately
 - E Documenting heat loads correctly
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in determining the heat loads for commercial refrigeration and air conditioning applications.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining heat loads using quick selection short form paper and/or computer based methods for a refrigeration and/or air conditioning system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ130A Produce HVAC/R control system diagrams

Modification History

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers interpreting technical data and project specifications and produce HVAC/R control system diagrams. It encompasses safe working practices, interpreting technical data and specifications, applying knowledge heating, ventilation, air conditioning and/or refrigeration control systems drawing protocols, using appropriate drawing tools and documenting design.

Application of the Unit

Application of the Unit 4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control

Prerequisite Unit(s)

2)

OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to produce HVAC/R control system diagrams	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the work is determined from project specifications and discussion with appropriate personnel.
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
	1.5 Software tools and equipment a needed for the work are obtained in accordance with established procedures

ELEMENT	PERFORMANCE CRITERIA
2 Produce HVAC/R control system diagrams	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The types of control diagrams and layouts required are determined from project specifications.
	2.3 Technical data of control system components is interpreted to determine parameters that are to be included in the diagrams
	2.4 Appropriate software tools are used to produce diagrams based on standard protocols.
	2.5 Diagrams are checked for accuracy are compliance with project specifications.
	2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
3 Complete and report HVAC/R control system diagrams	3.1 Completed control diagrams are submitted to an appropriate person to be checked for accuracy and compliance with project specifications.
	3.2 Any alterations, additions or correction instructions are followed and diagrams are re-submitted for final approval
	3.3 Copies of completed diagrams are filed securely in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and producing HVAC/R control system design diagrams.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ130A

HVAC/R control system fundamentals

Evidence shall show an understanding of HVAC control systems and diagrams, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Control fundamentals

- control terminology
- refrigeration system characteristics
- HVAC system characteristics
- control system characteristics
- control system components
- control system diagrams and symbols
- product knowledge

T2 Types of control equipment

- electrical:
 - classification of circuits
 - two position control
 - floating control
 - sensors
 - controllers
 - flow control devices
 - control systems diagrams
- electronic:
 - operating principles
 - sensors
 - controllers
 - control system diagrams

T3 Control systems applications

REQUIRED SKILLS AND KNOWLEDGE

- refrigeration
- air conditioning
 - air handling system controls
 - ventilation
 - heating
 - building airflow system control
 - airflow control
 - singles and multi -zones
- chiller/boiler and distribution system control (chilled water, boiler, distribution systems)

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies

EVIDENCE GUIDE

being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing measurements to noise and vibration encountered in HVAC/R applications

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ131A

Noise and vibration fundamentals

Evidence shall show an understanding of noise and vibration fundamentals, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Fundamentals of sound

- Properties of sound: Wavelength, amplitude, frequency, period, velocity, sound (intensity, pressure, power), decibels
- Sound pressure level
- Sound power level
- Addition of sound levels
- Loudness and weighting networks
- Sound spectrum and octave bands
- Single value representation of sound spectrum
- NR curves
- Sound meters

T2 Fundamentals of vibration

- Terminology: Spring-mass system, spring in series and/or parallel, stiffness, effective stiffness, viscous frictional coefficient, mass, period, frequency (angular, natural, damped, forced), amplitude, static deflection, damping ratio, damping factor, frequency ratio
- SHM (Simple Harmonic Motion)
- Damped vibration
- Forced vibration
- Maximum amplitude and resonance
- Transmissibility and isolation efficiency
- Vibration isolators

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required

9.2)

Before the critical aspects of evidence are considered all

to demonstrate competency in this unit

prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Determine noise and vibration encountered in HVAC/R applications as described in 8) and including:
 - A Identifying the dynamic characteristics of systems/materials and the effects due to different operating parameters
 - B Using established measurement methods
 - C Taking relevant measurements accurately
 - D Interpreting measured values appropriately
 - E Providing correct interpretation of data taken from

EVIDENCE GUIDE

measurements and calculations

- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in providing solutions to vibration problems in HVAC/R system design.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical

Prerequisite Unit(s)	2)
	equipment for connection to a single phase 230 Volt supply
	UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply
	For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills	3)
	This unit contains Employability Skills
	The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design commercial refrigeration systems.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 The extent and nature of the refrigeration system is determined from design specifications.
	1.3 Safety and other regulatory requirements to which the system shall comply are identified, obtained and

ELEMENT	PERFORMANCE CRITERIA
	understood
	1.4 Work supervisor or customers are consulted to determine which functions of the system are to be used and the parameter of each and written confirmation sought.
	1.5 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
2 Design commercial refrigeration systems.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of refrigeration and food storage technology, refrigeration system components and piping, performance standards and compliance methods are applied to developing the system design
	2.3 Safety, functional and budgetary considerations are incorporated in the installation design.
	2.4 Equipment required for the system is selected in accordance with the design specifications and established requirements.
	2.5 Location of components of the system is documented to ensure correct operation of system functions.
	2.6 System design draft is checked for compliance with the design brief and regulatory requirements.
	2.7 System design is documented for submission to appropriate person(s) for approval.
	2.8 Solutions to unplanned situation are provided consistent with organisation's policy.
3 Obtain approval for engineering computer applications design	3.1 System design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).

ELEMENT

PERFORMANCE CRITERIA

- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing commercial refrigeration systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ132A Commercial refrigeration system design

Evidence shall show an understanding of commercial refrigeration system design, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Food spoilage and possible causes

- physical damage
- animal activity
- chemical breakdown
- enzyme activity
- micro-organisms
- effects of temperature change
- effects of humidity change
- effects of freezing on fresh produce
- effects of slow freezing time
- effect of refreezing

T2. Food preservation

- removing or taking out a reactant
- removing or inactivating the catalyst
- reducing temperature
- changing the reaction system
- irradiation

T3. Micro-organisms

- conditions for growth
- potentially hazardous foods
- cross contamination

T4. Identification of food spoilage

- recognition and suggest possible cause

REQUIRED SKILLS AND KNOWLEDGE

- physical damage
- animal activity
- chemical breakdown
- enzyme activity
- micro - organisms

T5. Types of heat processing techniques

- heat processing using steam and water
- blanching
- pasteurisation
- sterilisation
- evaporation
- heat processing using hot air
- dehydration
- baking and roasting

T6. Types of chilling processing techniques

- chilling and controlled atmosphere storage
- freezing
- freeze drying and freeze concentration
- modified atmosphere combined with low temperature cryovac.

T7. Relevant Standards, Codes, Regulations and industry practices

- Standards and Codes
- Regulations
- Equipment manufactures specifications and practices

KS02-EJ132A Refrigeration system components and piping selection

Evidence shall show an understanding of refrigeration system components and piping selection, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Relevant Standards, Codes Regulations and industry practices

- AS1677, detailed understanding
- AS 3666, overview
- ozone protection regulations
- IIR Ammonia Data Book
- ANSI/IIR standards
- ANSI/ASHRAE Mechanical Refrigeration and IIR
- bulletins and standards
- Equipment manufactures specifications and practices

T2. Calculation of capacity in heat exchangers

REQUIRED SKILLS AND KNOWLEDGE

- $Q = UA$ (LMTD)
- $Q = mc\Delta t$
- $Q = m \Delta h$

T3. Evaporators

- commercial types and applications
- coil bypass factor
- effects of evaporator TD on space humidity
- effects of air circulation on product conditions
- selection criteria and selection tables

T4. Condensers

- commercial types and applications
- effects of ambient conditions
- condenser control
- heat rejection factor
- condenser TD
- selection criteria and selection tables

T5. Compressors

- types and applications
- capacity
- displacement
- volume flow rate
- theoretical capacity
- total volumetric efficiency
- effect of operating conditions, including suction
- pressure drop and superheating
- actual capacity
- power
- theoretical requirement
- effects of operating conditions
- actual requirements
- post defrost loads
- pull down torque requirements, high, medium and low back pressure compressors
- selection tables, motor selection

T6. Liquid expansion devices

- types, operation and applications
- effects from sub-cooling
- distributor types, operation and applications

REQUIRED SKILLS AND KNOWLEDGE

- selection tables
- System load balance point encompassing:
 - graphical representation
 - Line sizing an design
 - velocity tables
 - pressure drop in lines and fittings
 - oil migration stabilisation
 - refrigerant velocity
 - effect of varying system capacity
 - oil traps
 - risers
 - double risers
 - liquid migration
 - design for parallel components and multiplex systems

T7. Automatic controls

- fin spacing, suction temp to evaporator suction
- hot-gas bypass valves
- electronic control of valves PLC control
- refrigerant regulating valves
- solenoid valves
- condenser pressure regulating valves
- evaporator pressure regulating valves
- crankcase pressure regulating valves
- cycling controls
- pressure-stats
- thermostats,
- defrost controls
- monitoring and alarm controls
- refrigeration automation systems
- control strategies
- control modes

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement

EVIDENCE GUIDE

and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria

EVIDENCE GUIDE

shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design commercial refrigeration systems as described in 8) and including:
 - A Understanding required operating functions and parameters from the design specification
 - B Developing the design within the safety, regulatory and functional requirements and budget limitations
 - C Documenting and presenting design effectively,
 - D Successfully negotiating design alteration requests
 - E Obtaining approval for final design
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

EVIDENCE GUIDE

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing commercial refrigeration systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different commercial refrigeration systems encompassing only one of each major component (i.e. condenser, compressor and evaporator) and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the design of industrial refrigeration systems. It encompasses applying knowledge of refrigeration and food storage technology, industrial refrigeration system components and piping, safety and regulatory requirements, following design specifications and customer requirements and documenting system designs.

Application of the Unit

Application of the Unit 4)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training or institutional based delivery at the aligned AQF 5 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ132A Design commercial refrigeration systems and select components

UEENEEJ165A Evaluate thermodynamic and fluid parameters of refrigeration systems

UEENEEJ127A Establish the thermodynamic parameters of refrigeration and air conditioning systems

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Prerequisite Unit(s)	2)
	UEENEEE003B Solve problems in extra-low voltage single path circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ104A Establish the basic operating conditions of air conditioning systems
	UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
	UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components
	UEENEEJ113A Commission air conditioning and refrigeration systems
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring
	UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures
	UEENEEP024A Attach cords and plugs to electrical

Prerequisite Unit(s)	2)
	equipment for connection to a single phase 230 Volt supply
	UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply
	For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills	3)
	This unit contains Employability Skills

	2.8 Solutions to unplanned situation are provided consistent with organisation's policy.
3 Obtain approval for engineering computer applications design	3.1 System design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).

ELEMENT

PERFORMANCE CRITERIA

- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing industrial refrigeration systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ133A Industrial refrigeration systems design and component selection

Evidence shall show an understanding of industrial refrigeration systems design fundamentals, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Relevant Standards, Regulations and industry practices

- AS1677, detailed understanding
- AS 3666, overview
- ozone protection regulations
- IIR Ammonia Data Book
- ANSI/IIR standards
- ANSI/ASHRAE Mechanical Refrigeration & IIR bulletins and standards (list will be provided by Rama)
- Equipment manufactures specifications and practices

T2 Operating characteristics

- pH charts
- refrigerating effect, relate back to air and fluid coolers
- heat of compression, relate back to screw, rotary and reciprocating compressors
- heat rejected high side of the system, relate back to air cooled, evaporative, and water cooled condensers
- variable liquid refrigeration systems & liquid oversee systems
- required mass flow rate of refrigerant and volume flow rate at various points in system
- theoretical compressor power
- required condenser capacity

T3 Major system components

- refrigerants, including R717 and R22
- secondary refrigerants

REQUIRED SKILLS AND KNOWLEDGE

- component lubricant refrigerant compatibility
- evaporators
- condensers, cooling towers
- compressors
- expansion valves
- interconnecting piping and
- isolating valves
- pilot operated valves
- defrost system components for air, water, recycled water, hot gas, electric methods
- refrigerant accumulators and liquid pumps

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

EVIDENCE GUIDE

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to design commercial refrigeration systems.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood
	1.2	The extent and nature of the refrigeration system is determined from design specifications.
	1.3	Safety and other regulatory requirements to which the system shall comply are identified, obtained and

ELEMENT	PERFORMANCE CRITERIA
	understood
	1.4 Work supervisor or customers are consulted to determine which functions of the system are to be used and the parameter of each and written confirmation sought.
	1.5 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
2 Design commercial refrigeration systems.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of refrigeration and food storage technology, refrigeration system components and piping, performance standards and compliance methods are applied to developing the system design
	2.3 Safety, functional and budgetary considerations are incorporated in the installation design.
	2.4 Equipment required for the system is selected in accordance with the design specifications and established requirements.
	2.5 Location of components of the system is documented to ensure correct operation of system functions.
	2.6 System design draft is checked for compliance with the design brief and regulatory requirements.
	2.7 System design is documented for submission to appropriate person(s) for approval.
	2.8 Solutions to unplanned situation are provided consistent with organisation's policy.
3 Obtain approval for engineering computer applications design	3.1 System design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).

ELEMENT

PERFORMANCE CRITERIA

- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing heating, ventilation and air conditioning (HVAC) systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ134A Commercial HVAC system design

Evidence shall show an understanding of commercial HVAC system design, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Design parameters for single-storey buildings (e.g. offices, restaurants, hotels, bars)

- Customer and objective
- Customer concept of environment desired
- Economics
- Client brief

T2. Relevant design criteria

- Building purpose, location, orientation and shape
- External environment ambient conditions
- Internal load diversity
- Thermal capacity behaviour
- Thermal load (full and partial)

T3. Zoning and building usage

- Space and building
- Occupancies, single purpose, multi-purpose

T4. System selection criteria

- Economics
- Environment
- Control requirements
- Existing structures
- New structures
- System components
- Space for equipment and system

REQUIRED SKILLS AND KNOWLEDGE

- Selection of appropriate system, equipment, ductwork and components

T5. Systems and applications

- Design features, engineering and selection procedures for direct expansion air conditioning systems:
- RAC's, split systems, package units
- Free blow and ducted fan coil units
- Cooling, heat pump and electric heating•

KS02-EJ134A Air conditioning system components and piping selection

Evidence shall show an understanding of air conditioning system components and piping

selection, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Relevant Standards, Codes Regulations and industry practices

- AS1677, detailed understanding
- AS 3666, overview
- ozone protection regulations
- ANSI/IIAR standards
- ANSI/ASHRAE Mechanical Refrigeration and IIAR
- bulletins and standards
- Equipment manufactures specifications and practices

T2. Calculation of capacity in heat exchangers

- $Q = UA (LMTD)$
- $Q = mc\Delta t$
- $Q = m \Delta h$

T3. Evaporators

- commercial types and applications
- coil bypass factor
- effects of evaporator TD on space humidity
- effects of air circulation on product conditions
- selection criteria and selection tables

T4. Condensers

- commercial types and applications
- effects of ambient conditions
- condenser control
- heat rejection factor
- condenser TD
- selection criteria and selection tables

REQUIRED SKILLS AND KNOWLEDGE

T5. Compressors

- types and applications
- capacity
- displacement
- volume flow rate
- theoretical capacity
- total volumetric efficiency
- effect of operating conditions, including suction
- pressure drop and superheating
- actual capacity
- power
- theoretical requirement
- effects of operating conditions
- actual requirements
- post defrost loads
- pull down torque requirements, high, medium
- and low back pressure compressors
- selection tables, motor selection

T6. Liquid expansion devices

- types, operation and applications
- effects from sub-cooling
- distributor types, operation and applications
- selection tables
- System load balance point encompassing:
- graphical representation
- Line sizing an design
- velocity tables
- pressure drop in lines and fittings
- oil migration stabilisation
- refrigerant velocity
- effect of varying system capacity
- oil traps
- risers
- double risers
- liquid migration
- design for parallel components and multiplex systems

T7. Automatic controls

- fin spacing, suction temp to evaporator suction
- hot-gas bypass valves

REQUIRED SKILLS AND KNOWLEDGE

- electronic control of valves PLC control
- refrigerant regulating valves
- solenoid valves
- condenser pressure regulating valves
- evaporator pressure regulating valves
- crankcase pressure regulating valves
- cycling controls
- pressure-stats
- thermostats,
- defrost controls
- monitoring and alarm controls
- refrigeration automation systems
- control strategies
- control modes

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment,

EVIDENCE GUIDE

the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design heating, ventilation and air conditioning (HVAC) systems as described in 8) and including:
 - A Understanding required operating functions and parameters from the design specification
 - B Developing the design within the safety, regulatory and functional requirements and budget limitations
 - C Documenting and presenting design effectively
 - D Successfully negotiating design alteration requests
 - E Obtaining approval for final design
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing heating, ventilation and air conditioning (HVAC) systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different heating, ventilation and air conditioning encompassing only one of each major component (i.e. air handling plant, condenser, compressor and evaporator) and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ135A Design control systems for refrigeration or heating, ventilation and air conditioning systems

Modification History

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the design control systems for a heating, ventilation and air conditioning or refrigeration systems. It encompasses applying knowledge of refrigeration and air conditioning, control systems components, safety and regulatory requirements, following design specifications and customer requirements and documenting system designs.

Application of the Unit

Application of the Unit 4)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training or institutional based delivery at the aligned AQF 4 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ130A Produce HVAC/R control system diagrams

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

Prerequisite Unit(s)

2)

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500

Prerequisite Unit(s) 2)

Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design control systems for heating, ventilation and , air conditioning or refrigeration systems	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 The extent and nature of the HVAC or refrigeration system is determined from design specifications.
	1.3 Safety and other regulatory requirements to which the system shall comply are identified, obtained and understood

ELEMENT	PERFORMANCE CRITERIA
	<p>1.4 Work supervisor or customers are consulted to determine which functions of the system are to be used and the parameter of each and written confirmation sought.</p> <p>1.5 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.</p>
<p>2 Design control systems for heating, ventilation and , air conditioning or refrigeration systems</p>	<p>2.1 Established OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of control systems components, performance standards and compliance methods are applied to developing the system design</p> <p>2.3 Safety, functional and budgetary considerations are incorporated into the design.</p> <p>2.4 Control equipment required for the system is selected in accordance with the design specifications and established requirements.</p> <p>2.5 Location of components of the system is documented to ensure correct operation of system functions.</p> <p>2.6 Control system design draft is checked for compliance with the design brief and regulatory requirements.</p> <p>2.7 Control system design is documented for submission to appropriate person(s) for approval.</p> <p>2.8 Solutions to unplanned situation are provided consistent with organisation's policy.</p>
<p>3 Obtain approval for control systems for heating, ventilation and , air conditioning or refrigeration systems design</p>	<p>3.1 Control system design is presented and explained to client representative and/or other relevant person(s).</p> <p>3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.</p> <p>3.3 Final design is documented and approval obtained from appropriate person(s).</p>

ELEMENT

PERFORMANCE CRITERIA

- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing control systems for a heating, ventilation, air conditioning or refrigeration system.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ135A Refrigeration or heating, ventilation and, air conditioning control system design

Evidence shall show an understanding of designing refrigeration/HVAC control systems to meet refrigeration/HVAC system operating requirements through the integration of electrical, electronic, pneumatic and digital controls, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Control systems

- control terminology
- control system characteristics
- control system diagrams and symbols

T2 Types of control equipment

- Electrical (covered in KS01-EJ130A.1)
 - classification of circuits
 - two position control
 - floating control
 - sensors
 - controllers
 - flow control devices
 - control systems diagrams
- Electronic (covered in KS01-EJ130A.1)
 - operating principles
 - sensors
 - controllers
 - control system diagrams
- Pneumatic:
 - Control fundamentals

REQUIRED SKILLS AND KNOWLEDGE

- Pneumatic control terminology
- Definitions
- Control basics
 - Air supply
 - Pilot bleed system
 - Signal amplifier
 - Sensing elements
 - Relays and switches
- Air supply system
 - Air drying methods
 - Pressure regulating valves
 - Pressure reducing valves
- System controllers
 - Thermostats
 - Sensors
 - Actuators
 - Dampers
- System control configuration
 - Sequence control
 - Limit control
 - Changeover control
 - Compensated control
 - Recycling control
 - Pneumatic – electric control
- Control systems

T3 Digital Control Systems

- Computer based control fundamentals
 - Definitions
 - Principles
- Controller configuration
 - Equipment
 - Zone level controllers
 - System level controllers
- Controller software
 - Operating software
 - Application software
- Controller programming
 - System diagrams

REQUIRED SKILLS AND KNOWLEDGE

- Control diagrams
- Configuration
- Programming
- Initialisation
- EMS, BMS
- SCADA system
- Lan, Bacnet

T4 Applications

- Refrigeration systems
- HVAC systems
 - air handling system controls
 - ventilation
 - heating
 - building airflow system control
 - airflow control
 - single and multi –zones
 - chiller boiler and distribution system
- Logic analysis
- Energy management
- Asset management
- Life cycle
- Supervisory
 - introduction building management
 - remote building control interface and modem

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers evaluation of energy management building services plant and machinery. It encompasses working safely, setting up and conducting evaluation measurements, evaluating energy use from measured parameters and reporting results including recommending any resulting corrective actions.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulations for undertaking of refrigeration or air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to evaluate and report on energy management.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of evaluation is determined from specifications of building services plant and machinery and discussion with appropriate personnel.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Tools, testing devices, and materials needed to carry

ELEMENT	PERFORMANCE CRITERIA
2 Evaluate energy management.	out the work are obtained and checked for correct operation and safety.
2.1	OHS risk control measures and procedures for carrying out the work are followed.
2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
2.3	In-depth knowledge of the energy management of building services plant and machinery is applied to the evaluation process
2.4	Energy evaluation tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.
2.5	Energy evaluation tests are carried out methodically and results and comments systematically noted.
2.6	Unexpected situations are dealt with safely and with the approval of an authorised person.
2.7	Evaluation is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.
3 Report on energy management	3.1 OHS work completion risk control measures and procedures are followed.
3.2	Work site is cleaned and made safe in accordance with established procedures.
3.3	Results of energy management evaluation are documented including recommendations and justification for improvements.
3.4	Energy evaluation report is forwarded to appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating and reporting on energy management.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ136A

Energy management fundamentals

Evidence shall show an understanding of energy management fundamentals, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Typical energy sources and characteristics

- supply authorities
- standard units of measurement
- electricity
- steam
- hot water
- high temperature hot water
- town gas
- LP Gas
- solar
- waste heat
- petrol
- diesel

T2 Energy Usage

- office lighting
- air conditioning systems
- refrigeration systems
- security systems
- computer systems
- standby/emergency systems
- lifts and escalators

T3 Energy auditing process

- energy costs and tariffs

REQUIRED SKILLS AND KNOWLEDGE

- energy consumption
- predicting future costs
- plotting consumption trends
- historical data
- collecting information using surveys
- comparisons of actual to recorded usage
- energy balance
- instrumentation
- building management systems
- estimating savings potential

T4 System operation for energy efficiency

- types of systems
- efficiency in building structures
- operation of a vehicle fleet
- proportion total energy consumption against individual systems
- passive building design
- preventative maintenance procedures
- monitoring building management systems
- operation of major and minor plant
- inappropriate energy management procedures
- building plant control systems
- Australian standards/local authority requirements
- case studies

T5 Implementing energy management procedures for a building

- recording base year data
- climatic conditions for locality
- establishing energy costs and tariffs
- building and systems surveys
- payback period
- survey analysis
- energy conservation procedures
- informing stockholders
- recommendations and documentation
- implementation issues
- monitoring, evaluation and follow up

KS02-EJ136A

Building management systems

Evidence shall show an understanding of building management systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

REQUIRED SKILLS AND KNOWLEDGE

T1 Functions of a BMS

- autonomous Functions
- input
- output
- general I/O
- installation management items
- energy management
- risk management
- information processing
- objectives
- building running costs
- smoke control as per AS 1668 part 1

T2 BMS hardware

- system architecture
- communication devices
- substations
- PC's
- interfaces with other systems

T3 Input and output functions

- digital inputs/outputs
- digital output with status feedback
- analogue input/output
- sensors
- alarms

T4 Energy management

- night cycle
- optimum stop/start
- time and event programs
- night purge
- outside air percentage control
- enthalpy control
- power demand control
- duty cycle
- presence detection
- lighting control

T5 Information processing functions

- computer systems
- central system management

REQUIRED SKILLS AND KNOWLEDGE

- programs
- system configuration and security
- operator - machine interface
- data points

T6 Risk and maintenance management

- system files
- fire, intruder control
- access control

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

EVIDENCE GUIDE

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Evaluate and report on energy management as described in 8) and including:
 - A Determining the extent of the evaluation.
 - B Setting up and conducting appropriate examinations and tests.
 - C Reporting evaluation including recommendation for improving energy efficiency
 - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in evaluating and reporting on energy management.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to at least two different types of building services plant and machinery.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ137A Evaluate and report on the indoor air quality of buildings

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers evaluation of air quality in a building. It encompasses working safely, setting up and conducting evaluation measurements, evaluating air quality from measured parameters and reporting results including recommending any resulting corrective actions.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulations for undertaking of refrigeration or air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules,

Prerequisite Unit(s)**2)**

standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

Prerequisite Unit(s) 2)

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information**Employability Skills** 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to evaluate and report on air quality in buildings.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of evaluation is determined from specifications of building ventilation/air conditioning and internal and external environmental factors and discussion with appropriate personnel.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.

ELEMENT	PERFORMANCE CRITERIA
2 Evaluate air quality in buildings.	1.5 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.
	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 In-depth knowledge of the air quality requirements and regulations in buildings is applied to the evaluation process.
	2.4 Air quality evaluation tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.
	2.5 Air quality evaluation tests are carried out methodically and results and comments systematically noted.
	2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
3 Report on air quality buildings.	2.7 Evaluation is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.
	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Results of air quality evaluation are documented including unacceptable conditions and recommendation for improvement.
	3.4 Energy evaluation report is forwarded to appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating and reporting on air quality in buildings.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ137A

Indoor air quality

Evidence shall show an understanding of evaluating and reporting of a building's indoor air quality, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Indoor air quality factors

- interactive nature of pollutants
- comfort criteria
- source of odours
- pathway from source to occupants
- occupant activities
- impact on productivity

T2 Causes of IAQ problems

- moisture
- mould and mildew
- bacterial growths
- asbestos and other particulate
- volatile chemicals produced in the building
- chemical products

T3 HVAC systems

- types of HVAC systems
- system components
- duct cleaning
- system commissioning
- operation of system
- damper adjustment

T4 Measurements

- common parameters to measure

REQUIRED SKILLS AND KNOWLEDGE

- measurement devices available
- instrument calibration
- analysing and interpreting results
- laboratory tests
- standards
- evaluation and reporting of IAQ

T5 Resolving IAQ problems

- conducting IAQ investigations
- the walk-through
- building history
- HVAC system information
- occupant interviews
- troubleshooting

T6 IAQ management

- building IAQ profile
- location of potential IAQ problems
- procedures to control IAQ
- communication
- response to complaints
- equipment preventive maintenance
- chemical inventory

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the analysis of refrigeration and air conditioning systems to provide solutions to noise and vibration issues. It encompasses working safely, apply extensive knowledge of noise and vibration parameters, gathering and analysing data, applying problem solving techniques, developing and documenting results and solutions for use in design work.

Application of the Unit

Application of the Unit 4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ165A: Evaluate thermodynamic and fluid parameters of refrigeration systems

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to analyse noise and vibration in refrigeration and air conditioning systems	1.1	OHS procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	The extent of the noise and vibration issue is determined from performance specifications and situation reports and in consultations with relevant

ELEMENT	PERFORMANCE CRITERIA
	persons.
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.
2 Analyse noise and vibration in refrigeration and air conditioning systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of noise, vibration and thermodynamics are applied to analytical solutions to refrigeration and air conditioning systems.
	2.3 Parameters, specifications and performance requirements in relation to refrigeration and air conditioning systems are obtained in accordance with established procedures.
	2.4 Approaches to analysing noise and vibration parameters are carried out to provide the most effective solution.
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
	2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards
3 Document and report on the results of the noise and vibration analysis and actions taken.	3.1 Solutions to noise and vibration issues are evaluated to determine their effectiveness and modified where necessary.
	3.2 Analysis is documented including details of all findings, calculations and assumptions.
	3.3 Analysis is reported to appropriately personnel to establish appropriate action to be taken based on findings.
	3.4 Justification for findings and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional

ELEMENT **PERFORMANCE CRITERIA**
standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing noise and vibration in refrigeration and air conditioning systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ138A Noise and vibration in refrigeration and air conditioning systems

Evidence shall show an understanding of noise and vibration in refrigeration and air conditioning systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Fundamentals of sound

- frequency
- decibels
- octave bands
- direct sound
- velocity
- sound pressure level
- sound power level
- sound meters

T2 Noise and people

- physical measurement of sound
- weighting networks
- NR curves
- noise damage to hearing
- evaluate daily noise exposures
- peak noise levels
- attenuation for hearing protectors
- excess noise levels permissible
- noise abatement acts
- advanced noise and vibration control

T3 Sound in confined and unconfined spaces

- Inverse square laws
- Direct and reflective sound

REQUIRED SKILLS AND KNOWLEDGE

- Define reverberation time
- Sabine's formula
- Absorption coefficients of surfaces
- Types of absorbers and their operation
- Insulation performances of partitions

T4 Identify and analyse problems

- one-dimensional sound waves
- standing waves
- energy in a sound wave
- sources
- effects of air turbulence
- transmitters
- amplifiers
- absorptivity
- reflectivity
- room characteristics
- acoustic design in buildings
- fan and air noise transmission in ducts

T5 Methods of control

- natural attenuation
- sound absorbing materials, placement
- duct lining
- lined plenums
- lined duct splitters
- duct attenuators
- white noise
- vibration isolators

T6 Acoustic specifications

- attenuator ratings

T7 Sound insulation

- Plant room breakout
- Controlling plant room noise

T8 Duct borne noise

- Sound power spectra for fans
- Noise attenuation in ducts and fittings
- Reducing fan noise transmission
- Regeneration noise
- Sources of regenerated noise

REQUIRED SKILLS AND KNOWLEDGE

- Use tables to estimate regenerative noises
- Breakout situations
- Fan noise breakout
- List methods of controlling breakout

T9 Controlling the cost

- Economical use of attenuation

T10 Vibration

- SHM (Simple Harmonic Motion)
- Period
- Frequency
- Amplitude
- Estimate frequencies for fans, pumps and refrigeration plant
- Estimate transmission of vibration
- Vibration control for building structures
- Use transmissibility graphs to select springs, vibration eliminators and pads
- Types of isolation materials and mounting devices
- Select isolation and mounting devices
- Inertia blocks

T11 Relevant standards, regulation and codes

T12 Noise and vibration analysis computer software packages

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred

EVIDENCE GUIDE

model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Analyse noise and vibration in refrigeration and air conditioning systems as described in 8) and including:
 - A Understanding the noise and vibration issues
 - B Forming effective strategies for analysing refrigeration and air conditioning systems performance
 - C Obtaining noise and vibration parameters, specifications and performance requirements appropriate to each situation.
 - D Evaluating the results of the analysis
 - E Documenting analysis details of all findings, calculations and assumptions.
 - F Documenting justification of actions to be implemented in accordance with professional standards
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used

EVIDENCE GUIDE

to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in analysing noise and vibration in refrigeration and air conditioning systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to analysing noise and vibration in at least two different refrigeration and air conditioning systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers specification development and documentation of HVAC/Refrigeration projects. It encompasses safe working practices, following a design brief, applying knowledge heating, ventilation, air conditioning and/or refrigeration systems to selecting system components, operating within established project budget and developing project specifications and design drawings.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ128A Produce HVAC/R system design drawings

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology

Prerequisite Unit(s)

2)

equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to

Prerequisite Unit(s) 2)
electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply
For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)
This unit contains Employability Skills
The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop specifications and prepare drawings	1.1 OHS processes and procedures for a given work area are identified, identified, obtained and understood
	1.2 The extent of the project is established from design brief and/or other relevant documentation and from discussions with appropriate person(s).
	1.3 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved in the work

ELEMENT	PERFORMANCE CRITERIA
	1.4 Software tools and equipment a needed for the work are obtained in accordance with established procedures
2 Develop specifications and prepare drawings	2.1 Sources of components and materials needed for the project are established and selected for their availability, suitability for purpose and cost in accordance with organisation policies and procedures.
	2.2 Specifications are developed that include the necessary performance requirements for components and system.
	2.3 Risk management strategies for the project are sought and obtained for incorporating in the specification.
	2.4 Appropriate software tools are used to develop specifications and produce drawing based on standard protocols.
	2.5 Project specifications and drawings are reviewed against all inputs and adjusted to rectify any anomalies.
	2.6 Project specifications and drawings are documented in accordance with organisation policies and procedures.
	2.7 Solutions to unplanned situation are provided consistent with organisation's policy.
	2.8 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards
3 Obtain approval for specifications and drawings.	3.1 Project specifications and drawings are presented and discussed with person(s) of higher authority.
	3.2 Alterations to the project specifications and drawings resulting from the presentation / discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy.
	3.3 Final project specifications and drawings are documented and approval obtained from appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing specifications and preparing drawings for HVAC/R projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ139A Specification development

Evidence shall show an understanding of specification writing, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 Purpose and nature of specification
- T2 Performance based specifications
- T3 Prescriptive specifications
- T4 Acceptable evidence of compliance
- T5 Additional service required with the supply of equipment
- T6 Dealing with suppliers and manufacturer's
- T7 Documenting specification.

KS02-EJ139A Computer aided drafting

Evidence shall show an understanding of computer aided drafting, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 Specific procedures
 - Creating symbols for library files
 - Program specific commands
 - Speed enhancement
 - Configuring the digitising tablet
- T2 Methodology for creating layers
 - Name
 - Colour
 - Linetype
- T3 Methodology for drawing variables

REQUIRED SKILLS AND KNOWLEDGE

- Limits
- Grid
- Snap
- Dimensions
- Text
- Units

T4 ISO drawing sheets

T5 Advanced drawings

T6 Multiple three dimensional views

- Setting up environment on screen
- Top view
- Front and side views
- Three dimensional views

T7 Movement through space

- Draw on any created views
- Relocate coordinate system as necessary

T8 Creation of views

- Creation of three dimensional geometric shapes
- Creation of three dimensional complex view by:
- Manipulation of drawing planes
- Location of geometric shapes

T9 Editing

- Use of function to facilitate modification of geometric shapes in completion of a three dimensional view

T10 Display of three dimensional view

- Wire Line
- Solid Face
- Isometric
- Perspective
- Orthographic

T11 Saving

- Use of assembly drawing file for plotting

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

EVIDENCE GUIDE

competency in this unit

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop specifications and prepare drawings for HVAC/R projects as described in 8) and including:
 - A Determining the project requirements accurately
 - B Establishing source and availability of components appropriately
 - C Including the performance requirements of components and the system and risk management strategies in the specifications
 - D Negotiating alterations to the project specifications and drawings successfully
 - E Documenting project specifications and drawings in

EVIDENCE GUIDE

accordance with organisation policies and procedures

- F Obtaining approval for the completed project specifications and drawings
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in developing specifications and preparing drawings for HVAC/R projects.

EVIDENCE GUIDE

Method of assessment	9.4) This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'. Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.
Concurrent assessment and relationship with other units	9.5) There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to developing specifications and preparing drawings for at least two different HVAC/R projects for at least two different HVAC/R projects.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare to design complex commercial refrigeration	1.1	OHS processes and procedures for a given work area are identified, identified, obtained and understood
		1.2	Established OHS risk control measures and

ELEMENT		PERFORMANCE CRITERIA	
	system		procedures are followed in preparation for the work.
		1.3	The extent of the proposed refrigeration system is determined from the design brief or in consultations with appropriate person(s).
		1.4	Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
2	Design complex commercial refrigeration system	2.1	Knowledge of commercial refrigeration processes and methods are applied to the design.
		2.2	Alternative concepts for the design are evaluated based on the requirements outlined in the design brief. (See Note)
		2.3	Safety, functional and budget considerations are incorporated in the design.
		2.4	System design draft is checked for compliance with the design brief and regulatory requirements.
		2.5	System design is documented for submission to appropriate person(s) for approval.
		2.6	Solutions to unplanned situation are provided consistent with organisation's policy.
3	Obtain approval for complex commercial refrigeration system design	3.1	System design is presented and explained to client representative and/or other relevant person(s).
		3.2	Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
		3.3	Final design is documented and approval obtained from appropriate person(s).
		3.4	Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Note.

Design concepts should be evaluated by real or virtual prototyping where it cannot be shown easily by other means that particular aspects of the design met specified requirements.

REQUIRED SKILLS AND KNOWLEDGE

- Heat of compression,
- Heat Rejected on High Side of the System,
- required mass flow rate of refrigerant,
- Volume flow rate at various points in system,
- Theoretical compressor power,
- required condenser capacity.

T4 Review refrigerant flow controls

- refrigerant regulating valves
- solenoid valves
- expansion valves
- pressure regulating valves

T5 Review automatic systems controls

- cycling controls
- pressure-stats
- thermo-stats
- defrost controls
- monitoring and alarm controls
- energy management systems
- refrigeration automation system
- control strategies
- control modes

T6 System design

- Required cooling capacity per day
- Running time and required system cooling capacity
- System capacity control for peak and low load
- Refrigeration system diagrams
- Refrigerant, equipment, major component, controls, piping and accessory selection

of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

EVIDENCE GUIDE

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design a complex commercial refrigeration system as described in 8) and including:
 - A Developing outlines of alternative designs
 - B Developing the design within the safety, regulatory, functional requirements and budget limitations
 - C Documenting and presenting design effectively
 - D Successfully negotiating design alteration requests
 - E Obtaining approval for final design
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In

EVIDENCE GUIDE

these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing a complex commercial refrigeration system.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design complex commercial refrigeration system	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the proposed refrigeration system is determined from the design brief or in consultations with appropriate person(s).
	1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
2 Design complex commercial refrigeration system	2.1 Knowledge of industrial refrigeration system, processes and methods are applied to the design.
	2.2 Alternative concepts for the design are evaluated based on the requirements outlined in the design brief. (See Note)
	2.3 Safety, functional and budget considerations are incorporated in the design.
	2.4 System design draft is checked for compliance with the design brief and regulatory requirements.
	2.5 System design is documented for submission to appropriate person(s) for approval.
	2.6 Solutions to unplanned situation are provided consistent with organisation's policy.
3 Obtain approval for complex commercial refrigeration system design	3.1 System design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established

ELEMENT PERFORMANCE CRITERIA

organizational or professional standards.

Note.

Design concepts should be evaluated by real or virtual prototyping where it cannot be shown easily by other means that particular aspects of the design met specified requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing complex industrial refrigeration systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ142A **Complex industrial refrigeration system design**

Evidence shall show an understanding of complex industrial refrigeration system design, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Standards

- AS1677
- ANSI/IIAR Standards
- ANSI/ASHRAE Standards
- IIAR Bulletins

T2 Moderate and low temperature industrial refrigeration systems

- revise direct, flooded and pumped liquid recirculation systems
- evaporators
- multi-staged compression
- direct staging
- cascade staging
- compound compressors
- de-superheaters, liquid injection
- direct expansion intercoolers
- open and closed intercoolers
- basic designs of accumulators/intercooler vessels

REQUIRED SKILLS AND KNOWLEDGE

- oil cooling methods
- oil stabilisation, return and oil recovery in flooded systems

T3 Multiple evaporators and multiple compressors

- parallel evaporators
- multiple temperature systems
- evaporator pressure regulators
- temperature control methods
- parallel compressors
- pipework layout
- methods of establishing pressure drop in dry and wet suction lines

T4 Indirect refrigeration systems

- classification according to AS1677
- applications
- evaporators
- heat exchangers, types, construction, selection
- secondary refrigerants
- brines
- antifreeze solutions

T5 Flooded systems

- applications
- equipment
- accumulators
- level controls
- liquid recirculation pumps
- liquid pressure relief valve

T6 Cryogenic systems

- applications and equipment
- system components
- refrigerants
- design safety
- economics
- cascade systems

T7 Basic control sequences

- maintaining evaporator conditions
- staging and suction pressure control
- maintaining condenser conditions
- control of intermediate pressure, methods of industrial refrigeration compressor capacity control

REQUIRED SKILLS AND KNOWLEDGE

T8 System design

- Required cooling capacity per day
- Running time and required system cooling capacity
- System capacity control for peak and low load
- Refrigeration system diagrams
- Refrigerant, equipment, major component, controls, piping and accessory selection

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence

EVIDENCE GUIDE

need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design complex industrial refrigeration systems as described in 8) and including:
 - A Developing outlines of alternative designs
 - B Developing the design within the safety, regulatory, functional requirements and budget limitations
 - C Documenting and presenting design effectively
 - D Successfully negotiating design alteration requests
 - E Obtaining approval for final design
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing complex industrial refrigeration systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing a complex industrial refrigeration system incorporating multiple major components (i.e. compressors, condenser or evaporators) circuits or systems and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ143A Design complex air conditioning systems and select equipment

Modification History

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the design of complex air conditioning systems. It encompasses applying knowledge of complex air conditioning systems, safety and regulatory requirements, developing alternative design schemes based on a design brief and customer requirements and documenting system designs.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ134A Design heating, ventilation and air conditioning (HVAC) systems and select components

UEENEEJ138A Analyse vibration and noise in refrigeration and air conditioning systems

UEENEEJ165A Evaluate thermodynamic and fluid parameters of refrigeration systems

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle

Prerequisite Unit(s)	2)
	utilities industry components
	UEENEEE003B Solve problems in extra-low voltage single path circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ104A Establish the basic operating conditions of air conditioning systems
	UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
	UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components
	UEENEEJ113A Commission air conditioning and refrigeration systems
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring
	UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

Prerequisite Unit(s)	2)
	UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply
	UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply
	For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills	3)
	This unit contains Employability Skills
	The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to design complex commercial refrigeration system	1.1	OHS processes and procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.

ELEMENT	PERFORMANCE CRITERIA
	<p>1.3 The extent of the proposed refrigeration system is determined from the design brief or in consultations with appropriate person(s).</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.</p>
2 Design complex commercial refrigeration system	<p>2.1 Knowledge of complex air conditioning processes and methods are applied to the design.</p> <p>2.2 Alternative concepts for the design are evaluated based on the requirements outlined in the design brief. (See Note)</p> <p>2.3 Safety, functional and budget considerations are incorporated in the design.</p> <p>2.4 System design draft is checked for compliance with the design brief and regulatory requirements.</p> <p>2.5 System design is documented for submission to appropriate person(s) for approval.</p> <p>2.6 Solutions to unplanned situation are provided consistent with organisation's policy.</p>
3 Obtain approval for complex commercial refrigeration system design	<p>3.1 System design is presented and explained to client representative and/or other relevant person(s).</p> <p>3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.</p> <p>3.3 Final design is documented and approval obtained from appropriate person(s).</p> <p>3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.</p>

Note.

Design concepts should be evaluated by real or virtual prototyping where it cannot be shown easily by other means that particular aspects of the design met specified requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing complex air conditioning systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ143A

Complex HVAC system design

Evidence shall show an understanding of complex air conditioning system design, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 HVAC load estimating of multiple zone and multi-storey buildings

- System design parameters
 - human comfort
 - system requirements in accordance with AS1668
 - heat transfer calculations for complex structures and building components
 - heat and radiation transfer calculations through complex glass structures including various internal and external shading devices
 - indoor air quality
 - olfs and decipols
- Complex shading
 - solar data, azimuth and altitude angles
 - shading from adjacent structures
- Computer software
 - heat load estimating
 - building thermal performance analysis and simulation software

T2 Advanced Psychrometrics

- Complex psychrometric processes
 - revise sensible cooling and heating and evaporative (adiabatic) cooling
 - cooling and dehumidification
 - cooling and dehumidification with high latent load
 - cooling and dehumidification all out door air
 - cooling and dehumidification all out door air with dehumidified air requirements less than supply air
 - cooling with evaporative humidification
 - cooling with near isothermal humidification
 - spray process to include cooling and dehumidification, cooling and humidification with heated spray water, heating and humidification.

REQUIRED SKILLS AND KNOWLEDGE

- partial load processes
- reheat
- bypass of, RA only and mix of RA & OA
- variable air volume
- variable coil effective surface temperature
- split coil, horizontal, vertical and intertwined.
- System performance
 - saturation efficiency of sprayers
 - system capacity calculated from air quantity and enthalpy change
- Required plant capacity and airflow rates
 - effects of coil bypass factor and ADP
 - calculation of dehumidified air quantity, using both TSH and ERSH methods.
- Recap on psychrometrics formulae and charts
 - properties of air
 - gas constants
 - derivation of air constants
 - combined gas laws
 - Dalton's law of partial pressures
 - Carrier's equation
 - psychrometric property tables
 - psychrometric charts
 - air mixing equations
 - air quantity equations
 - indirect evaporative coolers
 - analysis of cooling coil selection and performance
 - psychrometric analysis of:
 - air conditioning in tropics
 - all outdoor air
 - LCV/HWF systems
 - psychrometric analysis using equations and tables

T3 Air conditioning system design

- Design parameters for multi-storey building
 - customer and objective
 - customer concept of environment desired
 - economic
 - client brief
- Relevant design criteria
 - building purpose, location, orientation and shape

REQUIRED SKILLS AND KNOWLEDGE

- external environment ambient conditions
- internal load diversity
- thermal capacity behaviour
- thermal load (full and partial)
- Zoning and building usage
 - space and building
 - occupancies, single purpose, multi-purpose
- System selection criteria
 - economics
 - environment
 - control requirements
 - existing structures
 - new structures
 - system components
 - space for equipment and system
 - selection of appropriate system
- System and applications
 - design features, engineering procedures and controls for:
 - direct expansion - self contained room/zone, heat pump, multi-zone fan-coils, central station
 - all water - room fan-coil
 - all-air - constant volume variable temperature, face and bypass, reheat, constant temp variable volume, constant volume induction, dual-duct, dual-conduit
 - air water - induction unit, primary air fan-coil
- HVAC energy conservation techniques
 - heat recovery systems
 - night cycle
 - optimum stop/start
 - purge cycles
 - chiller/boiler/cooling tower sequencing
 - economy cycles (based on temperature or enthalpy)
 - supply air reset
 - supply water reset
 - condenser water temperature reset
 - power demand control
 - load limiting
 - load shedding
 - set point relaxation

REQUIRED SKILLS AND KNOWLEDGE

- ventilation cycles
- plant - fixed OA to economy, boiler to electric reheat, constant volume to VAV etc.
- cost-benefit (payback)

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to

EVIDENCE GUIDE

its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing mechanical ventilation/exhaust systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ144A

Exhaust systems design

Evidence shall show an understanding of exhaust systems design, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Relevant codes and regulations

- health and safety
- noise
- smoke
- fire
- hazard identification

T2 System types

- applications
- application flow charts
- system requirements
- hazard identification
- effluent types and removal
- relationship with smoke spill systems
- supply air dilution applications
- natural ventilation applications
- fan assisted exhaust applications
- replenishment of exhaust air
- system components

T3 Duct design

- static, velocity, total pressure
- pressure drop
- fouling
- transitions
- elbows
- fan position and mounting

REQUIRED SKILLS AND KNOWLEDGE

- noise and noise attenuation
- requirements for access and maintenance
- system integrity

T4 Fan and motor selection

- applications
- suitable fan types
- motor rating and suitability
- balancing the fan duct system
- flame proofing

T5 Filters and filter selection

- types and applications
- capture velocity

T6 Outlet design and location

- prevailing winds
- position relative to air intakes
- weather and bird proofing

T7 Cycling/operation control

- applications
- code/regulation requirements
- monitoring of contaminants
- contaminant detection

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design mechanical ventilation/exhaust systems as described in 8) and including:
 - A Developing outlines of alternative designs
 - B Developing the design within the safety, regulatory, functional requirements and budget limitations
 - C Documenting and presenting design effectively
 - D Successfully negotiating design alteration requests
 - E Obtaining approval for final design
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing mechanical ventilation/exhaust systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different mechanical ventilation and exhaust systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the design of hydronic systems. It encompasses applying knowledge of hydronic systems, safety and regulatory requirements, developing alternative design schemes based on a design brief and customer requirements and documenting system designs.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ138A Analyse vibration and noise in refrigeration and air conditioning systems

UEENEEJ165A Evaluate thermodynamic and fluid parameters of refrigeration systems

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

Or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage

Prerequisite Unit(s)	2)
	single path circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ104A Establish the basic operating conditions of air conditioning systems
	UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
	UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components
	UEENEEJ113A Commission air conditioning and refrigeration systems
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring
	UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures
	UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt

Prerequisite Unit(s)	2) supply UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design hydronic systems and select equipment	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the proposed hydronic system is determined from the design brief or in consultations

ELEMENT	PERFORMANCE CRITERIA
	with appropriate person(s).
	1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
2 Design hydronic systems and select equipment	2.1 Knowledge of hydronic systems, processes and methods are applied to the design.
	2.2 Alternative concepts for the design are evaluated based on the requirements outlined in the design brief. (See Note)
	2.3 Safety, functional and budget considerations are incorporated in the design.
	2.4 System design draft is checked for compliance with the design brief and regulatory requirements.
	2.5 System design is documented for submission to appropriate person(s) for approval.
	2.6 Solutions to unplanned situation are provided consistent with organisation's policy.
3 Obtain approval for hydronic system design and equipment selection	3.1 System design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Note.

Design concepts should be evaluated by real or virtual prototyping where it cannot be shown easily by other means that particular aspects of the design met specified requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing hydronic systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ145A

HVAC/R hydronic system design

Evidence shall show an understanding of HVAC/R hydronic system design, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Hydronic system design fundamentals

- Principles of fluid flow
 - properties of fluids
 - flow of ideal fluids
 - fluid flow equipment
 - Bernoulli Theorem
 - fluid flow in pipes
- Pressure loss and static head - calculation
 - flow throughout system
 - pressure throughout system
 - friction losses
 - pressure loss charts for: copper, steel, UPVC
 - dynamic losses
 - fitting pressure losses
 - fitting interaction
 - total losses
 - calculating system (static and dynamic) head
- Pump performance and selection
 - pump classification and types
 - pump performance terminology, discharge, head, power, efficiency, speed, net positive suction head required
 - pump performance curves
 - pump laws
 - system head and 'K' factor
 - balance points
 - energy considerations

REQUIRED SKILLS AND KNOWLEDGE

- pump cavitation
- calculation of net positive suction head available
- Series and parallel operation
- Pipe sizing
 - maximum friction rate
 - erosion and equipment life
 - industry standards
 - recommended system water velocities
 - economic balance - first cost and operating cost

T2 Hot water systems

- boilers
- coils
- expansion tanks
- pumps, characteristics curves
- control valves, types, flow diagrams,
- air purge points
- water treatment
- pipe anchors and expansion joints

T3 Chilled water systems

- Chillers
- Coils
- expansion tanks
- pumps, characteristics curves
- control valves, types, flow diagrams,
- air purge points
- water treatment
- pipe anchors and expansion joints

T4 HVAC/R hydronic systems

- Systems operation
 - closed/open systems
 - pump head/lift, static head (high rise building)
 - system friction losses
 - net positive suction head
 - system curves
- Pumps
 - types
 - selection criteria
 - performance characteristics

REQUIRED SKILLS AND KNOWLEDGE

- bladder tanks
- coil characteristics
- heat exchangers: plate, shell and tube, tube in tube
- flow measurements: types
- flow switchers
- builders: types and performance characteristics
- cooling towers: elementary cooling thermodynamics and types
- Valves - flow control devices
 - types and applications
 - throttling characteristics
 - flow measurements
 - selection and applications
- Hydronic system configuration and design
 - piping configurations
 - single pipe closed circuit
 - two pipe closed circuit
 - direct return
 - three pipe closed circuit with reversed return
 - three way diverting valves
 - risers and headers
 - component location
 - evaluation of piping configurations
 - capital cost
 - owning and operating costs
 - noise vibration
 - maintenance
 - future expansion
 - commissioning and balancing
 - operating characteristics
 - cavitation
- System pipe sizes
 - pipe dynamic and friction losses for different materials
 - fitting pressure losses for different materials
 - thermal heat losses
 - bare, insulated and underground pipes

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required

9.2)

Before the critical aspects of evidence are considered all

EVIDENCE GUIDE

to demonstrate competency in this unit

prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design hydronic systems as described in 8) and including:
 - A Developing outlines of alternative designs
 - B Developing the design within the safety, regulatory, functional requirements and budget limitations
 - C Documenting and presenting design effectively
 - D Successfully negotiating design alteration requests
 - E Obtaining approval for final design
 - F Dealing with unplanned events by drawing on essential

EVIDENCE GUIDE

knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing hydronic systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

	3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Note.

Design concepts should be evaluated by real or virtual prototyping where it cannot be shown easily by other means that particular aspects of the design met specified requirements.

REQUIRED SKILLS AND KNOWLEDGE

T2 HVAC/R system energy conservation methods

- HVAC system control
 - night cycle
 - optimum stop/start
 - purge cycles
 - chiller/boiler/cooling tower sequencing
 - economy cycles (based on temperature or enthalpy).
 - supply air reset
 - condenser water temperature reset
- electrical load control
 - power demand control
 - load limiting
 - load shedding
 - set point relaxation
 - ventilation cycles

T3 Building Management Systems

- Functions of a BMS:
 - autonomous Functions
 - input
 - output
 - general I/O
 - installation management items
 - energy management
 - risk management
 - information processing
 - objectives
 - building running costs
 - smoke control as per AS 1668 part 1
- BMS hardware:
 - system architecture
 - communication devices
 - substations
 - PC's
 - interfaces with other systems
- Input and output functions:
 - digital - inputs/outputs
 - digital output with status feedback

REQUIRED SKILLS AND KNOWLEDGE

- analogue input/output
- sensors
- alarms

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and

EVIDENCE GUIDE

operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design complex control systems for heating, ventilation, air conditioning or refrigeration systems as described in 8) and including:

A Developing outlines of alternative designs

EVIDENCE GUIDE

- B Developing the design within the safety, regulatory, functional requirements and budget limitations
- C Documenting and presenting design effectively
- D Successfully negotiating design alteration requests
- E Obtaining approval for final design
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing complex control systems for heating, ventilation, air conditioning or refrigeration systems.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ135A Design control systems for refrigeration or heating, ventilation, air conditioning or systems

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different complex control systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers assessing the energy used by commercial HVAC and refrigeration systems in relation to its performance for the purpose of improving efficiency and/or certification as meeting energy efficiency standards. It encompasses safe working practices, determining efficiency requirements, setting up performance and energy tests, evaluating results and documenting test outcomes.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting

Application of the Unit 4)
and risk safety measures

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ136A Evaluate and report on building services energy management systems

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to

Prerequisite Unit(s)

2)

control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please

Prerequisite Unit(s) 2)
refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)
This unit contains Employability Skills
The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to audit energy use for a commercial HVAC/R application	1.1	OHS processes and procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	System assessment and testing area is checked for safety hazards and risk control measures implemented in strict accordance with safety policy and procedures.
		1.4	Relevant documentation is obtained and read to determine the performance/certification requirements against which the system is to be assessed.

ELEMENT**PERFORMANCE CRITERIA**

Note:

Examples of documentation are those specifying safety requirements, technical standard and as marketed technical energy performance

- | | | | |
|---|--|-----|--|
| | | 1.5 | Advice is sought from the work supervisor to ensure the work is coordinated effectively with others. |
| | | 1.6 | Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety. |
| 2 | Audit energy use for a commercial HVAC/R application | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | | 2.2 | Circuits/apparatus/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures |
| | | 2.3 | In depth knowledge of the performance and energy efficiency requirements of HVAC/R system and assessment methods are applied to the audit process. |
| | | 2.4 | Apparatus assessment and tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny. |
| | | 2.5 | System assessment and tests are carried out methodically and results and comments systematically noted. |
| | | 2.6 | Unexpected situations are dealt with safely and with the approval of an authorised person. |
| | | 2.7 | Auditing is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices. |
| 3 | Document auditing activities and results | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | | 3.2 | Work site is cleaned and made safe in accordance with established procedures. |

ELEMENT**PERFORMANCE CRITERIA**

- 3.3 Assessment and test results are evaluated and non-compliance issues identified.
- 3.4 Assessment, test results and recommendations on non-compliance issues are documented and reported to appropriate person(s) in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and auditing energy use for commercial HVAC/R systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ147A

HVAC/R energy audits

Evidence shall show an understanding of HVAC/R energy auditing, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Identification of major energy consuming plant

- review of HVAC/R system components

T2 Methods of energy conservation

- review of energy conserving strategies
- house keeping
- time schedules
- good maintenance practices
 - filters, fans, appropriate set points, dead bands etc.
- HVAC system control
 - night cycle
 - optimum stop/start
 - purge cycles
 - chiller/boiler/cooling tower sequencing
 - economy cycles (based on temperature or enthalpy).
 - supply air reset
 - condenser water temperature reset
- electrical load control
 - power demand control
 - load limiting
 - load shedding
 - set point relaxation
 - ventilation cycles

T3 Tests and data collection procedures

REQUIRED SKILLS AND KNOWLEDGE

- use of BMS for data collection (trending)
- use of data recorders (loggers)
- monitoring of building operations generally

T4 Analyse results from test data

- compare against standards (BOMA)
- review current practices against ideal
- total consumption vs. peak load
- electricity tariffs and implications

T5 Methods of reducing energy usage

- plant retrofits
- controls - application of strategies
- plant - fixed OA to economy, boiler to electric reheat, and constant volume to VAV etc. cost/benefit (payback).

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment,

EVIDENCE GUIDE

the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Audit energy use for commercial HVAC/R systems as described in 8) and including:
 - A Interpreting performance/certification requirements correctly.
 - B Setting up and conducting appropriate system assessments and tests.
 - C Identifying non-compliance issues.
 - D Reporting assessment and test results and non-compliance issues and recommendations appropriately.
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in auditing energy use for commercial HVAC/R systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to auditing energy use by at least two different commercial HVAC/R systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ148A Audit HVAC/R control systems for compliance with regulations and standards

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers control safety and performance evaluation of heating, ventilating, air conditioning and refrigeration control systems across their operating range. It encompasses working safely, setting up and conducting evaluation measurements, evaluating performance from measured parameters and documenting results and recommending any resulting corrective actions.

Application of the Unit

Application of the Unit 4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ135A Design control systems for refrigeration or heating, ventilation and air conditioning systems

UEENEEJ130A Produce HVAC/R control system diagrams

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Prerequisite Unit(s)

2)

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to audit HVAC/R control systems	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Examination and testing area is checked for safety hazards and risk control measures implemented in strict accordance with safety policy and procedures.
	1.4 Relevant documentation is obtained and read to determine the performance/certification requirements against which the system is to be assessed.

Note:

Examples of documentation are those specifying safety requirements, technical standard and as marketed technical performance, product quality endorsement standards.

ELEMENT	PERFORMANCE CRITERIA
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.6 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.
2 Audit HVAC/R control systems for compliance with regulations and standards.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 In depth knowledge of the performance and energy efficiency requirements of HVAC/R system and assessment methods are applied to the audit process.
	2.5 Control system examination and tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.
	2.6 Control system examination and tests are carried out methodically and results and comments systematically noted.
	2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8 Assessment is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete auditing work and document results	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Examination and test results are evaluated and non-compliance issues identified.

ELEMENT

PERFORMANCE CRITERIA

- 3.4 Examination, test results and comments on non-compliance issues are documented and reported to appropriate person(s) in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and auditing HVAC/R control systems for compliance with standards and regulations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ148A

HVAC/R control system audits

Evidence shall show an understanding of HVAC/R control system audits, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 review of HVAC/R system components
- T2 performance requirements of particular control applications from available system specifications, design briefs etc
- T3 descriptions of operation
- T4 measurements, recordings, etc. of system performance, as required to confirm plant control compliance with desired conditions.
- T5 comparison of system specifications, control strategies, design briefs, and recorded test results with current HVAC/R energy management principles to establish the economy of operation of HVAC/R plant.
- T6 preparation a detailed report outlining the results of investigation and stating suggested control system adjustments, alterations and modifications to improve the performance of the plant.

Evidence Guide

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines

EVIDENCE GUIDE

of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

EVIDENCE GUIDE

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Audit HVAC/R control systems for compliance with standards and regulations as described in 8) and including:
 - A Interpreting compliance documents
 - B Setting up and conducting appropriate examinations and tests
 - C Identifying non-compliance defects
 - D Reporting examination and test results and non-compliance issues clearly and accurately

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in auditing HVAC/R control systems for compliance with standards and regulations.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to at least two different types of HVAC/R control systems encompassing at least four different control scenarios.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers the analysis of refrigeration parameters and develop specification for heat exchanger design. It encompasses working safely, apply extensive knowledge of refrigeration parameters, gathering and analysing data, developing and documenting results and solutions for use in design work.

Application of the Unit

Application of the Unit 4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ138A Analyse vibration and noise in refrigeration and air conditioning systems

UEENEEJ165A Evaluate thermodynamic and fluid parameters of refrigeration systems

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

Prerequisite Unit(s)	2)
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ104A Establish the basic operating conditions of air conditioning systems
	UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
	UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components
	UEENEEJ113A Commission air conditioning and refrigeration systems
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring
	UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures
	UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

Prerequisite Unit(s)	2)
	UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply
	For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills	3)
	This unit contains Employability Skills
	The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop specifications for exchanger designs	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of analysis to develop specifications is determined from design brief and situation reports and in consultations with relevant persons

ELEMENT	PERFORMANCE CRITERIA
2 Develop specifications for exchanger designs.	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5 Effective strategies are formed to ensure analysis is carried out efficiently.
	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of refrigeration parameters are applied to developing heat exchanger specifications.
	2.3 Parameters and performance requirements in relation to refrigeration systems are obtained in accordance with established procedures.
	2.4 Approaches to analysing refrigeration parameters are carried out to provide the most effective solution.
3 Document specifications for exchanger design	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
	2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards
	3.1 Analysis is documented including details of all findings, calculations and assumptions.
	3.2 Specification for heat exchanger are developed from analysis findings and in accordance with established procedures
3.3 Developed specification and analysis is reported to appropriately person(s) for endorsement.	
3.4 Justification for findings and any actions to be undertaken in relation to the design is documented for inclusion in work/project or development records in accordance with professional standards.	

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing specifications for heat exchanger designs.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ149A

Heat exchanger design

Evidence shall show an understanding of heat exchanger design, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Advanced thermodynamics

- Heat transfer
 - Modes of heat transfer
 - Conduction through a flat plate, series flat plates, thick and thin wall pipe, composite pipes (e.g. lagged pipes and drums)
 - Convection at a flat surface or tube
 - Radiation from a flat surface or tube for black or grey bodies
 - Combined conduction and convection through single or multiple flat plates or thin wall tubes
 - Combined convection and radiation
 - Combined conduction, convection and radiation such as fluid in a tank (convection to wall), through wall and/or insulation (conduction) to outside air (convection and radiation)
 - Heat exchangers - parallel, counter flow and cross flow
- Refrigeration/heat pump
 - Basic principles and terminology
 - Vapour compression cycle
 - Performance criteria
 - Types of refrigerant - designation, properties advantages and disadvantages
 - Refrigerant properties using the p-h diagram
 - Ideal vapour compression cycle on the p-h diagram
 - Energy balance and heat transfers in compressor, evaporator and condenser
 - Actual vapour compression cycle and variations from the ideal
 - pressure loss in lines and non-ideal compression

REQUIRED SKILLS AND KNOWLEDGE

- Superheating and subcooling with or without suction/liquid heat exchanger
- Carnot principle applied to refrigerator and heat pump
- Principles of evaporative refrigeration, absorption refrigeration, air cycle refrigeration and thermo-electric refrigeration

T2 Heater exchanger design

- Concepts
- Design parameters and limitations
- Construction material and components
- Testing requirements

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries

EVIDENCE GUIDE

risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop specifications for heat exchanger designs as described in 8) and including:
 - A Interpreting compliance documents
 - B Setting up and conducting appropriate examinations and tests
 - C Identifying non-compliance defects
 - D Reporting examination and test results and non-compliance issues clearly and accurately

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in developing specifications for heat exchanger designs.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to developing specifications for at least two different heat exchangers.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ150A Evaluate new and alternative technologies applicable to electrotechnology applications

Modification History

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers evaluation of alternative and new technologies applicable to electrotechnology applications. It encompasses working safely, comparing manufacturer's technical data for alternative or new technologies with specifications for a proposed project, conducting evaluation tests, evaluating systems/components from technical data, calculations and/or measured parameters and reporting findings for use in design work.

Application of the Unit

Application of the Unit 4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulations for undertaking of refrigeration or air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

There are no prerequisite competencies for this unit.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to evaluate and report on alternative and new technologies	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of evaluation is determined from proposed project specifications and discussion with appropriate personnel.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Tools, testing devices, and manufacture's technical data needed to carry out the work are obtained and checked for correct operation and safety.

ELEMENT	PERFORMANCE CRITERIA
2 Evaluate alternative and new technologies.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 In-depth knowledge of the electrotechnology discipline applicable to the alternative or new technology being considered is applied to the evaluation process.
	2.3 Manufacture's technical data for alternative or new technologies is compared with proposed project specifications, budget and regulations.
	2.4 Evaluation tests, where used, are set up in strict accordance with OHS requirements and established test methods for each particular component under scrutiny.
	2.5 Evaluation is carried out methodically and results and comments systematically noted.
	2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.7 Evaluation is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.
3 Report on use of alternative and new technologies	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Where applicable, the work site is cleaned and made safe in accordance with established procedures.
	3.3 Results of the evaluation are documented for use in design work including recommendations and justifications for adoption or rejection of the alternative and new technologies evaluated.
	3.4 Report is forwarded to appropriate person(s) for endorsement.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating alternative and new technologies applicable to electrotechnology applications.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ150A

New and alternative technology sources

Evidence shall show an understanding of the sources of new and alternative technology development and processes for their adoption, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Sources of information on alternative or new technologies

- Industry organisations
- Industry technical journals
- Government and private research papers/literature
- Manufacturers' bulletins

T2 Comparison of technical data from different manufacturers

T3 Evaluating performance benefits and limitations of new and developed technologies for given applications, encompassing:

- Capital cost benefits
- Operations efficiency
- Risk hazardous and issues related to environmental and health and safety
- Functionality

T4 Processes to facilitate adoption

Note: Research; analyses; reporting; recommending; and the like, utilising a range of techniques, processes and technologies

 - A Determining the extent of the evaluation.
 - B Comparing manufacture's technical data for alternative or new technologies with proposed project specifications, budget and regulations accurately.
 - C Reporting evaluation including recommendations and justifications for adoption or rejection of the alternative and new technologies evaluated.
 - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions

EVIDENCE GUIDE

incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in evaluating alternative and new technologies applicable to electrotechnology applications.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to evaluating alternative and new technologies for two different proposed projects in any of the following electrotechnology disciplines.

- Automated systems
- Computer systems
- Electrical
- Electronics
- Industrial electronics and control
- Refrigeration and air conditioning
- Renewable energy

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ151A Service small electrical appliances and power tools

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers maintaining the effective and efficient operation of small electrical appliances and hand power tools. It encompasses working safely, applying knowledge of small appliances and power tools, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.

Application of the Unit

Application of the Unit 4)

This unit may apply to persons entering work in electrotechnology and may be used in school based vocational programs.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

Prerequisite Unit(s)**2)**

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

or

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

and

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE003B Solve problems in extra-low voltage single path circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to service small electrical appliances and power tools	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the repair is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are accessed in accordance with established routines and procedures.
	1.6 Tools, apparatus and testing devices needed to carry out

ELEMENT		PERFORMANCE CRITERIA	
			the work are obtained and checked for correct operation and safety.
2	Service small electrical appliances and power tools	2.1	Established OHS risk control measures and procedures for carrying out the work are followed.
		2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
		2.3	Circuits/apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
		2.4	Apparatus is dismantled in accordance with manufacturer's guide and supervisor's instructions.
		2.5	Component parts are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage.
		2.6	Repairs are affected efficiently without damage to other components, apparatus or circuits.
		2.7	Apparatus is assembled in an appropriate sequence with all parts placed, secured and connected in accordance with manufacturer's guide or industry practice.
		2.8	Procedures for referring non-routine events to immediate supervisor for directions are followed.
		2.9	Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3	Complete and report service work activities.	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Repaired apparatus is prepared and forwarded to appropriate person(s) for testing.
		3.3	Work area is cleaned and made safe in accordance with established procedures.
		3.4	Work supervisor is notified of the completion of the repair work in accordance with established procedures.

ELEMENT **PERFORMANCE CRITERIA**

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing small appliances and power tools.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ151A

Small electrical appliances and hand power tools

Evidence shall show an understanding of small electrical appliances and hand power tools, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects

- T1 Types, applications, operating principles and characteristics
- T2 Motors and drive mechanisms
- T3 Control and over current protection methods and devices
- T4 Typical hand power tool faults encompassing:

- Motor faults
- Power supply faults

Note. Examples include open circuit or tripped circuit in cord connected tools and battery charging and discharging problems in battery operated tools.

- Control faults
- Mechanical faults

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

EVIDENCE GUIDE

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

EVIDENCE GUIDE

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Service small appliances and power tools as described in 8) and including:
 - A Following manufactures service instructions for access to components
 - B Removing at least three different types of components specified in the work instructions
 - C Replacing components to manufacturers' requirements.
 - D Terminating internal wiring correctly.
 - E Reassembling the apparatus correctly
 - F Testing apparatus operation
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these

EVIDENCE GUIDE

cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing small appliances and power tools.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG006A Solve problems in single and three phase low voltage machines
or

EVIDENCE GUIDE

UEENEEJ153A Find and rectify faults in motors and associated controls in refrigeration and air conditioning systems

The critical aspects of occupational health and safety covered in Unit UEENEEJ101A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing at least two different small appliances and two different power tools. These include the following:

- Small appliances: Toasters, garbage disposal units, food mixer/processors, small heating appliances (e.g. hair dryers), range hoods, etc.
- Hand Power Tools: Drills (pistol, hammer, cordless, screw driver), circular saws, mitre saws, routers, sanders, grinders, planers, cut off machines, heat guns, etc.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ153A Find and rectify faults in motors and associated controls in refrigeration and air conditioning systems

Modification History

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers finding and repairing faults in motors and associated controls in refrigeration and air conditioning systems. It encompasses working safely, applying knowledge of motor systems and their controls, reading circuit diagrams, sketching diagrams from traced circuits, applying logical fault finding procedures, conducting repairs and completing the necessary service documentation.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing refrigeration or air conditioning appliance in particular when working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE003B Solve problems in extra-low voltage

Prerequisite Unit(s)

2)

single path circuits

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

Employability Skills Information

Employability Skills

3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to find and rectify faults	1.1	OHS procedures for a given work area are identified, obtained and understood
	1.2	OHS risk control measures and procedures in preparation for the work are followed.
	1.3	The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).

ELEMENT	PERFORMANCE CRITERIA
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are accessed in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.
2 Find and repair faults	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Equipment is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	2.5 Fault finding is approached methodically drawing on knowledge of refrigeration and air conditioning motors and their controls using measured and calculated values of circuit/motor parameters.
	2.6 Equipment is dismantled where necessary and parts stored to protect them against loss or damage
	2.7 Suspected faulty motor, component or circuit is rechecked and its fault status confirmed.
	2.8 Replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.
	2.9 Effectiveness of the repair is tested in accordance with established procedures.
	2.10 Apparatus is reassembled, finally tested and prepared for return to service.

ELEMENT	PERFORMANCE CRITERIA
	2.11 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.12 Fault finding and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Completion and report fault finding and repair activities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares inventory.
	3.3 Maintenance work activities are documented in accordance with established procedures. (See Note)

Note.

Examples of documentation are component faults reports, test results, authorisations, permits, parts/component dispatch and stores records.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults in appliance motors and associated controls.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ153A and associated controls

Refrigeration and air conditioning motors

Evidence shall show an understanding of refrigeration and air conditioning motors and associated controls, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Three phase induction motors

- Revise the principles of electromagnetism
- Phase sequence

REQUIRED SKILLS AND KNOWLEDGE

- Three phase induction motor action
- Induction motor construction
 - stator construction
 - rotor construction
- Speed and slip
- Line and phase voltages
- Terminal block markings
- Motor nameplate details
- Motor rating
- Star and Delta connections
- Electrical isolation
- Electrical testing and fault finding
- Rotation reversal
- Maintenance requirements

T2 Three phase motor starters

- Types of three phase induction motor starters
 - Direct-on-line motor starters
 - characteristics, applications and limitations
 - line and control voltages
 - connection, testing and fault finding
 - Other motor starters – characteristics, applications and limitations
 - Star-delta
 - Auto-transformer
 - Part winding
 - Solid State (soft start)

T3 Three phase motor protection devices

- Motor protection
- Motor protection devices
 - star point overloads
- Types of protection devices
 - fuses and circuit breakers
 - thermal overload
 - magnetic overload
 - under voltage and overvoltage relays
 - electronic motor protection
- Isolation devices
- Timers
- Environmental protection

REQUIRED SKILLS AND KNOWLEDGE

- Fault finding in three phase motor installations
- Motor circuit faults

T4 Split phase, single phase motors and starters

- Split phase single phase motors
- Development of starting torque in split phase induction motors
- Winding characteristics
- Construction details
- Starting
 - centrifugal switch
 - current coil relay
 - solid state relay
- Characteristics of a split phase motor
 - advantages
 - disadvantage
 - application
 - rating
 - speed
 - reversal
- Testing and fault finding

T5 Capacitor and shaded pole, single phase motor and starters

- Capacitor start motors
 - Characteristics
 - Switching mechanism
 - Applications
 - Motor reversal
- Capacitor start/capacitor run motors
 - Characteristics
 - Switching mechanism
 - Applications
 - Motor reversal
- Permanently split capacitor motors
 - Characteristics
 - Applications
 - Motor reversal
 - Capacitors
- Shaded pole induction motors
 - Advantages
 - Disadvantages

REQUIRED SKILLS AND KNOWLEDGE

- Reversal
 - Applications
 - Motor faults and fault finding
 - Capacitor start types
 - Shaded pole motor type
- T6 Series universal, single phase motors

- Basic motor principles
- Commutation
- Electromagnet field system
- Reversal
- Supply types, a.c. /d.c.
- Construction
- Characteristics
- Applications
- Reversal
- Faults
- Synchronous motor

T7 Single phase motor protection devices

- Motor protection
 - Environmental
 - Overheating
 - Thermal overload relay
 - Thermal disc overload
 - Internal overload
 - Protection against open circuit, under voltage and automatic restarting
- Testing and fault finding

T8 Single phase motor speed control devices

- Speed control methods
 - Pole changing method
 - Voltage control method
 - Inverter

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

EVIDENCE GUIDE

competency in this unit

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and rectify faults in refrigeration and air conditioning system motors and associated controls as described in 8) and including:
 - A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s)
 - B Using methodical fault finding techniques
 - C Finding faults efficiently
 - D Rectifying faults effectively
 - E Completing documentation correctly

EVIDENCE GUIDE

- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in finding and rectifying faults in appliance motors and associated controls

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to finding and repairing the following faults, in single and/or three phase appliance motors and associated controls in each of three different types of refrigeration and air conditioning systems:

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Motor component failure
- Control circuit component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ154A Find and rectify faults in appliance control systems and devices

Modification History

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers finding and repairing faults in appliance control systems and devices. It encompasses working safely, applying knowledge of appliance control systems and devices, reading circuit diagrams, sketching diagrams from traced circuits, applying logical fault finding procedures, conducting repairs and completing the necessary service documentation.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing refrigeration or air conditioning appliance in particular when working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

Prerequisite Unit(s)**2)**

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

or

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE003B Solve problems in extra-low voltage single path circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to find and rectify faults in appliance control systems and devices	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are accessed in accordance with established procedures.

ELEMENT	PERFORMANCE CRITERIA
	1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.
2 Find and repair faults in appliance control systems and devices	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	2.5 Fault finding is approached methodically drawing on knowledge of appliance control systems and devices using measured and calculated values of circuit/control parameters.
	2.6 Appliance is dismantled where necessary and parts stored to protect them against loss or damage
	2.7 Suspected faulty control device, component or circuit is rechecked and its fault status confirmed.
	2.8 Replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.
	2.9 Effectiveness of the repair is tested in accordance with established procedures.
	2.10 Apparatus is reassembled, finally tested and prepared for return to service.
	2.11 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.12 Fault finding and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy

ELEMENT		PERFORMANCE CRITERIA	
			practices.
3	Completion and report fault finding and repair activities	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares inventory.
		3.3	Maintenance work activities are documented in accordance with established procedures. (See Note)

Note.

Examples of documentation are component faults reports, test results, authorisations, permits, parts/component dispatch and stores records.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults in appliance control devices and systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ154A

Appliance control systems and devices

Evidence shall show an understanding of control systems and devices used in domestic appliances, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Control systems and components encompassing:

- appliance controls,
- electrical/electronic controls,

T2 Control terminology

T3 Types of control

T4 Appliance characteristics and control parameters

T5 System responses to parameter changes

T6 Appliance integrated communications components and their function.

REQUIRED SKILLS AND KNOWLEDGE

T7 Appliance diagnostic tools

- Types, construction, operation and application of electrical, electronic and mechanical diagnostic tools

Note. Examples are appliance manufacturer specific diagnostic tools, binary code via LED display; Test instruments such as multimeters, clamp meters, insulation resistance meters, power analysers and high voltage testers; data loggers, microwave leak detectors, gas (hydrocarbon) detectors and sound meters

- Installation requirements, adjustments and safety encompassing:

- Manufacturers' instructions and data
- Installation safety
- Effects and risks of electrical current and mechanical movement
- Protection against indirect contact

- Computer and paper based diagnostic tools encompassing:

- Appliance manufacturers programs

Note. Examples are binary code via LED display, remote fault diagnosis via phone access and remote fault diagnosis via Internet

- Text books and manufacturers data

- Service, fault finding and repair encompassing:

- Manufacturers' data
- Safety checks
- Operating sequence
- Typical symptoms
- Fault identification using diagnostic tools
- Confirmation of fault
- Repairs limitations

Overview of 9.1)

EVIDENCE GUIDE

Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this

EVIDENCE GUIDE

shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and rectify faults in appliance control devices and systems as described in 8) and including:
 - A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s)
 - B Using methodical fault finding techniques
 - C Finding faults efficiently
 - D Rectifying faults effectively
 - E Completing documentation correctly
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in finding and rectifying faults in appliance control devices and systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to finding and repairing any four of the following faults in appliance control systems and devices in each of two different types of appliance.

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Motor component failure
- Control circuit component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to service refrigerated appliances	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The extent of work to be undertaken is determined from service/fault request and/or discussions with appropriate person(s).
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials/parts that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established

ELEMENT	PERFORMANCE CRITERIA
2 Service refrigerated appliances	procedures and checked for correct operation and safety.
2.1	OHS risk control measures and procedures for carrying out the work are followed.
2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
2.3	Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures
2.4	Safety hazards resulting from the defect or fault are documented and risk control measures devised and implemented in consultation with appropriate personnel.
2.5	Appliances are tested for efficient operation and components affecting efficiency are inspected for wear or defects in accordance with standards, manufacturer's service manuals and industry codes of practice.
2.6	Appliance faults and their cause are identified through the application of refrigerated appliances and using measured and calculated values of appliance parameters.
2.7	Appliance is dismantled where necessary and parts stored to protect them against loss or damage
2.8	Defective, worn or faulty appliance components are rechecked and their status confirmed.
2.9	Replacement parts required to rectify defects/faults are sourced and obtained in accordance with established procedures.
2.10	Effectiveness of the repair is tested in accordance with established procedures.
2.11	Apparatus is reassembled, finally tested and prepared for return to service.
2.12	Unexpected situations are dealt with safely and with

ELEMENT	PERFORMANCE CRITERIA
	the approval of an authorised person.
	2.13 Servicing activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Completion and report fault finding and repair activities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Service report is completed and verified by an appropriate person in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing refrigerated appliances.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ155A

Appliance refrigeration system servicing

Evidence shall show an understanding of servicing appliance refrigeration systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Major appliances encompassing:

Note: Examples of major appliances are washing machines, clothes dryers, dishwashers, refrigerators, freezers, air conditioners, electrical and gas cookers and heaters

- Installation codes, statutory requirements and regulations
- Manufacturer and company installation requirements and warranty implications
- Site preparation and accessibility.
- Fixing and procedures and methods for connecting services.

T2. Operation principles of major domestic appliances that use electrical, gas and/or water services and/or incorporate refrigeration encompassing:

- Purpose and operational options.
- Functions of major components.

T3. Operational testing and set up procedures encompassing:

- Pre-start checking.
- Safety controls checking.
- Operating cycle testing and control adjustments

T4. Capillary systems

- Requirements of Domestic Refrigeration Code of Practice.
- Function, types, construction, characteristics and applications encompassing:
 - system unloading
 - calculating system operating pressures
 - critical length
 - critical charge
- Faults leading to repair/replacement of a capillary tubes

REQUIRED SKILLS AND KNOWLEDGE

- Selection of replacement capillary tubes.
 - Procedures for commissioning and servicing a capillary tube system.
- T5. Appliance refrigeration systems
- Types, applications, construction, components and operating characteristics
 - Typical component wear or defects
 - Typical faults
 - Component repair/replacement methods
 - Manufacturers' parts catalogues and service reports
- T6. Retrofitting domestic refrigeration systems
- Reasons for retrofitting
 - Montreal Protocol
 - Kyoto Summit
 - Global warming
 - AS Codes of Practice
 - Acts and Regulations
 - System Analysis
 - Equipment identification
 - Systems options
 - Refrigerant selection
 - Safety considerations
 - ANSI / ASHRAE Standard 34
 - AIRAH Refrigerant Selection Guide
 - Transitional and drop in-refrigerants

 - Oil and drier replacement
 - Evacuation
 - Refrigerant charging
 - System labelling

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required

9.2)

Before the critical aspects of evidence are considered all

EVIDENCE GUIDE

to demonstrate competency in this unit

prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Service refrigerated appliances as described in 8) and including:
 - A Determining the nature of the work from service request
 - B Identifying defective components affecting appliance efficiency
 - C Finding faults efficiently
 - D Rectifying defects/faults effectively
 - E Testing appliance functions effectively
 - F Completing service report accurately
 - G Dealing with unplanned events by drawing on essential

EVIDENCE GUIDE

knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing refrigerated appliances.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing refrigerated appliances with any four of the following defects/faults in appliance refrigeration system in each of two different types of appliance.

- Higher energy use than previously experienced
- Not cold enough
- Appliance ices-up
- Appliance light not working
- Electric shock received from appliance cabinet

The types of refrigeration appliances include: single door refrigerators, two door refrigerators/freezers and single door freezers in either cyclic defrost or frost free.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ156A Service clothes washing machines and dryers

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers maintaining the effective and efficient operation of clothes washing machines and dryers. It encompasses working safely, applying knowledge of clothes washing machines and dryers, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing clothes washers and dryers. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ154A Find and rectify faults in appliance control systems and devices

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

Prerequisite Unit(s)**2)**

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

or

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE003B Solve problems in extra-low voltage single path circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to service cloth washing machines and dryers.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The extent of work to be undertaken is determined from service/fault request and/or discussions with appropriate person(s).
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials/parts that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established

ELEMENT	PERFORMANCE CRITERIA
2 Service clothes washing machines and dryers.	procedures and checked for correct operation and safety.
2.1	OHS risk control measures and procedures for carrying out the work are followed.
2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
2.3	Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures.
2.4	Safety hazards resulting from the defect or fault are documented and risk control measures devised and implemented in consultation with appropriate personnel.
2.5	Appliances are tested for efficient operation and components affecting efficiency are inspected for wear or defects in accordance with standards, manufacturer's service manuals and industry codes of practice.
2.6	Appliance faults and their cause are identified through the application of refrigerated appliances and using measured and calculated values of appliance parameters.
2.7	Appliance is dismantled where necessary and parts stored to protect them against loss or damage.
2.8	Defective, worn or faulty appliance components are rechecked and their status confirmed.
2.9	Replacement parts required to rectify defects/faults are sourced and obtained in accordance with established procedures.
2.10	Effectiveness of the repair is tested in accordance with established procedures.
2.11	Apparatus is reassembled, finally tested and prepared for return to service.

ELEMENT	PERFORMANCE CRITERIA
	2.12 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.13 Servicing activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Completion and report fault finding and repair activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Service report is completed and verified by an appropriate person in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing clothes washers and dryers.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ156A

Clothes washing machines and dryers

Evidence shall show an understanding of clothes washing machines and dryers, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Types, applications, construction, components and operating characteristics

T2 Installation

- Installation codes, statutory requirements and regulations
- Manufacturer and company installation requirements and warranty implications
- Site preparation and accessibility.
- Fixing and procedures and methods for connecting services.

T3 Operational testing and set up procedures encompassing:

- Pre-start checking.
- Safety controls checking.
- Operating cycle testing and control adjustments

T4 Typical component wear or defects

T5 Typical faults

T6 Component repair/replacement methods

T7 Manufacturers' parts catalogues and service reports

Evidence Guide

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing clothes washers and dryers.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing clothes washers and dryers with any four of the following defects/faults in appliance clothes washers and dryer systems in each of two different types of appliance.

- Washing machines
 - Higher energy use than previously experienced
 - Program selector not working correctly
 - Appliance light not working
 - Electric shock received from appliance cabinet
- Dryers
 - Heater not operating
 - Fan not working
 - Timer not working correctly
 - Electric shock received from appliance cabinet

The types of appliances include:

- Washing machines: Automatic washers (top load and front load), twin tub washers, washer/dryer combinations
- Clothes Dryers: Tumble and static

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ154A Find and rectify faults in appliance control systems and devices

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

Prerequisite Unit(s)**2)**

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

or

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE003B Solve problems in extra-low voltage single path circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to service dish washing machines.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The extent of work to be undertaken is determined from service/fault request and/or discussions with appropriate person(s).
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials/parts that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to locate

ELEMENT	PERFORMANCE CRITERIA
2 Service dishwashing machines.	faults are obtained in accordance with established procedures and checked for correct operation and safety.
2.1	OHS risk control measures and procedures for carrying out the work are followed.
2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
2.3	Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures.
2.4	Safety hazards resulting from the defect or fault are documented and risk control measures devised and implemented in consultation with appropriate personnel.
2.5	Appliances are tested for efficient operation and components affecting efficiency are inspected for wear or defects in accordance with standards, manufacturer's service manuals and industry codes of practice.
2.6	Appliance faults and their cause are identified through the application of refrigerated appliances and using measured and calculated values of appliance parameters.
2.7	Appliance is dismantled where necessary and parts stored to protect them against loss or damage.
2.8	Defective, worn or faulty appliance components are rechecked and their status confirmed.
2.9	Replacement parts required to rectify defects/faults are sourced and obtained in accordance with established procedures.
2.10	Effectiveness of the repair is tested in accordance with established procedures.
2.11	Apparatus is reassembled, finally tested and prepared for return to service.
2.12	Unexpected situations are dealt with safely and with the approval of an authorised person.
2.13	Servicing activities are carried out without damage to apparatus, circuits, the surrounding environment or

ELEMENT	PERFORMANCE CRITERIA
	services and using sustainable energy practices.
3 Completion and report fault finding and repair activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Service report is completed and verified by an appropriate person in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing dish washing machines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ158A

Dishwasher machines

Evidence shall show an understanding of dish washer machines, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 Types, applications, construction, components and operating characteristics
- T2 Typical component wear or defects
- T3 Typical faults
- T4 Faulty component repair/replacement methods
- T5 Manufacturers' parts catalogues and service reports

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

EVIDENCE GUIDE

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'.

Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Service dish washing machines as described in 8) and including:
 - A Determining the nature of the work from service request
 - B Identifying defective components affecting appliance efficiency
 - C Finding faults efficiently

EVIDENCE GUIDE

- D Rectifying defects/faults effectively
- E Testing appliance functions effectively
- F Completing service report accurately
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing dish washing machines.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with

9.5)

There are no concurrent assessment recommendations for this

EVIDENCE GUIDE

other units unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing dish washing machines with any four of the following defects/faults in the dish washing machine system in each of two different types of appliance.

- Not enough or too much water entering machine
- No wash cycle
- No rinse cycle
- Heater not operating
- Timer not working correctly
- Electric shock received from appliance cabinet

The types of dish washing machines include: Automatic washers, side load, front load, and semi-automatic.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ159A Service gas heating appliances

Modification History

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers maintaining the effective and efficient operation of gas heating appliances. It encompasses working safely, applying knowledge of the gas appliance, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.

Application of the Unit

Application of the Unit 4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing gas appliances. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ154A Find and rectify faults in appliance control systems and devices

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology

Prerequisite Unit(s)**2)**

equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

or

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE003B Solve problems in extra-low voltage single path circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to verify functionality and compliance of appliances	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.5 Inspection and tests are appropriately sequenced in accordance with job schedule.
	1.6 Materials needed for the tests and verification are

ELEMENT	PERFORMANCE CRITERIA
	obtained in accordance with established procedures and checked against job requirements
1.7	Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety
2 Visually inspect appliances	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Appliances are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.3 Accessories and components are validated as being appropriately rated and meeting functional requirements.
	2.4 Evidence that equipment complies with safety and functional requirements is cited.
	2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.7 Inspection is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Conduct tests	3.1 OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Testing or measuring on a live and operating system in strict accordance with OHS requirements and within established safety procedures
	3.3 Appliances are checked as being isolated in strict accordance OHS requirements and procedures
	3.4 Electrical tests are conducted to verify that the electrical circuit within the appliance is safe and

ELEMENT	PERFORMANCE CRITERIA
4 Report inspection and verification findings	function as intended.
	3.5 Refrigeration tests are conducted to verify that the refrigeration components and pipe work within the appliance is safe and functions as intended.
	3.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	3.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
	3.8 Testing is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
	4.1 OHS work completion risk control measures and procedures are followed.
	4.2 Appliance is cleaned and made safe in accordance with established procedures.
	4.3 Non-compliance defects are identified and reported in accordance with established procedures.
	4.4 Recommendations for rectifying defects are made in accordance with established procedures.
4.5 Work completion is documented and an appropriate person or persons notified in accordance with established procedures	

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Verify compliance and functionality of appliances as described in 8) and including:
 - A Identifying visual defects
 - B Conducting all electrical tests safely and correctly
 - C Conducting all refrigeration tests safely and correctly
 - D Identifying non-compliant defects from test results
 - E Recommending appropriate corrective actions
 - F Acting within regulatory limits
 - G Reporting legibly and accurately
 - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in verifying compliance and functionality of appliances.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing room air conditioners with any four of the following defects/faults in appliance refrigeration system in each of two different types of appliance.

- Visual inspection of appliances
- Conducting all electrical tests

Note:

1. Electrical testing include isolation testing; insulation resistance of equipment; resistance of the internal circuits of equipment; polarity of supply and equipment; continuity of earthing; correct electrical connections load current.
2. Electrical testing may be limited by the scope permitted under restricted electrical work

- Conducting all refrigeration tests

Note:

Refrigeration testing includes pressure test apparatus/circuits; leak test apparatus/circuits; evacuation test apparatus/circuits; compressor efficiency; controls tests; refrigerant charge; operating pressures; system operation system capacity

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ162A Recover, pressure test, evacuate, charge and leak test refrigerants - appliances

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the recovery of refrigerants from appliances, pressure and leak testing evacuation and charging refrigerants in self contained appliances. It encompasses working safely and to standards, following regulations and industry practices for handling refrigerants and completing the necessary documentation.

Note:

1. Refrigeration systems may be those used for refrigerating or for air conditioning.

2. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this competency standard unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

Application of the Unit 4)

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some States/Territories, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures
3. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this competency standard unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

Pre-Requisites

Prerequisite Unit(s)

2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ102

A

UEENEEJ195 Establish the basic operating conditions of vapour compression systems - appliances

A

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to recover refrigerants, pressure and leak test, evacuate and charge refrigeration appliance.	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
	1.4 The nature and location of the work is determined from documentation or appropriate person(s) to establish the scope of work to be undertaken.
	1.5 The work is appropriately sequenced in accordance with job schedule
	1.6 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.7 Refrigerants, lubricants and cleaning materials needed for the work are obtained in accordance with established procedures and checked against job requirements
	1.8 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety
	1.9 Preparatory work is checked to ensure no damage has occurred and complies with requirements
2 Recover refrigerants, pressure and leak test, evacuate and charge refrigeration	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Checks are carried out to ensure the system or component parts are isolated, when necessary, in strict accordance with OHS requirements and procedures

ELEMENT	PERFORMANCE CRITERIA	
appliance.	2.3 Circuits/machines/plant are checked as being electrically isolated where necessary in strict accordance OHS requirements and procedures	
	2.4 Refrigerants are removed from a appliance safely into suitably labelled containers in accordance with regulatory requirements and industry practices.	
	2.5 Precautions are taken to prevent damage to components while pressure testing the appliance.	
	2.6 Pressure testing is conducted using dry nitrogen at a pressure relative to the refrigerant to be used.	
	2.7 Leaks are located and rectified using testing methods appropriate to the appliance under test and in accordance with industry practices.	
	2.8 Appliances are evacuated to the required level and cleaned the appliance of all moisture and other containments in accordance with industry practices.	
	2.9 A 'Drop test' is used to prove effectiveness of the evacuation in accordance with industry practice using an appropriate electronic vacuum gauge.	
	2.10 Components lubricants are checked and maintained in accordance with manufacturer's requirements.	
	2.11 Appliances are charged with the appropriate refrigerant in accordance with manufacturer's requirements and industry practices.	
	2.12 Problematic situations that arise during the work are dealt with in an appropriate manner.	
	2.13 Appliances are pressure and leak tested, evacuated and charged efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.	
	3 Complete and report refrigerants recovery, pressure and	3.1 OHS work completion risk control measures and procedures are followed.
		3.2 Work site and equipment is cleaned and made safe in accordance with established procedures.

ELEMENT

PERFORMANCE CRITERIA

leak test and
evacuate and
charge work

- 3.3 Contaminated refrigerant is dealt with in accordance with legislative/regulatory requirements.
- 3.4 Completion of the work is documented and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and recovering, pressure and leak testing, evacuating and charging refrigerants appliances.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ162A

Appliance Refrigerants and lubricants

Evidence shall show an understanding of refrigerants and lubricants used in self contained appliances, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Introduction to refrigerants

- Purpose of refrigerant
- Ideal properties
- Pure, azeotropic, zeotropic and blend refrigerants
- General safety requirements and personal protection equipment

T2 Relevant Acts, Regulations, Codes and Standards

- The ozone layer (function, ozone depleting substances)
- The ozone protection act and regulation
- State and federal agencies (Dept of the environment, water, heritage and the arts; Dept of climate change; Australian Refrigeration Council Ltd etc)
- State and federal licensing requirements
- Refrigerant handling code of practice
- Relevant Standards
 - Standards philosophy and format
 - How to read and apply a standard
- Equipment manufactures specifications

T3 Refrigerant properties

- Commonly used types used in appliances, including CFC, HCFC, HFC, high pressure and natural refrigerants
- Terms (blend, azeotrope, zeotrope, glide, CFC, HCFC, HFC, HC, bubble point, dew point, critical point, ODP, GWP etc)
- Typical properties and applications of the current refrigerants used in appliances (boiling point, glide, composition (components), comparative latent heat

REQUIRED SKILLS AND KNOWLEDGE

performance etc)

T4 Safe handling of refrigerants

- Refrigerant identification and the numbering system (AS 1677 part 1 sect 3)
- System refrigerant identification (labeling requirements, Code of Practice)
- Typical hazards (classification groups - AS 1677 part 1 sect 2 and handling precautions - inhalation, skin contact, cardiac sensitization, decomposition, reaction with moisture etc)
- Personal safety (MSDS - all common refrigerants plus phosgene, recommended PPE)
- Cylinders (cylinder terminology (WC, tare etc), transporting safely)
- Safe Filling (density and water capacity methods)
- Decanting methods (pumping, temperature differential etc)
- Recovery cylinders and their safe filling.
- Disposal of recovered refrigerants (including RRA)

T5 Refrigeration oil

- Types (mineral, POE, AB etc) used in appliances and their applications
- Basic properties (miscibility, dielectric strength, viscosity and hygroscopic abilities)
- Typical issues regarding compatibility (neoprene and POE, POE and mineral etc)
- Safe handling (MSDS - POE's, Mineral, AB's - Residual acid's in used oils)
- Applications for the various compressor lubricants used in the trade

T6 Recovery and reclaim procedures

- Refrigerant recovery systems and procedures
 - Vapour
 - Liquid
- Recovery cylinders
- Disposing of recovered refrigerants
- Safety and general issues when recovering refrigerant

T7 Pressure testing

- Pressure testing
- Pressure testing procedures and test pressures per Standards,
- Codes, Regulations and manufacturers requirements
- Safety and general issues when pressure testing refrigeration systems

T8 Leak detection

- Leak detector types and applications (electronic, halide, bubble, ultra violet, etc)
- Hazards and related safe working practices (working around rotating machinery, open flames, ultra violet light etc)
- Care and maintenance (delicate electronic equipment, changing sensor tip filters,

REQUIRED SKILLS AND KNOWLEDGE

changing gas cartridges etc)

- Calibration (auto calibrating , send to a specialist etc)
- Leak testing methods

T9 Evacuation and dehydration

- Evacuation and dehydration
 - Deep vacuum methods
 - Triple evacuation
- Vacuum Measurement
 - Instruments
 - Drop test
- Vacuum Pumps
 - Types, size and applications
 - Use and connections
 - Care and maintenance
- Safety and general issues when evacuating refrigeration systems

T10 Refrigerant and oil charging

- Refrigerant cylinders, storage and safe handling
- Refrigerant charging methods
 - Vapour
 - Liquid
- Safety and general issues when charging refrigeration systems including personal protection equipment
- Refrigerant oil removal and addition tools, procedures and safety

T11 System contamination

- Contaminants (Non-condensables, moisture, acids, carbon, copper etc)
- Effects of contamination (Acid, motor burnout, oil contamination, copper plating, seizing, RMD blockage, excessive condensing temps etc)
- Practices/procedures that cause contamination
- Methods and components use to remove contamination
 - Filter dryers – liquid, suction, burnout
 - Dry nitrogen
 - Flushing agents
- Evacuation

T12 Basic refrigeration component replacement

- Risks of working with refrigerants and rotating equipment
- Refrigerant recovery
- Prevention of system contamination
- Protection of damage to surrounding equipment/ environment

REQUIRED SKILLS AND KNOWLEDGE

- Replace basic components on a refrigeration system, for example filter dryer.

Pressure testing, evacuation, checking refrigerant charge, refrigerant charging and leak detection

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and

EVIDENCE GUIDE

operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Recover, pressure and leak test, evacuate and charge refrigerants appliances as described in 8) and including:
 - A Selecting appropriate materials and equipment

EVIDENCE GUIDE

- B Removing and storing refrigerant correctly
- C Conducting pressure testing at the appropriate pressure level and without damaging components
- D Locating and rectifying leaks
- E Evacuating the system to the required level
- F Evacuating the system to the required standard and using appropriate vacuum measuring instruments
- G Completing the necessary documentation.
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in recovering, pressure and leak testing, evacuating and charging refrigerants appliances.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to testing and charging refrigeration appliances used for refrigeration or air conditioning using appropriate vacuum measuring instruments encompassing the following:

- Recovering refrigerant from an existing appliance that may contain contaminants
- Pressure and leak testing a newly installed or repaired appliance
- Evacuating a appliance in preparation for charging with refrigerant
- Charging an appliance with refrigerant with minimal loss.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the analysis the operating parameters of heating, ventilating and air conditioning air and hydronic systems to determine whether performance requirements are being met. It encompasses working safely, apply knowledge of operating parameters, gathering and analysing data, applying problem solving techniques, developing and documenting results and solutions for use in design work.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies and is suitable for institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ192A: Analyse the psychrometric performance of HVAC/R systems

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

Prerequisite Unit(s)**2)**

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to analyse the operation of HVAC air and hydronic systems	1.1 OHS processes and procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of operating analysis is determined from performance specifications and situation reports and in consultations with relevant persons
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.

ELEMENT	PERFORMANCE CRITERIA
2 Analyse the operation of HVAC air and hydronic systems	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of HVAC air and hydronic systems operating parameters is applied to analytical solutions to refrigeration and air conditioning systems.
	2.3 Parameters, specifications and performance requirements in relation to HVAC air and hydronic systems are obtained in accordance with established procedures.
	2.4 Approaches to analysing operating parameters are carried out to provide the most effective solution.
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
	2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards
3 Document and report on the results of the operation of HVAC/R systems analysis and actions taken.	3.1 Results of system operating analysis are evaluated to determine whether performance requirements are being met.
	3.2 Analysis is documented including details of all findings, calculations and assumptions.
	3.3 Analysis is reported to appropriately personnel to establish appropriate action to be taken based on findings.
	3.4 Justification for findings and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing the operation of HVAC air and hydronic systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ164A HVAC air systems

Evidence shall show an understanding of heating, ventilation and air conditioning (HVAC) air systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Air distribution principles

- air diffuser selection
- factors affecting the design of ductwork systems
- types of ductwork systems
- static, velocity and total pressure
- laminar and turbulent flow
- moody diagram
- parameters that control cost

T2. Pressure loss

- friction and dynamic
- Colebrook - White formula
- in ducts, friction charts
- in fittings, loss co-efficient
- fitting selection criteria
- diffuser pressure loss

T3. System sizing

- velocity method
- equal friction method
- static regain method
- balanced pressure drop method
- circular to rectangular equivalent
- standard duct sizes and gauges
- balancing

REQUIRED SKILLS AND KNOWLEDGE

T4. Heat and leakage losses

- heat gain/loss calculation
- bare vs. insulated
- leakage

T5. Overview of noise in duct systems

- noise sources in duct systems
- attenuation
- impact on design
- methods of control

T6. Fans

- types and characteristics
- fan laws
- system effect
- fan selection
- fan and system curves

T7. Air systems

- dual and single duct constant volume
- variable volume
- induction units
- multi-zone
- diversity factors

KS02-EJ164A

HVAC systems

Evidence shall show an understanding of heating, ventilation and air conditioning (HVAC) hydronic systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Systems operation

- closed/open systems
- pump head/lift, static head (high rise building)
- system friction losses
- nett positive suction head
- system curves

T2. Pumps

- types
- selection criteria
- performance characteristics
- bladder tanks
- coil characteristics

REQUIRED SKILLS AND KNOWLEDGE

- heat exchangers: plate, shell and tube, tube in tube
- flow measurements: types
- flow switchers
- builders: types and performance characteristics
- cooling towers: elementary cooling thermodynamics and types

T3. Valves - flow control devices

- types and applications
- throttling characteristics
- flow measurements
- selection and applications

T4. Piping systems

- balancing and commissioning
- air venting
- water treatment
- vacuum breaking and air breaks

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in

EVIDENCE GUIDE

accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Analyse the operation of HVAC/R systems as described in 8) and including:
 - A Understanding the operating performance
 - B Forming effective strategies for analysing air conditioning systems performance
 - C Obtaining operating parameters, specifications and performance requirements appropriate to each situation.
 - D Evaluating the results of the analysis
 - E Documenting analysis details of all findings, calculations and assumptions.
 - F Documenting justification of actions to be implemented in accordance with professional standards.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In

EVIDENCE GUIDE

these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in analysing the operation of HVAC/R systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to analysing operating parameters in at least two different HVAC systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ165A Evaluate thermodynamic and fluid parameters of refrigeration systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers evaluation of thermodynamic and fluid parameters of refrigeration systems. It encompasses working safely, setting up and conducting evaluation measurements, evaluating thermodynamic and fluid parameters from measured parameters and reporting results for use in design work.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulations for undertaking of refrigeration or air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ127A Establish the thermodynamic parameters of refrigeration and air conditioning systems

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A Or Analyse the thermodynamic performance of HVAC/R systems

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

Prerequisite Unit(s)

2)

- UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace
- UEENEEE102A Fabricate, assemble and dismantle utilities industry components
- UEENEEE003B Solve problems in extra-low voltage single path circuits
- UEENEEE105A Fix and secure electrotechnology equipment
- UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
- UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
- UEENEEJ102A Prepare and connect refrigerant tubing and fittings
- UEENEEJ103A Establish the basic operating conditions of vapour compression systems
- UEENEEJ104A Establish the basic operating conditions of air conditioning systems
- UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
- UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
- UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
- UEENEEJ110A Select refrigerant piping, accessories and associated controls
- UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components
- UEENEEJ113A Commission air conditioning and refrigeration systems
- UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
- UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
- UEENEEJ194A Solve problems in low voltage refrigeration circuits
- UEENEEP012A Disconnect / reconnect composite

Prerequisite Unit(s)

2)

appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills

3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1 Prepare to evaluate fluid and thermodynamic parameters of refrigeration systems</p>	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of evaluation is determined from specifications for the refrigeration system and discussion with appropriate personnel.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.
<p>2 Evaluate fluid and thermodynamic parameters of refrigeration systems.</p>	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 In-depth knowledge of the fluid and thermodynamic parameters is applied to the evaluation process
	2.4 Energy evaluation tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.
	2.5 Fluid and thermodynamic parameters evaluation tests are carried out methodically and results and comments systematically noted.
	2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.7 Evaluation is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Report on evaluation of fluid and thermodynamic parameters of refrigeration systems	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Results of fluid and thermodynamic parameters evaluation are documented for use in design work
	3.4 Energy evaluation report is forwarded to appropriate person(s) for endorsement.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating fluid and thermodynamic parameters of refrigeration systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ165A Thermodynamics and fluid fundamentals

Evidence shall show an understanding of refrigeration engineering mathematics, thermodynamics and fluid fundamentals, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Matrices

- The operations: addition (subtraction), scalar multiplication, matrix multiplication up to 3x3 matrices.
- Identity matrix, inverse matrix
- Elementary algebraic manipulation of matrices
- Solve up to three equations (linear) in three unknowns using inverse matrices and determinants.

T2. Quadratic Functions

- Graphs of quadratic functions represented by parabolas and significance of the leading coefficient
- Zeros represented graphically
- Solve quadratic equations by factoring and quadratic formula
- Solve simultaneously linear and quadratic equations algebraically and geometrically.
- Engineering Mathematics- B

T3. Exponential and Logarithmic Functions

- Laws of indices
- Graph of $f(x) = kabx$, emphasising $a = 10, e$
- Definition of the logarithm to any base
- Graph of $f(x) = k \log_a bx$, emphasising $a = 10, e$
- Solve exponential and simple log equations using indices, logs, calculator, graphically
- Change of log base, emphasising 10 and e
- Growth and decay

REQUIRED SKILLS AND KNOWLEDGE

T4. Trigonometric Functions

- The ratios: sin, cos, tan, cosec, sec, cot
- Degrees, radians
- Graphs of $k f(ax + b)$ where $f(x) = \sin x, \cos x, \tan x$, and significance of k, a, b , for example $V = V_m \sin(\omega t + \phi)$
- Trigonometric identities
- Solve trigonometric equations

T5. Energy and humanity

- Need for energy and relationship between energy usage and standard of living
- Energy conversion - typical processes and efficiencies
- Sources of energy
- Solar energy - direct heating, photosynthesis, solar cells, power tower, hydrogen for solar energy, ocean thermal energy collector, solar ponds, wind and wave energy, hydro-electric power
- Geothermal energy
- Tidal energy
- Nuclear energy - fission and fusion, burner and breeder reactors
- Stored fuel reserves
- Fuel conservation - reduction in wastage, recycling, greater usage efficiency and use of waste heat
- Thermodynamics

T6. Basic Concepts

- Nature of matter - atoms, molecules, inter-molecular forces, molecular motion, states of matter
- Mass and conservation of mass principle
- Volume, density, specific volume, relative density
- Force, weight, pressure (atmospheric, gauge and absolute)
- Temperature (Celsius and Kelvin)
- Systems and black box analysis
- Reciprocating piston and cylinder mechanism – pressure ratio and compression ratio

T7. Energy

- Definition and principles
- Potential energy
- Kinetic energy
- Work (linear and rotational), constant and variable force, relationship to pressure and volume change
- Power (linear and rotational)
- Sensible heat - specific heat capacity (constant pressure and constant volume)

REQUIRED SKILLS AND KNOWLEDGE

- Latent heat
- Chemical energy - energy content of a fuel
- Internal energy
- Energy transfer in closed and open systems
- Definition of a closed system
- Calorimetry as an example of a closed system (with or without phase change)
- Thermodynamics 1
- Non-flow energy equation - typical applications such as stirring with simultaneous heating or cooling
- Definition of an open system
- Mass and volume flow rate and continuity equation
- Steady flow energy equation (negligible change in kinetic or potential energy) leading to the concept of enthalpy - typical applications such as turbines, compressors, boilers and heat exchangers.

T8. Gases

- Definition of a perfect or ideal gas in terms of the molecular model
- General gas equation
- Characteristic gas equation (equation of state)
- Constant pressure process
- Constant volume process
- Isothermal process
- Polytropic process
- Adiabatic process

T9. Heat engines

- Definition of a heat engine
- Essentials of a heat engine - heat source, heat sink, working substance, mechanical power output, working cycle
- Energy balance for a heat engine (as a black box) and efficiency
- Maximum possible efficiency (Carnot efficiency)
- Types of heat engines according to working substance, heat source, mechanical arrangement and working cycle
- Typical practical cycles - Stirling, Otto, Diesel, dual, two stroke (spark and compression ignition, Joule cycle).
- Thermodynamics 1

T10. Heat engine performance

- Measurement of torque and power output - rope brake, shoe brake, hydraulic dynamometer, electric dynamometer
- Heat supply rate, efficiency, specific fuel consumption
- Measurement of indicated power - mechanical indicator, electric/electronic indicator, Morse test

REQUIRED SKILLS AND KNOWLEDGE

- Friction power, mechanical efficiency, indicated thermal efficiency
- Volumetric efficiency
- Energy balance
- Performance curves - variable load constant speed, variable speed constant throttle setting.

T11. Basic properties of fluids

- Description of a fluid and the difference between solids and fluids, liquids and gases, hydraulics and pneumatics
- Chemical properties, reaction with metals, corrosiveness, flammability, toxicity, pollution and environmental effects
- Dissolves gases and particles in liquids (slurries)
- Foaming of liquids. Basic properties and units - mass, volume, density, specific volume, relative density, force and weight, pressure (absolute, atmospheric and gauge), temperature (Celsius and Kelvin), viscosity, surface tension
- Vapour pressure of a liquid - saturation vapour pressure
- Temperature and pressure effects on the basic properties
- Ideal/perfect gases and liquids
- Gas laws for ideal gases
- Fluid Mechanics 1

T12. Components

- Pipes, channels, tubes and ducts (rigid and flexible)
- Valves - gate, globe, non-return/foot, needle, ball, plug cock, diaphragm, pressure regulating/reducing, safety
- valves
- Filters and strainers for gases and liquids
- Gauges and instruments - pressure and temperature gauges, liquid level gauges, thermometers, thermocouples, manometers, piezometers
- Pipe fittings - elbows/bends, enlargement/contractions, coupler/unions, tees
- Tanks and vessels - storage tanks, pressure vessels, header and surge tanks, weirs/dams/reservoirs
- Nozzles/spray heads
- Flow measurement instruments - venturi and orifice meters, pitot tube, rotameter, anemometer (fan/hot wire)
- Pumps/compressors, motors/turbines
- Actuators - linear (cylinders) and rotary
- Selection of equipment and instruments considering properties and compatibility

T13. Fluid statics

- Pressure at a point, direction of pressure on a surface
- Pressure variation with depth in a liquid

REQUIRED SKILLS AND KNOWLEDGE

- Pascal's Principle
- Manometer/piezometer calculations (vertical and inclined)
- Forces due to fluid pressure on vertical, horizontal and inclined surfaces
- Centre of pressure
- Archimedes Principle - buoyancy, flotation, apparent weight and centre of buoyancy
- Fluid flow
- Steady and unsteady flow, streamlines and eddies
- Velocity - average or mean and local
- Mass and volume flow rate
- Conservation of mass leading to the Continuity Equation for fluid flow
- Modification of the Continuity Equation for volume flow of liquids or gases with small changes in density
- Bernoulli Equation for ideal fluids, meaning of pressure, velocity and potential head. Total head
- Causes of head loss and modification of the Bernoulli Equation to include a head loss term for real fluids

T14. Fluid power

- Definition and units for work, torque and power
- Relationship between force, velocity and power and torque, angular velocity and power
- Work done by a gas expanding at constant pressure
- Relationship between fluid power, mass flow rate and head
- Relationship between fluid power, volume flow rate and pressure
- Efficiency of a pump or turbine
- Modification of the Bernoulli Equation to include a pump or turbine in the fluid circuit as well as a head loss term

T15. Forces developed by flowing fluids

- Impulse-momentum equation for fluid flow
- Force developed by a jet striking a stationary plate - perpendicular, inclined or curved
- Force developed by a jet striking a moving plate or blade
- Force developed by a jet striking a series of moving plates or blades - power developed and efficiency

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

EVIDENCE GUIDE

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'.

Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Evaluate fluid and thermodynamic parameters of refrigeration systems as described in 8) and including:
 - A Determining the extent of the evaluation
 - B Setting up and conducting appropriate examinations and tests
 - C Documenting evaluation results for use in design work

EVIDENCE GUIDE

- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in evaluating fluid and thermodynamic parameters of refrigeration systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to evaluating and reporting fluid and thermodynamic parameters at least two different types of refrigeration systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ166A Resolve problems in dairy refrigeration systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers resolving problems in dairy refrigeration systems. It encompasses working safely and to standards, applying knowledge of the components and operation of dairy refrigeration systems, using effective problem resolving techniques and documenting solutions.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage

Prerequisite Unit(s)	2)
	single path circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ104A Establish the basic operating conditions of air conditioning systems
	UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
	UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring
	UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures
	For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to resolve problems in dairy refrigeration systems	1.1	OHS procedures for a given work area are identified, identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
		1.4	The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
		1.5	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.

ELEMENT	PERFORMANCE CRITERIA
	<p>1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures.</p> <p>1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety</p>
2 Resolve problems in dairy refrigeration systems	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.4 Problems are approached methodically drawing on operational knowledge of dairy refrigeration systems using observation, measurement, calculations and comparison with normal operating values of system and components.</p> <p>2.5 Information needed to resolve problems is gathered and evaluated against normal operating parameters.</p> <p>Note: Examples of information needed to resolve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters.</p> <p>2.6 Problems are dealt with safely and with the approval of an authorised person.</p> <p>2.7 Problems are resolved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.</p>

ELEMENT	PERFORMANCE CRITERIA
3 Complete work and document problem resolving activities	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to resolve problems is documented
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and resolving problems in dairy refrigeration systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ166A

Dairy refrigeration systems

Evidence shall show an understanding of dairy refrigeration systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 System characteristics, design features, applications, construction, components and typical layout arrangements.
- T2 Operating and control principles
- T3 Maintenance schedules
- T4 System faults and testing methods
- T5 Pure food act and HACCP
- T6 Dispensed beverage product knowledge

- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Resolve problems in dairy refrigeration systems as described in 8) and including:
 - A Using methodical problem resolving techniques
 - B Accessing relevant information
 - C Resolving problems effectively
 - D Providing written justification for the solutions used
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in resolving problems in dairy refrigeration systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ111A	Diagnose and rectify faults in air conditioning and refrigeration systems and components
-------------	--

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in resolving at least three operational problems related to dairy refrigeration systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ167A Resolve problems in central plant air conditioning systems

Modification History

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers resolving problems in central plant air conditioning systems. It encompasses working safely and to standards, applying knowledge of the components and operation of central plant systems, using effective problem solving techniques and documenting solutions.

Application of the Unit

Application of the Unit 4)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage

Prerequisite Unit(s)	2)
	single path circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ104A Establish the basic operating conditions of air conditioning systems
	UEENEEJ106A Install refrigerant pipe work, flow controls and accessories
	UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ110A Select refrigerant piping, accessories and associated controls
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring
	UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to resolve problems in central plant air conditioning systems	1.1	OHS procedures for a given work area are identified, identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
		1.4	The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
		1.5	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|--|--|
| | 1.6 | Sources of materials that may be required for the work are accessed in accordance with established procedures. |
| | 1.7 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety |
| 2 | Resolve problems in central plant air conditioning systems | |
| | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures |
| | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures |
| | 2.4 | Problems are approached methodically drawing on operational knowledge of central plant air conditioning systems using observation, measurement, calculations and comparison with normal operating values of system and components. |
| | 2.5 | Information needed to resolve problems is gathered and evaluated against normal operating parameters.

Note:
Examples of information needed to resolve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters. |
| | 2.6 | Problems are dealt with safely and with the approval of an authorised person. |
| | 2.7 | Problems are resolved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices. |

ELEMENT	PERFORMANCE CRITERIA
3 Complete work and document problem resolving activities	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to resolve problems is documented
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and resolving problems in central plant air conditioning systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ167A

Central plant air conditioning

Evidence shall show an understanding of central plant air conditioning systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 System characteristics, design features, applications, construction, components and typical layout arrangements.
- T2 Operating and control principles
- T3 Maintenance schedules
- T4 System faults and testing methods
- T5 Secondary systems and refrigerants

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs

EVIDENCE GUIDE

and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Resolve problems in central plant air conditioning systems as described in 8) and including:
 - A Using methodical problem solving techniques
 - B Accessing relevant information
 - C Resolving problems effectively
 - D Providing written justification for the solutions used
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in resolving problems in central plant air conditioning systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in resolving at least three operational problems related to central plant air conditioning systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the quality assurance and risk management compliance processes for maintenance of the air and water systems associated with refrigeration and air conditioning. It encompasses working safely and to technical, quality and risk management standards, work specifications and maintenance schedules, sample inspections, evaluating components and completing the necessary maintenance documentation.

Application of the Unit

Application of the Unit

4)

This unit apply to any qualification in this standard at an AQF 2 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the work place where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Where refrigeration and air conditioning are involved practice in the workplace is subject to Federal/State/Territory regulations covering public health and the relevant codes of practice; in some jurisdictions a licence is required.

Practice in the workplace is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

There are no prerequisite competencies for this unit.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to maintain microbial control of air and water systems.	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
	1.4 The maintenance schedule and process compliance requirements are confirmed and work appropriately sequenced in accordance with established procedures.
	1.5 Appropriate person(s) are consulted to ensure the work is coordinated effectively with others

ELEMENT

PERFORMANCE CRITERIA

- involved on the work site.
- 1.6 Location equipment to be maintained is determined from maintenance schedule procedures and/or system specifications and diagrams.
 - 1.7 Resources needed to conduct the maintenance is obtained in accordance with established procedures and checked against job requirements.
 - 1.8 Tools, equipment and testing devices needed to conduct the maintenance are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Maintain microbial control of air and water systems.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
 - 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
 - 2.3 Water samples are taken and tested in accordance with established methods and routines.
 - 2.4 Apparatus to be maintained is inspected and evaluated for compliance with requirements in accordance with maintenance schedule.
 - 2.5 Non compliant apparatus/components/samples are documented and arrangements made for their rectification in accordance with established procedures.
 - 2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
 - 2.7 Ongoing checks of the quality of the maintenance are undertaken in accordance with established procedures.
 - 2.8 Maintenance process compliance is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or

ELEMENT

PERFORMANCE CRITERIA

		services and using sustainable energy practices.
3	Complete of maintenance processes and documentation.	3.1 OHS work completion risk control measures and procedures are followed.
		3.2 Work site and equipment is cleaned and made safe in accordance with established procedures.
		3.3 Final checks are made to verify that the maintenance complies with requirements.
		3.4 Maintenance completion is documented and an appropriate person or persons notified in accordance with established procedures and regulations.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining microbial control of air and water systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ168A

Microbial control

Evidence shall show an understanding of microbial control, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 Legislation and regulatory requirements for microbial control
- T2 Types of air and water systems that require control of harmful microbes.
- T3 Harmful microbes and their effects if left uncontrolled
- T4 Methods of controlling harmful microbes, including regular cleaning/decontamination of effected plant, sample testing and approved treatment.
- T5 Safe handling and application of treatment materials.
- T6 Maintenance
 - Principles and function
 - Systems and terminology
 - Data acquisition
 - plant history cards/files
 - inspection techniques
 - predictive maintenance
 - Maintenance plans
 - Recording methods

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare to find and rectify faults	1.1	OHS procedures for a given work area are identified, identified, obtained and understood
		1.2	OHS risk control measures and procedures in preparation for the work are followed.
		1.3	The nature of the fault is obtained from documentation and/or from work supervisor to establish the scope of work to be undertaken.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|-------------|--|
| | 1.4 | Advice is sought from the work supervisor to ensure the work is coordinated effectively with others. |
| | 1.5 | Sources of materials that may be required for the work are accessed in accordance with established procedures. |
| | 1.6 | Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety |
| 2 | Find faults | |
| | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | The need to test or measure live and operating system is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures |
| | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS and regulatory requirements and procedures |
| | 2.4 | Fault finding is approached methodically drawing on knowledge of refrigeration and air conditioning control systems using measured and calculated values of system and component parameters. |
| | 2.5 | Faults beyond the scope of refrigeration and air conditioning system are identified. |
| | 2.6 | Control system components are dismantled where necessary and parts stored to protect them against loss or damage |
| | 2.7 | Faulty components are rechecked and their fault status and confirmed. |
| | 2.8 | Unexpected situations are dealt with safely and with the approval of an authorised person. |
| | 2.9 | Fault finding activities are carried out without damage to apparatus, circuits, the surrounding |

ELEMENT	PERFORMANCE CRITERIA
	environment or services and using sustainable energy practices.
3 Repair faults	3.1 OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Arrangements are made for appropriately competent and authorised person to rectify faults that are beyond the scope of refrigeration and air conditioning work.
	3.3 Equipment is checked as being isolated where necessary in strict accordance OHS requirements and procedures
	3.4 Materials required to rectify faults are sourced and obtained in accordance with established procedures.
	3.5 Repairs are affected efficiently without damage to other components or apparatus and using sustainable energy principles.
	3.6 Effectiveness of the repair is tested in accordance with established procedures.
	3.7 Apparatus is reassembled, finally tested and prepared for return to customer.
4 Completion and report fault finding and rectification activities	4.1 OHS work completion risk control measures and procedures are followed.
	4.2 Work area is cleaned and made safe in accordance with established procedures.
	4.3 Written justification is made for repairs to circuits/apparatus.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in refrigeration and air conditioning control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ170A

Refrigeration and air conditioning systems controls

Evidence shall show an understanding of refrigeration and air conditioning systems safety and cycling controls, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 Power and control terminology, symbols and diagrams/drawings
- T2 Control systems and components
- T3 Refrigeration and air conditioning system electrical/electronic controls
 - Types, applications, operation, installation/replacement, setting adjustment and testing
 - Refrigerant pressure sensing controls including low and high pressure, oil pressure controls and defrost pressure controls
 - Temperature, humidity, air/water flow and defrost controls
 - Electrical controls, including timers, relays (starting and control), contactors, three phase motor starters
- T4 Refrigeration and air conditioning direct digital controls
 - Types, applications, operation, installation/replacement, setting adjustment and testing
- T5 Refrigeration and air conditioning pneumatic controls
 - Types, applications, operation, installation/replacement, setting adjustment and testing
- T6 Refrigeration and air conditioning process characteristics and control parameters
- T7 System responses to parameter changes
- T8 Finding and rectify control system faults
 - Factors to consider in clarifying the nature of a fault including; initial fault report, confirmation of symptoms of the fault, comparison of symptoms with normal

REQUIRED SKILLS AND KNOWLEDGE

operation

- Effect to cause reasoning — assumptions of possible causes
- Methods for testing assumptions including; visual inspection, sectional testing, split-half tests, component isolation
- Dealing with intermittent faults caused by vibration, shock, changes in temperature and electromagnetic interference.
- Rectifying control system faults including control adjustment, repair and replacement

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material

EVIDENCE GUIDE

carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose and rectify faults in refrigeration and air conditioning control systems as described in 8) and including:
 - A Using methodical fault finding techniques,
 - B Finding faults efficiently,
 - C Rectifying faults without damage
 - D Providing written justification for the rectifications undertaken
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in diagnosing and rectifying faults in refrigeration and air conditioning control systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ110A Select refrigeration and air conditioning piping, accessories and associated controls

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to diagnose and rectify the following faults in at least two refrigeration and air conditioning control systems.

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Control apparatus/component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ171A Resolve problems in refrigerated beverage vending cabinets

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers resolving problems in refrigerated beverage vending cabinets. It encompasses working safely and to standards, applying knowledge of the components and operation of refrigerated beverage vending cabinets, using effective problem solving techniques and documenting solutions.

Application of the Unit

Application of the Unit 4)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage

Prerequisite Unit(s)

2)

single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

Or

UEENEEJ155A Service refrigeration appliances

UEENEEJ154A Find and rectify faults in appliance control systems and devices

UEENEEJ162A Recover, pressure test, evacuate, charge and leak test refrigerants appliances

Prerequisite Unit(s)	2)
	UEENEEJ102A Prepare and connect refrigerant tubing and fittings
	UEENEEJ195A Establish the basic operating conditions of vapour compression systems - appliances and
	UEENEEG006A Solve problems in single and three phase low voltage machines
	UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace
	UEENEEE102A Fabricate, assemble and dismantle utilities industry components
	UEENEEE104A Solve problems in d.c. circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEG101A Solve problems in electromagnetic devices and related circuits
	UEENEEG102A Solve problems in low voltage a.c. circuits
	UEENEEG106A Terminate cables, cords and accessories for low voltage circuits
	or
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEJ103A Establish the basic operating conditions of vapour compression systems
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace
	UEENEEE003B Solve problems in extra-low voltage single path circuits

Prerequisite Unit(s) 2)

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information**Employability Skills** 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1	Prepare to resolve problems in refrigerated beverage vending cabinets	1.1	OHS procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures and procedures in preparation for the work are followed
		1.3	Safety hazards which have not previously been identified are noted and established risk control measures are implemented
		1.4	The nature of the problem is obtained from documentation or from work supervisor to

ELEMENT	PERFORMANCE CRITERIA
2 Resolve problems in refrigerated beverage vending cabinets	establish the scope of work to be undertaken
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
	1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Problems are approached methodically drawing on operational knowledge of refrigerated beverage vending cabinets using observation, measurement, calculations and comparison with normal operating values of system and components
	2.5 Information needed to resolve problems is gathered and evaluated against normal operating parameters.
	<p>Note:</p> <p>Examples of information needed to resolve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters.</p>
2.6 Problems are dealt with safely and with the approval of an authorised person	

ELEMENT**PERFORMANCE CRITERIA**

		2.7	Problems are resolved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices
3	Complete work and document problem resolving activities	3.1	OHS risk control work completion measures and procedures are followed
		3.2	Work site is cleaned and made safe in accordance with established procedures
		3.3	Justification for solutions used to resolve problems is documented
		3.4	Work completion is documented and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and resolving problems in refrigerated beverage vending cabinets.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ171A

Refrigerated beverage vending cabinets

Evidence shall show an understanding of refrigerated beverage vending cabinets, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Types, construction and operation of refrigerated drink vending cabinets encompassing:

- Coin operated mechanism on the refrigerated vending cabinet.
- Electro-mechanical mechanism on the coin operated vending cabinet.
- Electronic mechanism on the coin operated vending cabinet.

T2 Specialised components and features required for the operation of a coin operated refrigerated vending cabinet encompassing:

- Electrical / electronic control circuitry.
- Air distribution and air flow curtains.
- Lighting arrangements.

T3 Installation requirements for a refrigerated coin operated vending cabinet encompassing:

- Location requirements
- Access requirements and avoidance obstruction
- Power supply and electrical service requirements

T4 System operating conditions for a coin operated refrigerated vending cabinet.

T5 Commissioning, service and maintenance procedures of a refrigerated coin operated vending cabinet encompassing:

- Electrical / electronic control devices checks and adjustments.
- Air flow checks and adjustments.
- Mechanical checks and adjustments
- Typical faults

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

EVIDENCE GUIDE

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This competency standard unit covers the recovery of refrigerant, pressure and leak testing, evacuation and refrigerant charging in split air conditioning and heat pump systems. It encompasses working safely and to standards, following regulations and industry practices for handling refrigerants and completing the necessary documentation.

Note:

The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this competency standard unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training and may be used to augment other electrotechnology qualifications at AQF 2 level or higher.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some States/Territories, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.
2. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to recover refrigerants, pressure and leak test, evacuate and charge split systems.	1.1 OHS procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
	1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 The work is appropriately sequenced in accordance with job schedule.
	1.6 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved

ELEMENT

PERFORMANCE CRITERIA

- on the work site.
- 1.7 Refrigerants, lubricants and cleaning materials needed for the work are obtained in accordance with established procedures and checked against job requirements
 - 1.8 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
 - 1.9 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
- 2 Recover refrigerants, pressure and leak test, evacuate and charge split systems.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed
 - 2.2 Checks are carried out to ensure the system or component parts are isolated, when necessary, in strict accordance with OHS requirements and procedures
 - 2.3 Machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures and circuits are isolated and confirmed by appropriately competent personnel
 - 2.4 Refrigerants are removed from a split system safely into suitably labelled containers in accordance with regulatory requirements and industry practices, and any electrical work is referred to an appropriate licensed person
 - 2.5 Precautions are taken to prevent damage to components while pressure testing the system
 - 2.6 Pressure testing is conducted using dry nitrogen at a pressure relative to the refrigerant to be used
 - 2.7 Leaks are located and rectified using testing methods appropriate to the system under test and in accordance with industry practices
 - 2.8 Split system is evacuated to the required level and cleaned the system of all moisture and other containments in accordance with industry practices

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|--|--|
| | 2.9 | A 'Drop test' is used to prove effectiveness of the evacuation in accordance with industry practice using an appropriate electronic vacuum gauge |
| | 2.10 | Components lubricants are checked and maintained in accordance with manufacturer's requirements |
| | 2.11 | Split systems are charged with the appropriate refrigerant in accordance with manufacturer's requirements and industry practices |
| | 2.12 | Problematic situations that arise during the work are dealt with in an appropriate manner |
| | 2.13 | Split systems are pressure and leak tested, evacuated and charged efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices |
| 3 | Complete and report refrigerants recovery, pressure and leak test and evacuate and charge work | |
| | 3.1 | OHS risk control work completion measures and procedures are followed |
| | 3.2 | Work site is cleaned and made safe in accordance with established procedures |
| | 3.3 | Contaminated refrigerant is dealt with in accordance with legislative/regulatory requirements |
| | 3.4 | Completion of the work is documented and an appropriate person or persons notified in accordance with established procedures |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and recovering, pressure and leak testing, evacuating and charging refrigerants split systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ172A Split system basic operating principles, refrigerants and lubricants

Evidence shall show an understanding of refrigerants and lubricants used in split air conditioning and heat pump systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated

T1 The Residential Air Conditioning and Heat Pump Industry and Licensing Requirements

- Brief overview and history of the Australian residential air conditioning/heat pump industry
- Typical applications and equipment
- Overview of the State and federal agencies (environment and heritage, greenhouse office, ARC, OFT etc)
- State and federal licensing requirements
- The ozone protection act
- The ozone layer (function, ozone depleting substances)
- Overview of the Australia and New Zealand refrigerant handling code of practice 2007, Part 2, Systems other than Self-contained low charge systems

T2 Heat

- Matter (atoms, molecules, energy and its different forms)
- Heat energy (definition, unit of measurement)
- Enthalpy (definition, unit of measurement)
- Heat flow (hot to cold)
- Heat transfer
 - methods (conduction, convection, radiation)
 - requirements
 - effects

T3 Temperature and Relative Humidity

REQUIRED SKILLS AND KNOWLEDGE

- Temperature
- Scale types (imperial, metric, absolute) and their units of measurement
- Conversion to/from absolute values
- Temperature difference/change (td, Δt , unit of measurement)
- Relative humidity

T4 Sensible and Latent Heat

- Definition of specific heat capacity, latent heat and sensible heat (including units of measurement)
- Types of latent heat
- Heat calculations

T5 Pressure

- Define
- Scale types (imperial, metric, absolute) and their units of measurement
- Vacuum scales (Pascals, microns)
- Conversion to/from absolute values
- The basic Gas Laws – Boyles, Charles and Daltons (excl combined or general gas law)
- Pressure gauge types and applications (pressure, compound, vacuum, manometer, magnehelic, barometer)
- Hazards and related safe working practices (dangerous system pressures)
- Care and maintenance (ingress of oil and contaminants (dirt), avoiding needle bounce (especially HP) etc)
- Calibration (atmospheric pressure, send to a specialist etc)
- Appropriate and safe methods of use
- Typical locations

T6 Refrigerant conditions

- Saturation temperature
- Saturated liquid / saturated vapour
- Superheated vapour
- Sub-cooled liquid
- Pressure temperature relationships
- P/T charts
- Enthalpy

T7 The Vapour Compression Cycle

- Major system components
- High and low pressure sides
- Basic system operation

T8 Thermometers and relative humidity devices

REQUIRED SKILLS AND KNOWLEDGE

- Thermometer types and applications (digital, stem, dial, max/min, non-contact, data loggers)
- Relative Humidity measurement devices and applications (dry bulb/wet bulb, sling, digital)
- Hazards and related safe working practices (working near rotating machinery - fans, pulleys, belts etc)
- Care and maintenance (bending stems, overheating, removing batteries after use, uncoiling capillary)
- Calibration (boiling water, iced water, send to a specialist etc)
- Appropriate and safe methods of use
- Typical locations on a system
- Fitting temperature and relative humidity instruments

T9 Leak Detectors

- Detector types and applications (electronic, halide, bubble, ultra violet)
- Hazards and related safe working practices (working around rotating machinery, open flame, ultra violet light etc)
- Care and maintenance (delicate electronic equipment, changing sensor tip filters, changing gas cartridges etc)
- Calibration (auto calibrating, send to a specialist etc)
- Leak detection procedures

T10 Service Gauges

Manifold Gauges

- Types (dial gauges or electronic, manifolds with additional vacuum and charging ports & sight glasses)
- Typical uses for service gauges (high & low side pressure readings, charging, evacuating)
- Care and maintenance (oil and contaminants (dirt) in hoses, avoiding needle bounce, changing hose seals)
- Calibration (hoses open to atmosphere, adjusting screw etc)
- Hose shut-off valves and adaptors (access control valves, kwik couplers, etc)

System Access Fittings

- Types (Schrader, service valve, post valve, quick couplers etc)
- Typical applications for each
- Hazards and related safe working practices (oil or liquid spray, keeping clean, leaks etc)
- Care and maintenance (gland nuts loosened/tightened, seal caps fitted, regulations on piercing valves)

Using Service Gauges

- Service gauge manifold hose fitting

REQUIRED SKILLS AND KNOWLEDGE

- Purging
- Pressure readings
- Service gauge manifold hose removal
- Pressure to temperature conversion

T11 Properties of Split Heat Pump Refrigerants

- Types (R22, R407C, R410a, R12 (old units) Hydrocarbons)
- Terms (blend, azeotrope, zeotrope, glide, CFC, HCFC, HFC, HC, bubble point, dew point, critical point, ODP, GWP etc)
- Typical properties of the current refrigerants used in split systems (boiling point, glide, composition (components), comparative latent heat performance etc)

T12 Properties of Split Heat Pump Refrigerant Oils

- Types (mineral, POE, AB) and their applications
- Basic properties (miscibility, dielectric strength and viscosity)
- Typical issues regarding compatibility (neoprene and POE, POE and mineral etc)
- Safe handling (MSDS - POE's, Mineral, AB's - Residual acid's in used oil)

T13 Procedures for Working with Refrigerants

- Contaminants (Non-condensables, moisture, carbon, copper etc), effects of contamination (Acid, motor burnout, oil contamination, seizing, RMD blockage etc) and methods of contamination prevention
- Reclaiming/recovering refrigerants (using recovery pumps)
- Recovery cylinders (suitable types, markings and precautions – Code of Practice)
- Disposing of recovered refrigerants (Code of Practice)
- Pressure testing systems (suitable gases (nitrogen), test pressure etc)
- Purging pipework (illegal in Australia)
- Evacuation of newly installed split systems (vacuum pumps, correct use, 'drop testing')
- Charging refrigerant into a newly installed split system (pre-charged, charging cylinders, electronic scales)
- Detecting refrigerant leaks (electronic, bubbles, halide for R22)
- De-commissioning a split system (recovering refrigerant, isolating in outdoor unit)
- The practice of retrofitting (overview)
- Working with high pressure refrigerants (R410A) and Hydrocarbons (special precautions, tools etc)

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

EVIDENCE GUIDE

competency in this unit

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Determine the basic operating conditions, recover, pressure and leak test, evacuate and charge refrigerants split systems as described in 8) and including:
 - A Selecting and using appropriate measuring devices, materials and equipment correctly
 - B Recording measurements
 - C Using calculation methods accurately
 - D Identifying the conditions of a refrigerant at various locations in the vapour compression system
 - E Documenting operating conditions correctly

EVIDENCE GUIDE

- F Removing and storing refrigerant correctly
- G Conducting pressure testing at the appropriate pressure level and without damaging components
- H Locating and rectifying leaks
- I Evacuating the system to the required standard and using appropriate vacuum measuring instruments
- J Charging the system with the appropriate refrigerant
- K Completing the necessary documentation
- L Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in recovering, pressure and leak testing, evacuating and charging refrigerants split systems.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to testing and charging split systems encompassing the following:

- Determining operating conditions using measurement and basic calculation methods of vapour compression split systems whether used for refrigeration or air conditioning. These conditions include suction and discharge pressures, ambient, evaporator and condensing temperatures, evaporator, and condenser temperature difference.
- Recovering refrigerant from an existing split system including split single head air conditioning and hot water heat pump systems
- Pressure and leak testing a newly installed systems
- Evacuating newly installed systems in preparation for charging with refrigerant
- Charging newly installed systems with refrigerant

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ173A Service and repair microwave ovens

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers maintaining the effective and efficient operation of microwave ovens. It encompasses working safely, applying knowledge of microwave ovens, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing electrical appliance. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ154A Find and rectify faults in appliance control systems and devices

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

Prerequisite Unit(s)**2)**

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

or

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE003B Solve problems in extra-low voltage single path circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to service microwave ovens.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 OHS risk control measures and procedures in preparation for the work are followed
	1.3 The extent of work to be undertaken is determined from service/fault request and/or discussions with appropriate person(s)
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
	1.5 Sources of materials/parts that may be required for the work are established in accordance with established procedures
	1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established

ELEMENT	PERFORMANCE CRITERIA
2 Service microwave ovens	procedures and checked for correct operation and safety
2.1	OHS risk control measures and procedures for carrying out the work are followed
2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
2.3	Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures
2.4	Safety hazards resulting from the defect or fault are documented and risk control measures devised and implemented in consultation with appropriate personnel
2.5	Appliances are tested for efficient operation and components affecting efficiency are inspected for wear or defects in accordance with standards, manufacturer service manuals and industry codes of practice
2.6	Appliance faults and their cause are identified through the application of refrigerated appliances and using measured and calculated values of appliance parameters
2.7	Appliance is dismantled where necessary and parts stored to protect them against loss or damage
2.8	Defective, worn or faulty appliance components are rechecked and their status confirmed
2.9	Replacement parts required to rectify defects/faults are sourced and obtained in accordance with established procedures
2.10	Effectiveness of the repair is tested in accordance with established procedures
2.11	Apparatus is reassembled, finally tested and prepared for return to service

ELEMENT	PERFORMANCE CRITERIA
	2.12 Unexpected situations are dealt with safely and with the approval of an authorised person
	2.13 Servicing activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices
3 Completion and report fault finding and repair activities.	3.1 OHS risk control work completion measures and procedures are followed
	3.2 Work site is cleaned and made safe in accordance with established procedures
	3.3 Service report is completed and verified by an appropriate person in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing microwave ovens.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ173A

Microwave ovens

Evidence shall show an understanding of microwave ovens, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Microwave cooking basics encompassing:

- Properties of microwaves
- Biological effects of microwaves
- Fundamental microwave oven operations

T2 Microwave oven performance encompassing:

- Radiation leakage
- Power output measurement
- Oven leakage safety system
- Magnetron tests and measurements
- Interlocks
- Thermal cut outs and thermostats
- Stirrer cooling and turntable systems

T3 Power control systems encompassing:

- Hazards of microwaves and associated high voltages
- High/low power selection
- Duty cycle control systems
- Basic circuit diagrams
- New microwave oven technology such as inverter microwave ovens

T4 Auto-cook facilities encompassing:

- Temperature control cooking systems
- Humidity sensor cooking systems
- Infrared sensor cooking systems
- Convection microwave oven systems

REQUIRED SKILLS AND KNOWLEDGE

T5 Service, fault finding and repair encompassing:

- Manufacturers' data
- Safety checks
- Operating sequence
- Typical fault symptoms
- Test equipment
- Fault identification
- Fault location using test equipment and service manuals
- Repairs techniques

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

EVIDENCE GUIDE

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Service microwave ovens as described in 8) and including:
 - A Determining the nature of the work from service request
 - B Identifying defective components affecting appliance efficiency
 - C Finding faults efficiently
 - D Rectifying defects/faults effectively
 - E Testing appliance functions effectively
 - F Completing service report accurately
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing microwave ovens.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing microwave ovens with any four of the following defects/faults in electric heating systems in each of two different types of appliance:

- Higher energy use than previously experienced
- Not cold enough.
- Appliance light not working.
- Electric shock received from appliance cabinet.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the safety and legal requirements to handle, use and store hydrocarbon refrigerants. All safety aspects are covered to Australian and International standards. Legal requirements are covered at local, State&National level.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and

Application of the Unit 4)

safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a licence to practice in the workplace. However, practice in this unit is to regulations directly relating to all OHS and AS requirements.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

There are no prerequisite competencies for this unit.

Prerequisite Unit(s) 2)

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work with hydrocarbon refrigerants	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
	1.2 Work area access permits are obtained from appropriate personnel according to established procedures.
	1.3 Preparations for electrical and non-electrical isolation are carried out to prevent creation of hazards from loss of machine/system/process control according to established procedures.

ELEMENT	PERFORMANCE CRITERIA
	1.4 Tools and equipment needed for the work are checked for safety and correct functionality according to established procedures and regulatory requirements.
2 Apply safe working practices to hydrocarbon refrigerants	2.1 Workplace procedures and work instructions for controlling risk are followed accurately.
	2.2 Workplace procedures for dealing with accidents, fires and emergencies are followed according to work procedures and scope of responsibility and competencies.
3 Follow workplace procedures for hazard identification and risk control of hydrocarbon refrigerants	3.1 Hazards are identified and control measures implemented and monitored through active participation in the consultation process with employer and other employees.
	3.2 Hazards in the work area are recognised and reported to appropriate personnel according to established procedures.
	3.3 OHS records of incidents are completed in accordance with regulatory requirements and established procedures.
	3.4 Workplace instructions and training are followed accurately within established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and applying OHS practices in relation to hydrocarbon refrigerants.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ174A Safe working practices for hydrocarbon refrigerants

Evidence shall show an understanding of safe working practices and relevant Standards, Codes and Regulations for hydrocarbon refrigerants to an extent indicated by the following aspects:

T1 Environmental issues

- Ultraviolet light and the Ozone Layer
- The Greenhouse Effect and Global Warming
- Refrigerant categories and basic compositions
- Environmental issues for each category

T2 Hydrocarbon Types and applications

- Introduction to hydrocarbons as a refrigerant
- Types
- Applications
- Properties
- Compatibility

T3 Acts, Regulations and Standards

- OH&S Overview
- Purpose of Acts, Regulations, Codes of Practice, Standards & guidelines
- Duty of care
- Applicable acts, standards and codes
- Record keeping requirements
- Toxicity and flammability groupings

T4 Emergency Procedures & Incident Management

- Workcover
- Hazard Control and Risk Assessment
- Typical emergency response plans

REQUIRED SKILLS AND KNOWLEDGE

T5 First Aid

- Personal protective equipment
- Hydrocarbon exposure
- Asphyxiation and revival techniques

T6 MSDS and HAZCHEM codes

- Types and layout
- Reading MSD sheets
- HAZCHEM codes

T7 Cylinders and Storage

- Ignition sources
- Storage requirements for hydrocarbons
- Typical plant room layouts and requirements
- Maintenance procedures
- Cylinder and system labelling
- Disposal of hydrocarbon refrigerants and lubricating oils

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package..

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace.

EVIDENCE GUIDE

However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - A. Preparing to enter the workplace including, the use of work permits and clearances and isolation permissions.
 - B. Applying work procedures and instructions as they apply to risk control measures.
 - C. Dealing with accidents and emergencies within the scope of responsibility.
 - D. Participation in consultation processes, identifying hazards and implementing and monitoring control measures.
 - E. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

EVIDENCE GUIDE

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in applying specific hydrocarbon OHS practices in the workplace.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

This unit shall be assessed concurrently, as it relates to other units undertaken in a possible skill clusters or qualification.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

- a) Relevant Occupational Health and Safety legislation, regulations and codes of practice related to hazards presented by the use of hydrocarbon refrigerants in refrigeration and air conditioning systems.
- b) Accepted industry work procedures and the specific safety procedures and work instructions related to working with refrigeration and air conditioning systems containing a hydrocarbon refrigerant

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	3
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ175A Service and repair self contained hydrocarbon air conditioning and refrigeration systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers specialised procedures for servicing and repairs to achieve the effective and efficient operation of primarily self contained air conditioning and refrigeration equipment using Hydrocarbon as the refrigerant. It reinforces safe working practice and encompasses applying specialised knowledge of refrigeration principles that apply to Hydrocarbon, following service manuals, testing, locating and rectifying faults and defective components and completing the necessary service documentation.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting,

risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note.

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Prerequisite Unit(s)

2)

-

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ174A Apply safety awareness and legal requirements for hydrocarbon refrigerants

and

UEENEEJ155A Service refrigeration appliances

UEENEEJ054B Find and rectify faults in appliance motors and associated controls

UEENEEJ062B Find and rectify faults in appliance motors and associated controls

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ195A Establish the basic operating conditions of vapour compression systems - appliances

and

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

or

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

Prerequisite Unit(s)

2)

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE003B Solve problems in extra-low voltage single path circuits

or

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration

Prerequisite Unit(s)

2)

systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring
For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Note:

UEENEEJ111A - Those holding a 'Certificate III in Refrigeration and Air Conditioning trade qualification or equivalent' meet the requirements of this unit and its pre-requisite requirements.

UEENEEJ155A - Those holding a 'Certificate III in Appliance Servicing trade qualification or equivalent' meet the requirements of this unit and its pre-requisite requirements.

Employability Skills Information

Employability Skills

3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to service and repair Hydrocarbon refrigeration and air conditioning systems	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.
	1.4 The nature of work is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.6 Sources of materials that may be required for the work are accessed in accordance with established routines and procedures.
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Service and repair Hydrocarbon refrigeration and air conditioning systems.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Measuring system operating parameters is conducted in strict accordance with OHS

ELEMENT

PERFORMANCE CRITERIA

- requirements and established safety procedures
- 2.3 Checks are carried out to ensure the system or component parts are isolated, when necessary in strict accordance OHS requirements and procedures.
 - 2.4 Refrigerant is removed from a system safely in accordance with regulatory requirements and industry practices.
 - 2.5 Precautions are taken to prevent damage to components while pressure testing the system
 - 2.6 Pressure testing is conducted at a pressure compatible with Hydrocarbon and in accordance with standards
 - 2.7 Leaks are located and rectified using testing methods appropriate to the system and in accordance with industry practices
 - 2.8 Oil is removed from an operational Hydrocarbon system in accordance with industry practices
 - 2.9 System is charged safely with Hydrocarbon and compatible lubricants in accordance with industry practices
 - 2.10 Established procedures are used to determine actual and specified range of operating conditions from measured and calculated values as they apply to Hydrocarbon vapour compression systems.
 - 2.11 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
 - 2.12 Unexpected situations are dealt with safely and with the approval of an authorised person.
 - 2.13 Operating conditions are determined without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|---|
| 3 | Complete work and report on servicing and repairing Hydrocarbon refrigeration and air conditioning systems | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | | 3.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | | 3.3 | Contaminated refrigerant and lubricant is dealt with in accordance with legislative/regulatory requirements |
| | | 3.4 | Operation conditions are documented, including identification of any parameter that is not within the specified range for the system. |
| | | 3.5 | Work supervisor is notified of the completion of the work in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining the operating conditions of Hydrocarbon refrigerating systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ175A Self contained Hydrocarbon refrigeration and air conditioning systems

Evidence shall show an understanding of servicing and repair techniques, applying safe working practices and relevant Standards, Codes and Regulations for Hydrocarbon refrigeration systems to an extent indicated by the following aspects:

T1 Hydrocarbon refrigeration systems

- Basic operation system types, applications and design operating conditions
 - Domestic refrigerators
 - Self contained refrigeration cabinets
 - Self contained air conditioners
 - Single head split air conditioners
 - Heat pump water heaters

T2 Operating conditions for hydrocarbon refrigeration systems

- Compressors
 - Functions of the compressor
 - Types, construction and their applications
- Lubrication and lubricators
 - Lubrication methods
 - Safe handling of lubricants
 - Selection of Lubricants
 - Adding and removing oil from Hydrocarbon systems
- Evaporators / Cooling Units
 - Types, construction and applications
 - Evaporator defrost methods and controls
 - Operation and maintenance
- Refrigerant Flow Devices
 - Types, construction and applications

REQUIRED SKILLS AND KNOWLEDGE

- Operation and maintenance
 - Ancillary Components
 - Leak detectors
 - Safety controls
 - Operation and maintenance
- T3 Applicable Standards and Codes
- Hazards associated with Hydrocarbons
 - AS/NZS 1677
 - AS/NZS 1571
 - IIAR Bulletins
 - ANSI/ASHRAE Standards
 - International Standards EN378
- T4 System access tools
- Schraeder valves
 - Piercing valves
 - Process tube adaptors
 - Gauge manifold sets
 - Maintenance
- T5 Access procedures
- Ignition sources
 - Ventilation
 - Gauge manifold hoses
 - System operating values
- T6 Refrigerant removal/recovery and flushing
- Bleed to atmosphere
 - Recovery to a cylinder
 - Burning
 - Flush with inert gas
- T7 Tube joining methods
- Lok-ring
 - Flare joints
 - Silver brazed joints
 - Flux
- T8 Compressor lubricants
- Types
 - Properties
 - Replacing

REQUIRED SKILLS AND KNOWLEDGE

- Disposing

T9 Pressure testing

- Requirements
- Recommended pressures

T10 Evacuation

- Vacuum pumps
- Vacuum measuring devices
- Maintenance
- Recommended depth of vacuum
- Procedure

T11 Charging

- Precautions
- Liquid or vapour charging
- Suitable methods
- Disposing of contaminated refrigerant and oil

T12 Leak detection

- Methods
- Procedure
- Maintenance

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or

EVIDENCE GUIDE

final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

Critical aspects of evidence required to demonstrate competency in this 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Pressure testing, charging/discharging refrigerant/lubricants and determining the operating conditions of self contained Hydrocarbon vapour compression systems.
 - A Selecting appropriate materials and equipment
 - B Obtaining and recording measurements
 - C Removing and storing refrigerant correctly
 - D Conducting pressure testing at the appropriate pressure level and without damaging components
 - E Locating and rectifying leaks
 - F Evacuating the system to the required standard and using appropriate vacuum measuring instruments
 - G Charging the system with the appropriate type and quantity of hydrocarbon refrigerant
 - H Completing the necessary documentation

Critical aspects of evidence required to demonstrate competency in this

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing and repairing as well as determining the operating conditions of Hydrocarbon systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with

9.5)

There are no concurrent assessment recommendations for this unit.

Critical aspects of evidence required to demonstrate competency in this other units

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

The critical aspects of occupational health and safety covered in unit UEENEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining operating conditions, using measurement and basic calculation methods, of primarily self contained Hydrocarbon refrigeration and air conditioning systems.

These systems are confined to those used in the following two Categories of Occupancy described in the Standard EN378-1 Refrigerating systems and heat pumps - Safety and environmental requirements - Part 1: Basic requirements, definitions, classification and selection criteria:

A General Occupancy

B Supervised Occupancy

These systems include domestic refrigerators and freezers; self contained refrigerated cabinets; self contained air conditioning units; single head split air conditioning units; and self contained heat pump water heaters.

It does NOT include systems described in category C Authorised Occupancy. This includes refrigeration and air conditioning equipment installed in plant rooms.

These conditions include suction and discharge pressures, ambient, evaporator and condensing temperatures, evaporator, and condenser temperature difference. Further, this unit must be demonstrated in relation to refrigerant recovery, component replacement, pressure testing, evacuation, charging and leak testing a hydrocarbon system in a safe and environmentally responsible manner.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ176A Install and commission hydrocarbon refrigeration systems, components and associated equipment

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers specialised procedures for the installation and commissioning of refrigeration equipment using Hydrocarbon as the refrigerant. It encompasses working safely and to installation standards matching equipment, location, components and piping to given specifications. After installation, to commission the complete system including: pre commissioning tests, starting the system, ensuring correct refrigerant charge, basic air or water balancing, adjusting components and controls to efficient operation. Completing all necessary installation and commissioning documentation.

Application of the Unit

Application of the Unit

4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken

Application of the Unit 4)

within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ174A Apply safety awareness and legal requirements for hydrocarbon refrigerants

UEENEEJ175A Service and repair self contained hydrocarbon air conditioning and refrigeration systems

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEOP017A Locate and rectify faults in low voltage composite appliances using set procedures

Prerequisite Unit(s)

2)

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

and

UEENEEJ174A Apply safety awareness and legal requirements for hydrocarbon refrigerants

and

Prerequisite Unit(s)

2)

UEENEEJ155A Service refrigeration appliances

UEENEEJ054B Find and rectify faults in appliance motors and associated controls

UEENEEJ062B Find and rectify faults in appliance motors and associated controls

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

Prerequisite Unit(s)

2)

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

Note:

UEENEEJ113A - Those holding a 'Certificate III in Refrigeration and Air Conditioning trade qualification or equivalent" meet the requirements of these units and their pre-requisite requirements.

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills

3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install and commission Hydrocarbon refrigeration systems	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
	1.2 OHS procedures for a given work area are identified, obtained and understood
	1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented
	1.4 The nature and location of work is determined from documentation or appropriate person(s) to establish the scope of work to be undertaken
	1.5 Component, equipment installation and commissioning work is appropriately sequenced in accordance with job schedule
	1.6 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.7 Materials needed to install pipework are obtained in accordance with established procedures and checked against job requirements
	1.8 Tools, equipment and testing devices needed to install and commission the components and equipment are obtained in accordance with established procedures and checked for correct operation and safety
	1.9 System control setting and operating parameters are determined from job specifications and requirements
	1.10 Preparatory work is scheduled to ensure no damage has occurred and complies with requirements

ELEMENT	PERFORMANCE CRITERIA
2 Install Hydrocarbon refrigeration systems.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance with OHS requirements and procedures
	2.3 Components and equipment are installed to comply with technical standards, job specifications and requirements with sufficient access to affect electrical and pipework connections and maintenance
	2.4 Components and equipment are installed straight and square in the required locations and within acceptable tolerances
	2.5 Refrigerant tubing and fittings are silver brazed with the use of dry nitrogen to prevent contamination
	2.6 Problematic situations that arise from the installation of components and equipment are dealt with in an appropriate manner
	2.7 Ongoing checks of the quality of pipework are undertaken, including pressure testing and repair of leaks in accordance with the relevant technical standards and specifications and established procedures
	2.8 Components and equipment are installed efficiently without waste of materials or damage/contamination to apparatus and the surrounding environment or services and using sustainable energy practices
3 Commission Hydrocarbon systems	3.1 Refrigeration system pressure controls, valves and regulators are adjusted to their required settings
	3.2 Testing/measuring devices are used to observe the operation of the refrigeration system and fine adjustments of controls are made as necessary
	3.3 Unexpected situations are dealt with safely and

ELEMENT

PERFORMANCE CRITERIA

- with the approval of an authorised person
- 3.4 Commissioning is conducted efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices
- 4 Complete installation and commissioning work
- 4.1 OHS work completion risk control measures and procedures are followed.
- 4.2 Work site is cleaned and made safe in accordance with established procedures.
- 4.3 Final check of the installed components and equipment is made to verify that it complies to all requirements
- 4.4 'As installed' components and equipment is documented and an appropriate person or persons notified in accordance with established procedures
- 4.5 Results of commissioning are documented including final operating parameters and an appropriate person or persons notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and commissioning refrigeration systems and associated equipment to be charged with a hydrocarbon refrigerant.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ176A Installation and commissioning techniques for Hydrocarbon refrigeration Systems

Evidence shall show an understanding of installation and commissioning techniques for hydrocarbon refrigeration systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Special features for hydrocarbon system

- Compatibility Issues
 - Major components
 - Materials/substances
 - Metering devices
 - Regulating valves
 - Electrical controls
 - Tools
- Refrigerant leakage
- Enclosures

T2 Codes, regulations and standards

- EN378
- AS 1677.1
- ANZ Refrigerant Handling Code of Practice 2007- Part 1

T3 Site Arrangements

- Building services
- Piping requirements for hydrocarbons
- Suitable Equipment locations

T4 Site Safety

- Hazards
- Checklist

REQUIRED SKILLS AND KNOWLEDGE

- Report

T5 System diagrams

- Mechanical layouts
- Electrical circuits

T6 Installation

- Assembly
- Pressure Testing
- Evacuation
- Charging
- Leak Detecting

T7 Commissioning

- Pressure Temperature relationships for hydrocarbon refrigerants
- Evaporator Td's for hydrocarbon systems
- Condenser Td's for hydrocarbon systems
- Cycling control settings
- Safety control settings
- Regulator settings
- Refrigerant metering device settings

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum,

EVIDENCE GUIDE

the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Pressure testing, charging/discharging refrigerant/lubricants and determining the operating conditions of Hydrocarbon vapour compression and liquid recirculation refrigeration system. as described in 8) and including:
 - A Reading and interpreting drawings to pipe work layouts and apparatus locations.
 - B Installing, connecting , securing and aligning components and equipment and ensuring that all equipment and pipe work is compliant with codes and regulations
 - C Pressure testing entire system at the appropriate design test pressures using dry nitrogen
 - D Removing system contaminants and evacuating
 - E Selecting and using appropriate measuring devices correctly
 - F Recording measurements
 - G Using calculation methods accurately

EVIDENCE GUIDE

- H Discharging / charging refrigerant / lubricants and pressure testing the system without damage to components
- I Locating and rectifying leaks
- J Using methodical and efficient commissioning techniques
- K Optimizing system performance and efficiency
- L Identifying the conditions of the refrigerant at various locations in the vapour compression and liquid recirculation system.
- M Completing the necessary installation and commissioning reports and documentation
- N Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to servicing and repairing as well as determining the operating conditions of Hydrocarbon vapour compression and liquid recirculation systems.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to installing and commissioning the major components and associated equipment for at least 2 different types of refrigeration and/or air conditioning systems operating with a hydrocarbon refrigerant.

Major components shall include refrigeration compressors, condensers, condensing units and evaporators.

Associated equipment shall include refrigerant flow controls, cycling controls, safety controls, on-site leak detection equipment, ventilation systems, spark isolation systems and electrical isolation, monitoring and inspection accessories.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the design of refrigeration systems using Hydrocarbon as a refrigerant. It encompasses applying knowledge of complex refrigeration systems, safety and regulatory requirements, developing alternative design schemes based on a design brief and customer requirements and documenting system design.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also

Application of the Unit 4)

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information**1.2) License to practice**

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the characteristics and behaviour of material in an engineering environment.

Pre-Requisites**Prerequisite Unit(s) 2)****2.1) Competencies**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ132A Design commercial refrigeration systems and select components

UEENEEJ174A Apply safety awareness and legal requirements for hydrocarbon refrigerants

Prerequisite Unit(s)**2)**

UEENEEJ129A Establish heat loads for commercial refrigeration and/or air conditioning applications

UEENEEJ165A Evaluate thermodynamic and fluid parameters of refrigeration systems

UEENEEJ127A Establish the thermodynamic parameters of refrigeration and air conditioning systems

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

Prerequisite Unit(s)**2)**

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design Hydrocarbon refrigeration systems	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 The extent and nature of the refrigeration system is determined from design specifications.
	1.3 Safety and other regulatory requirements to which the system shall comply are identified, obtained and understood.
	1.4 Work supervisor or customers are consulted to determine which functions of the system are to be used and the parameter of each and written confirmation sought.
	1.5 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.

ELEMENT	PERFORMANCE CRITERIA
2 Design Hydrocarbon refrigeration systems	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of Hydrocarbon refrigeration system analysis, Hydrocarbon refrigeration system components and piping, performance standards and compliance methods are applied to developing the system design.
	2.3 Safety, functional and budgetary considerations are incorporated in the installation designed.
	2.4 Equipment required for the system is selected in accordance with the design specifications and established requirements.
	2.5 Location of components of the system is documented to ensure correct operation of system functions.
	2.6 System design draft is checked for compliance with the design brief and regulatory requirements.
	2.7 System design is documented for submission to appropriate person(s) for approval.
	2.8 Solutions to unplanned situation are provided consistent with organisation's policy.
3 Obtain approval for engineering computer applications design	3.1 System design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing hydrocarbon refrigerating systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ177A **design**

Hydrocarbon refrigeration systems

Evidence shall show an understanding Hydrocarbon refrigeration systems, components and piping design requirements, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Technical standards, regulations and codes for hydrocarbon refrigeration systems

- Standard philosophy and format
- Standards, regulations and codes that apply to Hydrocarbon refrigeration systems
- Equipment manufactures specifications

T2 Hydrocarbon refrigeration system design requirements

- Applications of hydrocarbon refrigeration systems
 - Domestic refrigerators
 - Commercial refrigeration
- Thermodynamic properties of HC
 - HC phase diagram
 - HC properties tables and chart
- HC Refrigeration cycle
 - P-h diagram representation
 - Expansion, evaporation, compression and condensation processes
- Performance analysis of HC refrigeration systems
 - Refrigerating effect
 - Heat of rejection
 - Heat of compression
 - Coefficient of performance
 - Effects of suction superheating on cycle efficiency

REQUIRED SKILLS AND KNOWLEDGE

- Effects of liquid sub-cooling on cycle efficiency
- Actual HC refrigeration cycles
 - Superheating inside and outside the refrigerated space
 - Liquid-suction heat exchangers
 - Pressure drop in piping due to friction and dynamic losses

T3 Hydrocarbon refrigeration system components and piping

- Design preliminaries
 - System operating parameters
 - Project specifications
 - Equipment selection criteria
 - Selection tables, charts and catalogues
- Materials used with HC refrigerants
- Heat exchanger selection
 - Selection of evaporators
 - Selection of condensers
- Compressor selection
- Liquid expansion devices selection
- System load balance point
- Refrigeration line design and sizing
- Automatic controls
- Safety
 - MSDS of HC refrigerants

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over

EVIDENCE GUIDE

time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design Hydrocarbon refrigeration systems as described in 8) and including:
 - A Understanding required operating functions and parameters from the design specification
 - B Developing the design within the safety, regulatory and functional requirements and budget limitations
 - C Documenting and presenting design effectively
 - D Successfully negotiating design alteration requests
 - E Obtaining approval for final design
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing Hydrocarbon refrigeration systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different hydrocarbon refrigeration systems encompassing only one of each major component (i.e. condenser, compressor and evaporator), associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the safety and legal requirements to handle, use and store Ammonia refrigerant. All safety aspects are covered to Australian and International standards. Legal requirements are covered at local, State&National level.

Application of the Unit

Application of the Unit

4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also

Application of the Unit 4)

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a licence to practice in the workplace. However, practice in this unit is to regulations directly relating to all OH&S and AS requirements.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to work with Ammonia refrigerant

1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures

1.2 Work area access permits are obtained from appropriate personnel according to established procedures.

1.3 Preparations for electrical and non-electrical isolation are carried out to prevent creation of hazards from loss of machine/system/process

ELEMENT

PERFORMANCE CRITERIA

- control according to established procedures.
- 1.4 Tools and equipment needed for the work are checked for safety and correct functionality according to established procedures and regulatory requirements.
- 2 Apply safe working practices to Ammonia refrigerant
- 2.1 Workplace procedures and work instructions for controlling risk are followed accurately.
- 2.2 Workplace procedures for dealing with accidents, fires and emergencies are followed according to work procedures and scope of responsibility and competencies.
- 3 Follow workplace procedures for hazard identification and risk control of Ammonia refrigerant
- 3.1 Hazards are identified and control measures implemented and monitored through active participation in the consultation process with employer and other employees.
- 3.2 Hazards in the work area are recognised and reported to appropriate personnel according to established procedures.
- 3.3 OHS records of incidents are completed in accordance with regulatory requirements and established procedures.
- 3.4 Workplace instructions and training are followed accurately within established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining the operating conditions of both vapour compression and liquid recirculating ammonia refrigerating systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ178A Safe working practices with Ammonia refrigerant

Evidence shall show an understanding of safe working practices and relevant Standards, Codes and Regulations for Ammonia refrigerant an extent indicated by the following aspects:

T1 Introduction to Ammonia Refrigerant

- Properties of Ammonia
- Occupational Health and Safety Legislation
- Physical Effects of Ammonia
- Flammability of Ammonia

T2 Australia Standards

- AS/NZS 1667.1:1998 Refrigerating Systems Refrigerant Classification
- AS/NZS 1667.2:1998 Refrigerating Systems Safety Requirements for Fixed Applications
- AS/NZS 2022: 2003 Anhydrous Ammonia – Storage and Handling

T3 Safety

- Hazards in a refrigeration plant
- Hazards of Ammonia
- Dealing with emergencies
- Personal Protection Equipment
- Draining oil procedure
- Ammonia decanting procedure
- Ammonia charging procedure
- Ammonia pump down procedure
- Ammonia purging procedure
- Confined spaces
- First aid for Ammonia

REQUIRED SKILLS AND KNOWLEDGE

- Chemical Safety
 - Material Safety Data Sheets (MSDS)
- T4 Safety Management and Risk Management
- Operating Procedures
 - Preventative Maintenance Programs
 - Risk Assessment
 - Risk Management Plan
 - Training
 - Safety Audits
 - Record keeping
 - Permits
 - Incident investigation and reporting
 - Duty of care

Evidence Guide

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to hazards presented by the use of Ammonia refrigerant in refrigeration and air conditioning systems.
- Accepted industry work procedures and the specific safety procedures and work instructions related to working with refrigeration and air conditioning systems containing Ammonia refrigerant.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to

RANGE STATEMENT

be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

A Preparing to enter the workplace including, the use

RANGE STATEMENT

- of work permits and clearances and isolation permissions.
- B Applying work procedures and instructions as they apply to risk control measures.
 - C Dealing with accidents and emergencies within the scope of responsibility.
 - D Participation in consultation processes, identifying hazards and implementing and monitoring control measures.
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing and repairing as well as determining the operating conditions of Ammonia vapour compression and liquid recirculation systems.

RANGE STATEMENT

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

This unit shall be assessed concurrently, as it relates to other units undertaken in a possible skill clusters or qualification.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers specialised procedures for servicing and repairs to achieve the effective and efficient operation of refrigeration equipment using Ammonia as the refrigerant. It reinforces safe working practice and encompasses applying specialised knowledge of refrigeration principles that apply to Ammonia, following service manuals, testing, locating and rectifying faults and defective components and completing the necessary service documentation.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note :

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note.

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ178A Apply safety awareness and legal requirements for ammonia refrigerant

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology

Prerequisite Unit(s)**2)**

equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Note:

UEENEEJ111A and UEENEEJ113A - Those holding a 'Certificate III in Refrigeration and Air Conditioning trade qualification or equivalent' meet the requirements of these units and their pre-requisite requirements.

2.2) Literacy and numeracy skills

Prerequisite Unit(s) 2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to service and repair Ammonia refrigeration systems

1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures

1.2 Established OHS risk control measures and procedures are followed in preparation for the work.

1.3 Safety hazards which have not previously been

ELEMENT**PERFORMANCE CRITERIA**

- identified are reported and advice on risk control measures is sought from the work supervisor.
- 1.4 The nature of work is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established routines and procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
- 2 Service and repair Ammonia refrigeration systems.
- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Measuring system operating parameters is conducted in strict accordance with OHS requirements and established safety procedures
- 2.3 Checks are carried out to ensure the system or component parts are isolated, when necessary in strict accordance OHS requirements and procedures.
- 2.4 Refrigerant is removed from a system safely in accordance with regulatory requirements and industry practices.
- 2.5 Precautions are taken to prevent damage to components while pressure testing the system
- 2.6 Pressure testing is conducted at a pressure compatible with Ammonia and in accordance with standards
- 2.7 Leaks are located and rectified using testing methods appropriate to the system and in accordance with industry practices
- 2.8 Oil is removed from an operational Ammonia refrigeration system in accordance with industry

ELEMENT	PERFORMANCE CRITERIA
	practices
	2.9 System is charged safely with Ammonia and compatible lubricants in accordance with industry practices
	2.10 Established procedures are used to determine actual and specified range of operating conditions from measured and calculated values as they apply to Ammonia vapour compression and liquid recirculation systems.
	2.11 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.12 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.13 Operating conditions are determined without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and report on servicing and repairing Ammonia refrigeration systems	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Contaminated refrigerant and lubricant is dealt with in accordance with legislative/regulatory requirements
	3.4 Operation conditions are documented, including identification of any parameter that is not within the specified range for the system.
	3.5 Work supervisor is notified of the completion of the work in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining the operating conditions of Ammonia refrigerating systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

- **KS01-EJ179A Servicing and repair techniques for Ammonia refrigeration systems**
- Evidence shall show an understanding of the Ammonia refrigeration systems, their operating conditions, and servicing and repair techniques, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:
 - T1. Ammonia Refrigeration Systems
 - Vapour Compression Systems
 - Revision of Vapour Compression Cycle
 - Properties of Ammonia
 - Safe Handling of Ammonia
 - Types of Ammonia Systems
 - Direct Expansion Systems
 - Flooded Systems
 - Liquid Recirculation Systems
 - Multi Staged Systems
 - Single Staged Systems
 - Multi Staged Systems
 - Cascade Systems
 - T2. Operating conditions of Ammonia Refrigeration Systems
- Compressors
 - Function of the compressor
 - Types, construction and their applications
 - Capacity control of compressors
 - Factors affecting performance
 - Economiser operation
 - Types of oil separators
 - Methods of oil cooling
 - Operation and maintenance
- Lubrication and lubricants
 - Lubrication methods

REQUIRED SKILLS AND KNOWLEDGE

- Safe handling of lubricants
- Selection of lubricants
- Oil / Ammonia separation
- Adding and removing oil from Ammonia systems
- Methods of oil recovery
- Evaporators / Cooling Units
 - Types of evaporators (air / fluid cooling)
 - Direct contact freezing
 - Secondary refrigerants
 - Evaporator defrost methods and controls
 - Operation and maintenance
- Condensers and high pressure receivers
 - Evaporative condensers
 - Water cooled condensers
 - Air cooled condensers
 - High pressure receivers
 - Operation and maintenance
- Low Pressure Receivers
 - Suction accumulators
 - Intercoolers
 - Liquid refrigerant pumps
 - Liquid level controls
 - Operation and maintenance
- Purging
 - Non condensable gases
 - Moisture: measurement and removal
 - Manual; purging of Ammonia systems
 - Automatic refrigerated purgers
 - Operation and maintenance
- Refrigerant Flow Devices
 - Expansion valves
 - Automatic liquid feed control devices
 - Pressure regulating devices
 - Operation and maintenance
 - Methods of oil recovery
- Ancillary Components
 - Strainers, isolating valves
 - Liquid level indicators

REQUIRED SKILLS AND KNOWLEDGE

- Pressure relief valves
- Ammonia leak detectors
- Safety controls
- Operation and maintenance
- T3 Servicing and repairs
- Servicing Procedures
- Leak detection methods
- Adding refrigerant
- Removing refrigerant

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

EVIDENCE GUIDE

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti-Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

EVIDENCE GUIDE

- Pressure testing, charging/discharging refrigerant/lubricants and determining the operating conditions of Ammonia vapour compression and liquid recirculation refrigeration system.

EVIDENCE GUIDE

- A Selecting and using appropriate measuring devices correctly
- B Recording measurements
- C Using calculation methods accurately
- D Discharging / charging refrigerant / lubricants and pressure testing the system without damage to components
- E Locating and rectifying leaks
- F Decontaminating and evacuating the system
- G Identifying the conditions of the refrigerant (R717) at various locations in the vapour compression and liquid recirculation system.
- H Documenting operating conditions correctly
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing and repairing as well as determining the operating conditions of Ammonia vapour compression and liquid recirculation systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

EVIDENCE GUIDE

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining operating conditions using measurement and basic calculation methods of Ammonia refrigeration system. These conditions include suction and discharge pressures, ambient, evaporator and condensing temperatures, evaporator, and condenser temperature difference. Further, this unit must be demonstrated in relation to charging and discharging Ammonia (R717) system with refrigerant and lubricant in a safe and environmentally responsible manner

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers specialised procedures for the installation and commissioning of refrigeration equipment using Ammonia as the refrigerant. It reinforces safe working practice and encompasses applying specialised knowledge of refrigeration principles that apply to Ammonia, interpreting plans and specifications, project management principles, supervision of installation, commissioning and completing the necessary commissioning documentation.

Application of the Unit

Application of the Unit

4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for

Application of the Unit 4)

concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ178A Apply safety awareness and legal requirements for ammonia refrigerant

UEENEEJ179A Repair and service ammonia refrigeration systems

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

PERFORMANCE CRITERIA

		others.
	1.6	Sources of materials that may be required for the work are accessed in accordance with established routines and procedures.
2	Install and Commission Ammonia refrigeration systems.	
	2.1	Established OHS risk control measures and procedures for carrying out the work are followed. Site establishment carried out
	2.2	Measuring system operating parameters is conducted in strict accordance with OHS requirements and established safety procedures
	2.3	Major components and pipe work is installed in compliance with all applicable Standards, Codes and Regulations
	2.4	Pressure testing is conducted at a pressure compatible with Ammonia and in accordance with applicable standards
	2.5	Precautions are taken to prevent damage to components while pressure testing the system
	2.6	Leaks are located and rectified using testing methods appropriate to the system and in accordance with industry practice
	2.7	System is evacuated in accordance with industry practices
	2.8	System is charged safely with Ammonia and lubricants in accordance with industry practices
	2.9	Pre operational checks are carried out on all operating and safety controls. A "Dry Run" is carried out
	2.10	System is commissioned and all adjustments made to operating and safety controls. Adjustments and setting made to all refrigerant flow metering devices and level control devices.
	2.11	Caution to be taken with temperature reduction of coolrooms and freezers. Temperatures are reduced in accordance with industry practices

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|---|---|
| | 2.12 | Maintenance procedures to be carried out which include inspection and cleaning of all strainers, filters and collection of oil sample for analysis |
| | 2.13 | Training given to personnel responsible for the operation and maintenance of the refrigeration system. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and commissioning refrigeration systems and associated equipment to be charged with a Ammonia refrigerant.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ180A Installation and commissioning techniques for Ammonia refrigeration systems

Evidence shall show an understanding of installation and commissioning techniques for ammonia refrigeration systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Interpret Drawings

- Refrigeration Piping Schematic Diagrams
- Refrigeration Layout Diagrams
- Electrical Control Diagrams
- PLC Control Diagrams

T2 Project Management

- Work Breakdown Structures
- Network Diagrams / Gantt Charts
- Costing
- Dealing with Conflict
- Delegation

T3 Refrigerant Piping

- Pipe Sizing Principles
- Material Compatibility
- Installation Principles
- Welding
- Hydraulic Shock
- Relief Valves
- Pressure Testing/Evacuation

T4 Insulation and Vapour Barrier

- Insulation Materials

REQUIRED SKILLS AND KNOWLEDGE

- Vapour barriers

T5 Coolroom and Freezer Construction

- Construction Materials
- Construction Methods
- Underfloor heating
- Defrost Methods
- Commissioning Procedures

T6 Refrigeration Control System Testing and Adjustment

- Refrigerant Level Controls
- Refrigerant Pressure Controls
- Temperature Controls
- Flow Controls
- Defrost methods and controls
- Central PLC System

T7 Testing and Commissioning

- Compressors
- Evaporative condensers
- Water cooled condensers
- Air cooled condensers
- High pressure receivers
- Evaporators (air / fluid cooling)
- Direct contact freezing
- Secondary refrigerants
- Start up and Shut Down Procedures

T8 Report on the install and commissioning of Ammonia refrigeration systems

- Operating conditions are recorded
- Documentation marked up “As Installed”

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment

EVIDENCE GUIDE

Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence must

EVIDENCE GUIDE

also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Pressure testing, charging/discharging refrigerant/lubricants and determining the operating conditions of Ammonia vapour compression and liquid recirculation refrigeration system. as described in 8) and including:
 - A Reading and interpreting drawings to pipe work layouts and apparatus locations.
 - B Installing, connecting, securing and aligning components and equipment and ensuring that all equipment and pipe work is compliant with codes and regulations
 - C Pressure testing entire system at the appropriate design test pressures using dry nitrogen
 - D Removing system contaminants and evacuating

EVIDENCE GUIDE

- E Selecting and using appropriate measuring devices correctly
- F Recording measurements
- G Using calculation methods accurately
- H Discharging / charging refrigerant / lubricants and pressure testing the system without damage to components
- I Locating and rectifying leaks
- J Using methodical and efficient commissioning techniques
- K Optimizing system performance and efficiency
- L Identifying the conditions of the refrigerant (R717) at various locations in the vapour compression and liquid recirculation system.
- M Documenting operating conditions correctly
- N Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to servicing and repairing as well as determining the operating conditions of Ammonia vapour compression and liquid recirculation systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining operating conditions using measurement and basic calculation methods of Ammonia refrigeration system. These conditions include suction and discharge pressures, ambient, evaporator and condensing temperatures, evaporator, and condenser temperature difference, critical point of Ammonia (R717). Further, this unit must be demonstrated in relation to charging and discharging an Ammonia (R717) system with refrigerant and lubricant in a safe and environmentally responsible manner.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the design of refrigeration systems using ammonia as a refrigerant. It encompasses design skills including overall systems design, selection of components and definition of control logic.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

Application of the Unit 4)

training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information**1.2) License to practice**

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the characteristics and behaviour of material in an engineering environment.

Pre-Requisites**Prerequisite Unit(s) 2)****2.1) Competencies**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ178A Apply safety awareness and legal requirements for ammonia refrigerant.

UEENEEJ132A Design commercial refrigeration systems and select components

Prerequisite Unit(s)**2)**

UEENEEJ129A Establish heat loads for commercial refrigeration and/or air conditioning applications

UEENEEJ165A: Evaluate thermodynamic and fluid parameters of refrigeration systems

UEENEEJ127A Establish the thermodynamic parameters of refrigeration and air conditioning systems

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

Prerequisite Unit(s)**2)**

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design ammonia refrigeration systems	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 The extent and nature of the refrigeration system is determined from design specifications.
	1.3 Safety and other regulatory requirements to which the system shall comply are identified, obtained and understood.
	1.4 Work supervisor or customers are consulted to determine which functions of the system are to be used and the parameter of each and written confirmation sought.
	1.5 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.

ELEMENT	PERFORMANCE CRITERIA
2 Design ammonia refrigeration systems	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of ammonia refrigeration system analysis, ammonia refrigeration system components and piping, performance standards and compliance methods are applied to developing the system design.
	2.3 Safety, functional and budgetary considerations are incorporated in the installation designed.
	2.4 Equipment required for the system is selected in accordance with the design specifications and established requirements.
	2.5 Location of components of the system is documented to ensure correct operation of system functions.
	2.6 System design draft is checked for compliance with the design brief and regulatory requirements.
	2.7 System design is documented for submission to appropriate person(s) for approval.
	2.8 Solutions to unplanned situation are provided consistent with organisation's policy.
3 Obtain approval for engineering computer applications design	3.1 System design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and designing single-stage and/or multi-stage ammonia refrigerating systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ181A Ammonia refrigeration system design

Evidence shall show an understanding of Ammonia refrigeration systems, components and piping design requirements, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Technical Standards, Codes and Regulations

- Environmental and safety considerations in the use and disposal of ammonia refrigerant
 - Toxicity of ammonia, the effects on human health and the legislative limitations imposed on ammonia refrigerant as a result
 - Flammability of ammonia, concentration, LEL
 - Environmental effects
 - Safe disposal
 - MSDS samples
 - Registration requirements for transport and on-site use
 - Relationship between ammonia system refrigerant charge and Dangerous Goods Storage regulations
 - Engine ventilation requirements and determination of ventilation rates
 - Scrubbers for elimination of the harmful effects of ammonia

T2 Ammonia refrigeration system design requirements

- Applications of refrigerant ammonia (NH₃) in industrial refrigeration
 - Introduction to industrial ammonia refrigeration applications and systems
 - Applications in Industrial Refrigeration: Cool and cold storage, food processing, beverage manufacturing plants, fertilizer plants, second compression stage of CO₂ systems
 - Application in environment control and air conditioning: Large scale reticulated water/secondary refrigerant systems
 - Advantages and disadvantages of ammonia refrigerant compared with other

REQUIRED SKILLS AND KNOWLEDGE

natural and synthetic refrigerants

- Properties, application and limitations of ammonia refrigerant
 - General classification of ammonia refrigerant according to AS 1677 Refrigerating Systems
 - Common contaminants in ammonia refrigeration systems, water, oil, non-condensable and the effects of same on cycle efficiency and system wear
 - Refrigeration machine oils soluble in ammonia, oil type, applications, reactions with water
 - Thermal and transport properties of ammonia in comparison with other natural and synthetic refrigerants including the behaviour in a vapour compression cycle
- Application concepts and principles
 - Single stage vapour compression cycles with dry expansion refrigerant feed
 - Single and dual stage vapour compression cycles with liquid overfeed
 - Single stage vapour compression cycles with screw compressors and liquid overfeed
 - Cascade NH₃/CO₂ systems with dry expansion and liquid overfeed
 - Single and dual stage vapour compression cycles with gravity flooded refrigerant feed
 - Single and dual stage vapour compression cycles with NH₃ used as a volatile secondary refrigerant
 - Dual stage vapour compression cycles with multiple (>2) saturation temperature levels
 - Automatic defrost principles including off-cycle air defrost, ambient air defrost, hot gas defrost, electric defrost and water defrost
 - Selection and sizing of ammonia pumps for liquid overfeed systems
 - Selection and sizing of high pressure and low pressure vessels
 - Refrigerant pipe sizing using Ammonia refrigerant
 - Selection of suitable refrigerant oil

T3 Ammonia refrigeration system components and piping

- Corrosion and Material selection
 - Materials compatibility table
 - Thermal and other properties of materials in use
 - Pipe material and jointing methods/materials
 - Compressors
 - Pumps, impellers and seals
 - Isolation and control valves
 - Heat exchangers

REQUIRED SKILLS AND KNOWLEDGE

- Pipe and insulation materials, pipe stresses and pipe suspension methods
 - Mild steel pipe
 - Stainless steel pipe
 - Sharpy tested pipe
 - Post-installation insulation (in situ foaming, formed insulation, closed cell flexible insulation)
 - Pre-insulated pipe material
 - Vapour barrier – importance and maintenance
- Heat exchangers
 - Finned air coolers or evaporators - induced draught, forced draught, stainless steel/aluminium, mild steel galvanized, all aluminium, stainless steel/AlMg3, all stainless steel; description of what materials are used where and for what reason; various refrigerant feed methods including advantages/disadvantages i.e. top feed, bottom feed, vertical up flow/down flow of air; fin spacing, fin thickness; impact of geometry on fluid pressure drops
 - Condensers – evaporative, air cooled, air cooled adiabatically assisted, water cooled shell and tube, water cooled plate/plate, water cooled plate and shell, cascade shell and tube, cascade plate/plate, cascade plate and shell; material selection for condensers, importance of discharge temperature for condenser design
 - Cooling towers
 - Intercoolers and economizers of the closed type, sizing of liquid subcooling coils and tube bundles
 - Liquid coolers or evaporators – plate/plate, plate/shell, shell and tube; material selections, refrigerant feed methods, oil management
 - Screw compressor oil coolers – plate/plate type, shell and tube type, water cooled, refrigerant cooled, surface enhancement options
 - Heat recovery – shell and tube de-superheaters, plate/plate de-superheaters, heat recovery condensers of various types
- System control and monitoring
 - Compressor capacity control – pressure and temperature signals
 - Room temperature and humidity control – understanding the principle of cooling and re-heating air streams to control absolute moisture contents
 - Control of condensers – optimization of overall plant C.O.P.
 - Floating condensing pressures
 - Control of fluid temperatures within the system – oil, secondary refrigerants, subcooling
 - Control of flows – thermostatic expansion valves, low pressure floats, high pressure floats, motorized valves, electronic expansion valves, hand regulating valves, oil return systems between compressor oil separators and compressors

REQUIRED SKILLS AND KNOWLEDGE

- Pressure controllers - evaporating pressure controllers, thermostatic controllers, hot gas bypass valves, crankcase pressure regulators, overflow valves, NH₃ pump pressure control, flow controllers, defrost pressure controllers
- Defrost control
- PLC control systems
- SCADA systems
- Water treatment and desiccant dehumidifiers
 - Condenser water treatment – purpose and legislative requirement
 - Treatment of secondary refrigerant loops including monitoring
 - Desiccant dehumidifiers and their role in infiltration minimization, defrost control and energy savings
- Equipment Selection
 - Use computer software and manufacturers data to select major components of an Ammonia refrigeration plant

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

EVIDENCE GUIDE

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design ammonia refrigeration systems as described in 8) and including:
 - A Understanding required operating functions and parameters from the design specification
 - B Developing the design within the safety, regulatory and functional requirements and budget limitations
 - C Documenting and presenting design effectively
 - D Successfully negotiating design alteration requests
 - E Obtaining approval for final design
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing ammonia refrigeration systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing ammonia refrigeration systems in any of the following:

- In relation to at least two of the following types of (2 single-stage or 2 multi-stage or 1 single-stage and 1 multi-stage) ammonia refrigeration systems encompassing major components (i.e. condenser, compressors, evaporator, and flash chamber/flash intercooler), associated components and controls and on at least two occasions:

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ182A Repair and service secondary refrigeration systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers maintaining the effective and efficient operation of refrigeration equipment using non phase changing secondary refrigerant systems. It reinforces safe working practice, utilises service manuals, encompasses applying specialised knowledge of refrigeration principles to test and perform maintenance operations to these systems and to locate defective components and repair faults, completing reports on service and performance outcomes.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for

Application of the Unit 4)

concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note.

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology

Prerequisite Unit(s)	2) equipment UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work UEENEEJ102A Prepare and connect refrigerant tubing and fittings UEENEEJ103A Establish the basic operating conditions of vapour compression systems UEENEEJ104A Establish the basic operating conditions of air conditioning systems UEENEEJ106A Install refrigerant pipe work, flow controls and accessories UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants UEENEEJ110A Select refrigerant piping, accessories and associated controls UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems UEENEEJ194A Solve problems in low voltage refrigeration circuits UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures
-----------------------------	---

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Note:

UEENEEJ111A and UEENEEJ113A - Those holding a 'Certificate III in Refrigeration and Air Conditioning trade qualification or equivalent" meet the requirements of these units and their pre-requisite requirements.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to service and repair secondary refrigeration systems.	1.1 The type of secondary refrigeration system, components and operation are understood.
	1.2 OHS procedures are identified, MSDS are obtained and understood, risk control measures are followed, PPE worn.
	1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented.
	1.4 The extent of faults is determined from reports, other documentation, observation and from discussion with appropriate personnel.
	1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|------------------------------------|---|
| | 1.6 | Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety |
| 2 | Carry out maintenance requirements | |
| | 2.1 | OHS requirements, regulation, workplace procedures and risk control measures and are followed. |
| | 2.2 | Components are checked as being isolated, where necessary, in strict accordance OHS requirements and procedures. |
| | 2.3 | Maintenance tests are performed on the primary cooling source, operating pressures, operating current, refrigerant charge, secondary flow rates, condenser cooling system, document results including any systems faults or non compliance to operational specifications. |
| | 2.4 | Perform operational maintenance tests on the secondary refrigerant pumping / circulation devices, recording pressure and flow rates, document results, including faults or non compliance to system specification. |
| | 2.5 | Use test kit and follow approved OH&S procedure including PPE, check the chemical integrity (dilution rate, anti bacterial and anti corrosion rates) of the secondary refrigerant, document result or any non compliance. |
| | 2.6 | Secondary refrigerant pipework checked for leaks, insulation checked for soundness and pipework stability. |
| | 2.7 | System components evaporators, blowers, other heat exchangers, heat recovery or defrost systems are checked for correct operation and cleanliness. |
| | 2.8 | Test the control system operation, including safety controls, follow all OH&S guidelines, document results including any faults or non conformity to system specification. |

ELEMENT	PERFORMANCE CRITERIA
3 Repair secondary refrigeration systems.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to solve machine problems is documented.
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.
	3.5 Perform any required repairs to systems components to achieve compliance to design operation and manufactures recommendation for effective operation.
	3.6 Adjust control system as required to achieve compliance to design operation and manufactures recommendation, for effective operation.
	3.7 Record flows, pressures and temperatures obtained before and after repair and compare to specifications, implementing contingency measures where required, to ensure compliance to design operation and manufactures recommendation for effective operation.
4 Complete reports on maintenance and repair activities	4.1 Work completed safely, compliance is maintained with OH&S risk control measures.
	4.2 Work area is cleaned and made safe in accordance with established workplace procedures and practices.
	4.3 Report is written for service / maintenance and repair activities on secondary refrigeration system, non compliance after repair is reported to appropriate person.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in single and three phase low voltage machines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ182A Service and repair secondary refrigeration systems

Evidence shall show an understanding the secondary refrigeration systems, components, maintenance service and repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 Secondary refrigeration systems
- Introduction to secondary refrigeration systems
 - Safety
 - Basic operation
 - Typical applications
 - Safety in handling Secondary Refrigerants
 - Types of secondary Refrigerants
 - Need for anti bacterial and corrosion inhibitor use
 - Use of PPE (Personal Protective Equipment)
 - Major components location, purpose and operation
 - Safety
 - Major components Operation
 - Pipe work and insulation
 - Pumps
 - Cooling coils
 - Low temperature defrost systems
 - Heat recovery coils
 - Control system, pressure temperature, and safety
 - Control, balance and operational valves
- T2 Service and repair secondary refrigeration systems
- Carry out repairs to secondary refrigerant systems.

REQUIRED SKILLS AND KNOWLEDGE

- Safety
- Appropriate personnel contacted before isolation repairs to pumps
- Additions required to maintain chemical integrity of refrigerant
- Repairs to cooling coils/ freezing coils
- Repair system leaks
- Repair pipework or insulation
- Repair / replace defective control valves
- Repair / replace defective control system component
- Refrigerant disposal EPA requirements
- Complete report on repair activities
- Tools and equipment for repair work
- Applicable Standards and Codes

T3 Maintenance procedures for secondary refrigeration systems

- Maintenance requirements of secondary refrigeration systems.
 - Safety
 - Operation of primary cooling source
 - Tool and equipment
 - Operation of pumps
 - Chemical integrity of refrigerant
 - Cooling coils/ freezing coils operation
 - Leak detection additives
 - Leak test system
 - Pipework and insulation check
 - Control valve test
 - Control system check
- Complete report on maintenance activities
- Tools and equipment for maintenance work
- Applicable Standards and Codes

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction

EVIDENCE GUIDE

with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also

EVIDENCE GUIDE

comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

Service and repair secondary refrigeration systems as described in 8) and including:

- A Applying logical diagnostic methods
- B Using fault scenarios to test the cause of system faults
- C Identifying faults and competency needed to rectify them
- D Rectifying faults in system controls
- E Verifying that the system operates correctly
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in Service and repair secondary refrigeration systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to service and repair including all of the following

secondary refrigeration systems, incorporating major components, primary chillers and circuits, secondary piping circuits, pumps, defrost systems, heat recovery systems, control systems and other associated secondary refrigeration components

This unit must be demonstrated in relation to service and repair in the following secondary refrigeration systems and components:

- Evaporators/cooling coils, forced, natural draft,
- Refrigerant flow controls,
- Refrigerant piping and accessories,
- Cycling controls,
- Safety controls
- Defrost controls,
- Solenoid valves and associated piping,
- Heat recovery systems,
- Motors
- Pumps, positive displacement and centrifugal,
- Piping, insulation and associated equipment, air purgers.
- Safe handling and testing of glycol and other secondary fluids.

All of the following apparatus:

- Chilled water systems, (primary system)
- Ice bank systems,

All of the following systems

- cool rooms
- freezer rooms
- merchandising and display cabinets
- other commercial or industrial applications.

Generic terms used throughout this Vocational Standard shall be regarded as part of the

RANGE STATEMENT

Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the design of secondary refrigeration systems. It encompasses design skills including overall systems design, selection of components and definition of control logic.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

Application of the Unit 4)

training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information**1.2) License to practice**

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the characteristics and behaviour of material in an engineering environment.

Pre-Requisites**Prerequisite Unit(s) 2)****2.1) Competencies**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ132A Design commercial refrigeration systems and select components

UEENEEJ129A Establish heat loads for commercial refrigeration and/or air conditioning applications

UEENEEJ165A: Evaluate thermodynamic and fluid

Prerequisite Unit(s)

2)

parameters of refrigeration systems

UEENEEJ127A Establish the thermodynamic parameters of refrigeration and air conditioning systems

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and

Prerequisite Unit(s)**2)**

associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design secondary refrigeration systems	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 The extent and nature of the refrigeration system is determined from design specifications.
	1.3 Safety and other regulatory requirements to which the system shall comply are identified, obtained and understood.
	1.4 Work supervisor or customers are consulted to determine which functions of the system are to be used and the parameter of each and written confirmation sought.
	1.5 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.

ELEMENT	PERFORMANCE CRITERIA
2 Design secondary refrigeration systems	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of secondary refrigeration system analysis, secondary refrigeration system components and piping, performance standards and compliance methods are applied to developing the system design.
	2.3 Safety, functional and budgetary considerations are incorporated in the installation designed.
	2.4 Equipment required for the system is selected in accordance with the design specifications and established requirements.
	2.5 Location of components of the system is documented to ensure correct operation of system functions.
	2.6 System design draft is checked for compliance with the design brief and regulatory requirements.
	2.7 System design is documented for submission to appropriate person(s) for approval.
	2.8 Solutions to unplanned situation are provided consistent with organisation's policy.
3 Obtain approval for engineering computer applications design	3.1 System design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing multi-stage cascade and/or liquid recirculation secondary refrigeration systems. All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ183A Secondary refrigeration system design

Evidence shall show an understanding of secondary refrigeration system, components and piping design, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Technical standards, regulations and codes for secondary refrigeration systems

- Environmental and safety considerations in the use and disposal of secondary refrigerants
 - Toxicity and food compatibility
 - Flammability
 - Environmental effects
 - Safe disposal
 - MSDS samples
 - Registration requirements for transport and on-site use

T2 Secondary refrigeration systems design requirements

- Applications of secondary refrigeration systems in refrigeration
 - Introduction into Secondary Refrigeration
 - Applications in Industrial Refrigeration: Cold storage, food processing, climatic test chamber
 - Application in Commercial Refrigeration: Supermarkets, Small commercial systems
 - Advantages and disadvantages of secondary refrigerants over the direct use of primary refrigerants
- Properties, application and limitations of available secondary refrigerants
 - General classification of secondary refrigerant types – single phase, volatile, phase change
 - General types of single phase secondary refrigerants available: Glycols,

REQUIRED SKILLS AND KNOWLEDGE

Alcohols, Brines, Hydrocarbons, Silicone oils, Water

- Common types of volatile and phase change secondary refrigerants available: CO₂, Ice slurries
- Thermal and transport properties of most widely used single phase secondary refrigerants (MEG, PG, Ethyl Alcohol, CaCl₂, Potassium brines)
- Pump selection for viscous fluids
- Application concepts and principles
 - Main and loop circuits, use of variable speed pumps and overflow valves
 - Buffer and storage tanks, benefits and disadvantages
 - Loop temperature control and loop pump selection
 - Control valve options: Regulating and on/off, 2-way and 3-way, mixing and diverting
 - Expansion and contraction of components, compensation for pipe expansion, effect of pipe pre-insulation
 - Expansion and contraction of secondary refrigerant, use of membrane expansion tanks versus open expansion tank
 - Air purging

T3 Secondary refrigeration system components and piping

- Corrosion and Material selection
 - Materials compatibility table
 - Thermal and other properties of materials in use
 - Pipe material and jointing methods/materials
 - Pumps, impellers and seals
 - Isolation and control valves
 - Heat exchangers
- Pipe and insulation materials
 - Metal pipe
 - Plastic pipe
 - Post-installation insulation (in situ foaming, formed insulation, closed cell flexible insulation)
 - Pre-insulated pipe material
 - Vapour barrier – importance and maintenance
- Heat exchangers
 - Plate heat exchangers, brazed, welded, semi-welded, gasketed. Design considerations in conjunction with primary refrigerant, flooded, direct expansion, pump circulated primary refrigerant
 - Shell & tube and Plate & shell heat exchangers
 - Fan coil units
- System control

REQUIRED SKILLS AND KNOWLEDGE

- Primary pump speed and staging control
- Maintenance of minimum flow and control valve pressure head
- Overflow valves
- Secondary loop temperature control
- Room humidity and temperature control with fan-coil units

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

EVIDENCE GUIDE

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design secondary refrigeration systems as described in 8) and including:
 - A Understanding required operating functions and parameters from the design specification
 - B Developing the design within the safety, regulatory and functional requirements and budget limitations
 - C Documenting and presenting design effectively
 - D Successfully negotiating design alteration requests
 - E Obtaining approval for final design
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing secondary refrigeration systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different (2 multi-stage cascade or 2 liquid recirculation or 1 multi-stage and 1 liquid recirculation) secondary refrigeration systems encompassing major components (i.e. heat exchanger, condenser, compressor, accumulator, and pump), associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ184A Apply safety awareness and legal requirements for carbon dioxide refrigerant

Modification History

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the safety and legal requirements to handle, use and store hydrocarbon refrigerants. All safety aspects are covered to Australian and International standards. Legal requirements are covered at local, State&National level.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also

Application of the Unit 4)

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a licence to practice in the workplace. However, practice in this unit is to regulations directly relating to all OH&S and AS requirements.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Prerequisite Unit(s) 2)

There are no prerequisite competencies for this unit.

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to work with carbon dioxide refrigerant	1.1	OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
	1.2	Work area access permits are obtained from appropriate personnel according to established procedures.
	1.3	Preparations for electrical and non-electrical isolation are carried out to prevent creation of hazards from loss of machine/system/process

ELEMENT	PERFORMANCE CRITERIA
	control according to established procedures.
	1.4 Tools and equipment needed for the work are checked for safety and correct functionality according to established procedures and regulatory requirements.
2 Apply safe working practices in using carbon dioxide refrigerant	2.1 Workplace procedures and work instructions for controlling risk are followed accurately.
	2.2 Workplace procedures for dealing with accidents, fires and emergencies are followed according to work procedures and scope of responsibility and competencies.
3 Follow workplace procedures for hazard identification and risk control of carbon dioxide refrigerant	3.1 Hazards are identified and control measures implemented and monitored through active participation in the consultation process with employer and other employees.
	3.2 Hazards in the work area are recognised and reported to appropriate personnel according to established procedures.
	3.3 OHS records of incidents are completed in accordance with regulatory requirements and established procedures.
	3.4 Workplace instructions and training are followed accurately within established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and applying OHS practices in relation to hydrocarbon refrigerants.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ184 Safe working practices with carbon dioxide refrigerant

A

Evidence shall show an understanding of safe working practices with carbon dioxide refrigerant and relevant Standards, Codes and Regulations an extent indicated by the following aspects:

T1 Introduction to Carbon Dioxide refrigerant

- Refrigerants and CFC/HFC phase out
- Introduction to Carbon Dioxide – CO₂
- Benefits of using Carbon Dioxide as a Refrigerant (R744)

T2 Introduction to HAZCHEM Codes and Material Safety Data Sheets (MSDS)

- Classification of Dangerous Goods
- HAZCHEM CODE
- Refrigerant 2RE Hazchem Codes
- UN (United Nations) Number
- Material Safety Data Sheets (MSDS)
- Personal Protection Equipment (PPE)

REQUIRED SKILLS AND KNOWLEDGE

T3 Carbon Dioxide Plant Safety

- Carbon Dioxide CO2 R744 Detectors
 - Appropriate Type
 - Care ,Maintenance and Installation
- Cylinder Regulators CO2
 - All currently available regulators provide vapour feed only
 - Pressure readings (bottle and line)
- Refrigerant Cylinders CO2
- Refrigerant conditions
 - Hazards and related safe working practices (dangerous system pressures)
 - Pressure to temperature conversion (Saturated P/T is only between 430 kPa and 4399kPa)
- Carbon Dioxide Relief Valves AS1894-1997

T4 Emergency Management

- Planning for emergencies
- The emergency plan
- Risk Assessment

T5 First Aid for CO2 Exposure

- Type of exposure
 - Acute
 - Chronic
 - Swallowed
 - Eye
 - Skin
 - Inhaled
- Carbon Dioxide CO2 R744 is a narcotic and an asphyxiant in large concentrations in air. Concentrations above 10% in air may lead to death very quickly.
- First Aid Facilities
 - Ensure plenty of drinking water
 - Safety shower
 - Eye wash station eye wash bottle available
 - Oxygen for resuscitation
- Always seek urgent medical attention when an incident occurs with Carbon Dioxide CO2 R744 refrigerant.
- DRABC – steps or procedures that must be carried out if a first aid person or emergency personnel come across a person who is unconscious

REQUIRED SKILLS AND KNOWLEDGE

- SCBA – Self contained breathing apparatus. Compressed air comes in bottles strapped to the user’s body. Note all personnel who may be required to use SCBA type equipment require specialised training

T6 Applicable Standards and Codes

- Hazards associated with Carbon Dioxide (MSDS)
- AS1894 – 1997
- New South Wales OH&S Act 2000 No40
- Storage and handling of workplace Dangerous Goods National Code of Practice (NOHSC:2017 – 2001)
- Dangerous Goods Act
- AS1940-2004 The storage and handling of flammable and combustible liquids
- AS/NZS 1677
- AS/NZS 1571
- IIR Bulletins
- ANSI/ASHRAE Standards
- IOR Safety code for Refrigerating Systems utilising Carbon Dioxide

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package..

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that,

EVIDENCE GUIDE

in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - A Preparing to enter the workplace including, the use of work permits and clearances and isolation permissions.
 - B Applying work procedures and instructions as they apply to risk control measures.
 - C Dealing with accidents and emergencies within the scope of responsibility.
 - D Participation in consultation processes, identifying hazards and implementing and monitoring control measures.
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in applying specific hydrocarbon OHS practices in the workplace.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent Assessment and relationship with other units

9.5)

This unit shall be assessed concurrently, as it relates to other units undertaken in a possible skill clusters or qualification.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

- a) Relevant Occupational Health and Safety legislation, regulations and codes of practice related to hazards presented by the use of carbon dioxide refrigerant in refrigeration and air conditioning systems.
- b) Accepted industry work procedures and the specific safety procedures and work instructions related to working with refrigeration and air conditioning systems containing a carbon dioxide refrigerant.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers specialised procedures for servicing and repairs to achieve the effective and efficient operation of refrigeration equipment using carbon dioxide (CO₂) as a refrigerant excluding self contained systems. It reinforces safe working practice and encompasses applying specialised knowledge of refrigeration principles that apply to carbon dioxide, following service manuals, testing, locating and rectifying faults and defective components and completing the necessary service documentation.

Application of the Unit

Application of the Unit

4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice

Application of the Unit 4)

(1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below). Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note.

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ184A Apply safety awareness and legal requirements for carbon dioxide refrigerant

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage

Prerequisite Unit(s)

2)

single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Note:

UEENEEJ111A and UEENEEJ113A - Those holding a 'Certificate III in Refrigeration and Air Conditioning trade qualification or equivalent" meet the requirements of these

Prerequisite Unit(s) 2)

units and their pre-requisite requirements.

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to service and repair carbon dioxide refrigeration systems

1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures

1.2 Established OHS risk control measures and procedures are followed in preparation for the

ELEMENT	PERFORMANCE CRITERIA
	work.
	1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.
	1.4 The nature of work is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.6 Sources of materials that may be required for the work are accessed in accordance with established routines and procedures.
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Service and repair carbon dioxide refrigeration systems.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Measuring system operating parameters is conducted in strict accordance with OHS requirements and established safety procedures
	2.3 Checks are carried out to ensure the system or component parts are isolated, when necessary in strict accordance OHS requirements and procedures.
	2.4 Refrigerant is removed from a system safely in accordance with regulatory requirements and industry practices.
	2.5 Precautions are taken to prevent damage to components while pressure testing the system
	2.6 Pressure testing is conducted at a pressure compatible with carbon dioxide and in accordance with standards
	2.7 Leaks are located and rectified using testing methods appropriate to the system and in

ELEMENT	PERFORMANCE CRITERIA
	accordance with industry practices
2.8	System is evacuated to the required level and cleaned of all moisture and other contaminants in accordance with industry practices
2.9	System is charged safely with refrigerant grade carbon dioxide and compatible lubricants in accordance with industry practices
2.10	Established procedures are used to determine actual and specified range of operating conditions from measured and calculated values as they apply to sub critical carbon dioxide vapour compression and liquid recirculation/cascade systems.
2.11	Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
2.12	Unexpected situations are dealt with safely and with the approval of an authorised person.
2.13	Operating conditions are determined without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and report on servicing and repairing sub - critical carbon dioxide refrigeration systems.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Contaminated refrigerant and lubricant is dealt with in accordance with legislative/regulatory requirements
	3.4 Operation conditions are documented, including identification of any parameter that is not within the specified range for the system.
	3.5 Work supervisor is notified of the completion of the work in accordance with established

ELEMENT

PERFORMANCE CRITERIA

procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and determining the operating conditions of both sub - critical vapour compression and liquid recirculating carbon dioxide refrigerating systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ185 Servicing and repair techniques for carbon dioxide refrigeration Systems

Evidence shall show an understanding of carbon dioxide refrigeration systems, operation, components, service and repair techniques, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Carbon Dioxide Refrigeration Systems

- Introduction to Carbon Dioxide refrigeration System
- Benefits of using Carbon Dioxide as a Refrigerant
- Thermophysical Properties
- Introduction to Liquid recirculation /Cascade system employing Carbon Dioxide refrigerant at Sub-Critical condition.
 - Systems and Major components
 - Basic operation
 - Typical applications

T2 Operating conditions of carbon dioxide Refrigeration Systems

- CO2 Refrigeration Compressors and lubricants
 - Types, construction and their applications (reciprocating, screw,)
 - Types of compatible compressor oil (POE), (PAO)
 - Safe handling of lubricants for CO2 applications (MSDS - POE's, PAO)
- System components, construction and operation
 - CO2 Low temperature evaporators design features
 - Medium Temperature Liquid re-circulation evaporators
 - Hand expansion valves (medium temp.)
 - Electronic expansion valves (low temp)

REQUIRED SKILLS AND KNOWLEDGE

- Cryogenic pressure relief devices
- Plate heat exchangers
- Liquid –Suction heat exchangers
- Liquid CO₂ Refrigerant Pumps
- "Q" Min and "Q" Max valves
- Interconnecting piping
- Refrigerant receiver
- Isolation valves
- Applicable Standards and Codes
 - Hazards associated with Carbon Dioxide (MSDS)
 - AS/NZS 1677
 - AS/NZS 1571
 - IIAR Bulletins
 - ANSI/ASHRAE Standards
 - IOR Safety code for Refrigerating Systems utilising Carbon Dioxide

T3 Servicing and repair techniques for carbon dioxide refrigeration systems

- Service Gauges
 - Appropriate Type
 - Care and Maintenance of Gauges and hoses
- Service procedures
 - Charging CO₂ into a system in both vapour and liquid form
 - Discharging CO₂ from a system safely
 - Pressure testing
 - System and component isolation
 - Leak detection methods for CO₂
- Cylinder Regulators CO₂
 - All currently available regulators provide vapour feed only
 - Pressure readings (bottle and line)
- Refrigerant Cylinders CO₂
- Refrigerant conditions
 - Hazards and related safe working practices (dangerous system pressures)
 - Pressure to temperature conversion (Saturated P/T is only between 430 kPa and 4399kPa)
- System standing pressure as a result of power loss.
- Moisture problems with CO₂ systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of 9.2)

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Pressure testing, charging/discharging refrigerant/lubricants and determining the operating conditions of Carbon Dioxide vapour compression and volatile secondary (liquid recirculation) system as described in 8) and including:
 - A Selecting and using appropriate measuring devices correctly
 - B Recording measurements
 - C Using calculation methods accurately

EVIDENCE GUIDE

- D Discharging / charging refrigerant / lubricants and pressure testing the system without damage to components
- E Locating and rectifying leaks
- F Decontaminating and evacuating the system
- G Identifying the conditions of the refrigerant (R744) at various locations in the vapour compression and volatile secondary (liquid recirculation) system
- H Documenting operating conditions correctly
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to servicing and repairing as well as determining the operating conditions of Carbon Dioxide vapour compression and liquid recirculation/cascade system.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining operating conditions using measurement and basic calculation methods of carbon dioxide vapour compression and volatile secondary (liquid recirculation) system. These conditions include suction and discharge pressures, ambient, evaporator and condensing temperatures, evaporator, and condenser temperature difference, critical point, triple point, trans critical and sub-critical refrigerant conditions of carbon dioxide (R744). Further, this unit must be demonstrated in relation to charging and discharging a carbon dioxide (R744) system with refrigerant and lubricant in a safe and environmentally responsible manner. This excludes self contained systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers specialised procedures for the installation and commissioning to achieve effective and efficient operation of refrigeration equipment using carbon dioxide (CO₂) as a refrigerant excluding self contained systems. It reinforces safe working practice and encompasses applying specialised knowledge of refrigeration principles that apply to carbon dioxide, following design specifications, testing, locating and rectifying faults and defective components and completing the necessary installation and commissioning documentation.

Application of the Unit

Application of the Unit

4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice

Application of the Unit 4)

(1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ184A Apply safety awareness and legal requirements for carbon dioxide refrigerant

UEENEEJ185A Repair and service carbon dioxide refrigeration systems

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle

Prerequisite Unit(s)

2)

utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install major components and associated equipment.	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.
	1.4 The nature of work is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 Component and equipment installation is appropriately sequenced in accordance with job

ELEMENT

PERFORMANCE CRITERIA

- schedule.
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established routines and procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
- 2 Install major components and associated equipment.
- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Circuits / machines/plant are checked as being isolated where necessary in strict accordance with OHS requirements and procedures
- 2.3 Components and equipment are installed to comply with technical standards, job specifications and requirements with sufficient access to affect electrical and pipe work connections and maintenance.
- 2.4 Components and equipment are installed straight and square in the required locations and within acceptable tolerances
- 2.5 Pressure testing is conducted at a pressure compatible with carbon dioxide and in accordance with standards
- 2.6 Leaks are located and rectified using testing methods appropriate to the system and in accordance with industry practices
- 2.7 System is evacuated to the required level and cleaned of all moisture and other contaminants in accordance with industry practices
- 2.8 System is charged safely with refrigerant grade carbon dioxide and compatible lubricants in accordance with industry practices
- 2.9 Established procedures are used to determine actual and specified range of operating conditions from measured and calculated values as they apply to carbon dioxide vapour

ELEMENT

PERFORMANCE CRITERIA

- compression and volatile secondary (liquid recirculation/cascade) systems.
- 2.10 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
- 2.11 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.12 Operating conditions are determined without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Complete Installation and commissioning work and document performance data
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Final check of the installed components and equipment is made to verify that it complies to all requirements.
- 3.3 "As - installed" components and equipment is documented and an appropriate person or persons notified in accordance with established procedures.
- 3.4 Commissioning work is appropriately sequenced in accordance with job specification
- 3.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 3.6 The extent of the system and location of system components is determined from site inspection and/ or job specifications and diagrams
- 3.7 System control settings and operating parameters are determined from job specifications and requirements
- 3.8 Tools equipment and testing devices needed to commission a carbon dioxide refrigerant system are obtained and checked for correct operation and safety

ELEMENT

PERFORMANCE CRITERIA

- 3.9 Pre commissioning checks are undertaken to ensure all components are in place and secure
- 3.10 The need to test or measure a live operating CO₂ system is determined in strict accordance with OH&S requirements and when necessary conducted within established safety procedures.
- 3.11 Carbon Dioxide refrigeration system pressure controls, valves, pumps and regulators are adjusted to their required settings.
- 3.12 Testing /measuring devices are used to observe the operation of refrigeration system and fine adjustments of controls are made as necessary.
- 3.13 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
- 3.14 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 3.15 Commissioning is conducted efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices
- 3.16 Work site is cleaned and made safe in accordance with established procedures
- 3.17 Results of commissioning are documented, including final operating parameters of the system.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining the operating conditions of both vapour compression and liquid recirculating carbon dioxide refrigerating systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ186 Installation and commissioning procedures for Carbon Dioxide refrigeration systems

Evidence shall show an understanding of installation and commissioning procedures for sub-critical carbon dioxide refrigeration systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Materials and Installation procedures

- Material selection
- Copper pipe standards
- Pipe connections
- Pipe supports hangers and connections
- Arrangement of isolation valves
- Location of relief valves

T2 Commissioning

- Pressure testing
- Evacuation and dehydration
- Charging refrigerant and lubricant
- System testing and adjustment
- Documentation

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

EVIDENCE GUIDE

competency in this unit

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install CO₂ refrigeration system components pipe work and associated equipment including :
 - A Reading and interpreting drawings to pipe work layouts and apparatus locations.
 - B Installing, connecting , securing and aligning components and equipment and ensuring that all equipment and pipe work is compliant with codes and regulations
 - C Pressure testing entire system at the appropriate design test pressures using dry nitrogen
 - D Removing system contaminants and evacuating

EVIDENCE GUIDE

- E Selecting and using appropriate measuring devices correctly
- F Recording measurements
- G Using calculation methods accurately
- H Discharging / charging refrigerant / lubricants and pressure testing the system without damage to components
- I Locating and rectifying leaks
- J Using methodical and efficient commissioning techniques
- K Optimizing system performance and efficiency
- L Identifying the conditions of the refrigerant (R744) at various locations in the vapour compression and volatile secondary (liquid recirculation) system
- M Documenting operating conditions correctly (commissioning)
- N Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in installation techniques as well as Commissioning skills and a clear understanding of operating conditions of Carbon Dioxide vapour compression and volatile secondary (liquid recirculation/cascade) system/s.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining operating conditions using measurement and basic calculation methods of carbon dioxide vapour compression and volatile secondary (liquid recirculation) system.

Furthermore, this unit must be demonstrated in relation to installing, connecting and commissioning the following Carbon Dioxide refrigeration system and components and associated equipment.

Major components shall include compressors, cascade condensers, evaporators, liquid recirculation pump/s. Associated equipment shall include refrigerant piping, refrigerant flow controls, cycling controls, safety controls, relief valves, isolation valves, monitoring and inspection accessories. Note: Steel pipe welding competency is not covered by this unit.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the design of refrigeration systems using carbon dioxide as a refrigerant. It encompasses applying knowledge of complex refrigeration systems, safety and regulatory requirements, developing alternative design schemes based on a design brief and customer requirements and documenting system design.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also

Application of the Unit 4)

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information**1.2) License to practice**

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the characteristics and behaviour of material in an engineering environment.

Pre-Requisites**Prerequisite Unit(s) 2)****2.1) Competencies**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ132A Design commercial refrigeration systems and select components

UEENEEJ184A Apply safety awareness and legal requirements for carbon dioxide refrigerant

Prerequisite Unit(s)**2)**

UEENEEJ129A Establish heat loads for commercial refrigeration and/or air conditioning applications

UEENEEJ165A: Evaluate thermodynamic and fluid parameters of refrigeration systems

UEENEEJ127A Establish the thermodynamic parameters of refrigeration and air conditioning systems

UEENEEJ164A Analyse the operation of HVAC air and hydronic systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

and

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

Prerequisite Unit(s)**2)**

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design carbon dioxide refrigeration systems	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 The extent and nature of the refrigeration system is determined from design specifications.
	1.3 Safety and other regulatory requirements to which the system shall comply are identified, obtained and understood.
	1.4 Work supervisor or customers are consulted to determine which functions of the system are to be used and the parameter of each and written confirmation sought.
	1.5 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.

ELEMENT	PERFORMANCE CRITERIA
2 Design carbon dioxide refrigeration systems	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of carbon dioxide refrigeration system analysis, carbon dioxide refrigeration system components and piping, performance standards and compliance methods are applied to developing the system design.
	2.3 Safety, functional and budgetary considerations are incorporated in the installation designed.
	2.4 Equipment required for the system is selected in accordance with the design specifications and established requirements.
	2.5 Location of components of the system is documented to ensure correct operation of system functions.
	2.6 System design draft is checked for compliance with the design brief and regulatory requirements.
	2.7 System design is documented for submission to appropriate person(s) for approval.
	2.8 Solutions to unplanned situation are provided consistent with organisation's policy.
3 Obtain approval for engineering computer applications design	3.1 System design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
	3.3 Final design is documented and approval obtained from appropriate person(s).
	3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing subcritical and/or trans-critical carbon dioxide refrigerating systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ187 Carbon dioxide refrigeration system design requirements

A

Evidence shall show an understanding of Carbon Dioxide refrigeration systems, components and piping design requirements, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Technical Standards, Regulations and Codes for carbon dioxide refrigeration systems

- Standard philosophy and format
- Standards, regulations and codes that apply to CO₂ refrigeration systems
- Equipment manufacturers specifications

T2 Carbon Dioxide refrigeration system design requirements

- Possible areas of applications of CO₂ refrigeration systems
 - Mobile air conditioner
 - Heat pump water heater
 - Commercial refrigeration
- Thermodynamic properties of CO₂
 - CO₂ phase diagram
 - CO₂ properties tables and chart
- Conventional refrigeration cycle versus CO₂ refrigeration cycle
 - T-s and p-h diagram representations
 - Isentropic efficiency
 - Volumetric efficiency
- Types of CO₂ refrigeration system configurations
 - Sub-critical operation
 - Trans-critical operation

REQUIRED SKILLS AND KNOWLEDGE

- Cascade systems
- Performance analysis of CO₂ refrigeration systems
 - Sub-critical cycle
 - Trans-critical cycle
 - Cascade systems

T3 Carbon Dioxide refrigeration system components and piping

- Design preliminaries
 - System operating parameters
 - Project specifications
 - Equipment selection criteria
 - Selection tables, charts and catalogues
- Heat exchanger selection
 - Selection of evaporators
 - Selection of condensers
 - Selection of coolers
- Compressor selection
- Liquid expansion devices selection
- System load balance point
- Refrigeration line design and sizing
- Automatic controls
- Safety devices

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs

EVIDENCE GUIDE

and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design carbon dioxide refrigeration systems as described in 8) and including:
 - A Understanding required operating functions and parameters from the design specification
 - B Developing the design within the safety, regulatory and functional requirements and budget limitations
 - C Documenting and presenting design effectively
 - D Successfully negotiating design alteration requests
 - E Obtaining approval for final design
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing carbon dioxide refrigeration systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different (2 subcritical or 2 trans-critical or 1 subcritical and 1 trans-critical) carbon dioxide refrigeration systems encompassing major components (i.e. cooler, condenser, compressor and evaporator), associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ188A Repair and service self contained carbon dioxide refrigeration and heat pump systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers specialised procedures for servicing and repairs to achieve the effective and efficient operation of self contained refrigeration and heat pump equipment using carbon dioxide (CO₂) as a refrigerant. It reinforces safe working practice and encompasses applying specialised knowledge of refrigeration principles that apply to carbon dioxide, following service manuals, testing, locating and rectifying faults and defective components and completing the necessary service documentation.

Application of the Unit

Application of the Unit

4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or

Application of the Unit 4)

addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note.

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ184A Apply safety awareness and legal requirements for carbon dioxide refrigerant
and

UEENEEJ155A Service refrigeration appliances

UEENEEJ054B Find and rectify faults in appliance motors and associated controls

UEENEEJ062B Find and rectify faults in appliance motors and associated controls

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

Prerequisite Unit(s)

2)

UEENEEJ195A Establish the basic operating conditions of vapour compression systems - appliances

and

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

or

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE003B Solve problems in extra-low voltage single path circuits

or

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEP017A Locate and rectify faults in low voltage

Prerequisite Unit(s)

2)

composite appliances using set procedures

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

Note:

UEENEEJ111A - Those holding a 'Certificate III in Refrigeration and Air Conditioning trade qualification or equivalent' meet the requirements of these units and their pre-requisite requirements.

Prerequisite Unit(s)

2)

UEENEEJ155A - Those holding a 'Certificate III in Appliance Servicing trade qualification or equivalent" meet the requirements of these units and their pre-requisite requirements.

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Employability Skills Information

Employability Skills

3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to service and repair self contained carbon dioxide refrigeration and heat pump systems

1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures

1.2 Established OHS risk control measures and procedures are followed in preparation for the work.

1.3 Safety hazards which have not previously been

ELEMENT

PERFORMANCE CRITERIA

- identified are reported and advice on risk control measures is sought from the work supervisor.
- 1.4 The nature of work is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established routines and procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
- 2 Service and repair self contained carbon dioxide refrigeration and heat pump systems.
- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Measuring system operating parameters is conducted in strict accordance with OHS requirements and established safety procedures
- 2.3 Checks are carried out to ensure the system or component parts are isolated, when necessary in strict accordance OHS requirements and procedures.
- 2.4 Refrigerant is removed from a system safely in accordance with regulatory requirements and industry practices.
- 2.5 Precautions are taken to prevent damage to components while pressure testing the system
- 2.6 Pressure testing is conducted at a pressure compatible with carbon dioxide and in accordance with standards
- 2.7 Leaks are located and rectified using testing methods appropriate to the system and in accordance with industry practices

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|---|---|
| | 2.8 | System is evacuated to the required level and cleaned of all moisture and other contaminants in accordance with industry practices | |
| | 2.9 | System is charged safely with refrigerant grade carbon dioxide and compatible lubricants in accordance with industry practices | |
| | 2.10 | Established procedures are used to determine actual and specified range of operating conditions from measured and calculated values as they apply to carbon dioxide vapour compression systems. | |
| | 2.11 | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented. | |
| | 2.12 | Unexpected situations are dealt with safely and with the approval of an authorised person. | |
| | 2.13 | Operating conditions are determined without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices. | |
| 3 | Complete work and report on servicing and repairing self contained carbon dioxide refrigeration and heat pump systems. | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | | 3.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | | 3.3 | Contaminated refrigerant and lubricant is dealt with in accordance with legislative/regulatory requirements |
| | | 3.4 | Operation conditions are documented, including identification of any parameter that is not within the specified range for the system. |
| | | 3.5 | Work supervisor is notified of the completion of the work in accordance with established |

ELEMENT

PERFORMANCE CRITERIA

procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and determining the operating conditions of self contained carbon dioxide vapour compression systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ188 Trans-Critical Carbon Dioxide Refrigeration and Heat Pump A Systems

Evidence shall show an understanding of servicing and repair techniques for Trans-critical Carbon Dioxide refrigeration and Heat Pump Systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Introduction to Carbon Dioxide refrigeration and heat pump systems encompassing -

- Benefits of using Carbon Dioxide as a Refrigerant
- Thermophysical Properties

T2 Access procedures Introduction to self contained systems employing Carbon Dioxide refrigerant at Trans-Critical condition.

- Systems and major components
- Basic Operation
- Typical applications
 - Domestic refrigerators and freezers
 - Refrigerated cabinets
 - Heat pump water heaters

T3 Servicing tools, equipment and procedures

- Service Gauges
 - Appropriate Type
 - Care and Maintenance of Gauges and hoses
- Service procedures
 - Charging CO₂ into a system in both vapour and liquid form
 - Discharging CO₂ from a system safely

REQUIRED SKILLS AND KNOWLEDGE

- Pressure testing
- System and component isolation
- Leak detection methods for CO₂
- Cylinder Regulators CO₂
 - All currently available regulators provide vapour feed only
 - Pressure readings (bottle and line)
- Refrigerant Cylinders CO₂
- Refrigerant conditions
 - Hazards and related safe working practices (dangerous system pressures)
 - Pressure to temperature conversion (Saturated P/T is only between 430 kPa and 4399kPa)
- System standing pressure as a result of power loss.
- Moisture problems with CO₂ systems

T4 CO₂ refrigeration compressors and lubricants

- Types, construction and their applications
- Types of compatible compressor oil (POE), (PAO)
- Safe handling of lubricants for CO₂ applications (MSDS - POE's, PAO)

T5 System components, construction and operation

- CO₂ evaporators design features
- CO₂ sub-cooler design features
- Refrigerant flow controls
 - Capillary tubes and accumulator
 - Electronic expansion valves
- Pressure relief devices
- Liquid –Suction heat exchangers

T6 Applicable Standards and Codes

- Hazards associated with Carbon Dioxide (MSDS)
- AS/NZS 1677
- AS/NZS 1571
- IIR Bulletins
- ANSI/ASHRAE Standards
- IOR Safety code for Refrigerating Systems utilising Carbon Dioxide

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required

9.2)

Before the critical aspects of evidence are considered all

EVIDENCE GUIDE

to demonstrate competency in this unit

prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Pressure testing, charging/discharging refrigerant/lubricants and determining the operating conditions of Carbon Dioxide vapour compression systems as described in 8) and including:
 - A Selecting and using appropriate measuring devices correctly
 - B Recording measurements
 - C Using calculation methods accurately
 - D Discharging / charging refrigerant / lubricants and pressure testing the system without damage to

EVIDENCE GUIDE

components

- E Locating and rectifying leaks
- F Decontaminating and evacuating the system
- G Identifying the conditions of the refrigerant (R744) at various locations in the vapour compression system in a trans-critical and sub-critical state.
- H Documenting operating conditions correctly
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to servicing and repairing as well as determining the operating conditions of Carbon Dioxide vapour compression and liquid recirculation/cascade system.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit..

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining operating conditions using measurement and basic calculation methods of self contained carbon dioxide vapour compression systems, including domestic refrigerators and freezers, refrigerated cabinets and heat pump water heaters. These conditions include suction and discharge pressures, ambient, evaporator and condensed/gas cooler temperatures, evaporator, and gas cooler temperature difference, critical point, triple point and trans-critical and sub-critical refrigerant conditions of carbon dioxide (R744). Further, this unit must be demonstrated in relation to charging and discharging a Trans-critical carbon dioxide (R744) system with refrigerant and lubricant in a safe and environmentally responsible manner.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ189A Service room air conditioners

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers maintaining the effective and efficient operation of self contained room air conditioners. It encompasses working safely, applying knowledge of room air conditioners, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.

Application of the Unit

Application of the Unit

4)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing air conditions. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEE010A Comply with scheduled and preventative maintenance program processes

and

UEENEEJ154A Find and rectify faults in appliance control systems and devices

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEE101A Apply Occupational Health and

Prerequisite Unit(s)	2)
	Safety regulations, codes and practices in the workplace
	UEENEEE102A Fabricate, assemble and dismantle utilities industry components
	UEENEEE104A Solve problems in d.c. circuits
	UEENEEE105A Fix and secure electrotechnology equipment
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEG101A Solve problems in electromagnetic devices and related circuits
	UEENEEG106A Terminate cables, cords and accessories for low voltage circuits
	or
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ194A Solve problems in low voltage refrigeration circuits
	UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace
	UEENEEE003B Solve problems in extra-low voltage single path circuits
	or
	UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems
	UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems
	UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants
	UEENEEJ194A Solve problems in low voltage refrigeration circuits

Prerequisite Unit(s)**2)**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE003B Solve problems in extra-low voltage single path circuits

and

UEENEEJ162A Recover, pressure test, evacuate, charge and leak test refrigerants appliances

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

or

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to service room air conditioners.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The extent of work to be undertaken is determined from service/fault request and/or discussions with appropriate person(s).
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials/parts that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established

ELEMENT	PERFORMANCE CRITERIA
2 Service room air conditioners.	procedures and checked for correct operation and safety.
2.1	OHS risk control measures and procedures for carrying out the work are followed.
2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
2.3	Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures.
2.4	Safety hazards resulting from the defect or fault are documented and risk control measures devised and implemented in consultation with appropriate personnel.
2.5	Appliances are tested for efficient operation and components affecting efficiency are inspected for wear or defects in accordance with standards, manufacturer's service manuals and industry codes of practice.
2.6	Appliance faults and their cause are identified through the application of refrigerated appliances and using measured and calculated values of appliance parameters.
2.7	Appliance is dismantled where necessary and parts stored to protect them against loss or damage.
2.8	Defective, worn or faulty appliance components are rechecked and their status confirmed.
2.9	Replacement parts required to rectify defects/faults are sourced and obtained in accordance with established procedures.
2.10	Effectiveness of the repair is tested in accordance with established procedures.
2.11	Apparatus is reassembled, finally tested and prepared for return to service.
2.12	Unexpected situations are dealt with safely and with the approval of an authorised person.

ELEMENT	PERFORMANCE CRITERIA
	2.13 Servicing activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Completion and report fault finding and repair activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Service report is completed and verified by an appropriate person in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing room air conditioners.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

EK01-EJ189A Room air conditioners

Evidence shall show an understanding of self contained room air conditioners, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 Types, applications, construction, components and operating characteristics
- T2 Typical component wear or defects
- T3 Typical faults
- T4 Component repair/replacement methods
- T5 Manufacturers' parts catalogues and service reports

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably

EVIDENCE GUIDE

gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Service room air conditioners as described in 8) and including:
 - A Determining the nature of the work from service request
 - B Identifying defective components affecting appliance efficiency
 - C Finding faults efficiently
 - D Rectifying defects/faults effectively
 - E Testing appliance functions effectively
 - F Completing service report accurately
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing room air conditioners.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing self contained room air conditioners with any four of the following defects/faults in appliance refrigeration system in each of two different types of appliance.

- Higher energy use than previously experienced
- Not cooling/heating enough.
- Fan not operating
- Appliance noisy
- Electric shock received from appliance cabinet

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

Scope

This unit covers the selection of basic commercial refrigeration system equipment and components, pipe work and controls. It encompasses the selection of the refrigerant, condensing unit, evaporator, refrigerant controls, accessories, refrigerant and condensate pipe work, and system controls based on specifications, standards and manufacturer catalogues to determine calculated and deemed-to comply solutions and documenting all selection information. It also includes predicting the refrigeration system's balance point to achieve design conditions.

Application of the Unit

Application of the Unit 4)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training or institutional based delivery at the aligned AQF 4 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ129A Establish heat loads for commercial refrigeration and/or air conditioning applications

UEENEEJ127A Establish the thermodynamic parameters of refrigeration and air conditioning systems

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

Prerequisite Unit(s)

2)

and

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning

Prerequisite Unit(s)

2)

systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills

3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to select basic commercial refrigeration system equipment and components	1.1 The extent and nature of the refrigeration installation is determined from job specifications.
	1.2 Safety and other regulatory requirements to which the refrigeration system shall comply, are identified, obtained and understood
2 Develop pipe work arrangements	2.1 The intended location of refrigeration equipment is determined from job specifications and site drawings or deemed to comply arrangements.
	2.2 Pipe work arranged to ensure safe and functional operation of the system.
	2.3 Pipe work is arranged to comply with technical standards and job specifications and requirements.
3 Select basic commercial refrigeration system equipment and components	3.1 Pipe and tubing is selected for suitability for the environments in which it is to be installed
	3.2 Pipe and tubing is sized to meet refrigeration parameters and capacity requirements for the refrigerant to be used.
	3.3 Pipe and tubing quantities are determined from equipment location diagrams and job specifications.
	3.4 Refrigeration system equipment and components are selected to meet load requirements based on calculated or deemed-to-comply solutions.
	3.5 Refrigerant liquid expansion valves are selected to meet functional, specified and regulatory requirements.
	3.6 Automatic control devices are selected to meet functional, specified, regulatory requirements. And current, voltage and IP ratings.
	3.7 Evidence is obtained that the selected refrigeration equipment and components comply with all requirements.

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 4 Document selection of system equipment and components | 4.1 Reasons for selections made, including calculations, are documented in accordance with established procedures. |
| | 4.2 Refrigeration installation arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s). |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting basic commercial refrigeration system equipment and components.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ190 Basic commercial refrigeration system equipment, and components and accessories selection

Evidence shall show an understanding of basic commercial refrigeration system components and piping selection, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Calculation of capacity in heat exchangers:

- $Q = UA \text{ (LMTD)}$
- $Q = mc\Delta t$
- $Q = m \Delta h$

T2 Evaporators

- commercial types and applications
- coil bypass factor
- effects of evaporator TD on space humidity
- effects of air circulation on product conditions
- selection criteria and selection tables

T3 Condensers

- commercial types and applications
- effects of ambient conditions
- condenser control
- heat rejection factor
- condenser TD
- selection criteria and selection tables

T4 Compressors

- types and applications
- capacity

REQUIRED SKILLS AND KNOWLEDGE

- displacement
- volume flow rate
- theoretical capacity
- total volumetric efficiency
- effect of operating conditions, including suction pressure drop and superheating
- actual capacity
- power
- theoretical requirement
- effects of operating conditions
- actual requirements
- post defrost loads
- pull down torque requirements, high, medium and low back pressure compressors
- selection tables, motor selection

T5 Refrigerant flow controls

- types, operation and applications
- effects from sub-cooling
- distributor types, operation and applications
- selection tables

T6 System load balance point

- graphical representation

T7 Line sizing and design

- quick selection tables
- velocity tables
- pressure drop in lines and fittings
- oil migration stabilisation
- refrigerant velocity
- effect of varying system capacity
- oil traps
- risers
- liquid migration

T8 Automatic controls

- fin spacing, suction temp to evaporator suction
- hot-gas bypass valves
- electronic control of valves PLC control
- refrigerant regulating valves

REQUIRED SKILLS AND KNOWLEDGE

- solenoid valves
- condenser pressure regulating valves
- evaporator pressure regulating valves
- crankcase pressure regulating valves
- cycling controls
- pressure-stats
- thermostats,
- defrost controls
- monitoring and alarm controls
- refrigeration automation systems
- control strategies
- control modes

systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect / reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills

3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to select residential air conditioning system equipment and components	1.1 The extent and nature of the air conditioning installation is determined from job specifications.
	1.2 Safety and other regulatory requirements to which the air conditioning system shall comply, are identified, obtained and understood
2 Develop pipe work arrangements	2.1 The intended location of air conditioning equipment is determined from job specifications and site drawings or deemed to comply arrangements.
	2.2 Pipe work arranged to ensure safe and functional operation of the system.
	2.3 Pipe work is arranged to comply with technical standards and job specifications and requirements.
3 Select residential air conditioning system equipment and components	3.1 Pipe and tubing is selected for suitability for the environments in which it is to be installed
	3.2 Pipe and tubing is sized to meet air conditioning parameters and capacity requirements for the refrigerant to be used.
	3.3 Pipe and tubing quantities are determined from equipment location diagrams and job specifications.
	3.4 Air conditioning unitary equipment and components are selected to meet load requirements based on calculated or deemed-to-comply solutions.
	3.5 Air distribution components and controls are selected to meet functional, specified and regulatory requirements.
	3.6 Automatic control devices are selected to meet functional, specified, regulatory requirements. And current, voltage and IP ratings.
	3.7 Evidence is obtained that the selected air conditioning equipment and components comply with all requirements.

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 4 Document selection of system equipment and components | 4.1 Reasons for selections made, including calculations, are documented in accordance with established procedures. |
| | 4.2 Air conditioning installation arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s). |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting residential air conditioning system equipment and components.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ191A Air conditioning system equipment and component selection

Evidence shall show an understanding of air conditioning system equipment, components and piping selection, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Residential Air Conditioning Unitary Equipment

- Construction, operation, application and selection of:
 - room air conditioners
 - split systems – wall hang, cassettes and ducted
 - small package units
 - cooling only and reverse cycle

T2 Line sizing and design

- quick selection tables
- velocity tables
- pressure drop in lines and fittings
- oil migration stabilisation
- effect of varying system capacity
- oil traps
- liquid migration

T3 Control Systems

- Construction, operation, application and selection of:
 - cycling and safety controls
 - pressure-stats
 - thermostats,
 - de-ice controls
 - air conditioning automation systems
 - control strategies

REQUIRED SKILLS AND KNOWLEDGE

T4 Air Distribution

- Principles
 - factors affecting the design of ductwork systems
 - flexible ductwork systems
 - static, velocity and total pressure
- Pressure loss
 - friction and dynamic
 - in ducts, friction charts
 - in fittings, loss co-efficients
 - diffuser pressure loss
- System sizing
 - standard duct sizes and gauges
 - duct selection
 - fitting selection
 - air diffuser selection
 - balancing

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the

EVIDENCE GUIDE

workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Select residential air conditioning system equipment and components as described in 8) and including:
 - A Arranging pipe work to comply with regulatory and functional requirements.
 - B Selecting appropriate type, size and quantity of pipe and tubing
 - C Selecting air conditioning unitary equipment and components that meets load requirements
 - D Selecting air distribution components and controls that meets load requirements
 - E Selecting automatic control devices that meet functional and regulatory requirements.
 - F Documenting pipe work arrangement, specification for items selected and reasons for the selections made
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in selecting refrigerant pipe/tube, accessories and associated controls.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEE001B Use basic computer applications'

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the selection of residential air conditioning equipment and components, pipe work, air distribution components and controls for two different air conditioning systems. These include the following; unitary air conditioning equipment and components, system controls, refrigerant and condensate pipe work and air distribution system and components.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ192A Analyse the psychrometric performance of HVAC/R systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the analysis of heating, ventilating, air conditioning and refrigeration (HVAC/R) systems to provide solution to psychrometric performance issues. It encompasses working safely, apply extensive knowledge of psychrometric parameters, gathering and analysing data, applying problem solving techniques, developing and documenting results and solutions for use in design work.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ193A Analyse the thermodynamic performance of HVAC/R systems

or

UEENEEJ109A Verify functionality and compliance of refrigeration and air conditioning installations

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE003B Solve problems in extra-low voltage single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEJ102A Prepare and connect refrigerant tubing and fittings

Prerequisite Unit(s)**2)**

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

UEENEEJ104A Establish the basic operating conditions of air conditioning systems

UEENEEJ106A Install refrigerant pipe work, flow controls and accessories

UEENEEJ107A Install air conditioning and refrigeration systems, major components and associated equipment

UEENEEJ108A Recover, pressure test, evacuate, charge and leak test refrigerants

UEENEEJ110A Select refrigerant piping, accessories and associated controls

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

UEENEEJ113A Commission air conditioning and refrigeration systems

UEENEEJ153A Find and rectify faults motors and associated controls in refrigeration and air conditioning systems

UEENEEJ170A Diagnose and rectify faults in air conditioning and refrigeration control systems

UEENEEJ194A Solve problems in low voltage refrigeration circuits

UEENEEP012A Disconnect /reconnect composite appliances connected to low voltage installation wiring

UEENEEP017A Locate and rectify faults in low voltage composite appliances using set procedures

UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

UEENEEP025A Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to analyse the psychrometric performance of HVAC/R systems	1.1 OHS processes and procedures for a given work area are identified, identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of the psychrometric issues are determined from performance specifications and situation reports and in consultations with relevant persons
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.

ELEMENT	PERFORMANCE CRITERIA
2 Analyse the psychrometric performance of HVAC/R systems	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of psychrometric principles are applied to analytical solutions to refrigeration and air conditioning systems.
	2.3 Parameters, specifications and performance requirements in relation to refrigeration and air conditioning systems are obtained in accordance with established procedures.
	2.4 Approaches to analysing psychrometric parameters are carried out to provide the most effective solution.
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
	2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards
3 Document and report on the results of the psychrometric performance analysis and actions taken.	3.1 Solutions to psychrometric issues are evaluated to determine their effectiveness and modified where necessary.
	3.2 Analysis is documented including details of all findings, calculations and assumptions.
	3.3 Analysis is reported to appropriately personnel to establish appropriate action to be taken based on findings.
	3.4 Justification for findings and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing the psychrometric performance of HVAC/R systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ192 HVAC/R Psychometrics

A

Evidence shall show an understanding of applied psychometrics, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Fundamentals and terms

- sensible heat factor (conditioned space and grand total)
- quantity of air
- effective surface temperature
- bypass factor

T2 Coil characteristics

- processes
- sensible cooling
- cooling, dehumidification
- sensible heating

T3 Spray processes

- saturation efficiency
- processes
- adiabatic/evaporative cooling
- cooling & humidification
- sensible cooling
- cooling and/or humidification
- chemical dehumidification process: dehumidification & heating
- cooling tower characteristics: humidification & cooling
- indirect evaporative cooling process

REQUIRED SKILLS AND KNOWLEDGE

T4 System analysis

- partial load
- reheat control
- bypass control
- volume control
- dump back systems
- low velocity coils

T5 Psychrometric formulae and charts

- properties of air
- gas constants
- derivation of air constants
- combined gas laws
- Dalton's law of partial pressures
- Carrier's equation
- psychrometric property tables
- air mixing equations
- air quantity equations

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum,

EVIDENCE GUIDE

the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Analyse the psychrometric performance of HVAC/R systems as described in 8) and including:
 - A Understanding the psychrometric performance issues
 - B Forming effective strategies for analysing refrigeration and air conditioning systems performance
 - C Obtaining psychrometric performance parameters, specifications and performance requirements appropriate to each situation.
 - D Evaluating the results of the analysis
 - E Documenting analysis details of all findings, calculations and assumptions.
 - F Documenting justification of actions to be implemented in accordance with professional standards.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used

EVIDENCE GUIDE

to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in analysing the psychrometric and thermodynamic performance of HVAC/R systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to analysing psychrometric parameters in at least two different refrigeration and air conditioning systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

REQUIRED SKILLS AND KNOWLEDGE

- dairy
- fruit and vegetable
- multi-deck display
- single deck
- well type
- island cases
- glass door
- reach door
- reach in merchandisers
- defrosting methods
- cold rooms and freezer rooms
- types and construction
- insulation
- vapour barrier
- frost heave
- interior fittings
- location of equipment
- defrosting methods
- cold tracking
- trace heating
- storage conditions
- temperature
- relative humidity
- air velocity
- air patterns
- load limits

KS02-EJ193A

Air conditioning systems

Evidence shall show an understanding of introduction to air conditioning systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Occupational health requirements:

- WH&S requirements
- BCA requirements
- AS1668 parts 1 & 2
- AS3666
- noise and vibration
- air quality
- sick building syndrome

T2. Operating requirements:

REQUIRED SKILLS AND KNOWLEDGE

- ventilation
- air distribution
- terminal velocity
- temperature
- relative humidity
- air quality
- noise
- basic psychrometrics

T3. Operating modes

- ventilation
- evaporative cooling
- ventilation and cooling
- ventilation and heating
- dehumidification
- dehumidification
- dehumidification and reheat
- humidification

T4. Operating terminology/characteristics:

- throw, drop
- primary and secondary air
- coanda effect

T5. HVAC system components and functions:

- fans
- ducting
- registers
- dampers
- filters
- cooling coils
- heating coils
- induction units
- fan coil units
- terminal units
- humidifiers, pumps and sprayers
- hydronic systems and components

T6. Applications and construction of air conditioning systems:

- applications
- residential, commercial, low and high rise, industrial ventilation and air conditioning

REQUIRED SKILLS AND KNOWLEDGE

- packaged plant
- RACs, split systems (wall and floor console, ceiling fan coil), wall facia, roof top, reverse cycle option central station plant
- all air systems, constant volume variable temperature, constant temperature variable volume, air/water systems
- all water system, multi-zoning, thermal storage systems
- basic air conditioning system diagrams
- duct layout
- hydronic layout
- unit/conditioner drawings

T7. HVAC control systems:

- basic principles
- terminology
- symbols and diagrams
- basic applications

Evidence should show demonstrated competency in analysing the psychrometric and thermodynamic performance of HVAC/R systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with

9.5)

There are no concurrent assessment recommendations for this

EVIDENCE GUIDE

other units unit.

Range Statement**RANGE STATEMENT**

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to analysing thermodynamic parameters in at least two different refrigeration and air conditioning systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field**2.2) Literacy and numeracy skills**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers determining correct operation of low voltage d.c. and a.c. circuits and providing solutions as they apply to refrigeration work functions. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in single and multiple path circuits.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Application of the Unit 4)

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V a.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE003B Solve problems in extra-low voltage single path circuits

and

UEENEEJ103A Establish the basic operating conditions of vapour compression systems

and

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

or

UEENEEJ195A Establish the basic operating conditions of vapour compression systems - appliances

and

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work on low voltage refrigeration circuits.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.

ELEMENT	PERFORMANCE CRITERIA
2 Solve problems in low voltage refrigeration circuits.	<p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p> <p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Established methods are used to solve d.c. and a.c. circuit problems from measure and calculated values as they apply to single and multiple path electrical circuits.</p> <p>2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.</p> <p>2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.</p>
3 Complete work and document problem solving activities.	<p>3.1 OHS work completion risk control measures and procedures are followed.</p> <p>3.2 Work site is cleaned and made safe in accordance with established procedures.</p> <p>3.3 Justification for solutions used to solve circuit problems is documented.</p> <p>3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in multiple path a.c. circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ194 Low voltage refrigeration circuits

A

Evidence shall show an understanding of low voltage d.c. and a.c single and multiple path applied to refrigeration systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Resistance Measurement

- Typical field instruments and applications
- Insulation resistance tester
- IR Tester parts and functions
- Continuity testing
- Insulation resistance testing
- IR Tester voltage ranges
- AS/NZS 3000 wiring rules
- Calibration of IR Testers
- Storage of IR Testers
- Using of testers for continuity and insulation resistance measurement
- Calculation of resistance from measured results

T2 Factors affecting resistance

- Factors
- Resistivity
- Change in length
- Change in cross sectional area (csa)
- Change in temperature
- PTC and NTC
- Influence on practical circuits

REQUIRED SKILLS AND KNOWLEDGE

- Measurement of resistance

T3 Voltage and current measurement

- Hazards
- Characteristics of instruments
- Reading scales
- Voltmeters
 - Characteristics
 - Types
 - Operation
 - Connection
 - Loading effect
 - Advantages and disadvantages
 - Selection
- Ammeters
 - Characteristics
 - Types, series-ammeter and tong-ammeter
 - Operation
 - Connection
 - Advantages and disadvantages
 - Selection

T4 Direct Current parallel circuits

- Parallel circuits
- Parallel circuit components
- Applications of parallel circuits
- Characteristics
- Calculation of parallel circuit parameters
- Circuit connections
- Measurements of R, V, I in parallel circuits
- Determine V, I, R, P

T5 Direct Current series / parallel circuits

- Series/Parallel circuits
- Series/Parallel circuit components
- Applications of series/parallel circuits
- Characteristics
- Bridge network
- Calculation of series/parallel circuit parameters

REQUIRED SKILLS AND KNOWLEDGE

- Connection of series/parallel circuits
- Measurements of R, V, I in series/parallel circuits
- Determine V, I, R, P

T6 Capacitors and Capacitance

- Capacitor construction
- Dielectric material
- Types of capacitors
- Circuit symbols
- Capacitor terms
- Units
- Factors affecting capacitance
- Capacitor charge
- RC d.c series circuit
- Time constants
- Connection of capacitors

T7 Capacitors in Series and Parallel

- Capacitor hazards
- Safe handling of capacitors
- Dangers of discharging capacitors
- Series connections
- Parallel connections
- Measuring / testing of capacitors
- Capacitor faults
- Applications of capacitors
- Calculation of total capacitance
- Series and parallel connections
- Testing capacitors for serviceability

T8 Electromagnetic induction

- Faraday's law
- Applications
- Inductance

T9 Single phase alternating current

- Generation of a sinusoidal waveform
- Sinusoidal waveform characteristics
- Measuring and calculating values of a sinusoidal waveform
- Generation of single phase alternating current

REQUIRED SKILLS AND KNOWLEDGE

- Voltage and current in resistive, inductive and capacitive circuits
- Ohms Law and Impedance
- Power
 - power in a single phase circuit
 - power factor and phase angle
 - methods used to measure single phase power, energy and power factor
 - single phase power measurement
 - effects of low power factor
 - power factor improvement requirements
 - power factor improvement methods
 - wiring rules and regulations

T10 Magnetic devices

- Relays
- Contactors
- Solenoids
- Transformers
 - Single & double wound.
 - Volts vs. Turns ratio.
 - Losses:
 - VA in vs. VA out.
 - Control transformers
 - Power and motor starting transformers.
- Safety.
- Magnetic sensing devices

T11 Three phase alternating current

- Advantage of three phase system
- Generation of three phase
- Relationship between generated voltages
- Phase sequence
- Three phase star-connections
 - Star connections
 - Line and phase voltages and currents
- Three phase four wire systems
 - function of the neutral conductor
- Three phase delta-connections
 - Delta connections
 - Line and phase voltages and currents

REQUIRED SKILLS AND KNOWLEDGE

T12 Circuit protection and isolation

- Harmful effects of:
 - direct contact
 - indirect contact
 - thermal effects
 - over current
 - faults
 - mechanical movement
- Earthing
 - earthing terms
 - minimum earthing conductor size
 - MEM system
 - AS/NZS 3000 requirements
- Circuit protection devices
 - purpose, types, operating principles, characteristics and applications, including rewirable fuses, HRC fuses, circuit breakers, residual current devices and overvoltage and under voltage protection devices.
 - circuit protection and load protection
 - AS/NZS 3000 requirements (including sanger tags, & switch locking)
 - discrimination of circuit protection devices.
- Isolation devices
 - requirements for provision of isolation
 - need for protection against mechanical movement
 - AS/NZS 3000 requirements

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)
Longitudinal competency development approaches to

EVIDENCE GUIDE

assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this

EVIDENCE GUIDE

shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in single and multiple path d.c. and a.c. circuits as described in 8) and including:
 - A Determining the operating parameters of an existing circuit.
 - B Alternating an existing circuit to comply with specified operating parameters.
 - C Developing circuits to comply with a specified function and operating parameters.
 - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in multiple path a.c. circuits.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE003B Solve problems in extra low voltage single path circuits

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Single source series, parallel and series-parallel d.c and a.c. circuits as they apply to problems related to installation, fault finding, maintenance or development work functions in Refrigeration, Air Conditioning and Appliance Servicing disciplines.
- In relation to at least two of the following types of circuit problems and on at least two occasions
 - determining the operating parameters of an existing circuit
 - alternating an existing circuit to comply with specified operating parameters
 - developing circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the determination of the operating conditions of vapour compression systems of self contained refrigerated appliances. It encompasses working safely, determining refrigerant pressures and temperatures and relevant air temperatures using measurement and basic calculation methods.

Application of the Unit

Application of the Unit

4)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Application of the Unit 4)

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to determine the basic operating conditions of appliance vapour compression systems	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work
	1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
	1.4 Expected operating conditions are obtained from documentation or from work supervisor to establish the scope of work to be undertaken
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with

ELEMENT	PERFORMANCE CRITERIA
	others
	1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
	1.7 Tools, equipment and testing devices needed to determine the basic operating conditions of appliances are obtained and checked for correct operation and safety
2 Determine the basic operating conditions of appliance vapour compression systems	2.1 Established OHS risk control measures and procedures for carrying out the work are followed
	2.2 Measuring system operating parameters is conducted in strict accordance with OHS requirements and established safety procedures
	2.3 System is checked and isolated where necessary, in strict accordance OHS requirements and procedures
	2.4 Established procedures are used to determine actual and specified range of operating conditions from measured and calculated values as they apply to appliance vapour compression systems.
	2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.6 Unexpected situations are dealt with safely and with the approval of an authorised person
	2.7 Operating conditions are determined without damage to of appliance, circuits, the surrounding environment or services and using sustainable energy practices
3 Complete work and report	3.1 OHS work completion risk control measures and procedures are followed
	3.2 Work site and equipment is cleaned and made safe in accordance with established procedures

ELEMENT

PERFORMANCE CRITERIA

- 3.3 Operation conditions are documented, including identification of any parameter that is not within the specified range for the system
- 3.4 Work supervisor is notified of the completion of the work in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining the basic operating conditions of vapour compression systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ195 Basic operating conditions of vapour compression systems - A appliances

Evidence shall show an understanding of basic operating conditions of vapour compression systems used in refrigerated appliances, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Domestic refrigeration industry

- The history of the domestic refrigeration industry
- Applications, classifications and equipment used

T2 Introduction to the Vapour Compression System

- Basic Operation
- Major Components

T3 Heat

- Matter (atoms, molecules, energy and its different forms)
- Heat energy (definition, unit of measurement)
- Enthalpy (definition, unit of measurement)
- Heat flow (hot to cold)
- Heat transfer
 - methods (conduction, convection, radiation)
 - requirements
 - effects

T4 Temperature and relative humidity

- Temperature
- Scale types (imperial, metric, absolute) and their units of measurement
- Conversion to/from absolute values

REQUIRED SKILLS AND KNOWLEDGE

- Temperature difference/change (t_d , Δt , unit of measurement)
- Relative humidity
- Thermometer types and applications (digital, stem, dial, max/min, non-contact, data loggers)
- Relative Humidity measurement devices and applications (dry bulb/wet bulb, sling, digital)
- Hazards and related safe working practices (working near rotating machinery - fans, etc)
- Care and maintenance (bending stems, overheating, removing batteries after use, uncoiling capillary)
- Calibration (boiling water, iced water, send to a specialist etc)
- Appropriate and safe methods of use
- Typical locations on a system
- Fitting temperature and relative humidity instruments

T5 Sensible and Latent Heat

- Definition of specific heat capacity, latent heat and sensible heat (including units of measurement)
- Types of latent heat
- Heat calculations

T6 Pressure

- Pressure
- Scale types (imperial, metric, absolute) and their units of measurement
- Vacuum scales (Pascals, microns)
- Conversion to/from absolute values
- The basic Gas Laws – Boyles, Charles and Daltons (excl combined or general gas law)
- Pressure gauge types and applications (pressure, compound, vacuum, manometer, magnehelic, barometer)
- Hazards and related safe working practices (dangerous system pressures)
- Care and maintenance (ingress of oil and contaminants (dirt), avoiding needle bounce (esp. HP) etc)
- Calibration (atmospheric pressure, send to a specialist etc)
- Appropriate and safe methods of use
- Typical locations

T7 Refrigerant conditions

- Saturation temperature
- Saturated liquid / saturated vapour
- Superheated vapour

REQUIRED SKILLS AND KNOWLEDGE

- Sub-cooled liquid
- Pressure temperature relationships
- P/T charts
- Enthalpy

T8 The vapour compression cycle

- Primary system components
- High and low pressure sides
- Basic system operation

T9 Working safely with refrigeration vapour compression systems

- Risk management principles and processes
- Hazards and risk control measures associated with:
 - refrigeration vapour compression systems and components
 - refrigerants
 - measuring and testing equipment

T10 Leak detectors

- Detector types and applications (electronic, halide, bubble, ultra violet)
- Hazards and related safe working practices (working around rotating machinery, open flame, ultra violet light etc)
- Care and maintenance (delicate electronic equipment, changing sensor tip filters, changing gas cartridges etc)
- Calibration (auto calibrating , send to a specialist etc)
- Leak detection procedures

T11 Service gauges

- Service Gauges
 - Types (dial gauges or electronic, manifolds with additional vacuum and charging ports & sight glasses)
 - Typical uses for service gauges (high & low side pressure readings, charging, evacuating)
 - Care and maintenance (oil and contaminants (dirt) in hoses, avoiding needle bounce, changing hose seals)
 - Calibration (hoses open to atmosphere, adjusting screw etc)
 - Hose shut-off valves and adaptors (access control valves, kwik couplers, Hansen lines etc)
- System Access Fittings
 - Types (Schrader, piercing, etc)
 - Typical applications for each
 - Hazards and related safe working practices (oil or liquid spray, keeping

REQUIRED SKILLS AND KNOWLEDGE

clean, leaks etc)

- Care and maintenance (gland nuts loosened/tightened, seal caps fitted, regulations on piercing valves)
- Using Service Gauges
 - Service gauge manifold hose fitting
 - Purging
 - Pressure readings
 - Service gauge manifold hose removal
 - Pressure to temperature conversion

T12 Refrigeration Compressors

- Function of the compressor
- Compressor style (hermetic)
- Types, construction and their applications (reciprocating, rotary, scroll)
- Basic types of compressor oil (Mineral, Polyolester (POE), Alkyl Benzene, Polyalkylene Glycols (PAG)) (brief overview)
- Methods of lubrication (splash, forced)
- Safe handling (MSDS - POE's, PAG's, Mineral, AB's - Residual acid's in used oil)

T13 Condensers and related components

- Function of the condenser
- Types, construction and their applications (static, forced draught)

T14 Evaporators and related components

- Function of the evaporator
- Evaporator styles (direct expansion)
- Types, construction and their applications (static, forced draught)
- Refrigerant/air flow paths (forced/induced draft, parallel/counter flow)

T15 Common Refrigerant Metering Devices

- Function of a refrigerant metering device
- Overview of common types and their applications (capillary tube and restrictor)

T16 Basic Operating Conditions

- Ambient conditions
- Common climate values (highest max temp, lowest min temp, mean daily temp, mean highest/lowest)
- Typical climates for various common localities
- Evaporator Td

REQUIRED SKILLS AND KNOWLEDGE

- Effect of changes in Evap. Td and typical industry reference values for forced draught and static coils
- Condenser Td
- Effect of changes in Cond. Td and typical industry reference values for forced draught and static coils
- Typical storage conditions (temp & RH)
- Typical high and low side system operating values (pressures and temperatures allowing 1K equivalent PD)

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material

EVIDENCE GUIDE

carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Determine the basic operating conditions of refrigerated appliance vapour compression systems as described in 8) and including:
 - A Selecting and using appropriate measuring devices correctly
 - B Recording measurements
 - C Using calculation methods accurately
 - D Identifying the conditions of a refrigerant at various locations in the appliance vapour compression system
 - E Documenting operating conditions correctly
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in determining the basic operating conditions of vapour compression systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining operating conditions using measurement and basic calculation methods of vapour compression systems in refrigerated appliances. These conditions include suction and discharge pressures, ambient, evaporator and condensing temperatures, evaporator, and condenser temperature difference.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEJ196A Operate Ammonia Refrigeration Plant

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers specialised procedures for operating an industrial refrigeration plant using ammonia as the refrigerant. It encompasses applying specialised knowledge of refrigeration principles that apply to ammonia, specifying the normal operating parameters for the plant, rectifying faults and defective components within organisational guidelines and completing the necessary service documentation.

Application of the Unit

Application of the Unit 4)

This competency standard is suitable for refrigeration plant operators who need to be aware of the potential hazards associated with ammonia and the appropriate course of action that should be taken in an emergency.

Currently delivered as a stand alone unit of competency and is open to any person whose work requires them to operate ammonia refrigeration plant.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note :

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training

1.2) License to practice

such as apprenticeships.

Note.

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ178A Apply safety awareness and legal requirements for ammonia refrigerant

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1	1.1
Prepare to operate Ammonia refrigerant plant	OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2
	Refrigeration systems and components on which the work is to be carried out are identified.
	1.3
	Established OHS risk control measures and procedures are followed in preparation for the work.
1.4	
Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.	
1.5	
The nature of work is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.	

ELEMENT	PERFORMANCE CRITERIA
1.6	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
1.7	Sources of materials that may be required for the work are accessed in accordance with established routines and procedures.
1.8	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
1.9	The refrigeration system's required operating conditions are established from documentation/supervisor and the application of refrigeration fundamentals
2 Operate Ammonia refrigeration plant	2.1
	Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2
	Refrigeration plant is started up in accordance with established procedures, standard, codes and regulations
	2.3
	Measuring refrigeration system operating parameters is conducted in strict accordance with OHS requirements and established safety procedures
	2.4
	Supervisor or person in charge is advised of system and components performing outside their operating parameters to facilitate remedial action.
	2.5
	Remedial action is implemented within the organisation's procedures.
	2.6
	Service procedures are completed according to identified organisational procedures according to SOPs.
	2.7
	Daily processing requirements are ascertained to predict demand on refrigeration plant.
	2.8
	Oral and written information on the performance of the

ELEMENT	PERFORMANCE CRITERIA
	plant is exchanged formally and informally between the operator and supervisor/production team.
	2.9 Equipment controls are adjusted to prepare plant to meet the load.
	2.10 Action is taken in a proactive way to maintain the performance of the plant.
	2.11 Demands on plant consumables are calculated to facilitate the ordering of replacements.
	2.12 Strategies are developed to meet demand in the event of equipment malfunction or breakdown.
3 Complete work and report on operating Ammonia refrigeration plant	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Plant performance records are maintained and distributed to meet organisational standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of refrigeration plant using ammonia as the refrigeration medium safe working practices and operation.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ196A Ammonia refrigeration system operation

Evidence shall show an understanding of refrigeration principles, Ammonia refrigeration systems, their operating conditions, and starting up and shut down procedures, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Introduction to the Vapour Compression System

- Basic Operation
- Major Components

T2 Heat

- Heat energy (definition, unit of measurement)
- Enthalpy (definition, unit of measurement)
- Heat flow (hot to cold)
- Heat transfer
 - methods (conduction, convection, radiation)
 - requirements
 - effects

T3 Temperature and relative humidity

- Temperature
 - Scale types (imperial, metric, absolute) and their units of measurement
 - Conversion to/from absolute values
 - Temperature difference/change (td, Δt , unit of measurement)
- Relative humidity
- Thermometer types and applications (digital, stem, dial, max/min, non-contact, data loggers)
- Relative Humidity measurement devices and applications (dry bulb/wet bulb, sling, digital)

REQUIRED SKILLS AND KNOWLEDGE

- Hazards and related safe working practices (working near rotating machinery - fans, pulleys, belts etc)
- Care and maintenance (bending stems, overheating, removing batteries after use, uncoiling capillary)
- Calibration (boiling water, iced water, send to a specialist etc)
- Appropriate and safe methods of use
- Typical locations on a system
- Fitting temperature and relative humidity instruments

T4 Sensible and Latent Heat

- Definition of latent heat and sensible heat (including units of measurement)
- Types of latent heat

T5 Pressure

- Pressure
 - Scale types (imperial, metric, absolute) and their units of measurement
 - Vacuum scales (Pascals, microns)
 - Conversion to/from absolute values
- The basic Gas Laws – Boyles, Charles and Daltons (excl combined or general gas law)
- Pressure gauge types and applications (pressure, compound, vacuum, manometer, magnehelic, barometer)
 - Hazards and related safe working practices (dangerous system pressures)
 - Care and maintenance (ingress of oil and contaminants (dirt), avoiding needle bounce (esp. HP) etc)
 - Calibration (atmospheric pressure, send to a specialist etc)
 - Appropriate and safe methods of use
 - Typical locations

T6 Refrigerant conditions

- Saturation temperature
- Saturated liquid / saturated vapour
- Superheated vapour
- Sub-cooled liquid
- Pressure temperature relationships
- P/T charts
- Enthalpy

T7 The vapour compression cycle

- Primary system components
- High and low pressure sides

REQUIRED SKILLS AND KNOWLEDGE

- Basic system operation
- T8 Working safely with refrigeration vapour compression systems
- Risk management principles and processes
 - Hazards and risk control measures associated with:
 - refrigeration vapour compression systems and components
 - refrigerants
 - measuring and testing equipment
- T9 Ammonia Refrigeration Systems
- Vapour Compression Systems
 - Revision of Vapour Compression Cycle
 - Properties of Ammonia
 - Safe Handling of Ammonia
 - Types of Ammonia Systems
 - Direct Expansion Systems
 - Flooded Systems
 - Liquid Recirculation Systems
 - Multi Staged Systems
 - Single Staged Systems
 - Multi Staged Systems
 - Cascade Systems
- T10 Operating conditions of Ammonia Refrigeration Systems
- Compressors
 - Function of the compressor
 - Types, construction and their applications
 - Capacity control of compressors
 - Factors affecting performance
 - Economiser operation
 - Types of oil separators
 - Methods of oil cooling
 - Operation and maintenance
 - Lubrication and lubricants
 - Lubrication methods
 - Safe handling of lubricants
 - Selection of lubricants
 - Oil / Ammonia separation
 - Adding and removing oil from Ammonia systems

REQUIRED SKILLS AND KNOWLEDGE

- Methods of oil recovery
- Evaporators / Cooling Units
 - Types of evaporators (air / fluid cooling)
 - Direct contact freezing
 - Secondary refrigerants
 - Evaporator defrost methods and controls
 - Operation and maintenance
- Condensers and high pressure receivers
 - Evaporative condensers
 - Water cooled condensers
 - Air cooled condensers
 - High pressure receivers
 - Operation and maintenance
- Low Pressure Receivers
 - Suction accumulators
 - Intercoolers
 - Liquid refrigerant pumps
 - Liquid level controls
 - Operation and maintenance
- Purging
 - Non condensable gases
 - Manual; purging of Ammonia systems
 - Automatic refrigerated purgers
 - Operation and maintenance
- Refrigerant Flow Devices
 - Expansion valves
 - Automatic liquid feed control devices
 - Pressure regulating devices
 - Operation and maintenance
 - Methods of oil recovery
- Ancillary Components
 - Strainers, isolating valves
 - Liquid level indicators
 - Pressure relief valves
 - Ammonia leak detectors
 - Safety controls
 - Operation and maintenance
 - Leak detector types and applications

REQUIRED SKILLS AND KNOWLEDGE

- Hazards and related safe working practices
- Care and maintenance
- Leak detection procedures
- Charging refrigerant into system
- Routine maintenance procedures
 - Draining and adding oil
 - Charging system
 - Purging condensable gases
 - Leak testing
 - Checking drives, bearings, couplings, pulleys, V-belts etc.
- Fault finding
 - Identify faults that affect the safe operation of the plant
- Controlling and addresses faults
 - Limiting the affect of the fault on the safe operation of the fault
 - Organising correction action to repair the fault

T11 System start up and shut down procedures

T12 Emergency procedures

T13 Maintenance and servicing procedures

- Leak Testing

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships.

However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of

9.2)

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Operating an industrial refrigeration plant using ammonia as the refrigerant, determining plant operating conditions, rectifying faults and defective components within organisational guidelines and completing the necessary service documentation.

A Starting up Ammonia refrigerant plant

B. Selecting and using appropriate measuring devices correctly

C Recording measurements

D Using calculation methods accurately

E Identifying the conditions of the refrigerant (R717) at various

EVIDENCE GUIDE

locations in the vapour compression and liquid recirculation system.

F Taking remedial action within organisational procedures and job role

-

G Documenting operating conditions correctly

H. Conducting servicing procedures according to the schedule, including the inspection of all lagging, insulation, pipe and duct mountings

I. Shutting down Ammonia refrigerant plant

J. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in operating and servicing ammonia refrigeration plant in a safe manner following organisational procedures.

EVIDENCE GUIDE

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ178A Apply safety awareness and legal requirements for ammonia refrigerant

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to Ammonia refrigeration systems and include starting up, determining operating conditions using measurement and basic calculation methods, basic repairs and shutting down the system. These conditions include suction, inter-stage and discharge pressures, ambient, evaporator, inter-stage and condensing temperatures, evaporator, and condenser temperature difference.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

2.2) Literacy and numeracy skills

Competency Field 5)

Refrigeration and Air Conditioning

UEENEEK101A Maintain safety and tidiness of remote area power supply systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers maintaining safety of remote area power supply (RAPS) system by ensuring that only RAPS equipment is present and is in its allotted place and that the system is free of litter. It encompasses working safely, regularly checking systems, cleaning techniques and reporting safety issues.

Application of the Unit

Application of the Unit 2)

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

UEENEEK1 02A Work safely with remote area power supply systems

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|--|
| 1 | Prepare to maintain safety and tidiness of RAPS system | 1.1 | OHS procedures for a given work area are identified, obtained and understood through established routines and procedures |
| | | 1.2 | Established OHS risk control measures and procedures in preparation for the work are followed. |
| | | 1.3 | Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor. |
| | | 1.4 | The nature and location of the RAPS system is obtained from work schedule and supervisor to establish the scope of work to be undertaken. |
| | | 1.5 | Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community. |
| | | 1.6 | Tools and equipment needed to carry out the cleaning work are obtained and checked for correct operation and safety |
| 2 | Maintain safety and tidiness of RAPS system | 2.1 | Established OHS risk control measures and procedures for carrying out the work are followed. |
| | | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
| | | 2.3 | Circuits/machines/system are checked as being isolated where necessary in strict accordance |

ELEMENT	PERFORMANCE CRITERIA
	OHS requirements and procedures.
	2.4 Routine procedures are used to clean RAPS system and area.
	2.5 Cleaning is carried out efficiently without waste of materials and energy or damage to apparatus, circuits, the surrounding environment or services.
	2.6 Routine quality checks are carried out in accordance with work instructions.
3 Complete work and report	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Procedures for referring cleaning and tidiness issues to the local community are followed.
	3.3 Completion of cleaning work and issues are reported to work supervisor in accordance with established routines.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and maintaining safety and tidiness of remote area power supply (RAPS) systems

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK101A RAPS plant area cleaning

Evidence shall show an understanding of cleaning and maintaining remote area power supply (RAPS) systems to an extent indicated by the following aspects:

REQUIRED SKILLS AND KNOWLEDGE

- Needs for a clean and tidy plant area
- RAPS system components and associated equipment and their location within the plant area
- manual fuel pump if available
- Plant cleaning techniques:
 - Fuel and oil
 - acid spills;
 - removal of dust, insects, spiders, animals
 - removal of non-RAPS equipment
- Technique for reporting and dealing with cleaning issues.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place,

access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a

percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Maintain safety and tidiness of remote area power supply systems as described in 8) and including:

- A Removing non-RAPS equipment
- B Safely removing insects, spiders and any animals
- C Safely removing dust and dirt from floors and equipment
- D Identifying and reporting at least two safety issues
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry

practices in relation to maintaining safety and tidiness of remote area power supply systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5) There are no concurrent assessment recommendations for this unit.

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with units UEENEEE101A Apply Occupational Health Safety regulations, codes and practices in the workplace

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different RAPS systems incorporating a battery bank and at least two of the following:

- Generator set
- Photo voltaic array
- RAP system
- Wind generator

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to enter a RAPS system	1.1 Instruction in hazards and risk control measures for RAPS systems maintenance are identified, obtained and understood.
	1.2 System access permit is obtained from work supervisor.
	1.3 Preparations for electrical and non-electrical isolation are made to prevent creation of hazards
	1.4 Tools and equipment needed for the work are checked for safety and correct functionality according to established safety routines.
2 Apply safe working practices in RAPS system area.	2.1 Workplace procedures and work instructions for controlling risk are followed accurately.
	2.2 Workplace procedures for dealing safe working practices in RAPS system are followed according to prescribed work procedures.
	2.3 Circuits/machines/system are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Routine procedures are used to apply safe working practices in RAPS system and area.
	2.5 Safe working practices are carried out efficiently without waste of materials and energy or damage to apparatus, circuits, the surrounding environment or services.
	2.6 Routine quality checks are carried out in accordance with work instructions.

ELEMENT	PERFORMANCE CRITERIA
3. Follow workplace procedures for hazard identification and risk control in RAPS system areas	<p>3.1 Hazards are identified and prescribed control measures implemented and monitored through active participation in the consultation process with employer, other employees and local community.</p> <p>3.2 Hazards in the work are recognised and reported to work supervisor personnel according to established procedures.</p> <p>3.3 OHS records of incidents are completed in accordance with regulatory requirements and established procedures</p> <p>3.4 Workplace instructions and training are followed accurately within established procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and working safely with remote area power supply (RAPS) systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK102A Remote area power supply safe working practice

Evidence shall show an understanding of RAPS safe working practices to an extent indicated by the following aspects:

General safety encompassing:

- General safety
- Risk assessment
- Personal protective equipment
- OHS procedures

RAPS safety and risk assessment encompassing:

- Types of hazards in and around remote area power supplies

Note: In addition to the safety hazards found in most workplace RAPS systems are likely to have the hazards related to electricity

REQUIRED SKILLS AND KNOWLEDGE

supplied from more than one source, rotating machines, fuels and oils, exhaust fumes, and acids and flammable gases from batteries.

- Measures for dealing with hazards in and around remote area power supplies
- Purpose and methods for isolation and de-energisation of power supplies

Correct isolation and de-energisation procedures encompassing:

- Processes for preventing generator from automatically starting
- Isolating photo voltaic arrays,
- Isolating wind driven generators,
- Isolating battery
- Isolating inverter power sources

Safety signage encompassing:

- Types of signs
- Location
- Condition
- Suitability

Access to system encompassing:

- Methods for limiting access to plant areas

Reporting

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Work safely with remote area power supply (RAPS) systems as described in 8) and including:

A Preparing to enter the RAPS system including, permission to enter the area and to isolate RAPS equipment

- B Applying work procedures and instructions as they apply to risk control measures
- C Dealing with accidents and emergencies
- D Participating in consultation processes, identifying hazards and implementing and monitoring control measures
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to working safely with remote area power supply (RAPS) systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competence development in this unit may be arranged concurrently with other units in a qualification or possible skill clusters in which this unit is included.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different RAPS systems incorporating a battery bank, a generator set and a photo voltaic array and at least one similar RAPS system with the additions of a wind generator.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Renewable and Sustainable Energy

UEENEEK103A Conduct periodic maintenance of remote area power supply battery banks

Modification History

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers maintenance of remote area power supply (RAPS) battery banks where the exposed voltage is not greater than 50 V a.c. or 120 V d.c. It encompasses working safely and to maintenance standards and following maintenance routines, identifying known types of battery faults using routine procedures and completing the necessary maintenance reporting.

Application of the Unit

Application of the Unit **2)**

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

- | | |
|-----------------|--|
| UEENEEE1
01A | Apply Occupational Health Safety regulations, codes and practices in the workplace |
| UEENEEE1
02A | Fabricate, dismantle, assemble of utilities industry components |
| UEENEEK1
01A | Maintain safety and tidiness of remote area power supply systems |
| UEENEEE1
07A | Use drawings, diagrams, schedules, standards, codes and specifications |
| UEENEEK1
02A | Work safely with remote area power supply systems |
| UEENEEE1
31A | Solve problems in ELV circuits for non electrical workers |
| OR | |
| UEENEEE1
04A | Solve problems in d.c. circuits |

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1 Prepare to conduct periodic maintenance of battery banks | 1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures |
| | 1.2 Established OHS risk control measures and procedures in preparation for the work are followed |
| | 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor |
| | 1.4 The nature and location of RAPS system is identified from documentation or from work supervisor to establish the scope of work to be undertaken |

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|--------------------------------------|---|
| | 1.5 | Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community |
| | 1.6 | Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures |
| | 1.7 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety |
| 2 | Maintain RAPS systems battery banks. | |
| | 2.1 | Established OHS risk control measures and procedures for carrying out the work are followed |
| | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures |
| | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures |
| | 2.4 | Prescribed maintenance procedures are used to test and check RAPS system battery banks |
| | 2.5 | Battery bank maintenance, including performance measurements and repairs are carried out safely and to prescribed routines and procedures |
| | 2.6 | Known types of battery functional faults are identified using routine fault finding procedures |
| | 2.7 | Procedures are followed for referring non-routine events to immediate supervisor for directions |
| | 2.8 | Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services |
| | 2.9 | Routine quality checks are carried out in accordance with work instructions |

ELEMENT	PERFORMANCE CRITERIA
3 Complete maintenance work on battery banks and report.	3.1 OHS work completion risk control measures and procedures are followed
	3.2 Work site is cleaned and made safe in accordance with routine procedures
	3.3 Procedures for referring local maintenance issues to the community are followed
	3.4 Battery bank performance measurements are reported to the work supervisor through the established maintenance reporting procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and conducting periodic maintenance of remote area power supply (RAPS) battery banks.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK103A RAPS systems battery bank maintenance techniques

Evidence shall show an understanding of maintaining RAPS battery systems to an extent indicated by the following aspects:

- T1 Basic battery maintenance encompassing:
- scope of regular testing, checking and corrective actions
 - measurement of specific gravity and voltages of battery cells;
 - checking and topping up electrolyte levels;
 - checking for acid leakage, cracks in battery casing, corrosion of battery terminals and connections,
 - cleaning of terminal connections and treating with an anticorrosive

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Conduct periodic maintenance of remote area power supply (RAPS) battery banks as described in 8) and including:

A Measuring and recording specific gravity of electrolyte

B Measuring and recording cell voltages

C	Visual inspecting of batteries for low electrolyte levels; electrolyte leakage corroded terminals and connections
D	Topping up low electrolyte levels
E	Identifying electrolyte leaks
F	Cleaning corroded terminals and connections and treating with an anticorrosive
G	Reporting all maintenance activities
H	Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to conducting periodic maintenance of remote

area power supply (RAPS) battery banks.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEK10 4A Conduct periodic maintenance of remote area power supply generator sets

UEENEEK10 5A Conduct periodic maintenance of remote area power supply photo voltaic arrays

UEENEEK10 6A Conduct periodic maintenance of remote area power supply wind generators

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

UEENEEE1 04A Solve problems in d.c. circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare to conduct periodic maintenance on photo voltaic arrays | 1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures. |
| | 1.2 Established OHS risk control measures and procedures in preparation for the work are followed. |
| | 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor. |
| | 1.4 The nature and location of RAPS system is identified from documentation or from work supervisor to establish the scope of work to be undertaken. |

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|--|---|
| | 1.5 | Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community. |
| | 1.6 | Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures. |
| | 1.7 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety. |
| 2 | Maintain RAPS systems photo voltaic arrays | |
| | 2.1 | Established OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
| | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures. |
| | 2.4 | Prescribed maintenance procedures are used to test and check RAPS system photo voltaic arrays. |
| | 2.5 | Photo voltaic array maintenance, including performance measurements and repairs are carried out safely and to prescribed routines and procedures. |
| | 2.6 | Known types of photo voltaic array functional faults are identified using routine fault finding procedures. |
| | 2.7 | Procedures are followed for referring non-routine events to immediate supervisor for directions. |
| | 2.8 | Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services |

ELEMENT	PERFORMANCE CRITERIA
	2.9 Routine quality checks are carried out in accordance with work instructions.
3 Complete maintenance work of photo voltaic arrays and report	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with routine procedures.
	3.3 Procedures for referring local maintenance issues to the community are followed.
	3.4 Photo voltaic array performance measurements are reported to the work supervisor through the established maintenance reporting procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and conducting periodic maintenance of remote area power supply (RAPS) photo voltaic arrays sets.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK105A RAPS systems photovoltaic array maintenance techniques

Evidence shall show an understanding of maintaining remote area power supply (RAPS) photovoltaic arrays to an extent indicated by the following aspects:

T1 RAPS systems photovoltaic array maintenance techniques encompassing:

- Cleaning of photo voltaic modules
- Checking for damage or de-lamination
- Checking of module connections, connecting cable and integrity of the array structure
- Maintaining log books and maintenance regime

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and

developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Conduct periodic maintenance of remote area power supply (RAPS) photo voltaic arrays as described in 8) and including:

A Measuring and recording array no-load and load voltages together with ambient temperature

- B Measuring and recording array output for three load conditions
- C Visually inspecting array modules and support structure for physical damage
- D Visually inspecting array connections and cables
- E Identifying array defects and faults
- F Reporting all maintenance activities
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to conducting periodic maintenance of remote area power supply (RAPS) photo voltaic arrays.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEK10 3A Conduct periodic maintenance of remote area power supply battery banks

UEENEEK10 4A Conduct periodic maintenance of remote area power supply generator sets

UEENEEK10 6A Conduct periodic maintenance of remote area power supply wind generators

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different RAPS systems in which the photo voltaic array is charged from a photo voltaic array and a photo voltaic array and at least one similar RAPS system where the photo voltaic array is charged from a wind generator.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Renewable and Sustainable Energy

UEENEEK106A Conduct periodic maintenance of remote area power supply wind generators

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers maintenance of remote area power supply (RAPS) wind generators where the exposed voltage is not greater than 50 V a.c. or 120 V d.c. It encompasses working safely and to maintenance standards and following maintenance routines, identifying known types of wind generator faults using routine procedures and completing the necessary maintenance reporting.

Application of the Unit

Application of the Unit **2)**

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities industry components

UEENEEK1 01A Maintain safety and tidiness of remote area power supply systems

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEK1 02A Work safely with remote area power supply systems

UEENEEE1 31A Solve problems in ELV circuits for non electrical workers

OR

UEENEEE1 04A Solve problems in d.c. circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|--|
| 1 Prepare to conduct periodic maintenance on wind generators | 1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures |
| | 1.2 Established OHS risk control measures and procedures in preparation for the work are followed. |
| | 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor. |

| | 2.5 | Wind generator maintenance, including performance measurements and repairs, are carried out safely and to prescribed routines and procedures. |
| | 2.6 | Known types of wind generator functional faults are identified using routine fault finding procedures. |
| | 2.7 | Procedures are followed for referring non-routine events to immediate supervisor for directions. |
| | 2.8 | Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services |
| | 2.9 | Routine quality checks are carried out in |

ELEMENT	PERFORMANCE CRITERIA
	accordance with work instructions.
3 Complete maintenance work of wind generators and report	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with routine procedures.
	3.3 Procedures for referring local maintenance issues to the community are followed.
	3.4 Wind generator performance measurements are reported to the work supervisor through the established maintenance reporting procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and conducting periodic maintenance of remote area power supply (RAPS) wind generators.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK106A RAPS systems wind generator maintenance techniques

Evidence shall show an understanding of maintaining small wind generator systems to an extent indicated by the following aspects:

- T1 Wind generator minor maintenance encompassing:
- Checking the integrity of support structure
 - Tension of stay wires
 - Visual inspection of wind generator operation
 - Maintaining log books and maintenance regime

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and conducting checks in the demand side use of remote area power supplies.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK107A RAPS system use auditing techniques

Evidence shall show an understanding of effective RAPS systems use to an extent indicated by the following aspects:

T1 General safety

T2 Demand side use of power systems encompassing:

- Demand exceeds supply
- Size or capacity of the system
- Energy needs of the end users
- Energy use awareness of the end users
- Data logging chips

T3 Demand versus supply encompassing:

- selecting appliances
- using appliances
- using lights, hot water, freezers
- energy efficient items;
- CFL globes
- water saver shower heads
- weather stripping
- appropriate use of RAPS system components - overloading system components, using generator supply for heavy loads and the like.

This unit covers plant maintenance planning and scheduling. It encompasses developing and self managing simple maintenance programs, replacing some specified components and reporting of maintenance work.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training and may be used to augment other electrotechnology qualifications at AQF 3 level or higher. Additionally, this unit may apply to indigenous persons entering work in remote area power supply (RAPS) servicing. The unit may also apply to renewable energy service work in general and be used in school-based vocational programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may, in some States/Territories, require a license to practice in the workplace subject to regulations for undertaking plant maintenance planning and scheduling related to RAPS work. Practice in workplace and during training may also

License to practice

3)

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 37A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEK1 02A Work safely with remote area power supply systems

UEENEEK1 03A Conduct periodic maintenance of remote area power supply battery banks

UEENEEK1 04A Conduct periodic maintenance of remote area power supply generator sets

For the full prerequisite chain details for this unit please

Prerequisite Unit(s) 4)
refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish maintenance requirements	1.1 OHS policies and procedures, skills required and frequency and level of maintenance work are determined in accordance with maintenance routines
	1.2 Records are established to manage maintenance work and up-to-date accordance with routine procedures
	1.3 Level of replacement or repair to be done under maintenance work is established in accordance with manufacturer and community requirements
	1.4 Needed maintenance program, including basic periodic instruction in demand side use, is established in accordance with local community requirements
2 Develop and implement maintenance schedule	2.1 Maintenance schedules are developed from recommendations of equipment manufacturers and in accordance with RAPS system safety and performance requirements
	2.2 Procedures are developed and implemented to ensure the maintenance program is followed in accordance with the planned schedule and requirements
	2.3 Procedures are developed and implemented to ensure records are maintained in accordance with planned schedule and requirements
3 Evaluate maintenance program	3.1 Periodic and sample inspection reports are used to ascertain maintenance quality and the need for revision of maintenance schedule and frequency
	3.2 Maintenance schedule is periodically reviewed and revised to maintain the integrity of the RAPS system

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of plant maintenance planning and scheduling, encompassing the development and self management of simple maintenance programs, replacing some specified components and reporting of maintenance work.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK108A RAPS system maintenance schedule

Evidence shall show an understanding of maintaining scheduling for RAPS systems to an extent indicated by the following aspects:

Maintenance scheduling encompassing:

- Limitation of the role of the RAPS service worker
- Periodic maintenance planning procedures encompassing:
 - Development of vehicle booking procedures, check lists for replacement equipment, items to be checked, items to be replaced and procedures for recording and reporting.
 - Scheduling of maintenance at a number of homeland communities.
 - Check list for preparation of service vehicle and tools and equipment needed to carry out the maintenance
 - Processes for sourcing and funding replacement component

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop a plan for periodic maintenance of RAPS systems located in different communities as listed in 8). It must incorporate the following components:

A Safety requirements

B Items to be check and tested

C	Items to be replaced or repaired
D	Frequency of the periodic maintenance
E	Materials and equipment required
F	Time needed to conduct maintenance on each RAPS system
G	Travel distance and times to each community
H	Protocols for working in different communities,
I	Methods for recording and evaluating maintenance,
J	Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Access to a supervisor for obtaining work instructions and advice.
- Maintenance and repair materials
- Maintenance requirements for RAPS system incorporating Battery bank; Engine driven generator sets; Fuel storage; Inverter and regulator; Photo voltaic array, and Wind generators.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and

replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing a plan for periodic maintenance of RAPS systems located in different communities.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEK10 3A Conduct periodic maintenance of remote area power supply battery banks

UEENEEK10 4A Conduct periodic maintenance of remote area power supply generator sets

UEENEEK10 6A Conduct periodic maintenance of remote area power supply wind generators

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in plant maintenance planning and scheduling including developing and self managing simple maintenance programs, replacing some specified components and reporting of maintenance work according to established procedures and requirements.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Renewable and Sustainable Energy

UEENEEK109A Attend to breakdowns in remote area power supplies (RAPS)

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers attending to a breakdown of remote area power supplies. It encompasses working safely, ascertaining the nature of a breakdown, the extent of repairs required and the personnel needed to repair the breakdown, and reporting so arrangements can be made for the repair work to be carried out. It also encompasses undertaking specified minor repairs.

Application of the Unit

Application of the Unit **2)**

This unit must apply to indigenous persons entering work in remote area power supply (RAPS) servicing. The unit may also apply to renewable energy service work in general and be used in school-based vocational programs.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace. However they are subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 03A Solve problems in ELV single path circuits

UEENEEK1 01A Maintain safety and tidiness of remote area power supply systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged

Employability Skills

5)

will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1	Prepare to undertake maintenance work	1.1	OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
		1.2	Established OHS risk control measures and procedures in preparation for the work are followed
		1.3	Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
		1.4	The nature of maintenance work is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
		1.5	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
		1.6	Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
		1.7	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

ELEMENT	PERFORMANCE CRITERIA
2 Carry out maintenance work	2.1 Established OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Procedures are followed for referring non-routine events to immediate supervisor for directions
	2.5 Work is done efficiently without waste of materials and energy
	2.6 Work is done without damage to apparatus, circuits, the surrounding environment or services
	2.7 Routine quality checks are carried out in accordance with work instructions.
3 Complete work and report	3.1 OHS risk control work completion measures and procedures are followed
	3.2 Work site is cleaned and made safe in accordance with established procedures
	3.3 Work supervisor is notified of the completion of maintenance in accordance with established procedures and documented

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and attending to breakdowns in remote area power supplies.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK109 Remote area essential services facilities

A

Evidence shall show an understanding of remote area essential service facilities breakdowns to an extent indicated by the following aspects:

Remote area essential services facilities repairs encompassing:

- windows repairs
- fences repairs
- gate repairs
- locks and catches repairs

Power generation components repairs encompassing:

- Diesel engine minor repairs
- Generator minor repairs
- Batteries minor repairs
- photovoltaic arrays minor repairs
- wind generators minor repairs
- auxiliary equipment minor repairs

Electrical lighting services minor repair encompassing:

- Incandescent light globes
- Fluorescent tubes
- Fluorescent light starters
- Diffusion devices
- Safety awareness

Essential services facilities safety and security and emergency checks encompassing:

- Broken windows
- Faulty lighting
- Damaged gates

REQUIRED SKILLS AND KNOWLEDGE

- Logging the inspections
- Notification of the situation
- Safety awareness

Telephone encompassing:

- Answer calls promptly and clearly.
- Using designated business protocol procedures.
- Making and receiving telephone calls in a workplace related context.
- Obtain accurate telephone numbers from an appropriate source.
- Establish contact using designated business protocol procedures.
- Convey purpose all call clearly and concisely.

Electrical encompassing:

- Identification and basic function of electrical components used
- for generating and distributing.
- Electricity safety procedures when working with electricity.
- Identification of faulty electrical components.
- Reporting of faulty electrical components.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to coordinate maintenance	1.1 OHS procedures for a given work area are obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work
	1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel
	1.4 The extent of work is determined from job specifications, drawings and regulatory requirements
	1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.6 Competencies needed to undertake work are determined from job specifications and/or consultation with appropriate personnel
	1.7 Personnel and materials needed to undertake maintenance are obtained in accordance with established procedures and checked against job requirements

ELEMENT	PERFORMANCE CRITERIA
	1.8 Tools, equipment and testing devices needed to undertake maintenance are obtained in accordance with established procedures and checked for correct operation and safety
	1.9 Preparatory work is checked to ensure no damage has occurred and complies with requirements
2 Carry out maintenance	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Maintenance is carried out in compliance with technical standards and job specifications and requirements
	2.5 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.7 Ongoing checks of the quality of maintenance are undertaken in accordance with job specification, technical standards and/or regulatory requirements
	2.8 Work efficiently without waste of materials and energy or damage to apparatus, circuits, the surrounding environment or other services
3 Complete work	3.1 OHS risk control work completion measures and procedures are followed
	3.2 Work site is made safe in accordance with established safety procedures

ELEMENT

PERFORMANCE CRITERIA

- 3.3 Verify maintenance conforms to requirements
- 3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and co-ordinating maintenance of renewable energy apparatus and systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK110 Scheduled maintenance process

A

Evidence shall show an understanding of scheduled maintenance processes to an extent indicated by the following aspects:

Maintenance principles encompassing:

- maintenance function
- role of maintenance department
- occupational health and safety requirements

Maintenance systems encompassing:

- maintenance terminology
- preventative maintenance
- predictive maintenance
- corrective maintenance

Data acquisition encompassing:

- plant history cards/files
- inspection techniques
- predictive maintenance
- remote visual inspection
- non-destructive testing

REQUIRED SKILLS AND KNOWLEDGE

- thermography
- vibration analysis
- oil analysis

Maintenance plan encompassing:

- characteristics of plant operation
- assessment of failure characteristics
- link failure characteristics to maintenance systems
- identify production windows
- resources
- labour
- materials
- establish plan
- implementation procedures

Review of maintenance plan encompassing:

- analysis of records
- manual recording methods

Computerised recording methods.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships.

However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers installation of remote area power supply (RAPS) systems where the exposed voltage is not greater than 50 V a.c. or 120 V d.c. It encompasses working safely and to installation standards, matching equipment with that specified for a given location, placing and securing equipment accurately, making required circuit connections and completing the necessary installation documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Note:

License to practice**3)**

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE1 08A Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits

And

UEENEEE1 31A Solve problems in ELV circuits for non electrical workers

OR

UEENEEE1 Solve problems in d.c. circuits

Prerequisite Unit(s) 4)

04A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install remote area power supplies	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Health and safety risks are identified, and established risk control measures and procedures are followed in preparation for the work
	1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented
	1.4 Installation of apparatus is prepared in consultation with others effected by the work and sequenced appropriately
	1.5 The nature and location of the work is determined from documentation or appropriate persons to establish the scope of work to be undertaken
	1.6 Locations of apparatus and associated equipment is planned within the constraints of the building structure, significant and regulations
	1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others
	1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements
	1.9 Tools, equipment and testing devices needed for the installation work are obtained in accordance with established procedures and checked for correct operation and safety
	1.10 Preparatory work is checked to ensure no damage has occurred and that it complies with requirements
2 Install remote area power supplies	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and

ELEMENT	PERFORMANCE CRITERIA
	when necessary conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Apparatus and associated equipment are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance
	2.5 Wiring is terminated at apparatus and associated equipment in accordance with manufacturer specifications and functional and regulatory requirements
	2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented
	2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8 Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures
	2.9 Apparatus installation is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles
3 Complete maintenance work on battery banks and report	3.1 OHS work completion risk control measures and procedures are followed
	3.2 Work site is cleaned and made safe in accordance with established procedures
	3.3 Final checks are made so that the installed apparatus conforms to requirements
	3.4 'As-installed' apparatus and associated equipment is documented and appropriate

ELEMENT**PERFORMANCE CRITERIA**

person(s) notified in accordance with established procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and assembling and connecting remote area power supplies (RAPS).

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK111A Remote area power supplies ELV installations requirements

Evidence shall show an understanding of requirements for Remote area power supplies ELV installations to an extent indicated by the following aspects:

Requirements for installation of wiring and equipment

Compliant methods for providing protection

Requirements for installation planning and selection of equipment

Testing and verification requirements

Documentation encompassing:

- results of tests conducted that comply with requirements and ensure the remote area power supplies ELV installation is safe, including any formal documents of the results of testing required by authorities.
- documents of periodic inspection and testing of remote area power supplies ELV wiring and equipment including any tagging, in accordance with requirements.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Assemble and connect remote area power supplies (RAPS) as described in 8) and including:
 - A Reading and interpreting drawings related to and apparatus locations and circuit connections.
 - B Placing and securing apparatus accurately

- C Maintaining fire integrity
- D Connecting apparatus and associated equipment to comply with requirements
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to assembling and connecting remote area power supplies (RAPS).

Method of assessment**9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units**9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEK10 4A Conduct periodic maintenance of remote area power supply generator sets

UEENEEK10 5A Conduct periodic maintenance of remote area power supply photo voltaic arrays

UEENEEK10 7A Conduct checks in the demand side use of remote area power supplies (RAPS)

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different RAPS systems in which the battery bank is charged from a generator set and a photo voltaic array and at least one similar RAPS system where the battery bank is charged from a wind generator.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Renewable and Sustainable Energy

UEENEEK112A Provide basic sustainable energy solutions for energy reduction in residential premises

Modification History

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers monitoring energy use and providing basic sustainable energy options to reduce the energy consumption in residential premises. It encompasses working safely and providing basic sustainable energy solutions for energy reduction in domestic premises.

Application of the Unit

Application of the Unit 2)

This unit shall apply to persons entering work in electrotechnology and may be used in school-based vocational programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work

License to practice

3)

platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1 Prepare to monitor energy usage and provide basic solutions for energy reduction | 1.1 Monitoring activities are planned and prepared for to ensure OHS policies and procedures are followed with the work appropriately sequenced in accordance with requirements |
| | 1.2 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved |
| | 1.3 Materials are obtained and checked in accordance with established procedures and to comply with requirements |
| | 1.4 Location in which monitoring activities are to be undertaken is determined from job requirements |
| | 1.5 Materials necessary to complete the work are obtained in accordance with established procedures and checked against job requirements |
| | 1.6 Materials needed to carry out the monitoring are obtained in accordance with established procedures |
| 2 Undertake monitoring of energy usage and provide basic solutions for energy reduction | 2.1 OHS policies and procedures for undertaking monitoring activities are followed |
| | 2.2 Monitoring activities are undertaken in accordance with requirements, without damage or distortion to the surrounding environment or services |
| | 2.3 Unplanned events or conditions are responded to in accordance with established procedures |

ELEMENT	PERFORMANCE CRITERIA
	2.4 Approval is obtained in accordance with established procedures from appropriate personnel before any contingencies are implemented
	2.5 Ongoing checks of the quality of the work are carried out in accordance with established procedures
3 Complete monitoring activities and provide and provide reports where necessary	3.1 Documentation/reports are completed to ensure administrative requirements are met
	3.2 Work completion is notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and providing basic sustainable energy solutions for energy reduction in domestic premises.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK112 Concepts of renewable energy

A

Evidence shall show an understanding of concepts of renewable energy to an extent indicated by the following aspects:

T1 Non-technical issues encompassing:

- current economic, social, environmental and political issues, impact on a renewable energy technology

T2 Energy services/demand encompassing:

- terminology
- energy, power, temperature, symbols, units

REQUIRED SKILLS AND KNOWLEDGE

- energy conversion and efficiency
 - domestic dwelling: energy services and energy demand of individual appliance,
 - energy efficient appliances
 - primary energy and end use energy
 - embodied energy
- T3 Solar radiation resource encompassing:
- terminology
 - units, symbols, conversions
 - sun path diagrams
 - solar contour maps
 - solar window
- T4 Solar thermal systems encompassing:
- terminology
 - components
 - applications
 - types of hot water systems
- T5 Photovoltaic arrays encompassing:
- terminology
 - current, voltage and power
 - modules: types, efficiency, applications
 - IV curve
 - irradiance and temperature effects
 - array configurations
- T6 Wind energy resource and technology encompassing:
- terminology, units, symbols
 - wind speed, direction, turbulence, wind power,
 - vertical wind speed profile (wind shear)
 - local terrain roughness
 - isovent maps
 - measuring instruments
 - Wind Energy Conversion Systems (WECS)
 - terminology
 - characteristics
 - applications

REQUIRED SKILLS AND KNOWLEDGE

- T7 Micro-hydro resource and technology encompassing:
- terminology, units, symbols
 - flow rate, head, assessment
 - turbine types and applications
- T8 Stand-alone power system configuration encompassing:
- basic configuration series systems
 - components: functions, efficiencies; regulators, inverters, battery chargers, generators

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may

be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare to promote sustainable energy practice	<p>1.1 Activities are planned and prepared to ensure OHS policies and procedures are followed with the work appropriately sequenced in accordance with requirements</p> <p>1.2 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved</p> <p>1.3 Materials are obtained and checked in accordance with established procedures and to comply with requirements</p> <p>1.4 Location in which activities are to be undertaken is determined from requirements</p> <p>1.5 Materials necessary to complete the work are obtained in accordance with established procedures and checked against job requirements</p>
2 Promote sustainable energy practice	<p>2.1 OHS policies and procedures for undertaking administrative functions are followed</p> <p>2.2 Activities are undertaken in accordance with requirements without damage or distortion to the surrounding environment or services</p> <p>2.3 Unplanned events or conditions are responded to in accordance with established procedures</p> <p>2.4 Approval is obtained in accordance with established procedures from appropriate personnel before any contingencies are implemented</p>

ELEMENT	PERFORMANCE CRITERIA
	2.5 Ongoing checks of the quality of the work are undertaken in accordance with established procedures
3 Complete the promotion of sustainable energy	3.1 Documentation/reports are completed to ensure detailed promotional activities requirements are met
	3.2 Completion is notified in accordance with established procedure

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and promoting sustainable energy practices in the community.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK114A Greenhouse reduction strategies

Evidence shall show an understanding of greenhouse gas reduction strategies to an extent indicated by the following aspects:

- T1 Greenhouse gas emissions profile encompassing:
- goals and principles of the National Greenhouse Strategy
 - what a greenhouse gas inventory is, why it is required, and the sectors to which it applies
 - uses to which the National Greenhouse Gas Inventory can be applied.
- T2 Understanding and communicating climate change and its impacts encompassing:
- the possible impact of climate change in Australia.
 - techniques for improving the understanding of climate change
 - techniques for communicating to and educating the general public on greenhouse gas induced climate change.

REQUIRED SKILLS AND KNOWLEDGE

- T3 Partnerships for greenhouse action encompassing:
- actions achievable by each level of government to implement the NGS.
 - methods by which the community activity can be engaged in the reduction of greenhouse gas emissions.
 - initiatives that can be undertaken by the private sector to reduce greenhouse gas emissions.
 - advantages of international partnerships.
 - emissions trading system.
- T4 Efficient and sustainable energy use and supply encompassing:
- techniques for reducing the greenhouse intensity of energy supply.
 - types of renewable energy sources suitable for use in Australia.
 - methods and technique for improving end-use efficiency.
- T5 Efficient transport and sustainable urban planning encompassing:
- how integrating land use and transport planning can assist the greenhouse problem.
 - how each of the following can be used to mitigate greenhouse gas; travel demand and traffic management strategies; encouraging greater use of public transport, walking and cycling; freight and logistics systems; improving vehicle fuel efficiency and fuel technologies;
- T6 Greenhouse sinks and sustainable land management encompassing:
- how enhancing greenhouse sinks and encouraging sustainable forestry and vegetation management can complement the AGS.
 - how greenhouse gas emissions are obtained from agricultural production and describe techniques to mitigate the emissions.
- T7 Models of greenhouse best practice in industrial processes and waste management encompassing:
- types and methods of reducing greenhouse gas emissions from industry.
 - methods of reducing methane emissions from waste treatment and disposal.

REQUIRED SKILLS AND KNOWLEDGE

- T8 Adaptation to climate change encompassing:
- salient points in each of the key sectors that require analysis and the strategies required in the need for adaptation to climate change

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to promoting sustainable energy practice in the community in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Renewable and Sustainable Energy

UEENEEK116A Maintain and repair remote area power generation facilities

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers basic maintenance of power generation facilities in remote areas. It encompasses working safely, following maintenance schedules to inspect, repair, replace and adjustment equipment, maintaining a clean and efficient generation facility and completing the necessary reporting.

Application of the Unit

Application of the Unit 2)

This unit is intended primarily for indigenous persons seeking qualifications in remote area utilities facilities servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Note:

License to practice

3)

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Competency in this unit shall be assessed in conjunction with other units in a qualification.

UEENEEK1 04A Conduct periodic maintenance of remote area power supply generator sets

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to maintain and repair remote area power generation facilities	1.1 OHS procedures for a remote area power station facility are identified, obtained and understood through established routines and procedures
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed
	1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
	1.4 The nature and location of remote area power station facility is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community
	1.6 Sources of materials that may be required for the work are identified and accessed in accordance

ELEMENT	PERFORMANCE CRITERIA
2 Maintain and repair remote area power generation facilities	with established routines and procedures
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
	2.1 Established OHS risk control measures and procedures for carrying out the work are followed
	2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.2 Inspection, repairs, replacements and/or adjustments are carried out on items listed in the maintenance schedule and in accordance with established procedures.
	2.3 Fuel, coolant, oil and other fluid spills are cleaned and area made safe in accordance with established procedures.
	2.4 Batteries are serviced and/or replaced as specified in the maintenance schedule and in accordance with established procedures.
	2.5 Consumables are removed and disposed of following environmentally safe procedures.
	2.6 Procedures are followed for referring non-routine events to immediate supervisor for directions
	2.7 Routine quality checks are carried out in accordance with work instructions
3 Report maintenance and repair of remote area power generation facilities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Procedures are followed for referring maintenance issues beyond the scope of prescribed work to persons of higher authority.
	3.3 Work carried out is reported to the work supervisor through the established maintenance reporting procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and maintaining and repairing facilities associated with remote area essential service operations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK116A Remote area essential services power plant

Evidence shall show an understanding of remote area essential services power plant to an extent indicated by the following aspects:

Minor service and maintenance procedures of diesel powered generation equipment in accordance with a prepared schedule encompassing:

- Types and grades of inspections, repairs, replacement and/or adjustments under a maintenance schedule:
 - Replacement items/materials include engine oil, oil filters, fuel filters, engine coolant system filters, air cleaners and fan belts;
 - Inspection and repair items include leakages from fuel system, coolant system and lubricating oil system.
- Cleaning of fluid spills.
- Environmentally safe procedures for removal and disposal of consumables.

Servicing batteries and battery packs in a community power station in accordance with the prepared maintenance schedule encompassing:

- Hazards associated with batteries.
- Types of batteries and their application in a community power station (Starting battery set, switchboard (nicad) batteries)
- Battery maintenance techniques

Schedule regular servicing and maintenance encompassing:

- Engine oil and filter changes;

REQUIRED SKILLS AND KNOWLEDGE

- Fuel filters;
- Coolant filters
- Water trap devices
- Drive belt (condition/adjustment);
- Valve adjustments (if applicable);
- Major and minor mechanical servicing by outside agents;
- Air cleaner (both dry paper and oil bath types)

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement.
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling

employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
- Maintain and repair remote area power generation facilities as described in 8) and including:

- A Understanding the location and nature of the work required
- B Correctly inspecting, repairing, replacing and adjusting items listed in the maintenance schedule
- C Cleaning fluid spills appropriately.
- D Removing and disposing of consumable following environmentally safe procedures.
- E Documenting work activities accurately
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to maintaining and repairing facilities associated with remote area essential service operations.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different remote area power generation facilities.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 03A Solve problems in ELV single path circuits

And

UEENEEE1 31A Solve problems in ELV circuits for non electrical workers

OR

UEENEEE1 04A Solve problems in d.c. circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1 Prepare to maintain and repair facilities | 1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures |
| | 1.2 Established OHS risk control measures and procedures in preparation for the work are followed |

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|--------------------------------|---|
| | 1.3 | Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor |
| | 1.4 | The nature and location of service facilities is obtained from documentation or from work supervisor to establish the scope of work to be undertaken |
| | 1.5 | Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community |
| | 1.6 | Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures |
| | 1.7 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety |
| 2 | Maintain and repair facilities | |
| | 2.1 | Established OHS risk control measures and procedures for carrying out the work are followed |
| | 2.2 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures |
| | 2.2 | Prescribed procedures are used to check and identify deterioration and damage to facilities |
| | 2.4 | Faulty and damaged facilities are repaired using routine procedures |
| | 2.5 | Maintenance and repairs are carried out safely and within the prescribed limits, routines and procedures |
| | 2.6 | Procedures are followed for referring non-routine events to immediate supervisor for directions |
| | 2.7 | Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services |

ELEMENT	PERFORMANCE CRITERIA
	2.8 Routine quality checks are carried out in accordance with work instructions
3 Complete maintenance and repair work report	3.1 OHS work completion risk control measures and procedures are followed
	3.2 Work site is cleaned and made safe in accordance with routine procedures
	3.3 Procedures are followed for referring maintenance issues beyond the scope of prescribed work to persons of higher authority
	3.4 Work carried out is reported to the work supervisor through the established maintenance reporting procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and maintaining and repairing facilities associated with remote area essential service operations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK117A Remote area essential services facilities

Evidence shall show an understanding of remote area essential services facilities to an extent indicated by the following aspects:

- T1 Window repair and maintenance encompassing:
- Emergency repairs
 - Louvre type
 - Fixed pane type
 - Shutters
 - Safety awareness

REQUIRED SKILLS AND KNOWLEDGE

T2 Repair and maintenance to fences and gates encompassing:

- Emergency repairs
- Locks and catches
- Security fencing
- Fence maintenance
- Gates
- Safety awareness

T3 Maintenance painting encompassing:

- Preparation of surfaces
- Block work
- Concrete
- Timber
- Steel
- Paint selection
- Brush and roller selection
- Paint application
- Clean up process
- Paint and accessories storage
- Safety awareness

T4 Essential services facilities lighting encompassing:

- Incandescent lamps
- Compact fluorescent lamps
- Fluorescent tubes
- Fluorescent light starters
- Diffusion devices
- Safety awareness
- Disposal of faulty lamps

T5 Essential services facilities safety and security and emergency checks encompassing:

- Broken windows
- Faulty lighting
- Damaged gates
- Logging the inspections
- Notification of the situation
- Safety awareness

REQUIRED SKILLS AND KNOWLEDGE

- T6 Telephone encompassing:
- Answer calls promptly and clearly.
 - Using designated business protocol procedure
 - Making and receiving telephone calls in a workplace context
 - Obtain accurate telephone numbers from an appropriate source.
 - Establish contact using designated business protocol procedures.
 - Convey purpose all call clearly and concisely.
- T7 Mathematical operations encompassing:
- Whole numbers.
 - Fractions
 - Decimals
 - Percentages
 - Ratios
 - Proportions
- T8 Electrical encompassing:
- Identification and basic function of electrical components used
 - for generating and distributing.
 - Electricity safety procedures when working with electricity.
 - Identification of faulty electrical components.
 - Reporting of faulty electrical components.
- T9 Fire fighting equipment encompassing:
- Fire extinguishers and signage
 - Types of fire extinguishers
 - Contents and colour
 - Correct identification
 - Use of fire extinguishers
 - Use of water hose and reel
 - Safety awareness

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Maintain and repair facilities associated with remote area essential service operations as described in 8) and including:

A Understanding the location and nature of the work required

B Identifying deterioration and damage to facilities

- correctly
- C Carrying out maintenance and repairs effectively
 - D Identifying maintenance issues beyond the scope of prescribed work and notifying appropriate persons
 - E Documenting work activities accurately
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to maintaining and repairing facilities

associated with remote area essential service operations.

**Method of
assessment** **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare to maintain and power station compound and monitor performance. | 1.1 OHS procedures for a remote area power station facility is identified, obtained and understood through established routines and procedures |
| | 1.2 Established OHS risk control measures and procedures in preparation for the work are followed |
| | 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor |
| | 1.4 The nature and location of remote area power station facility is obtained from documentation or from work supervisor to establish the scope of work to be undertaken |

ELEMENT

PERFORMANCE CRITERIA

- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 1.8 Established procedures are followed to repair or replace defective and unsafe tools and service equipment.
- 2 Maintain power station compound and monitor performance
 - 2.1 Established OHS risk control measures and procedures for carrying out the work are followed
 - 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
 - 2.2 Established procedures are followed to clean and tidy power station building, generating equipment and compound to maintain safe and efficient plant area.
 - 2.3 Inspection and reporting is conducted on suitability, location and legibility of safety signage.
 - 2.4 Inspection and reporting is conducted on location, suitability and condition of fighting equipment
 - 2.5 Performance, status and fuel and oil use of generation equipment is monitored and logged from information displayed instruments, meters and measuring devices.
 - 2.7 Procedures are followed for referring non-routine events to immediate supervisor for directions
 - 2.8 Routine quality checks are carried out in

ELEMENT	PERFORMANCE CRITERIA
	accordance with work instructions
3 Develop basic maintenance schedule and complete work report	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Maintenance schedule is developed from logged information on power station performance, status and condition of compound.
	3.3 Procedures are followed for referring maintenance issues beyond the scope of prescribed work to persons of higher authority.
	3.4 Work carried out is reported to the work supervisor through the established maintenance reporting procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and maintaining and repairing facilities associated with remote area essential service operations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK118A Power station and compound maintenance

Evidence shall show an understanding of RAPS compound maintenance and meter reading to an extent indicated by the following aspects:

Maintaining clean, tidy and safe condition of the power station building and generating equipment encompassing:

- Removal of generating plant oil, coolant and fuel leaks.
- Removal fluid spills from plant room floor areas.
- Cleaning of power house ventilation systems
- Removal of insects and fauna from plant area.
- Environmentally safe disposal of used consumables and

REQUIRED SKILLS AND KNOWLEDGE

rubbish.

- Repositioning emptied rubbish bins.
- Correct storage of plant spares.

Maintaining a clean, tidy and safe working environment of power station compound encompassing:

- Repairing and securing compound perimeter fencing and gates.
- Removal and environmentally safe disposal of flora from the fence line and plant room perimeter.
- Removal and environmentally safe disposal compound rubbish
- Cutting and watering the compound grassed area.
- Safe arrangements for storage of fuel drums and other flammable liquids.
- Maintaining water reticulation equipment.

Inspecting, classifying and repairing the power station tools and equipment encompassing:

- Inspecting and reporting hand tools and service equipment for serviceability.
- Equipment repair procedures.
- Cleaning and storage of tools and equipment.

Inspecting and reporting on the safety signage displayed in the power station and on the perimeter fence encompassing:

- Types and location of safety signs relevant to a community power station and compound.
- Reporting on the conditions and suitability of the signs.

Locating, inspecting and reporting on the fixed and portable fire fighting equipment contained in and around the power station encompassing:

- Types of fire fighting equipment suitable for a power station.
- Typical locations of power station fire fighting equipment.
- Inspecting and reporting suitability and condition of fire fighting equipment.

Instruments/meters showing performance/status of community power stations encompassing:

- Types of information displayed on the instrument panel and switchboards (engine oil pressure, coolant temperatures fuel pressure/flow, amperes, voltage, kilowatt, kilowatt hours,

REQUIRED SKILLS AND KNOWLEDGE

- frequency Hertz, and engine running hours).
- Instrument/meter reading and recording techniques.
- Dip stick measurement measure and recording methods of bulk fuel and engine oil.

Developing maintenance schedules from logged information of community power station performance encompassing:

- Logged information is that listed in T1 above.
- Maintenance schedules includes timely ordering of fuel, coolant and engine oil, engine oil changes, engine oil filter changes, fan belt condition and adjustment, air cleaner element service, minor tune up requirements, valve adjustments and minor and major overhaul work.

Instrument/meter reading and maintenance scheduling records.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement.
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Maintain and monitor remote area essential service operations as described in 8) and including:
 - A Understanding the location and nature of the work required
 - B Following established procedures for repairing or replacing defectives tools and service equipment
 - C Cleaning and tidying power station building, generating equipment and compound effectively.
 - D Correctly inspecting and reporting suitability, location and legibility of safety signage.
 - E Correctly inspecting and reporting location, suitability and condition of fighting equipment.
 - F Accurately monitoring and logging performance, status and fuel and oil use of generation equipment.
 - G Developing an appropriate basic maintenance schedule from logged information
 - H Documenting work activities accurately
 - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which

competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to maintaining and repairing facilities associated with remote area essential service operations.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different remote area essential service operations.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Renewable and Sustainable Energy

UEENEEK120A Maintain operation of remote area power generation plant

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers maintenance of remote area power generation plant where the exposed voltage is not greater than 50 V a.c. or 120 V d.c. It encompasses working safely and to maintenance standards and following maintenance routines, identifying known types of power plant faults using routine procedures and completing the necessary maintenance reporting.

Application of the Unit

Application of the Unit 2)

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

License to practice**3)**

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG105A and all prerequisite units it specifies.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK1 Maintain and repair remote area power
16A generation facilities

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Maintain operation of remote area power generation plant	1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed

ELEMENT	PERFORMANCE CRITERIA
	1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
	1.4 The nature and location of the power plant is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community
	1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Maintain operation of remote area power generation plant	2.1 Established OHS risk control measures and procedures for carrying out the work are followed
	2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.3 Prescribed maintenance procedures are used to test and check remote area power plant
	2.4 Known types of remote area power plant functional faults are identified and repaired using routine procedures
	2.5 Maintenance, including performance measurements and repairs are carried out safely and to prescribed routines and procedures
	2.6 Procedures are followed for referring non-routine events to immediate supervisor for directions
	2.7 Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the

ELEMENT	PERFORMANCE CRITERIA
3 Complete maintenance work and report	surrounding environment or services
	2.8 Routine quality checks are carried out in accordance with work instructions
	3.1 OHS work completion risk control measures and procedures are followed
	3.2 Work site is cleaned and made safe in accordance with routine procedures
	3.3 Procedures are followed for referring maintenance issues beyond the scope of prescribed work to persons of higher authority
3.4 Work carried out is reported to the work supervisor through the established maintenance reporting procedures	

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and maintaining operation of remote area power generation plant.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK120A Remote area essential services power generation plant

Evidence shall show an understanding of remote area essential services power plant maintenance to an extent indicated by the following aspects:

T1 Minor servicing of a power station's generating plant encompassing:

- Engine oil and filters
- Fuel filters
- Coolant filters
- Water trap devices

REQUIRED SKILLS AND KNOWLEDGE

- Air cleaners

T2 Minor maintenance of a power station's generating plant encompassing:

- Fan and accessory drive belts
- Repair of minor leaks: coolant, oil and fuel

T3 Servicing of a power station's generating plants battery systems encompassing:

- Starting battery set
- Switchboard (nicad) batteries

T4 Information displayed by the instruments/meters in a power station encompassing:

- Generating equipment (diesel engine)
- Engine lubrication
- System oil pressure
- Engine cooling system coolant
- Temperature (in and out)
- Fuel pressure
- Current (A)
- Voltage
- Power (kW)
- Kilowatt hours
- Frequency, hertz (Hz)
- Engine running hours
- Station services: Fuel tank dip; Lubricating oil tank level;
- Fuel flow meter

T5 Use of the information gathered from instruments/meters encompassing:

- Ordering of: Fuel; Lubricating oil; Coolant
- Schedule regular servicing and maintenance for: Engine oil and filter changes; Fuel filters; Drive belt (condition/adjustment); Valve adjustments (if applicable); Major and minor mechanical servicing by outside agents; Air cleaner (both dry paper and oil bath types)

REQUIRED SKILLS AND KNOWLEDGE

T6 Power station log sheets and readings encompassing:

- Completed log sheets
- Forwarding information to appropriate person/location at regular intervals (weekly)

T7 General cleanliness of the power stations plant and buildings encompassing:

- Generation plant
- Oil leaks
- Water leaks
- Fuel leaks
- Safety awareness
- Plant buildings
- Internal floor area
- Used consumables
- Spare parts storage
- Spider webs and other pests
- Rubbish containers
- Ventilation
- Power station compound
- Fence and gate (if applicable)
- Weeds
- Grass (if applicable)
- Rubbish containers
- Fuel and oil supply, (drums)
- Water reticulation (if applicable)
- Tools and equipment
- Location/storage
- Cleanliness
- Maintenance
- Drain/drip tins
- Safety signage
- Location
- Condition
- Suitability

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Maintain operation of remote area power generation plant as described in 8) and including:

A Understanding the location and nature of the work required

B Following prescribe procedures to testing and checking plant.

- C Identifying and repairing known functional faults
- D Carrying out maintenance and repairs effectively.
- E Identifying maintenance issues beyond the scope of prescribed work and notifying appropriate persons.
- F Documenting work activities accurately.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to maintaining operation of remote area power generation plant.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to maintaining operation of at least two different remote area power plants.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish the scope of the project.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 Project deliverables and budget are identified from project planning and other relevant documentation and from discussions with appropriate person(s)
	1.3 Measurable outcomes are identified to evaluate the project on completion from project planning and other relevant documentation
	1.4 Plant, materials and skills needed to meet project outcome are identified from project planning and other relevant documentation
	1.5 Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement
2 Manage project.	2.1 OHS policies, procedures and programs are implemented and monitored
	2.2 Achievement of project outcomes is delegated to appropriately competent persons involved in the project
	2.3 Risk events are identified and project plan strategies implemented to ensure that outcomes are achieved to the required standard of quality specified in the contract and safety required by organisation policy
	2.4 Procurement processes and procedures are monitored to ensure on-time supply of plant and materials and in accordance with organisation policy
	2.5 Project progress is monitored against schedule, quality requirements and budget
	2.6 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation

ELEMENT	PERFORMANCE CRITERIA
	policy
	2.7 Variations are managed in accordance with agreed processes and in accordance with the contract
	2.8 Project records are maintained and progress reports written and forwarded to all appropriate person(s)
3 Complete project.	3.1 Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget
	3.2 Project completion acceptance is sought from appropriate person(s) and handover documented in accordance with organisation policy

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and managing renewable energy projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK121 Renewable energy project management

A

Evidence shall show an understanding of project management to an extent indicated by the following aspects:

T1 - Project management encompassing:

- Defining project parameters: Project scope; Project stakeholders and clients; Project phases and the relationship between phases; Time requirements and limitations; Resource requirements and limitations; Quality requirements and limitations.
- Time management: time management concepts; standard practices for ensuring a project runs to time and the like.

REQUIRED SKILLS AND KNOWLEDGE

- Financial management: Financial management concepts; Standard practices for managing project finances; Project budgets; Costs, variations and estimations; Invoicing against project phases/deliverables; Acquittals and the like.
- Quality management: Quality management concepts; Standard practices for managing quality within a project.
- Human Resource management: human resource management concepts; standard practices for managing personnel within a project
- Communication management: Communication management concepts; Standard practices for managing communication within a project and the like.
- Risk management and contingencies: risk management concepts; standard practices for managing risk within a project; Internal risks; External risks; Risk minimisation; Risk removal; Contingencies and the like.
- Procurement management: procurement management concepts; standard practices for managing procurement and the like.
- Physical Resource management: Types of physical resource, including; Equipment, Technology, Information, Facilities; Physical resource management concepts; Standard practices for managing physical resources
- Contracts: Understanding project contracts; Standard practices for working to contract specifications; Contract format; Contract content; Legal obligations of contract parties; Accompanying documentation including; Contract Schedules and the like.
- Performance assessment and continuous improvement: standard performance assessment practices; standard continuous improvement practices and the like
- Engineering ethics principles

T2 - Customer/Client relations encompassing:

- Importance of customer/client relations
- interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

T3 - Renewable energy industry sector customs and practices encompassing:

- Technical aspects of project planning and management encompassing:
- Method of ensuring equipment meets specified performance

REQUIRED SKILLS AND KNOWLEDGE

requirements

- Performance/cost benefit analysis
- Equipment procurement\
- Typical approaches to planning and management
- Successful planning techniques
- Best practice management methods and styles

T4 - Occupational Health and Safety, enterprise responsibilities encompassing:

- Provisions of relevant health and safety legislation
- Principles and practice of effective occupational health and safety management
- Management arrangements relating to regulatory compliance
- Enterprise hazards and risks, control measures and relevant expertise required
- Characteristics and composition of workforce and their impact on occupational health and safety management
- Relevance of enterprise management systems to occupational health and safety management
- Analysis of working environment and design of appropriate occupational health and safety management systems
- Analysis of relevant data and evaluation of occupational health and safety system effectiveness
- Assess resources to establish and maintain occupational health and safety management systems.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to plan project.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 Established techniques for project planning are reviewed are adopted in accordance with organisation policies
	1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s)
2 Develop project plan proposal.	2.1 Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation policies and procedures
	2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with organisation policies and procedures
	2.3 Knowledge of critical path analysis is applied to developing workflow strategies
	2.4 Sources and availability of materials and human resources needed for the project are identified in accordance with organisation policies and procedures.
	2.5 Risk management strategies are sought and obtained for incorporating in the project plan
	2.6 Project plan is reviewed against all inputs and adjusted to rectify any anomalies
	2.7 Project plan proposal is documented in accordance with organisation policies and procedures
3 Obtain approval for project plan.	3.1 Project plan is presented and discussed with person(s) of higher authority
	3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the

ELEMENT**PERFORMANCE CRITERIA**

constraints of organisation policy

- 3.3 Final project plan is documented and approval obtained from appropriate person(s)

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and planning renewable energy projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK122 Renewable energy project planning**A**

Evidence shall show an understanding of RE project planning to an extent indicated by the following aspects:

T1 Project planning encompassing:

- Purpose of project planning
- Documents needed to plan a project
- Factors influencing sequence and restraints of project activities
- Critical path analysis encompassing:
 - Graphical representation methods
 - Methods of representing time/rates

T2 Critical path project analysis encompassing:

- Purpose of critical path analysis
- Essential data
- Relational sequence of work activities
- Graphical representation methods
- Methods of representing time/rates
- Monitoring methods

T3 Renewable energy industry sector customs and practices encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Technical aspects of project planning and management encompassing:
- Method of ensuring equipment meets specified performance requirements
- Performance/cost benefit analysis
- Equipment procurement\
- Typical approaches to planning and management
- Successful planning techniques
- Best practice management methods and styles

T4 Occupational Health and Safety, enterprise responsibilities encompassing:

- Provisions of relevant health and safety legislation
- Principles and practice of effective occupational health and safety management
- Management arrangements relating to regulatory compliance
- Enterprise hazards and risks, control measures and relevant expertise required
- Characteristics and composition of workforce and their impact on occupational health and safety management
- Relevance of enterprise management systems to occupational health and safety management
- Analysis of working environment and design of appropriate occupational health and safety management systems Analysis of relevant data and evaluation of occupational health and safety system effectiveness
- Assess resources to establish and maintain occupational health and safety management systems.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Plan renewable energy projects as described in 8) and including:
 - A Determining the project requirements accurately,
 - B Establishing a project budget
 - C Developing effective work flow strategies,

- D Documenting project plan proposal
- E Negotiating alterations to the proposed project plan successfully
- F Obtaining approval of the final plan
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to planning renewable energy projects.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized renewable energy project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Renewable and Sustainable Energy

UEENEEK123A Carry out basic repairs to renewable energy apparatus

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit deals with the replacement of electrical and non-electrical components of renewable energy apparatus. It encompasses safe working practices, following written and oral instructions and procedures, basic testing techniques, disconnecting and reconnecting electrical/electronic components, dismantling and assembling apparatus and reporting repair activities.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

License to practice**3)**

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 Solve problems in d.c. circuits
04A

AND

UEENEEE1 Lay wiring/cabling and terminate
08A accessories for extra-low voltage (ELV)
circuits

OR

UEENEEG1 Terminate cables, cords and accessories for
06A low voltage circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to repair renewable energy apparatus.	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|------------------------------------|---|
| | 1.3 | The nature of the repair is obtained from documentation or from work supervisor to establish the scope of work to be undertaken |
| | 1.4 | Advice is sought from the work supervisor to ensure the work is coordinated effectively with others |
| | 1.5 | Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures |
| | 1.6 | Tools, apparatus and testing devices needed to carry out the work are obtained and checked for correct operation and safety |
| 2 | Repair renewable energy apparatus. | |
| | 2.1 | Established OHS risk control measures and procedures for carrying out the work are followed |
| | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures |
| | 2.3 | Circuits/apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures |
| | 2.4 | Apparatus is dismantled in accordance with manufacturer's guide and supervisor's instructions |
| | 2.5 | Component parts are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage |
| | 2.6 | Repairs are affected efficiently without damage to other components, apparatus or circuits. |
| | 2.7 | Apparatus is assembled in an appropriate sequence with all parts placed, secured and connected in accordance with manufacturer guide or industry practice |
| | 2.8 | Procedures are followed for referring |

ELEMENT	PERFORMANCE CRITERIA
	non-routine events to immediate supervisor for directions
	2.9 Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices
3 Complete and report repair work activities.	3.1 OHS work completion risk control measures and procedures are followed
	3.2 Repaired apparatus is prepared for testing by an appropriate person
	3.3 Work area is cleaned and made safe in accordance with established procedures
	3.4 Work supervisor is notified of the completion of the repair work in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and carrying out basic repairs to renewable energy apparatus by replacement of components.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK123 Introduction to renewable energy technologies

A

Evidence shall show an understanding of renewable energy principles and technologies to the extent indicated by the following aspects:

- T1 Major non-technical issues encompassing:
- impact of economic, social, environmental and political issues on the use of renewable energy technologies.
 - how each of the non-technical issues impact on the application

REQUIRED SKILLS AND KNOWLEDGE

of a selected renewable energy technology.

T2 Energy services and demand encompassing:

- definition of the terms: energy, power, energy efficiency, end use energy, primary energy, embodied energy.
- calculation relating to energy, power and time with the appropriate number and time with the appropriate number of significant figures.
- units and symbols for energy, power, time and temperature using standard SI units and prefixes.
- conversion of energy and power quantities from one unit to another using conversion tables
- the two laws that apply to any energy conversion process.
- efficiency of a simple energy conversion process.
- energy services required by a domestic dwelling.
- power and energy consumption of individual appliances and systems using appropriate meters or other methods.
- calculation of the end use and primary energy required for these energy services.
- selection of the most appropriate energy source for each of these services.
- justification in terms of environmental, economic, social and political constraints.
- selection of appropriate energy efficient appliances and technologies.

T3 The solar resource encompassing:

- definition of the terms: irradiation, latitude, solar constant, direct and diffuse radiation, azimuth and altitude angles, irradiance, solar window, tilt angle, solstice, equinox.
- units and symbol for irradiation and irradiance and the conversion of one unit to another using conversion tables.
- measurement of solar irradiance with a solarimeter.
- solar radiation data tables and contour maps.
- position of the sun for a given date, time and latitude using a sun path diagram.
- times when an obstacle will shade a given collector.
- how radiation varies throughout the year on the surface of a collector which is either fixed, single-axis tracking or double-axis tracking.
- appropriate tilt angles for fixed and seasonally-adjustable collectors at a given latitude and given application

REQUIRED SKILLS AND KNOWLEDGE

- calculation of the effect of single-axis tracking and double-axis tracking on collected radiation using radiation data tables.

T4 Solar thermal systems encompassing:

- definition of the terms: conduction, convection, radiation, collector heat loss co-efficient, conductivity, specific heat, solar fraction.
- components for a solar thermal system including collector, storage, reticulation and control.
- solar collector types suitable for low, medium and high temperature applications.
- different types of domestic solar hot water (SWH) systems.
- how the components of thermosiphon and pumped storage systems operate.
- heat loss mechanisms in collectors.
- stratification in storage tanks.
- backup energy systems.
- control and protection strategies.
- solar fraction of a domestic SHW system with the use of table or nomograms.

T5 Energy efficient building design encompassing:

- definition of the terms: thermal comfort, passive system, active system, aspect of the site, orientation of the building, thermal mass.
- the climate factors which affect building design.
- relationship between thermal comfort and climate.
- relationship between the seasonal variation of the sun's path and the heat gain of the building elements (roof, walls, windows, floor).
- effect of the thermal conductivity of building materials on heat flows to and from the building
- use of thermal mass in reducing temperature variations within the building.
- use of ventilation.
- thermal performance of a dwelling using both indoor and outdoor hourly temperature measurements over the period of at least one day.
- effect of insulation, glazing, orientation, shading devices, thermal mass and ventilation on the thermal performance of a building.
- an active solar system which could be used in a dwelling to

REQUIRED SKILLS AND KNOWLEDGE

- complement passive design features in extreme climates.
 - aspects of an existing dwelling that contribute to or detract from thermal performance.
- T6 Photovoltaic arrays encompassing:
- definition of the terms: photovoltaic (PV) cell, module, series, parallel, array, maximum power point (MPP), nominal operating cell temperature (NOCT), short circuit current (ISC), open Circuit voltage (VOC), I-V curve, current at maximum power point (IMP), voltage at maximum power point (VMP).
 - calculations relating to voltage, current and power with the appropriate number of significant figures and using standard SI units and prefixes.
 - types of commercially available PV modules, their efficiency and typical applications.
 - I-V curve for a typical PV module and label the approximate position of MPP and values of ISC, VOC, IMP and VMP.
 - effect of irradiance and temperature on ISC, VOC, IMP and VMP.
 - function of blocking and bypass diodes.
 - current and voltage of a single module to produce the I-V characteristic curve.
 - major specification criteria for a PV module.
 - size and configuration of a PV array for a given load and system voltage using tables or nomograms.
- T7 Wind energy resources encompassing:
- definition of the terms: kinetic energy, specific wind power, vertical wind speed profile, surface roughness, temperature inversion layer, cut in (v_C), rated (v_R) and furling (v_F) wind speeds, rated power (PR), power co-efficient (c_P), output co-efficient (c_O), tip speed ratio.
 - units and symbols for wind speed, specific wind power and air density.
 - large scale wind patterns over the Australian continent, their causes and the effect of local terrain on wind speed, direction and turbulence.
 - specific wind power for given wind speeds.
 - wind speed at different heights above ground level.
 - the mean wind speed based on wind speed frequency distribution data in the form of a histogram.
 - suitable minimum tower height for a Wind.
 - energy conversion System (WECS) sited downwind from an

REQUIRED SKILLS AND KNOWLEDGE

obstacle.

- isovent maps.
- types of wind-measuring instruments and the minimum requirements for assessing wind energy at a given site.
- measurement of wind speed and direction
- characteristics of horizontal axis and vertical axis, upwind and downwind, lift and drag propelled wind turbines.
- power vs. wind speed curve for a typical WECS showing v_C , v_R , v_F , and PR.
- major specification criteria for a WECS.
- sizing a WECS for a given load, efficiency and annual mean wind speed using tables or a nomogram.

T8 Micro-hydro system basis encompassing:

- definition of the terms: flow rate, gross or static head, potential energy, net or dynamic head, hydraulic efficiency, MHS efficiency, equivalent pipe length, reaction turbine, impulse turbine
- units and symbols for: flow rate, head, gravitational constant
- methods each assessing flow rate and head.
- measurement of stream flow rate and head.
- assessment from contour maps.
- different MHS in terms of their physical and operating characteristics.
- major specification criteria for an MHS for electricity generation.
- suitable type and size of MHS for a given load, efficiency, available flow rate and net head using tables or a nomogram.

T9 Energy storage encompassing:

- methods of energy storage.
- energy density of the energy storage methods above by mass and volume.
- define the following terms in relation to batteries: nominal voltage, cell, primary and secondary cells, battery, charge and discharge rate, amp hour capacity, watt hour capacity, state of charge (SOC), depth of discharge (DOD), specific gravity (SG), watt hour and amp hour efficiency, cycle life.
- major features of common types of batteries suitable for stand-alone power systems.
- state of charge of a lead-acid battery through measurement of specific gravity or battery voltage using safe working practices.

REQUIRED SKILLS AND KNOWLEDGE

- T10 Stand alone power system basis encompassing:
- d.c. sub-system efficiency.
 - block diagram of a typical SPS
 - function of each SPS system component
 - typical efficiencies of each component.
 - major characteristics of different types of commercially available regulators, inverters and battery chargers.
- T11 Biomass encompassing:
- definition of the terms: biogas, producer gas, biofuels, feedstock, gross and net calorific values.
 - biofuels and their specific energy contents
 - method of production of one of these five biofuels including: source of raw material/feedstock, conversion process, yield
 - applications for each of the biofuels.
 - assessment of the biomass resource required to meet a particular energy service e.g. cooking, hot water, space heat, transport, process heat, electricity.
 - social, political and economic impact of large scale use of selected biomass resources.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Carry out basic repairs to renewable energy apparatus by replacement of components as described in 8) and including:

- A Following manufactures service instructions for access to components
- B Removing at least three different types of components specified in the work instructions
- C Replacing components to manufacturer requirements.
- D Reassembling the apparatus correctly.
- E Testing apparatus operation
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of

evidence must be clearly identified

**Context of and
specific
resources for
assessment** 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to carrying out basic repairs to renewable energy apparatus by replacement of components.

**Method of
assessment** 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units****9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE10 Fabricate, assemble and dismantle utilities
2A industry components

UEENEEE10 Solve problems in d.c. circuits
4A

UEENEEE10 Use drawings, diagrams, schedules, standards,
7A codes and specifications

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to carrying out basic repairs renewable energy apparatus limited to replacement or repair of components in which the fault has been previously established. This must include at least two different renewable energy apparatus in which three different types of components are faulty one of which is mechanical.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Renewable and Sustainable Energy

UEENEEK124A Solve basic problems in micro hydro systems

Modification History

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers providing known solutions to predictable problems in micro hydro apparatus and systems operated at ELV and LV. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on

License to practice**3)**

low voltage electrical installations is incorporated in unit UEENEEG105A and all prerequisite units it specifies

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Note: Those holding an 'Unrestricted Electrician's Licence' or equivalent issued in an Australian State or Territory meet the pre-requisite requirements of this unit.

UEENEEG1 Solve problems in electromagnetic devices
01A and related circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work on micro hydro systems	1.1 OHS procedures for a given work area are obtained and understood
	1.2 OHS risk control work preparation measures and procedures are followed
	1.3 The nature of the apparatus problem is obtained

ELEMENT	PERFORMANCE CRITERIA
	<p>from documentation or from work supervisor to establish the scope of work to be undertaken</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others</p> <p>1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Solve problem in micro hydro systems	<p>2.1 OHS risk control work measures and procedures are followed</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures</p> <p>2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.4 Established routines are used to solve micro hydro problems using measured and calculated values of apparatus operating parameters</p> <p>2.5 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices</p>
3 Complete work and document problem solving activities.	<p>3.1 OHS work completion risk control measures and procedures are followed</p> <p>3.2 Work site is cleaned and made safe in accordance with established procedures</p> <p>3.3 Justification for solutions used to solve micro hydro problems is documented</p> <p>3.4 Work completion is documented and appropriate person(s) notified in accordance with established</p>

ELEMENT**PERFORMANCE CRITERIA**

routine procedures

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and solving basic problems in micro hydro systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK124A Micro hydro systems

Evidence shall show an understanding of micro-hydro systems to an extent indicated by the following aspects:

System components and configuration encompassing:

- structural differences between the Pelton, Turbo Impulse, Francis, and propeller type, Michell or Banki cross flow turbines and PATs (Pumps As Turbines).
- system configuration for each turbine type identifying all major components.
- for impulse and cross flow turbine types, the comparison of bucket and blade shapes, nozzle shapes and types, types of hydraulic and electrical controllers/governors, speed increasers and over speed clutches and their basic operation and appropriate application.
- operational parameters and efficiency of different turbines.
- circumstances under which battery storage would be used.
- respective merits and suitability of various turbine types for various micro hydro-electric applications.
- operation of hydraulic rams or similar water pumps.
 - typical efficiencies of hydraulic ram systems and appropriate applications.
- advantages and disadvantages of water energy storage systems with other energy storage systems such as battery banks.

REQUIRED SKILLS AND KNOWLEDGE

Micro-hydro systems standards encompassing:

- Relevant Australian Standards AS/NZS3000, AS4509, and AS4086.2 requirements for associated with the installation, maintenance and operation of micro-hydro small scale generation units

Micro-hydro systems drawings encompassing:

- Schematic and wiring diagrams for the MHS showing the general circuit layout and protection between the MHS, batteries, inverter and loads.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may

be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve basic problems in micro hydro systems as described in 8) and including:
 - A Understanding the nature of the problem
 - B Using established routines to solve apparatus/system problems
 - C Providing viable solutions to apparatus/system problems.

- D Documenting justification for the solutions used
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving basic problems in micro hydro systems

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG10 Solve problems in electromagnetic devices and
1A related circuits

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to micro hydro systems as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following:

- In relation to at least three of the following types of micro hydro systems problems and on at least two occasions:
 - determining the operating parameters of an existing apparatus/system
 - identifying and locating electrical faults
 - identifying and locating mechanical fault

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers providing known solutions to predictable problems in photovoltaic energy apparatus and systems operated at ELV and LV. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development in entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Note.

Competency requirements to be granted a license to carry

License to practice

3)

out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG105A and all prerequisite units it specifies

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Note: Those holding an 'Unrestricted Electrician's Licence' or equivalent issued in an Australian State or Territory meet the pre-requisite requirements of this unit.

UEENEEE1 Solve problems in d.c. circuits
04A

UEENEEE1 Document and apply measures to control
37A OHS risks associated with
electrotechnology work

Prerequisite Unit(s) 4)

AND

UEENEEE1 Lay wiring/cabling and terminate
08A accessories for extra-low voltage (ELV)
circuits

OR

UEENEEG1 Terminate cables, cords and accessories for
06A low voltage circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work on photovoltaic energy apparatus and systems	1.1 OHS procedures for a given work area are obtained and understood
	1.2 OHS risk control work preparation measures and procedures are followed
	1.3 The nature of the apparatus problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
	1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Solve problem in photovoltaic energy apparatus and systems	2.1 OHS risk control work measures and procedures are followed
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Established routines are used to solve photovoltaic energy apparatus problems using

ELEMENT	PERFORMANCE CRITERIA
	measured and calculated values of apparatus operating parameters
	2.5 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices
3 Complete work and document problem solving activities.	3.1 OHS work completion risk control measures and procedures are followed
	3.2 Work site is cleaned and made safe in accordance with established procedures
	3.3 Justification for solutions used to solve photovoltaic energy apparatus problems is documented
	3.4 Work completion is documented and appropriate person(s) notified in accordance with established routine procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and solving basic problems in photovoltaic energy apparatus and systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK125A Photovoltaic power systems

Evidence shall show an understanding of photovoltaic power systems to an extent indicated by the following aspects:

- T1 Daily irradiation encompassing:
- definition of the terms: declination angle, reflectance, sunshine hours, extraterrestrial irradiation, Latitude, direct and diffuse radiation, azimuth and altitude angles, radiance,

REQUIRED SKILLS AND KNOWLEDGE

- solar window, tilt angle, solstice, equinox
 - units and symbols for irradiation and irradiance
 - interpretation of solar radiation data tables and contour maps.
 - measuring solar irradiance with a solarimeter.
 - how radiation varies throughout the year on the surface of a fixed collector.
 - determining, using field measurements and a sun path diagram, the times and dates when a PV array will be shaded by obstacles at a particular site.
 - calculation of the daily average irradiation on a horizontal plane given extraterrestrial irradiation, location constants and sunshine hour data.
 - calculation of the monthly mean daily irradiation falling on a PV array for each month of the year, adjusted for the effects of shading, using irradiance and irradiation data tables and a sun path diagram and/or appropriate software.
 - selection of an appropriate tilt angle for fixed and seasonally-adjustable PV arrays at an given latitude
- T2 Photovoltaic modules encompassing:
- definition of the terms: cell, module, array, mono-crystalline, poly-crystalline, amorphous, band gap energy, semi-conductor
 - diagram of a basic crystalline silicon PV cell, showing its physical structure, with at least five major features labelled
 - major steps in the production of PV modules based on bulk silicon cells, in comparison with the production of thin film PV modules.
 - basic physical principles of PV cell operation for the main types of commercially available PV modules.
 - efficiency, spectral response, cost and typical applications of the main types of commercially available PV modules.
 - new photovoltaic technologies currently being developed towards commercialisation, and their major features.
 - mechanical and electrical features necessary for the long life of a PV module under a wide range of operating conditions.
- T3 Module characteristics encompassing:
- definition of the terms: I-V curve, fill factor, operating point, maximum power point (MPP), cell temperature co-efficient, nominal operating cell temperature (NOCT), current, voltage and power output co-efficient.
 - equivalent circuit for a PV cell, labelling each of the

REQUIRED SKILLS AND KNOWLEDGE

elements and the polarity of the terminals.

- family of I-V curves for a PV module, labelling major points and showing the effects of variation in irradiance and variation in cell temperature.
- major ratings of a PV module from manufacturer's information or nameplate data.
- determination of the operating point of a PV module with a resistive load, a constant voltage source or any other load with known I-V characteristics, using the load line method.
- configuration of a typical PV array, including the function, placement and ratings of blocking and bypass diodes.
- the effect of partial shading of a PV module or array, the impact of bypass diodes and the significance of their configuration on output current in typical operating conditions.
- calculation of the power at MPP, and the power under typical battery charging conditions, of a PV module, given irradiance and ambient air temperature.
- calculation of the daily energy output of a PV array in accordance with AS 4509.2, and by using "rule of thumb" de-rating factors.
- the scope and content of Australian or international standards relevant to the performance of PV modules.
- the electrical characteristics of a PV module according to relevant Australian or International standards, using an outdoor test method.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve basic problems in photovoltaic energy apparatus and systems as described in 8) and including:

A Understanding the nature of the problem

B Using established routines to solve apparatus problems

- C Providing viable solutions to apparatus problems.
- D Documenting justification for the solutions used
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving basic problems in photovoltaic energy apparatus.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary

equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG10 Terminate cables, cords and accessories for low
6A voltage circuits

UEENEEE10 Lay wiring/cablings and terminate accessories for
8A extra-low voltage (ELV) circuits

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to photovoltaic energy apparatus as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following:

- In relation to at least three of the following types of photovoltaic energy problems and on at least two occasions:
 - determining the operating parameters of an existing apparatus
 - identifying and locating electrical faults
 - identifying and locating mechanical fault

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare to Diagnose and rectify faults. | 1.1 OHS procedures for a given work area are identified, obtained and understood |
| | 1.2 OHS risk control measures and procedures are followed in preparation for the work |
| | 1.3 The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s) |
| | 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others |
| | 1.5 Sources of materials that may be required for the |

ELEMENT**PERFORMANCE CRITERIA**

		work are identified and accessed in accordance with established procedures.
	1.6	Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety
2	Diagnose and rectify faults.	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4	Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel
	2.5	Fault finding is approached methodically drawing on knowledge of renewable energy systems and interconnecting circuits using measured and calculated values of circuit/apparatus parameters
	2.6	Circuit/apparatus components are dismantled where necessary and parts stored to protect them against loss or damage
	2.7	Faulty circuits/components are rechecked and their fault status and confirmed
	2.8	Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures
	2.9	Effectiveness of the repair is tested in accordance with established procedures
	2.10	Apparatus is reassembled, finally tested and prepared for return to service

ELEMENT	PERFORMANCE CRITERIA
	2.11 Unexpected situations are dealt with safely and with the approval of an authorised person
	2.12 Fault finding and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices
3 Completion and report fault finding and repair activities.	3.1 OHS work completion risk control measures and procedures are followed
	3.2 Work area is cleaned and made safe in accordance with established procedures
	3.3 Written justification is made for repairs to apparatus
	3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and diagnosing faults in renewable energy control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK127 Renewable energy system electronics

A

Evidence shall show an understanding of renewable energy systems fault finding to an extent indicated by the following aspects:

Fault finding techniques encompassing:

- Factors to consider in clarifying the nature of a fault encompassing:
 - Initial fault report

REQUIRED SKILLS AND KNOWLEDGE

- Confirmation of symptoms of the fault
- Comparison of symptoms with normal operation
- Effect to cause reasoning — assumptions of possible causes
- Methods for testing assumptions encompassing:
 - Visual inspection
 - Sectional testing
 - Split-half tests
 - Component isolation
- Dealing with intermittent faults

Semiconductor components encompassing:

- symbols for common semiconductor components including rectifier diodes, LEDs, zener diodes, bipolar transistors, Darlington pairs, MOSFETs, IGBTs, SCRs, and triacs.
- basic function of these devices above.
- major rating parameters of device above.
- applications for each device.
- I-V characteristics of diodes and the current gain characteristic of bipolar transistors.

T3 Linear regulated d.c. power supplies encompassing:

- label circuit diagrams for half wave and full wave, single phase and three phase rectifiers.
- voltage and current waveforms for these rectifier circuits with and without capacitor filtering
- peak output voltages from single phase and three phase rectifier circuits.
- block diagram showing the structure of a regulated DC power supply.
- main features of linear integrated circuit voltage regulator ICs.
- each of the major components and their physical location in a regulated power supply.

T4 Switching power control circuits encompassing:

- power dissipation of a transistor when operated as a switch.
- how Pulse Width Modulation (PWM) can provide a variable output voltage from a switch mode regulator.
- advantages and disadvantages of switch mode power circuits compared with linear power circuits.
- block diagram of a basic PV switching voltage regulator for

REQUIRED SKILLS AND KNOWLEDGE

battery charging.

- applications of switch mode circuits found in renewable energy systems.
- how power control in AC circuits is achieved using SCRs and Triacs.
- methods used to reduce radio frequency interference (RFI) in DC and AC circuits utilising high speed switching.

T5 Digital electronic circuits encompassing:

- characteristic features that distinguish analogue and digital devices and circuits.
- how numbers or text information can be represented using binary numbers and how these are represented in digital circuits.
- operation of voltage comparators, Analogue to Digital (A-D) converters, and Digital to Analogue (D-A) converters, and give one example of each one's use in a renewable energy application.
- basic function of microcontrollers, volatile and non-volatile memory devices.
- operation of a solar hot water system pump differential controller, as an example of the use of logic in digital circuits.

T6 Inverters encompassing:

- basic function of inverters and d.c.-d.c. converters and their use in renewable power systems.
- the operation of an inverter bridge and half-bridge.
- output voltage waveforms for square wave, modified square wave and synthesised sine wave inverters showing typical voltages and timing.
- the function of PWM techniques in modified square wave and synthesised sine wave inverters.
- block diagrams showing the structure of common forms of d.c.-d.c. converters and inverters used in renewable energy applications

T7 Maintenance encompassing:

- safety procedures for work on electronic systems, circuits and apparatus.
- hazards that may be encountered when performing tests on inverters, battery chargers or other equipment containing LV circuits.
- functionality of electronic equipment through appropriate

REQUIRED SKILLS AND KNOWLEDGE

client questioning and application of systematic tests and observation.

- various types of common faults and their causes in renewable energy electronic equipment.
- typical test equipment used to repair electronic and electrical equipment
- safe and correct use of tools and test equipment to locate electronic equipment faults under the direction of an electronics technician.
- replacement of circuit boards, observing appropriate handling precautions for static sensitive devices.
- replacement of socketed ICs such as EPROMs or microprocessors, using appropriate tools and methods

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge

and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose and rectify faults in renewable energy control systems as described in 8) and including:

- A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate persons
- B Using methodical fault finding techniques
- C Finding faults efficiently
- D Rectifying faults effectively
- E Completing documentation correctly
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing faults in renewable energy control systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to finding and repairing any four of the following faults in renewable energy systems:

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Apparatus/component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Renewable and Sustainable Energy

UEENEEK128A Solve problems in stand-alone renewable energy systems

Modification History

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers providing known solutions to predictable problems in stand-alone renewable energy systems operated at extra-low voltage. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Note.

Competency requirements to be granted a license to carry

License to practice**3)**

out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG105A and all prerequisite units it specifies

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK1 Carry out basic repairs to renewable energy
23A apparatus

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in

this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1 Prepare to work on stand-alone renewable energy systems</p>	<p>1.1 OHS procedures for a given work area are obtained and understood</p> <p>1.2 OHS risk control work preparation measures and procedures are followed</p> <p>1.3 The nature of the apparatus problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with</p>

ELEMENT	PERFORMANCE CRITERIA
	others
	1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Solve problem in stand-alone renewable energy systems	2.1 OHS risk control work measures and procedures are followed
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Established routines are used to solve stand-alone renewable energy systems problems using measured and calculated values of apparatus operating parameters
	2.5 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices
3 Complete work and document problem solving activities.	3.1 OHS work completion risk control measures and procedures are followed
	3.2 Work site is cleaned and made safe in accordance with established procedures
	3.3 Justification for solutions used to solve stand-alone renewable energy systems problems is documented
	3.4 Work completion is documented and appropriate person(s) notified in accordance with established routine procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and solving basic problems in stand-alone renewable energy systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK128A Stand alone renewable energy system components

Evidence shall show an understanding of stand-alone RE system components to an extent indicated by the following aspects:

T1 ELV wiring and circuit protection for renewable power systems encompassing:

- extra low voltage (ELV) and low voltage (LV) circuits in a stand-alone or grid connected renewable power system and the regulatory restrictions regarding work at each level.
- earthing requirements for renewable power systems over a range of applications and environments
- required sizes for ELV cabling in a renewable power system, considering allowable voltage drops and cable current carrying capacity, in accordance with AS/NZS 3000 and AS 4509.
- Selection of suitable d.c. circuit protection and isolation for all relevant points in a stand-alone renewable power system, in accordance with AS/NZS 3000 and AS 4509

T2 Electrical diagrams for a renewable power system encompassing:

- functional block diagrams for typical stand-alone renewable power system configurations.
- circuit schematic of typical renewable power systems supplying d.c. and/or a.c. loads, including all major components, protection devices, earthing, isolation, switching and metering
- unit wiring diagram for a typical renewable stand-alone power system d.c. control board
- architectural and site diagrams to show the locations of equipment, fittings and cabling

REQUIRED SKILLS AND KNOWLEDGE

T3 Batteries encompassing:

- major features of each of the major types of commercially available batteries for stand-alone power system applications including basic chemistry, physical structure, advantages and disadvantages
- factors affecting the life of a battery
- processes of sulphation and stratification in lead acid batteries, their causes, effects and methods of prevention or reduction.
- effect of depth of discharge and of temperature on the capacity and life of lead-acid batteries.
- major specifications for a lead-acid battery in a stand-alone power system application.
- main features of charging regimes suitable for the major types of stand-alone power system batteries, using real examples.
- life of a standalone power system battery in years, based on manufacturer's cycle life data and given capacity, configuration and operating conditions
- precautions required when handling, installing or maintaining lead-acid batteries.
- procedures required for safe disposal of the major commercially available types of batteries in accordance with AS 4509.

T4 Balance of system components and common loads encompassing:

- features of commercially available inverters suitable for use in stand-alone power systems.
- major operating parameters of an inverter, including d.c. voltage operating window; efficiency, output voltage waveform and output voltage regulation over a range of loads up to 5 minute ratings.
- problems that may be caused by non-sine supply voltage waveforms on typical loads, and the solutions used to overcome these
- significance of low power factor loads for inverter systems and the principle of power factor correction.
- operation of the major types of regulators for use in stand-alone renewable power systems, using commercially available equipment as examples.
- current vs. voltage characteristics, efficiency and charging voltage waveform for a transformer/rectifier type and a

REQUIRED SKILLS AND KNOWLEDGE

switchmode type battery charger suitable for use in stand-alone renewable power systems.

- operation of and applications for MPPTs for photovoltaic arrays.
- basic operation, advantages and disadvantages of mechanical tracking devices for PV arrays.
- control parameters or data using digital displays on inverters, regulators or controllers

T5 Basic lighting design encompassing:

- properties and features of the major lamp types including their suitability for use in stand-alone PV power systems.
- effect on room lighting levels, of luminaire design and positioning, décor, room construction and windows.
- Selection and sizing of suitable lamps and fittings and their placement in a household taking into account usage, lighting levels required by relevant standards and energy efficiency considerations.

T6 Generating sets encompassing:

- major components in the construction of a generating set
- main components of gas, petrol or diesel internal combustion engines
- basic principle of operation of internal combustion engines, including different fuel types and ignition methods.
- operating characteristics, advantages and disadvantages of gensets using different fuel types, aspiration methods, operating speed and number of cylinders.
- major methods of mechanical coupling and power transmission between an engine and alternator
- function and ratings of mechanical and electronic speed governing systems.
- basic structure and operation of an alternator.
- advantages and disadvantages of different types of excitation system and voltage regulation used for genset alternators.
- components and basic operation of a brushless excitation system in an alternator, and the principle of self-excitation

T7 Generator set sizing calculations encompassing:

- major electrical and mechanical ratings which control the performance of a genset
- calculations relating to real and apparent power, power factor, mechanical power, voltage regulation and speed droop

REQUIRED SKILLS AND KNOWLEDGE

for single phase gensets

- derating factor for a genset given manufacturer's derating data and a given set of operating conditions.
- Selection of a suitable genset given maximum demand and surge loadings and derating factor.
- Calculation of the fuel consumption of a genset given manufacturer's data and operating conditions

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity,

electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve basic problems in stand-alone renewable energy systems as described in 8) and including:
 - A Understanding the nature of the problem
 - B Using established routines to solve apparatus problems
 - C Providing viable solutions to apparatus problems.
 - D Documenting justification for the solutions used
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving basic problems in stand-alone renewable energy systems.

**Method of
assessment****9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units****9.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to stand-alone renewable energy systems as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following:

- In relation to at least three of the following types of stand-alone renewable energy system problems and on at least two occasions:
 - Open-circuit
 - Short-circuit
 - Incorrect connections
 - Insulation failure
 - Unsafe condition
 - Apparatus/component failure
 - Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the design of renewable energy heating systems and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK1 28A Solve problems in stand-alone renewable energy systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design renewable energy heating systems.	1.1 OHS procedures for a given work area are obtained and understood
	1.2 The extent and nature of the electrical installation is determined from design brief
	1.3 Safety and other regulatory requirements to which the electrical installation must comply are obtained and understood
	1.4 Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work
2 Develop renewable energy heating systems design.	2.1 Knowledge of renewable energy heating systems performance standards, compliance methods is applied to the design
	2.2 Alternative arrangements for the heating systems design are considered based on the requirements outlined in the design brief
	2.3 Safety, functional and budgetary considerations are incorporated in the design
	2.4 Heating systems design draft is checked for compliance with the design brief and regulatory requirements
	2.5 Heating systems design is documented for submission to appropriate persons for acceptance and approval
	2.6 Solutions to unplanned situation are provided

ELEMENT	PERFORMANCE CRITERIA
3 Obtain approval for renewable energy heating systems design.	<p data-bbox="671 297 1117 333">consistent with organisation policy</p> <p data-bbox="550 360 1264 472">3.1 Heating systems design is presented and explained to client representative and/or other relevant persons</p> <p data-bbox="550 544 1264 656">3.2 Requests for alterations to the design are negotiated with relevant persons within the constraints of organisation policy</p> <p data-bbox="550 683 1264 757">3.3 Final design is documented and approval obtained from appropriate persons.</p> <p data-bbox="550 784 1264 898">3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and designing renewable energy heating systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK129A Renewable energy heating - design

Evidence shall show an understanding of the design of renewable energy heating to an extent indicated by the following aspects:

- T1 Heat transfer encompassing:
- Modes of heat transfer
 - Conduction through a flat plate, series flat plates, thick and thin wall pipe, composite pipes (e.g. lagged pipes and drums)
 - Convection at a flat surface or tube
 - Radiation from a flat surface or tube for black or grey bodies

REQUIRED SKILLS AND KNOWLEDGE

- Combined conduction and convection through single or multiple flat plates or thin wall tubes
- Combined convection and radiation
- Combined conduction, convection and radiation such as fluid in a tank (convection to wall), through wall and/or insulation (conduction) to outside air (convection and radiation)
- Heat exchangers - parallel, counter flow and cross flow

T2 Combustion and fuels encompassing:

- The combustion process
- Fuels - desirable and undesirable characteristics, solid, liquid and gaseous types, their relative advantages and disadvantages and common methods of combustion
- Air/fuel ration - stoichiometric excess or insufficient air
- Emissions and pollutants and their control
- Combustion equations - element mass balance
- Combustion products - gravimetric basis

T3 Steam encompassing:

- Importance of steam for heat transfer and power production
- Steam/water properties and the inter-relationship between the various properties for unsaturated or saturated water or steam either superheated, saturated or wet
- Saturation temperature and pressure, specific enthalpy, specific volume, dryness fraction
- Temperature-specific enthalpy diagram for steam/water
- Use of steam table to determine steam/water properties (any condition except supercritical)
- Steam generation - water tube and fire tube boilers, boiler efficiency
- Safety devices and controls used with boilers
- Steam plant - steam traps, economiser, air, pre-heater, superheater, air/water separators, water treatment, feedwater pump, exhaust gas treatment
- Heat transfer rates to or from steam/water (any condition except supercritical)
- Steam throttling and formation of flash steam
- Steam heat exchangers and barrel calorimeters
- Steam plant for process heating
- Steam plant for power production

REQUIRED SKILLS AND KNOWLEDGE

- T4 Refrigeration/heat pump encompassing:
- Basic principles and terminology
 - Vapour compression cycle
 - Performance criteria
 - Types of refrigerant - designation, properties advantages and disadvantages
 - Refrigerant properties using the p-h diagram
 - Ideal vapour compression cycle on the p-h diagram
 - Energy balance and heat transfers in compressor, evaporator and condenser
 - Actual vapour compression cycle and variations from the ideal - pressure loss in lines and non-ideal compression
 - Superheating and subcooling with or without suction/liquid heat exchanger
 - Carnot principle applied to refrigerator and heat pump
Principles of evaporative refrigeration, absorption refrigeration, air cycle refrigeration and thermo-electric refrigeration
- T5 Daily irradiation encompassing:
- definition of the terms: declination angle, reflectance, sunshine hours, extraterrestrial irradiation.
 - solar radiation data tables and contour maps.
 - determination, using field measurements and a sun path diagram, the times and dates when a PV array will be shaded by obstacles at a particular site.
 - calculation of the daily average irradiation on a horizontal plane given extraterrestrial irradiation, location constants and sunshine hour data.
 - calculation of the monthly mean daily irradiation falling on a PV array for each month of the year, adjusted for the effects of shading, using irradiance and irradiation data tables and a sun path diagram and/or appropriate software.
- T6 Energy balance encompassing:
- definitions of the terms: transmittance, absorptance, emittance, specific heat, absorber, heat removal factor, stagnation temperature.
 - explain the heat transfer mechanisms of conduction, convection and radiation and their operation in a simple fin and tube collector.
 - how the transmittance, absorptance and emittance properties

REQUIRED SKILLS AND KNOWLEDGE

of materials used in the collector affect the performance of the collector.

- ways to reduce heat losses from a collector.
- energy balance and instantaneous efficiency equations for a collector.
- calculation of the collector constants from the instantaneous collector efficiency equation for a linear relationship.

T7 The solar collector encompassing:

- five major factors that affect the selection of materials for solar collectors.
- features of collectors for low, medium and high temperature applications in terms of heat transfer, optical properties and materials of construction.
- the scope and content of AS 2712 or similar standards.
- requirements of AS 2712 or similar standards in one aspect of collector construction.
- tests required by AS 2712 or similar standards with regard to collector construction.

T8 Solar collector performance encompassing:

- scope and content of Australian Standards AS 2535 and AS 2984 or similar standards.
- method for testing the thermal performance of a solar collector or a solar water heater according to AS 2535 and AS 2984 or similar standards.
- instantaneous efficiency of a solar collector for different inlet temperatures and flow rates.
- effect of varying inlet temperature and flow rate on the performance of a solar collector.
- efficiency curves for various types of solar collectors.
- performance of various types of solar water heaters in terms of their design, location and predicted solar fraction

T9 Hydraulic circuits encompassing:

- definition of the terms: equivalent length, static head, dynamic head, heat exchanger.
- configuration of a hydraulic circuit for a pumped storage solar water heating system.
- function of the components in the circuit.
- effects of water quality on the life and performance of components in the hydraulic circuit.
- suitable type and size components to minimise hydraulic

REQUIRED SKILLS AND KNOWLEDGE

and energy losses including pipes, pumps, heat exchangers, expansion tanks, valves and filters for a hydraulic circuit with a given flow rate and head.

- safety requirements of the hydraulic circuit in terms of temperature, pressure and hydrogen gas release.
- requirements to balance flow through parallel/series combinations of collector arrays.
- suitable water and energy conservation measures including user education, water conservation technologies and insulation.
- suitable types and level of insulation for system components to minimise heat losses.

T10 Domestic solar water heaters encompassing:

- definition of the terms: thermosiphon system, pumped storage system, sacrificial anode.
- function of the components in a domestic solar water heater including the collector, storage tank, valves, piping, differential controllers, pumps, insulation and support frames.
- schematic diagram of different types of system configurations showing collectors, storage tank, piping, pumps, filters, valves, heat exchangers and expansion tanks.
- factors which affect system performance including: storage tank and collector design, system location and collector orientation, water quality, hot water demand, usage pattern.
- safety requirements that prevent injury from high temperature water and hydrogen gas explosions during installation, maintenance and use of solar water heaters.
- demand for hot water and irradiation for a given location and collector tilt angle, orientation and shading.
- selection a suitably sized system for a given demand and location to meet a specific solar fraction and/or minimise life cycle cost.
- consequences of under/oversizing of solar water heating systems in terms of: the effect on system performance, safety, life expectancy of components.
- installation, commissioning and maintenance requirements for a given situation including location and mounting of collectors, storage tanks, valves, pumps, pipes and ancillary fittings.
- energy conservation and efficiency measures that will enhance the performance of a solar water heater such as:

REQUIRED SKILLS AND KNOWLEDGE

appropriate usage patterns, insulation, water conservation technologies, auxiliary energy tariffs.

- the capital cost, simple pay back and life cycle cost of solar and electric or gas hot water heaters according to AS3595 and AS4536.

T11 Commercial solar hot water heaters encompassing:

- schematic diagrams for two different types of system configurations showing collectors, storage tank, piping, pumps, filters, valves, heat exchangers and expansion tanks.
- steps involved in the design of a commercial solar water heating system.
- assessment of the demand for hot water and irradiation for a given location and collector tilt angle, orientation and shading.
- selection of a suitably sized system for a given demand and location to meet a specific solar fraction and/or minimise life cycle cost.
- consequences of under/oversizing of a solar water heating system in terms of: system performance, safety, life expectancy of components.
- installation, commissioning and maintenance requirements for a given situation including location and mounting of collectors, storage tanks, valves, pumps, pipes and ancillary fittings.
- evaluation of energy conservation and efficiency measures that will enhance the performance of a solar water heater such as: appropriate usage patterns, insulation, water conservation technologies, auxiliary energy tariffs.
- the capital cost, simple payback time and life cycle cost of solar and electric or gas hot water heaters according to AS3595 and AS4536.

T12 Pool solar hot water heaters encompassing:

- function of the components of solar pool heating systems.
- typical system configuration.
- two factors which affect system performance

T13 Heating system technologies encompassing:

- Types and their application
- Operating parameters of common systems
- System component parameters and specifications
- System performance and requirements

REQUIRED SKILLS AND KNOWLEDGE

- Installation specifications and requirements

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered

will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design renewable energy heating systems as described in

8) and including:

- A Developing outlines of alternative designs,
- B Developing the design within the safety and functional requirements and budget limitations,
- C Documenting and presenting design effectively,
- D Successfully negotiating design alteration requests
- E Obtaining approval for final design
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing renewable energy heating systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENED10 Use computer applications relevant to a workplace
1A

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing renewable energy heating systems and their installation.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers providing known solutions to predictable problems in wind energy conversion systems rated up to 10 kW. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development in entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Note.

Competency requirements to be granted a license to carry

License to practice

3)

out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG105A and all prerequisite units it specifies.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG1 01A Solve problems in electromagnetic devices and related circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills

indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work on wind energy conversion systems	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the apparatus problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|--|--|
| | 1.5 | Sources of materials that may be required for the work are identified and accessed in accordance with established procedures. |
| | 1.6 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety. |
| 2 | Solve problem in wind energy conversion systems | |
| | 2.1 | OHS risk control work measures and procedures are followed. |
| | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
| | 2.3 | Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures |
| | 2.4 | Established routines are used to solve wind energy conversion systems problems using measured and calculated values of apparatus operating parameters. |
| | 2.5 | Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete work and document problem solving activities. | |
| | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | 3.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | 3.3 | Justification for solutions used to solve wind energy conversion systems problems is documented. |
| | 3.4 | Work completion is documented and appropriate person(s) notified in accordance with established routine procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and solving problems in wind energy conversion systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK13 Types, construction and operating features of small WECS 0A

Evidence shall show an understanding of small WECS types, construction and operating features to the extent indicated by the following aspects:

- T1 Basic operation of lift and drag type WECS
- T2 Characteristics of WECS in terms of power and torque, efficiency (power and output co-efficient), solidity and tip speed ratio.
- T3 Major categories and sub-categories of WECS.
- T4 Advantages and disadvantages of each type of WECS.
- T5 Suitable materials for the construction of WECS taking into consideration fatigue stresses and environmental conditions such as salt air, humidity and ice.
- T6 Typical system configurations and components for: stand-alone power systems and water pumping.
- T7 Strategies and/or mechanisms to control: mechanical stresses on the WECS in gale force winds and power output for battery charging.
- T8 Appropriate types of WECS for a particular application

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in wind energy conversion systems as described in 8) and including:

A Understanding the nature of the problem

B Using established routines to solve apparatus problems

- C Providing viable solutions to apparatus problems.
- D Documenting justification for the solutions used
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in wind energy conversion systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary

equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to wind energy conversion systems as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following:

- In relation to at least three of the following types of wind energy conversion system problems and on at least two occasions:
 - determining the operating parameters of an existing apparatus
 - identifying and locating electrical fault
 - identifying and locating mechanical fault

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor 1) Scope:

1.1) Descriptor

This unit covers the design of wind energy conversion systems and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK1 30A Solve problems in wind energy conversion systems rated to 10 kW

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|--|
| 1 | Prepare to design wind energy conversion systems | 1.1 | OHS processes and procedures for a given work area are identified, obtained and understood |
| | | 1.2 | The extent and nature of the system is determined from design brief |
| | | 1.3 | Safety and other regulatory requirements to which the electrical installation must comply are identified, obtained and understood |
| | | 1.4 | Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work |
| 2 | Develop wind energy conversion systems design. | 2.1 | Knowledge of wind energy conversion systems performance standards, compliance methods is applied to the design |
| | | 2.2 | Alternative arrangements for the wind energy systems design are considered based on the requirements outlined in the design brief |
| | | 2.3 | Safety, functional and budgetary considerations are incorporated in the design |
| | | 2.4 | Wind energy system design draft is checked for compliance with the design brief and regulatory requirements |
| | | 2.5 | Wind energy system design is documented for submission to appropriate persons for acceptance and approval |
| | | 2.6 | Solutions to unplanned situation are provided |

ELEMENT**PERFORMANCE CRITERIA**

		consistent with organisation policy
3	Obtain approval for wind energy conversion systems design.	<p>3.1 Wind energy system design is presented and explained to client representative and/or other relevant persons</p> <p>3.2 Requests for alterations to the design are negotiated with relevant persons within the constraints of organisation policy</p> <p>3.3 Final design is documented and approval obtained from appropriate persons</p> <p>3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards</p>

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and designing wind energy conversion systems rated to 10 kW.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK131A Design of small wind energy conversion systems (WECS)

Evidence shall show an understanding of the design of small wind energy conversion systems (WECS) to the extent indicated by the following aspects:

- T1 Wind characteristics encompassing:
- definition of the terms: weather charts, isobars, fronts and troughs, cyclone and anti-cyclone, atmospheric boundary layer, geotropic wind, gradient wind, wind shear, wind rose
 - major global wind circulations and the formation of major wind flows over your continent.
 - major features of the atmospheric boundary layer including: variation of wind speed with height according to logarithmic

REQUIRED SKILLS AND KNOWLEDGE

- and power Laws, effects of surface roughness
 - atmospheric stability and temperature inversions turbulence.
 - major local winds including: trade winds, sea and land breezes, katabatic and anabatic winds.
 - likely effects on the major local winds from local topography, surface roughness, isolated barriers and temperature inversions.
 - typical diurnal, monthly and seasonal patterns of winds over the local area.
 - the formation and likely effects of extreme winds and wind shear.
- T2 Wind speed data measurement and analysis encompassing:
- definition of the terms: porosity, internal boundary layer, speed-up factor, temperature inversion factor, wind speed frequency distribution, lull period, calms.
 - interpretation of local and regional wind speed and direction data such as local records (E.g. Meteorological Bureau data), ecological indicators and wind speed/energy maps.
 - wind speed and direction using data logging anemometers.
 - manufacturer's calibration curves for anemometers to correct recorded data.
 - calculation at a site, monthly and yearly average wind speed, and wind power density from existing, nearby data or on-site measurements, using appropriate software
 - estimation of the wind speed at a WECS tower of suitable height and location given: wind speed data recorded at two or more elevations at the site, and wind speed data recorded at one elevation and appropriate surface roughness, temperature inversion and speed-up factors at the site.
- T3 Site selection encompassing:
- the likely effects of local topography, surface roughness, isolated barriers and temperature inversions on a WECS at a given site.
 - assessment of available local or regional wind speed, wind energy and direction data.
 - selection of the most appropriate site-monitoring location taking into consideration factors such as: topography, accessibility, surface roughness, shielding from isolated barriers (obstacles), turbulence, temperature inversions, power transmission distance, environmental and heritage impacts e.g. noise, visual, bird life, national parks or

REQUIRED SKILLS AND KNOWLEDGE

aboriginal sites.

- measurement of wind speed and direction data at an appropriate site and height(s) using a data logging anemometer over a sufficient period of time.
- analysis of the recorded wind speed and direction data to determine if the site is suitable for wind energy utilisation.

T4 Selection of WECS encompassing:

- selection of suitable WECS specifications to suit site load and wind speed data according to AS4509 including: cut-in, rated and furling wind speeds, blade diameter, rated power at an appropriate rated wind speed, materials of construction.
- select a suitable commercially available WECS that most closely fits the specifications above.
- suitable tower requirements at the site including site access, soil type and foundations, structural certification and planning approvals.
- calculation of the monthly and annual energy output of the selected WECS at the site from wind speed data and load data using appropriate computer software and in accordance with AS4509.
- height of the tower and the size of the WECS for optimum use.
- suitable system configurations.
- balance of system components including: battery storage, inverter, regulator, transmission cable, back-up battery charger and generator.
- equipment reliability and manufacturer/suppliers back-up service including availability of spare parts and service personnel
- installed capital and life cycle costs of various system configurations according to AS3595 and AS4536.
- environmental, cultural and social factors that impact on the implementation of a WECS such as: external costs, WECS manufacturing processes and embodied energy and energy payback time, noise levels, visual amenity, RFI

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design wind energy conversion systems rated to 10 kW as described in 8) and including:

A Developing outlines of alternative designs

B Developing the design within the safety and functional requirements and budget limitations

- C Documenting and presenting design effectively
- D Successfully negotiating design alteration requests
- E Obtaining approval for final design
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing wind energy conversion systems rated to 10 kW.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended

primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers developing strategies to address environmental and sustainability issues in the energy sector. It encompasses working safely, apply extensive knowledge of sustainable energy systems and components and their operating parameters, gathering and analysing data, applying problem solving techniques, developing and documenting alternatives solutions.

Application of the Unit

Application of the Unit 2)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element.

Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop strategies to address environmental and sustainability issues.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work
	1.3 The extent of the environmental and sustainability issues are determined from performance specifications and situation reports and in consultation with relevant persons
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work
	1.5 Effective strategies are determined to ensure solution development and implementation is carried out efficiently
2 Develop strategies to address environmental and sustainability issues	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2 Knowledge of sustainability is applied to developing strategies to address greenhouse gas and sustainability issues
	2.3 Parameters, specifications and performance requirements in relation to environmental and sustainability issues are set in accordance with established procedures
	2.4 Approaches to resolving environmental and sustainability issues are analysed to provide most effective solutions
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy
	2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards

ELEMENT	PERFORMANCE CRITERIA
3 Document strategies to address environmental and sustainability issues.	3.1 Solutions to environmental and sustainability issues are tested to determine their effectiveness and modified where necessary
	3.2 Adopted solutions are documented, including instructions for implementation that incorporates risk control measures to be followed
	3.3 Appropriately competent and qualified persons required to implement solutions to environmental and sustainability issues are coordinated in accordance with regulatory requirements and enterprise policy (See Note)
	3.4 Justification for strategies used to solve environmental and sustainability issues is documented for inclusion in work/project development records in accordance with professional standards

Note:

A licence or permit to practise in the workplace is required for specified work on building and premises

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and developing strategies to address sustainability issues.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK132A Environmental and Sustainability strategies

Evidence shall show an understanding of greenhouse reduction strategies to an extent indicated by the following aspects:

T1 Principles of sustainability encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- ways in which ecosystems moderate climate.
 - ways in which ecosystems purify and store water.
 - ways in which ecosystems recycle waste.
- T2 Problems in a sustainable world encompassing:
- changes to Australian forest cover since white settlement, and the resulting loss of ecosystem and human benefits.
 - changes to Australia's soils since white settlement, and the resulting loss of ecosystem and human benefits.
 - changes to Australia's waterways since white settlement, and the resulting loss of ecosystem and human benefits.
 - place of environmental accounting in quantifying Australia's environmental losses.
 - limits to Australia's population carrying capacity.
- T3 Sustainability principles encompassing:
- principles within sustainability including: environmental accounting and economics; full cost pricing; triple bottom line ethic; ecologically sustainable development; greenhouse gas abatement; energy efficiency; resource and water use efficiency; life cycle costing; renewable energy substitution, cleaner production; waste minimisation, reuse and recycling; ecological footprint.
- T4 Addressing the problem of global warming encompassing:
- greenhouse gases and their sources and quantities that contribute to global warming.
 - global warming impacts for Australia for 2030 and 2070 predicted by CSIRO modelling.
 - requirements to achieve stable atmospheric concentrations of greenhouse gases.
 - ecologically and economically sustainable methods for achieving these stable concentrations.
- T5 Greenhouse gas emissions profile encompassing:
- goals and principles of the National Greenhouse Strategy
 - what a greenhouse gas inventory is, why it is required, and the sectors to which it applies
 - uses to which the National Greenhouse Gas Inventory can be applied.
- T6 Understanding and communicating climate change and its impacts encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- the possible impact of climate change in Australia.
 - techniques for improving the understanding of climate change
 - techniques for communicating to and educating the general public on greenhouse gas induced climate change.
- T7 Partnerships for greenhouse action encompassing:
- actions achievable by each level of government to implement the NGS.
 - methods by which the community activity can be engaged in the reduction of greenhouse gas emissions.
 - initiatives that can be undertaken by the private sector to reduce greenhouse gas emissions.
 - advantages of international partnerships.
 - emissions trading system.
- T8 Efficient and sustainable energy use and supply encompassing:
- techniques for reducing the greenhouse intensity of energy supply.
 - types of renewable energy sources suitable for use in Australia.
 - methods and technique for improving end-use efficiency.
- T9 Efficient transport and sustainable urban planning encompassing:
- how integrating land use and transport planning can assist the greenhouse problem.
 - how each of the following can be used to mitigate greenhouse gas; travel demand and traffic management strategies; encouraging greater use of public transport, walking and cycling; freight and logistics systems; improving vehicle fuel efficiency and fuel technologies;
- T10 Greenhouse sinks and sustainable land management encompassing:
- how enhancing greenhouse sinks and encouraging sustainable forestry and vegetation management can complement the AGS.
 - how greenhouse gas emissions are obtained from agricultural production and describe techniques to mitigate the emissions.
- T11 Models of greenhouse best practice in industrial processes

REQUIRED SKILLS AND KNOWLEDGE

and waste management encompassing:

- types and methods of reducing greenhouse gas emissions from industry.
- methods of reducing methane emissions from waste treatment and disposal.

T12 Adaptation to climate change encompassing:

- salient points in each of the key sectors that require analysis and the strategies required in the need for adaptation to climate change

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may

be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or

licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop strategies to address environmental and sustainability issues as described in 8) and including:

- A Understanding the extent of the energy problem
- B Forming effective strategies for solution development and implementation
- C Obtaining energy system/component parameters, specifications and performance requirements appropriate to each problem
- D Testing solutions to energy problems
- E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed
- F Documenting justification of solutions implemented in accordance with professional standards
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice

using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing strategies to address environmental and sustainability issues.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to developing engineering strategies to address environmental and sustainability issues for at least four energy problems.

Note.

Typical sustainability issues are those encountered in meeting sustainability performance standards, such as reducing needs for energy use, reducing causes of greenhouse gas emissions, revising a energy system operating parameters and dealing with energy system efficiencies.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the design of hybrid renewable power systems and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK1 28A Solve problems in stand-alone renewable energy systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design hybrid power systems	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 The extent and nature of the system is determined from design brief
	1.3 Safety and other regulatory requirements to which the electrical installation must comply are identified and understood
	1.4 Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work
2 Develop hybrid power systems design	2.1 Knowledge of hybrid power systems performance standards, compliance methods is applied to the design
	2.2 Alternative arrangements for the wind energy systems design are considered based on the requirements outlined in the design brief
	2.3 Safety, functional and budgetary considerations are incorporated in the design
	2.4 Wind energy system design draft is checked for compliance with the design brief and regulatory requirements
	2.5 Wind energy system design is documented for submission to appropriate persons for acceptance and approval
	2.6 Solutions to unplanned situation are provided

ELEMENT	PERFORMANCE CRITERIA
	consistent with organisation policy
3 Obtain approval for hybrid power systems design	3.1 Wind energy system design is presented and explained to client representative and/or other relevant persons
	3.2 Requests for alterations to the design are negotiated with relevant persons within the constraints of organisation policy
	3.3 Final design is documented and approval obtained from appropriate persons
	3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and designing hybrid renewable power systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK133A Hybrid Energy Systems - design

Evidence shall show an understanding of the design of hybrid energy systems to an extent indicated by the following aspects:

Energy demand encompassing:

- end-use services and energy demand for each service.
- most appropriate energy sources for each energy service for a given application and location, taking into consideration economic, environmental and client requirements.
- greenhouse gas savings from a hybrid energy system compared to an existing non-hybrid system, resulting from energy source switching and reduction in fuel usage.
- daily load profiles illustrating average demand and maximum

REQUIRED SKILLS AND KNOWLEDGE

- demand, based on time of use data for all electrical loads
- daily load profiles based on given load data, with consideration of likely variations in usage patterns.
- load management strategies and or energy source switching options to reduce the maximum and surge demand, based on load profile analysis
- load profile using a.c. power logging equipment
- daily load profiles illustrating average demand and maximum demand, based on time of use data for all electrical loads

Hybrid energy system operation encompassing:

- Definition of the terms complementarily (in relation to renewable energy resources)
- availability
- advantages and disadvantages of hybrid energy systems.
- major features of typical system configurations including pure renewables; renewables and genset; series; switched; parallel (including those with nominal daily genset running)
- operation of a hybrid system over the short term (e.g. daily) and long term (e.g. seasonal, annual).
- response of a genset to a step change in load, and to an overload condition.
- calculations relating to real and apparent power, power factor, mechanical power, voltage regulation and speed droop for single and three phase gensets.
- Calculation of the average efficiency of a genset supplying a given daily load profile, given genset efficiency vs. load data.

System design encompassing:

- system design criteria in consultation with a client.
- renewable energy resources available at a site through the use of on-site measurements and pre-existing weather data as appropriate.
- Selection of a suitable hybrid power system configuration
- Selection and sizing of suitable renewable energy generators for a hybrid energy system taking into consideration available renewable energy resources and daily and seasonal load profiles consistent with AS 4509.2.
- Analysis of load data to determine preferred time of day for genset running, and required energy storage in a parallel hybrid system.
- Selection and sizing of a suitable genset for any system configuration, including a parallel system, according to AS

REQUIRED SKILLS AND KNOWLEDGE

4509.2

- Selection and sizing of suitable balance-of-system components for a hybrid energy system including energy storage, controls and inverters consistent with AS 4509.2.
- Selection and sizing of a battery bank to meet both energy and maximum power demands in a parallel hybrid system, using an appropriate battery discharge rate and considering load data and genset running times
- Selection of an inverter for a parallel hybrid system, considering load data, genset running times and battery charging requirement.
- Selection and sizing of suitable internal combustion generators (genset) for a hybrid energy system taking into consideration genset characteristics and de-rating requirements
- performance of the system given load data, resource data, equipment specifications, configuration and control strategy.
- Calculation of the load fraction contributed from each renewable energy generator and from the genset.
- Calculation of the genset run time and fuel usage
- Optimisation of the system design based on a mix of design criteria such as cost, availability and reliability, maintenance, environmental factors, convenience etc.
- system manual according to AS4509.3 and AS4509.2, given system components and design data

Life cycle costing encompassing:

- present worth of a future payment
- major costs in the life cycle of a hybrid energy system to be considered in life cycle costing.
- Selection of an appropriate discount rate, inflation rates, and life cycle for a hybrid system life cycle cost analysis.
- life cycle cost analysis including the cost of finance and tax savings for a hybrid system using computer software
- most cost effective of a number of hybrid energy system options on the basis of life cycle costing analysis according to AS4536, AS3595 or similar standards.
- Comparison of the capital cost, simple payback time and life cycle cost of a hybrid energy system with another energy supply option, according to AS 4536, AS 3595 or similar standards.
- sensitivity analysis of life cycle costing to variations in discount rate or other major parameters

REQUIRED SKILLS AND KNOWLEDGE

Installation, commissioning and maintenance encompassing:

- Specification of the installation and maintenance requirements for a complete hybrid energy system taking into consideration safety and relevant Australian Standards
- installation requirements for fuel storage for a given genset in accordance with AS 1940, AS 4509 and local regulations
- considerations involved in providing adequate genset vibration isolation
- considerations involved in providing a genset exhaust system suitable for a given genset and installation site.
- major considerations and methods used in providing suitable noise attenuation for a genset installation.
- Specification of the physical accommodation requirements for a given genset to provide adequate air flow and noise attenuation, with due regard for safety, maintenance access, and in accordance with AS 3010 and AS 4509.
- methods used to allow extended service intervals for gensets
- main features of engine protection systems commonly used on small gensets and the genset sizes to which these are applicable.
- installation and commissioning work on a small genset and controller observing relevant OHS guidelines.
- symptoms of common genset faults
- basic fault location and rectification on a genset with the aid of troubleshooting guides or flowcharts.
- symptoms, causes and possible solutions for the phenomenon of "hunting".
- maintenance schedule for a hybrid power system.

Data communications encompassing:

- typical applications of data communications in renewable energy systems.
- different types of cables and connectors used in data communications between electronic devices and computers.
- commonly used protocols used for serial data communications
- different communications ports on palmtop, laptop or desktop computers
- Correction of an electronic device (e.g. inverter or charge controller) to a computer directly, and via modems and telephony network, using appropriate cabling, connectors and computer ports

REQUIRED SKILLS AND KNOWLEDGE

- dial-up connection from a computer to a remote electronic device, such as an interactive inverter.
- standard terminal program or proprietary communications software to send to and receive data from an electronic device.
- Programming and retrieving data from an interactive inverter via a computer and data communications link.
- logged data downloaded from an interactive inverter.

Data-logging encompassing:

- general features and operation of on-site and remote data logging systems for monitoring and control of a hybrid energy system.
- logger programming, data downloading, display and interpretation of the results

Interactive inverters encompassing:

- main features of different devices commonly used as controllers in hybrid energy systems
- function and operation of an interactive inverter.
- system control philosophies used in different interactive inverters
- program parameters for an interactive inverter, as required for the correct operation of a parallel hybrid system given system component details, load data and preferred genset running times.
- appropriate charging regime for the system battery, based on manufacturer's data and system operating conditions.
- Programming an interactive inverter through its front panel interface.
- function, operation and major features of a genset controller and how it interfaces with a system controller such as an interactive inverter.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design hybrid renewable power systems as described in 8) and including:

A Developing outlines of alternative designs

B Developing the design within the safety and functional requirements and budget limitations

- C Documenting and presenting design effectively
- D Successfully negotiating design alteration requests
- E Obtaining approval for final design
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing hybrid renewable power systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary

equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENED10 Use computer applications relevant to a workplace
1A

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different hybrid renewable power systems and their installation.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This competency standard unit covers the installation, adjustment and set up of ELV stand-alone photovoltaic power systems. It encompasses working safely and to installation standards, matching components with that specified for a given location, placing and securing system components accurately, making required circuit connections and completing the necessary installation documentation.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practice in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States and Territories

License to practice**3)**

subject to regulations related to electrical work.

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG105A and all prerequisite units it specifies

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and the like.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation and the like.

2. Compliance may be required in various jurisdictions relating to currency in first aid, confined space, lifting, risk safety measure and the like.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK1 Solve basic problems in photovoltaic

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve this unit if they have reading, writing and maths skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install ELV stand-alone photovoltaic power apparatus and systems.	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been

ELEMENT**PERFORMANCE CRITERIA**

- identified are noted and established risk control measures are implemented.
- 1.4 Installation of the system is prepared in consultation with others affected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken.
- 1.6 Sitting limitations and customer system requirements are identified by consultation with the customer.
- 1.7 Energy demand is assessed and recommendations made to the customer for energy efficiency improvements if necessary.
- 1.8 Suitable system components are specified and selected.
- 1.9 Location of system components is planned within the constraints of the building structure and regulations.
- 1.10 Advice is sought from appropriate persons to ensure the work is co-ordinated effectively with others.
- 1.11 Materials and components needed for the installation work are obtained in accordance with established procedures, pre-assembled where necessary, and checked against job requirements.
- 1.12 Materials and components are prepared for transport to the site and transport is arranged.
- 1.13 Tools, equipment and testing devices needed for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.14 Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements.

ELEMENT	PERFORMANCE CRITERIA
2 Install ELV stand-alone photovoltaic power apparatus and systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Equipment is transported safely to the site.
	2.3 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.4 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.5 System components are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance.
	2.6 Wiring is terminated at components and associated equipment in accordance with manufacture's specifications and functional and regulatory requirements.
	2.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.9 On-going checks of the quality of installed apparatus are undertaken in accordance with established procedures.
	2.10 System installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
3 Complete installation and report installation activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.

ELEMENT**PERFORMANCE CRITERIA**

- 3.3 Final checks are made to that the installed apparatus conforms to requirements.
- 3.4 System operation is tested and installation verified to be compliant with standards and work specifications.
- 3.5 'As-installed' apparatus and associated equipment is documented and an appropriate person or persons notified in accordance with established procedures.
- 3.6 Customer is informed of the system operation, routine maintenance and limitations.
- 3.7 Appropriate documentation as required by standards or job specifications is provided to the customer.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and setting up ELV stand-alone photovoltaic power apparatus and systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK134 Stand-alone ELV photovoltaic systems**A**

Evidence shall show an understanding of the installation requirements for stand-alone ELV photovoltaic systems to the extent indicated by the following aspects:

- T1 PV array installation requirements encompassing:
- OH&S requirements and methods for working on roofs.
 - common methods of roof construction (rafters and tile battens) and methods to ensure integrity of waterproofing.
 - common types of roof mounted and free-standing PV array

REQUIRED SKILLS AND KNOWLEDGE

- frame construction and methods of tilt angle adjustment.
 - fixing methods for different roof types.
 - array mounting methods for north orientation roof sections and non-north facing roof sections.
 - aesthetic considerations in choosing an appropriate array location and type of mounting.
 - the mounting and fixing methods for at least one type of domestic available building integrated PV product.
- T2 Electrical PV array installation requirements encompassing:
- methods used in wiring and connecting PV arrays as per the Australian Standards AS 4509 and AS5033
 - considerations involved in wiring of series connected PV modules in order to minimise power losses due to shading.
 - PV array wiring diagram including the placement of blocking and bypass diodes.
 - considerations involved in choosing the location of associated system equipment including regulators, d.c. control board,
 - cable route from PV array/s to regulators so as to minimise the route length to battery so as to minimise the route length.
- T3 System installation and maintenance encompassing:
- installation work on a PV power system in accordance with relevant standards and OH&S guidelines.
 - correct isolation and shutdown procedures prior to carrying out maintenance tasks.
 - routine maintenance tasks on PV arrays.
 - required vegetation control to remove or reduce shading or soiling on a PV array

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitude competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

The evidence on which competency in this unit is based shall be considered holistically for each element on at least two occasions comprising:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements. and
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
- Demonstrated performance across a representative range of contexts from the prescribed items below:
 - Install and set up stand-alone (ELV) photovoltaic power systems as listed in Range statement' and including:
 - A Assessing customer energy requirements, efficiency improvements and site limitations.
 - B Reading and interpreting drawings related to and apparatus locations and circuit connections.
 - C Placing and securing system components accurately.

- D Maintaining fire integrity
- E Connecting system components to comply with requirements.
- F Testing system operation and verifying compliance with standards and job specifications.
- G Completing necessary documentation including handing over system operational documents to the customer and informing customer of system operation, routine maintenance and limitations.
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above in Context of and specific resources for assessment, evidence should show demonstrated competency in installing and setting up ELV stand-alone photovoltaic power systems.

Method of assessment **9.4)**

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with units:

UEENEEK12 Solve basic problems in photovoltaic energy
5A apparatus and systems

Range Statement**RANGE STATEMENT**

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated by completing the installation of two different types of ELV stand-alone photovoltaic system on at least two occasions.

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Renewable and Sustainable Energy

UEENEEK135A Design grid connected photovoltaic power supply systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor 1) Scope:

1.1) Descriptor

This unit covers the design of grid connected photovoltaic power supply systems and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK1 25A Solve basic problems in photovoltaic energy apparatus and systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1 Prepare to design grid connected power supply systems. | 1.1 OHS processes and procedures for a given work area are identified, obtained and understood |
| | 1.2 The extent and nature of the system is determined from design brief. |
| | 1.3 Safety and other regulatory requirements to which the electrical installation must comply are identified, obtained and understood |
| | 1.4 Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work. |
| 2 Develop grid connected power supply systems design. | 2.1 Knowledge of grid connected power supply system's performance standards, compliance methods is applied to the design. |
| | 2.2 Alternative arrangements for the hybrid power systems design are considered based on the requirements outlined in the design brief. |
| | 2.3 Safety, functional and budgetary considerations are incorporated in the design. |
| | 2.4 Grid connected power supply system design draft is checked for compliance with the design brief and regulatory requirements. |
| | 2.5 Grid connected power supply system design is documented for submission to appropriate persons for acceptance and approval. |
| | 2.6 Solutions to unplanned situation are provided |

ELEMENT**PERFORMANCE CRITERIA**

ELEMENT	PERFORMANCE CRITERIA
	consistent with organisation policy.
3 Obtain approval for grid connected power supply systems design	3.1 Grid connected power supply system design is presented and explained to client representative and/or other relevant persons.
	3.2 Requests for alterations to the design are negotiated with relevant persons within the constraints of organisation policy.
	3.3 Final design is documented and approval obtained from appropriate persons.
	3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and designing grid connected photovoltaic power supply systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK135A Photovoltaic power systems -design

Evidence shall show an understanding of photovoltaic power systems design principles to an extent indicated by the following aspects:

Site Survey encompassing:

- declination angle, reflectance, sunshine hours, extraterrestrial irradiation
- energy efficiency techniques relevant for domestic dwelling and commercial premises to reduce the electrical energy demand.
- energy efficient initiatives that could be implemented by the site owner.
- assessing the occupational health and safety (OHS) risks

REQUIRED SKILLS AND KNOWLEDGE

when working on that particular site.

- determining the solar access for the site.
- determining whether any shading will occur and estimate its effect on the system.
- estimation of the solar resource for the site.
- determining the available area for the solar array.
- determining whether the roof is suitable for mounting the array.
- determining how the modules will be mounted on the roof.
- determining where the switchboard or distribution board is located for connecting the output of inverter.
- determining where the array junction box (if required) and inverter will be located.
- determining the cabling route and therefore estimate the lengths of the cable runs.
- determining whether monitoring panels or screens are required and determine a suitable location with the site owner

PV arrays selection encompassing:

- selection and sizing of PV array for a grid-connected inverter system, based on any of: annual energy demand, budget constraints, architectural constraints or limitations on available inverter sizes.
- determining the minimum and maximum number of PV modules in a string for the specified voltage

System components selection encompassing:

- selection and sizing the balance of the system components including cabling, circuit protection and isolation equipment for a grid-connected PV system.
- determining the energy yield, specific energy yield and performance ratio for system
- schematic diagrams of common grid-connected inverter circuit configurations including metering arrangements, isolation and connection with respect to RCDs.
- the major installation details for a proposed grid-connected inverter system, based on the requirements set out in AS 4777 and AS5033

Other design considerations encompassing:

- major non-technical considerations impacting on the design, installation and operation of grid-connected PV systems

REQUIRED SKILLS AND KNOWLEDGE

including economic, financial, contractual, institutional, legislative and regulatory.

- calculation of the annual reduction in greenhouse gas emissions achieved by a given PV power system at a given location.

Inverters encompassing:

- types of inverters used in grid connected systems.
- Australian standard symbol for a low voltage inverter
- the basic function of an inverter.
- simple block diagram of a typical inverter used in grid connected system

Inverter Operation encompassing:

- the basic principle of operation of a single phase inverter (using switch analogue)
- the operation of an inverter bridge and half-bridge configuration.
- operation of a FET inverter
- connection of a grid inverter and measurement of the inverter parameters for various loads

Inverter Characteristics encompassing:

- the characteristics which distinguish inverters suitable for grid connected photovoltaic array application from standard inverters.
- using waveform diagrams, the function of PWM techniques in square wave, modified square wave and synthesised sine wave inverters
- output voltage waveforms for square wave, modified square wave and synthesized sine wave inverters showing typical voltages and periodic times
- the six (6) essential inverter specifications

PV Grid Connected System Operation encompassing:

- block diagram of a PV grid connected system.
- operation of grid interactive PV systems including synchronisation, safety feature, power flow control, passive and active anti-islanding, and metered energy for systems.
- schematic diagrams of common grid connected inverter circuit configurations including metering arrangements, isolation and connection with respect to RCDs in accordance with AS 4777.1.

REQUIRED SKILLS AND KNOWLEDGE

Grid connect inverter selection encompassing:

- determining the operating window of the inverter for the expected minimum and maximum effective cell temperatures
- selection of an inverter rating with respect to the output power of the array/s.
- major installation requirements for all system components which will ensure correct operation, long life, safety and ease of maintenance consistent with AS 4509, AS 4086.2, AS/NZS 3000 and relevant OH&S guidelines
- selection of a suitable location for the PV array, inverter and other components, at a given installation site in accordance with AS2676.2 and AS3011.2, and the considerations given in AS4509 and AS4086.2.
- typical installation configurations for grid connection of energy systems via inverters
- the function and operation of a "grid protection device" as specified in AS4777
- draft array wiring plan for series connected modules to minimise power loss due to shading at a particular site.
- installation requirements for a grid connected system.
- labelling and signage requirements for switchboards supplied with power from grid connected inverters, as set out in AS 4777.1.
- the additional requirements for UPS systems as specified in AS4777.1.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design grid connected photovoltaic power supply systems as described in 8) and including:
 - A Developing outlines of alternative designs
 - B Developing the design within the safety and functional requirements and budget limitations

- C Documenting and presenting design effectively
- D Successfully negotiating design alteration requests
- E Obtaining approval for final design
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing grid connected photovoltaic power supply systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended

primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENED10 Use computer applications relevant to a workplace
1A

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different grid connected photovoltaic power supply systems and their installation.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the installation and adjustment and set-up of LV micro-hydro systems rated up to 6.4 kW. It encompasses working safely and to installation standards, matching components with that specified for a given location, placing and securing system components accurately, making required circuit connections and completing the necessary installation documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace.

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG105A and all prerequisite units it specifies.

License to practice

3)

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG1 Install low voltage wiring and accessories
03A

UEENEEK1 Solve basic problems in micro hydro
24A systems

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to install LV micro-hydro systems.	1.1	OHS procedures for a given work area are identified, obtained and understood
	1.2	Health and safety risks are identified, and established risk control measures and procedures in preparation for the work are followed
	1.3	Safety hazards that have not previously been identified are noted and established risk control measures are implemented
	1.4	Installation of the system is prepared in consultation with others effected by the work and sequenced appropriately

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|---------------------------------|--|
| | 1.5 | The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken |
| | 1.6 | Location of system components is planned within the constraints of the building structure, significant and regulations |
| | 1.7 | Advice is sought from appropriate persons to ensure the work is coordinated effectively with others |
| | 1.8 | Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements |
| | 1.9 | Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety |
| | 1.10 | Preparatory work is checked to ensure no damage has occurred and complies with requirements |
| 2 | Install LV micro-hydro systems. | |
| | 2.1 | OHS risk control measures and procedures are followed for carrying out the work |
| | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures |
| | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures |
| | 2.4 | System components are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance |
| | 2.5 | Wiring is terminated at system components in accordance with manufacturer specifications and functional and regulatory requirements |

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|--|--|
| | 2.6 | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented |
| | 2.7 | Unexpected situations are dealt with safely and with the approval of an authorised person |
| | 2.8 | Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures |
| | 2.9 | Apparatus installation is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles |
| 3 | Completion and report installation activities. | |
| | 3.1 | OHS work completion risk control measures and procedures are followed |
| | 3.2 | Work site is cleaned and made safe in accordance with established procedures |
| | 3.3 | Final checks are made so that the installed apparatus conforms to requirements |
| | 3.4 | ‘As-installed’ apparatus and associated equipment is documented and appropriate person(s) notified in accordance with established procedures |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and installing and setting up LV micro-hydro systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK136 Micro-hydro systems LV installation and maintenance processes A

Evidence shall show an understanding of micro-hydro systems LV installation and maintenance to an extent indicated by the following aspects:

Micro-hydro systems (MHS) LV installation processes encompassing:

- Selection of an appropriate MHS taking into account the topology of the site, local council approvals, environmental considerations, site access and transport of equipment, water and power transmission distances and daily and seasonal load profiles.
- Appropriate methods, using appropriate safety procedures, for: dam or weir construction; watercourse construction and/or penstock installation; turbine installation;
- Appropriate installation, testing, commissioning, fault diagnosis and rectification procedures using appropriate safety procedures.
- Schematic and wiring diagrams for the MHS showing the general circuit layout and protection between the MHS, batteries, inverter and loads according to Australian Standards AS/NZS3000, AS4509, and AS4086.2 requirements.
- Safety procedures for the installation, commissioning, fault diagnosis of system components.

Micro-hydro systems (MHS) maintenance processes encompassing:

- Appropriate maintenance methods using appropriate safety procedures.
- Maintenance schedule for the system.
- Safety procedures for the maintenance of system components.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

- 2.7 Unexpected situations are dealt with safely and with the approval of an authorised person
- 2.8 Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures
- 2.9 Apparatus installation is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles
- 3 Completion and report installation activities.
- 3.1 OHS work completion risk control measures and procedures are followed
- 3.2 Work site is cleaned and made safe in accordance with established procedures
- 3.3 Final checks are made so that the installed apparatus conforms to requirements
- 3.4 'As-installed' apparatus and associated equipment is documented and appropriate person(s) notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and installing and setting up ELV micro-hydro systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK137 Micro-hydro systems ELV installation and maintenance processes **A**

Evidence shall show an understanding of micro-hydro system ELV installation and maintenance to an extent indicated by the following aspects:

Micro-hydro systems (MHS) ELV installation processes encompassing:

- Selection of an appropriate MHS taking into account the topology of the site, local council approvals, environmental considerations, site access and transport of equipment, water and power transmission distances and daily and seasonal load profiles.
- Appropriate methods, using appropriate safety procedures, for: dam or weir construction; watercourse construction and/or penstock installation; turbine installation;
- Appropriate installation, testing, commissioning, fault diagnosis and rectification procedures using appropriate safety procedures.
- Schematic and wiring diagrams for the MHS showing the general circuit layout and protection between the MHS, batteries, inverter and loads according to Australian Standards AS/NZS3000, AS4509, and AS4086.2 requirements.
- Safety procedures for the installation, commissioning, fault diagnosis of system components.

Micro-hydro systems (MHS) maintenance processes encompassing:

- Appropriate maintenance methods using appropriate safety procedures.
- Maintenance schedule for the system.
- Safety procedures for the maintenance of system components.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and set up ELV micro-hydro systems as described in 8) and including:
 - A Reading and interpreting drawings related to and apparatus locations and circuit connections.
 - B Placing and securing system components accurately

- C Maintaining fire integrity
- D Connecting system components to comply with requirements
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing and setting up ELV micro-hydro systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended

primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to installing ELV micro-hydro systems in at least two different types of premises construction or environment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the design of micro-hydro systems rated to 6.4 kW and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK1 24A Solve basic problems in micro hydro systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design micro-hydro systems.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood
	1.2 The extent and nature of the electrical installation is determined from design brief
	1.3 Safety and other regulatory requirements to which the electrical installation must comply are identified, obtained and understood
	1.4 Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work
2 Develop micro-hydro systems design.	2.1 Knowledge of micro-hydro systems performance standards, compliance methods is applied to the design
	2.2 Alternative arrangements for the hybrid power systems design are considered based on the requirements outlined in the design brief
	2.3 Safety, functional and budgetary considerations are incorporated in the design
	2.4 Micro-hydro system design draft is checked for compliance with the design brief and regulatory requirements
	2.5 Micro-hydro system design is documented for submission to appropriate persons for acceptance and approval
	2.6 Solutions to unplanned situation are provided

ELEMENT	PERFORMANCE CRITERIA
3 Obtain approval for micro-hydro systems design.	consistent with organisation policy
	3.1 Micro-hydro system design is presented and explained to client representative and/or other relevant persons
	3.2 Requests for alterations to the design are negotiated with relevant persons within the constraints of organisation policy
	3.3 Final design is documented and approval obtained from appropriate persons
	3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and designing micro-hydro systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK1 Micro-hydro systems - design 38A

Evidence shall show an understanding of micro-hydro design to an extent indicated by the following aspects:

- T1 Site evaluation encompassing:
- definition of the terms: potential and kinetic energy, micro-hydro system, gross head, net head, flow rate.
 - available head at a site using a dumpy level or theodolite, altimeter, pressure gauge and contour maps.
 - the accuracy, advantages and disadvantages of each method for flow and head assessment.
 - the flow rate of a given site using each of the following methods - catchment area calculations, water diversion to fill a container,

REQUIRED SKILLS AND KNOWLEDGE

stream velocity/area measurement and/or weir construction method.

- advantages and disadvantages of each method of head and flow measurement with particular reference to their accuracy.
- long term usable flow rate from long term stream flow if available able taking into account environmental considerations.
- effects of seasonal variation using long term weather data.
- typical daily and seasonal energy consumption profile at a given site.
- effect of the energy demand profiles both daily and seasonally at the site on the system sizing.
- government regulatory requirements such as those covered under environmental or water resource legislation.
- environmental constraints at a site including minimum stream flow rates, ecological impacts, visual and noise impacts.

T2 System design encompassing:

- suitable MHS characteristics to suit site load, hydraulic head and stream flow rate characteristics and a suitable type of commercially available MHS to suit.
- frictional losses in delivery pipes using manufacturer's data.
- calculation of the energy output of the selected MHS at the site from water flow rate, head and manufacturer's data, allowing for seasonal variations in performance and environmental constraints.
- design of any required weirs or dams, open races or penstocks, strainer and intake systems.
- optimum the position of the MHS and size of the MHS.
- suitable balance of system components including delivery pipe and fittings, transmission cable and voltage, voltage and frequency regulation, battery storage type and capacity, battery charger, inverter, back-up generator, and load dump.
- likely environmental impacts of the MHS and appropriate measures to minimise these impacts.

T3 System costing encompassing:

- major costs to be considered in the life cycle costing method.
- calculation of the capital and life cycle cost that includes the cost of various system configurations for a micro hydro application.
- external costs that might impact on the cost effectiveness of a MHS.
- most cost effective of a number of options on the basis of life

REQUIRED SKILLS AND KNOWLEDGE

cycle costing analysis

T4 Micro-hydro systems installation and maintenance processes encompassing

- Selection of an appropriate MHS taking into account the topology of the site, local council approvals, environmental considerations, site access and transport of equipment, water and power transmission distances and daily and seasonal load profiles.
- Appropriate methods, using appropriate safety procedures, for: dam or weir construction; watercourse construction and/or penstock installation; turbine installation;
- Appropriate installation, commissioning, fault diagnosis and rectification procedures and maintenance methods using appropriate safety procedures.
- Maintenance schedule for the system.
- Schematic and wiring diagrams for the MHS showing the general circuit layout and protection between the MHS, batteries, inverter and loads according to Australian Standards AS/NZS3000, AS4509, and AS4086.2 requirements.
- Safety procedures for the installation, commissioning, fault diagnosis and maintenance of system components.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare to develop engineering solution for renewable energy problems	1.1	OHS processes and procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work
		1.3	The extent of the renewable energy problem is determined from performance specifications and situation reports and in consultation with relevant persons
		1.4	Activities are planned to meet scheduled timelines in consultation with others involved in the work
		1.5	Effective strategies are determined to ensure solution development and implementation is carried out efficiently
2	Develop engineering solution for renewable energy problems	2.1	OHS risk control measures and procedures are followed for carrying out the work
		2.2	Knowledge of renewable energy systems and components, their construction, operation, characteristics and applications are applied to developing solutions to renewable energy

ELEMENT

PERFORMANCE CRITERIA

		problems
	2.3	Parameters, specifications and performance requirements in relation to each renewable energy problem are set in accordance with established procedures
	2.4	Approaches to resolving renewable energy problems are analysed to provide most effective solutions
	2.5	Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy
	2.6	Quality of work is monitored against personal performance agreement and/or established organisational or professional standards
3	Test, document and implement engineering solution for renewable energy problem	3.1 Solutions to renewable energy problems are tested to determine their effectiveness and modified where necessary
		3.2 Adopted solutions are documented, including instructions for implementation that incorporates risk control measures to be followed
		3.3 Appropriately competent and qualified persons required to implement solutions to renewable energy problems are coordinated in accordance with regulatory requirements and enterprise policy (See Note)
		3.4 Justification for solutions used to solve renewable energy problems is documented for inclusion in work/project development records in accordance with professional standards

Note

A licence or permit to practise in the workplace is required for specified work on building and premises

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and developing engineering solutions to renewable energy problems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK140A Renewable Energy Engineering

Evidence shall show an understanding of renewable energy engineering problem solving to an extent indicated by the following aspects:

T1 Energy and humanity encompassing:

- Need for energy and relationship between energy usage and standard of living
- Energy conversion - typical processes and efficiencies
- Sources of energy
- Solar energy - direct heating, photosynthesis, solar cells, power tower, hydrogen for solar energy, ocean thermal energy collector, solar ponds, wind and wave energy, hydro-electric power
- Geothermal energy
- Tidal energy
- Nuclear energy - fission and fusion, burner and breeder reactors
- Stored fuel reserves
- Fuel conservation - reduction in wastage, recycling, greater usage efficiency and use of waste heat
- Thermodynamics

T2 Basic Concepts encompassing:

- Nature of matter - atoms, molecules, inter-molecular forces, molecular motion, states of matter
- Mass and conservation of mass principle
- Volume, density, specific volume, relative density
- Force, weight, pressure (atmospheric, gauge and absolute)
- Temperature (Celsius and Kelvin)
- Systems and black box analysis
- Reciprocating piston and cylinder mechanism – pressure

REQUIRED SKILLS AND KNOWLEDGE

ratio and compression ratio

- T3 Energy encompassing:
- Definition and principles
 - Potential energy
 - Kinetic energy
 - Work (linear and rotational), constant and variable force, relationship to pressure and volume change
 - Power (linear and rotational)
 - Sensible heat - specific heat capacity (constant pressure and constant volume)
 - Latent heat
 - Chemical energy - energy content of a fuel
 - Internal energy
- T4 Energy transfer in closed and open systems encompassing:
- Definition of a closed system
 - Calorimetry as an example of a closed system (with or without phase change)
 - Thermodynamics 1
 - Non-flow energy equation - typical applications such as stirring with simultaneous heating or cooling
 - Definition of an open system
 - Mass and volume flow rate and continuity equation
 - Steady flow energy equation (negligible change in kinetic or potential energy) leading to the concept of enthalpy - typical applications such as turbines, compressors, boilers and heat exchangers.
- T5 Gases encompassing:
- Definition of a perfect or ideal gas in terms of the molecular model
 - General gas equation
 - Characteristic gas equation (equation of state)
 - Constant pressure process
 - Constant volume process
 - Isothermal process
 - Polytropic process
 - Adiabatic process
- T6 Heat engines encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Definition of a heat engine
 - Essentials of a heat engine - heat source, heat sink, working substance, mechanical power output, working cycle
 - Energy balance for a heat engine (as a black box) and efficiency
 - Maximum possible efficiency (Carnot efficiency)
 - Types of heat engines according to working substance, heat source, mechanical arrangement and working cycle
 - Typical practical cycles - Stirling, Otto, Diesel, dual, two stroke (spark and compression ignition. Joule cycle.
 - Thermodynamics 1
- T7 Heat engine performance encompassing:
- Measurement of torque and power output - rope brake, shoe brake, hydraulic dynamometer, electric dynamometer
 - Heat supply rate, efficiency, specific fuel consumption
 - Measurement of indicated power - mechanical indicator, electric/electronic indicator, Morse test
 - Friction power, mechanical efficiency, indicated thermal efficiency
 - Volumetric efficiency
 - Energy balance
 - Performance curves - variable load constant speed, variable speed constant throttle setting.
- T8 Structure of the existing generation, transmission and distribution system
- T9 Benefits, issues and impacts
- T10 Distributed generation technologies
- T11 Electrical power distribution systems operation encompassing:
- Electrical characteristics of feeders
 - Causes of voltage problems in a power distribution system
 - Voltage regulation limits
 - Calculations for feeder voltage drops
 - Methods of voltage control
 - Fault types, causes and effects
 - Determination of fault levels
 - Fault level limitation

REQUIRED SKILLS AND KNOWLEDGE

- T12 Protection and relaying encompassing:
- Protection system purpose and features
 - Application of protection in a distribution network
 - Protection system terminology
 - Feeder protection systems
- T13 Distributed generation issues encompassing:
- Utility requirements for interconnection
Safety of personnel
Islanding
Grid Stability
 - Voltage regulation
 - Potential benefits of DG
 - Limitations in design of distribution circuits (designed for 1-way operation)
 - Match between supply and demand
 - Operation: dispatchable and non-dispatchable supplies
 - Factors affecting the sizing of distributed generation
 - Use of energy storage
 - Case studies
- T14 Renewable energy supplies issues encompassing:
- Limits to penetration
 - Factors affecting the value of renewables on the grid
 - Implications of renewable input on power system operation
 - Connection of energy systems via inverters: AS 4777
- T15 Factors affecting the uptake of distributed generation encompassing:
- Institutional factors
 - Regulatory factors
 - Policy including mandated targets
 - Green power market
 - Financial issues
 - Contractual issues
 - Case studies

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE11’. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop engineering solutions to renewable energy problems as described in 8) and including:
 - A Understanding the extent of the renewable energy problem
 - B Forming effective strategies for solution development and implementation

- C Obtaining renewable energy system/component parameters, specifications and performance requirements appropriate to each problem.
- D Testing and solutions to renewable energy problems
- E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
- F Documenting justification of solutions implemented in accordance with professional standards
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved

industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing engineering solutions to renewable energy problems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to developing engineering solution for at least four renewable energy problems.

Note.

Typical renewable energy problems are those encountered in meeting performance requirements and compliance standards, revising a system operating parameters and dealing with system malfunctions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field

11)

Renewable and Sustainable Energy

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor 1) **Scope:**

1.1) Descriptor

This competency standard unit requires the worker to undertake methods of work practice that minimises energy and material usage and to seek energy reduction strategies in the energy sector workplace. The unit seeks to minimise negative impacts on the environment.

Application of the Unit

Application of the Unit 2)

This competency standards unit shall apply to persons entering work in energy sector and may be used in school based vocational programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practice in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships and the like.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work

License to practice

3)

platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation and the like.

2. Compliance may be required in various jurisdictions relating to currency in first aid, confined space, lifting, risk safety measure and the like

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

There are no prerequisite competencies for this unit

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve this unit if they have reading, writing and maths skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare to apply sustainable work practice	<p>1.1 Activities are planned and prepared for to ensure OHS policies and procedures are followed with the work appropriately sequenced in accordance with requirements</p> <p>1.2 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved</p> <p>1.3 Materials are obtained and checked in accordance with established procedures and to comply with requirements</p> <p>1.4 Location in which activities are to be undertaken is determined from requirements</p> <p>1.5 Materials necessary to complete the work are obtained in accordance with established procedures and checked against job requirements</p> <p>1.6 Workplace environmental risks and resource efficiency issues are identified</p>
2 Apply sustainable work practice	<p>2.1 OHS policies and procedures for undertaking administrative functions are followed</p> <p>2.2 Activities are undertaken in accordance with requirements to implement techniques which produce energy reduction directly or indirectly</p> <p>2.3 Unplanned events or conditions are responded to in accordance with established procedures</p> <p>2.4 Approval is obtained in accordance with established procedures from appropriate personnel before any contingencies are</p>

ELEMENT	PERFORMANCE CRITERIA
	implemented
	2.5 On-going checks of the quality of the work are undertaken in accordance with established procedures
	2.6 Work is carried out efficiently without unnecessary waste of materials or damage to the surrounding environment, while using sustainable work practices which minimise wastage of energy and materials either directly or indirectly
3 Complete the application of sustainable work practice	<p>3.1 Documentation/reports are completed to ensure detailed promotional activities requirements are met</p> <p>3.2 Suggestions are made for improvements to workplace practices to minimise energy and materials wastage</p> <p>3.3 Completion is notified in accordance with established procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and applying environmentally and sustainable work practices in the energy sector.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK142 Environmentally and sustainable work practice

A

Evidence shall show an understanding of environmentally and sustainable work practices to an extent indicated by the following aspects:

T1 Sustainable work practices encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Notion of sustainable work practice
- Effects of neglecting sustainable work practice
- The greenhouse effect - causes, consequences.
- International and national greenhouse imperatives.
- The role of regulators and similar bodies
- Legislative requirements
- Economic benefits of sustainable initiatives.

T2 Techniques for reducing carbon produced energy and hence greenhouse gases encompassing:

- domestic, commercial and industrial strategies
- trade related technologies and methods
- energy efficient retrofits (overview).
- renewable energy technologies (overview)

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitude competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord

with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

The evidence on which competency in this unit is based shall be considered holistically for each element on at least two occasions comprising:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable work practice principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements. and
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
- Demonstrated performance across a representative range of contexts from the prescribed items below:
 - Participate in environmentally sustainable work practices as listed in the Range statement' and including:

A Apply sustainable work practice in daily work activities

B Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in Context of assessment³, which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above in Context of and specific resources for assessment, evidence should show demonstrated competency in participating in environmentally sustainable work practices.

Method of assessment 9.4)

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is

primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to participating in environmentally sustainable work practices in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electronics
- Fire protection
- Instrumentation and control
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Renewable and Sustainable Energy

UEENEEK143A Install small wind energy conversion systems rated up to 10 kW for ELV stand-alone applications

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This competency standard unit covers the installation, adjustment and set up of small wind energy conversion systems rated up to 10 kW for ELV stand-alone applications. It encompasses working safely and to installation standards, matching components with that specified for a given location, placing and securing system components accurately, making required circuit connections and completing the necessary installation documentation.

Application of the Unit

Application of the Unit **2)**

This competency standard unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a licence to practice in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States and Territories

License to practice

3)

subject to regulations related to electrical work.

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG105A and all prerequisite units it specifies

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and the like.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation and the like.

2. Compliance may be required in various jurisdictions relating to currency in first aid, confined space, lifting, risk safety measure and the like.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK1 30A Solve problems in wind energy conversion systems rated up to 10 kW

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve this unit if they have reading, writing and maths skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|--|-----|---|
| 1 Prepare to install small ELV wind energy conversion systems. | 1.1 | OHS procedures for a given work area are obtained and understood. |
| | 1.2 | Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed. |
| | 1.3 | Safety hazards that have not previously been |

ELEMENT

PERFORMANCE CRITERIA

- identified are noted and established risk control measures are implemented.
- 1.4 Installation of the system is prepared in consultation with others affected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken.
- 1.6 Sitting limitations and customer system requirements are identified by consultation with the customer.
- 1.7 Suitable system components are specified and selected.
- 1.8 Location of system components is planned within the constraints of the building structure and regulations.
- 1.9 Advice is sought from appropriate persons to ensure the work is co-ordinated effectively with others.
- 1.10 Materials and components needed for the installation work are obtained in accordance with established procedures, pre-assembled where necessary, and checked against job requirements.
- 1.11 Materials and components are prepared for transport to the site and transport is arranged.
- 1.12 Tools, equipment and testing devices needed for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.13 Preparatory work is checked to ensure no unnecessary damage has occurred previously and complies with requirements.

ELEMENT	PERFORMANCE CRITERIA
2 Install small ELV wind energy conversion systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Equipment is transported safely to the site.
	2.3 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.4 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.5 System components are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance.
	2.6 Wiring is terminated at components and associated equipment in accordance with manufacture's specifications and functional and regulatory requirements.
	2.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.9 On-going checks of the quality of installed apparatus are undertaken in accordance with established procedures.
	2.10 System installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
3 Complete installation and report installation activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.

ELEMENT

PERFORMANCE CRITERIA

- 3.3 Final checks are made to that the installed apparatus conforms to requirements.
- 3.4 System operation is tested and installation verified to be compliant with standards and work specifications.
- 3.5 'As-installed' apparatus and associated equipment is documented and an appropriate person or persons notified in accordance with established procedures.
- 3.6 Customer is informed of the system operation, routine maintenance and limitations.
- 3.7 Appropriate documentation as required by standards or job specifications is provided to the customer.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing small wind energy conversion systems for stand-alone applications.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK143A Installation and maintenance of small ELV WECS

Evidence shall show an understanding of installation and maintenance of small ELV WECS to the extent indicated by the following aspects:

- T1 Installation of a ELV WECS encompassing:
- selection of an appropriate tower for the installation of a WECS taking into consideration: soil type and footings, local council approvals, appropriate codes such as AS1170.2, transport of tower.
 - appropriate methods, using appropriate safety procedures, for: raising tower and WECS, lightning protection, tower

REQUIRED SKILLS AND KNOWLEDGE

maintenance, safety in the erection and maintenance of the tower and WECS, site management to minimise environmental impacts.

- appropriate electrical transmission voltage and cable size from the WECS to the load or energy storage.
- appropriate installation, commissioning, fault diagnosis and rectification, using appropriate safety procedures. This will include: WECS power output, voltage regulation, and transmission cable voltage drop, manual and automatic furling, shut-down.
- schematic and wiring diagrams for the WECS showing the general circuit layout and protection between the WECS, energy storage, inverter and loads according to AS/NZS3000, AS4509 and lightning protection requirements.
- suitable layout for the location of energy storage to meet AS/NZS3000, AS3011.1 and AS4509.
- safety procedures for the installation, commissioning, fault diagnosis of system components.

Maintenance of a ELV WECS encompassing:

- appropriate methods, using appropriate safety procedures tower maintenance, safety.
- appropriate maintenance methods using appropriate safety procedures. This will include: WECS power output, voltage regulation, and transmission cable voltage drop, manual and automatic furling, shut-down.
- safety procedures for the maintenance of system components.
- maintenance schedule for the system.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitude competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

The evidence on which competency in this unit is based shall be considered holistically for each element on at least two occasions comprising:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements. and
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
- Demonstrated performance across a representative range of contexts from the prescribed items below:
 - Install and set up small WECS for ELV stand-alone applications as listed in the Range statement' and including:
 - A Assessing customer energy requirements, efficiency improvements and site limitations.
 - B Reading and interpreting drawings related to and apparatus locations and circuit connections.
 - C Placing and securing system components

- accurately.
- D Maintaining fire integrity.
- E Connecting system ELV components to comply with requirements.
- F Testing system operation and verifying compliance with standards and job specifications.
- G Completing necessary documentation including handing over system operational documents to the customer
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in 'Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing small wind energy conversion systems for stand-alone applications.

Method of assessment **9.4)**

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEK13 Solve problems in wind energy conversion
0A systems rated up to 10 kW

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated by completing the installation of small wind energy conversion systems for ELV stand-alone applications for one mainstream type of small WECS on at least two occasions.

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Renewable and Sustainable Energy

UEENEEK144A Install, configure and commission LV wind energy conversion systems rated up to 10 kW

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This competency standard unit covers the installation, configuration and commissioning of LV wind energy conversion systems rated up to 10 kW. It encompasses working safely and to installation standards, matching components with that specified for a given location, placing and securing system components accurately, making required circuit connections and completing the necessary installation documentation.

Application of the Unit

Application of the Unit **2)**

This competency standard unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a licence to practice in the workplace.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

License to practice

3)

training such as apprenticeships and the like.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation and the like.

2. Compliance may be required in various jurisdictions relating to currency in first aid, confined space, lifting, risk safety measure and the like.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG1 Install low voltage wiring and accessories
03A

UEENEEK1 Solve problems in wind energy conversion
30A systems rated up to 10 kW

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy
skills

4.2)

Participants are best equipped to achieve this unit if they have reading, writing and maths skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 "Literacy and Numeracy"

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to install LV wind energy conversion systems.	1.1	OHS procedures for a given work area are obtained and understood.
	1.2	Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
	1.3	Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4	Installation of the system is prepared in consultation with others affected by the work and sequenced appropriately.
	1.5	The nature and location of the work is determined from documentation or appropriate

ELEMENT

PERFORMANCE CRITERIA

- person to establish the scope of work to be undertaken.
- 1.6 Sitting limitations and customer system requirements are identified by consultation with the customer.
- 1.7 Suitable system components are specified and selected.
- 1.8 Location of system components is planned within the constraints of the building structure and regulations.
- 1.9 Advice is sought from appropriate persons to ensure the work is co-ordinated effectively with others.
- 1.10 Materials and components needed for the installation work are obtained in accordance with established procedures, pre-assembled where necessary, and checked against job requirements.
- 1.11 Materials and components are prepared for transport to the site and transport is arranged.
- 1.12 Tools, equipment and testing devices needed for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.13 Preparatory work is checked to ensure no unnecessary damage has occurred previously and complies with requirements.
- 2 Install LV wind energy conversion systems.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Equipment is transported safely to the site.
- 2.3 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.4 Circuits/machines/plant are checked as being isolated where necessary in strict accordance

ELEMENT

PERFORMANCE CRITERIA

- OHS requirements and procedures.
- 2.5 System components are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance.
- 2.6 Wiring is terminated at components and associated equipment in accordance with manufacture's specifications and functional and regulatory requirements.
- 2.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
- 2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.9 On-going checks of the quality of installed apparatus are undertaken in accordance with established procedures.
- 2.10 System installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
- 3 Complete installation and report installation activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work site is cleaned and made safe in accordance with established procedures.
- 3.3 Final checks are made to that the installed apparatus conforms to requirements.
- 3.4 System operation is tested and installation verified to be compliant with standards and work specifications.
- 3.5 'As-installed' apparatus and associated equipment is documented and an appropriate person or persons notified in accordance with established procedures.

ELEMENT

PERFORMANCE CRITERIA

- 3.6 Customer is informed of the system operation, routine maintenance and limitations.
- 3.7 Appropriate documentation as required by standards or job specifications is provided to the customer.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing LV wind energy conversion systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK144 Installation and maintenance of LV WECS

A

Evidence shall show an understanding of installation and maintenance of small LV WECS to the extent indicated by the following aspects:

Installation of a LV WECS encompassing:

- selection of an appropriate tower for the installation of a WECS taking into consideration: soil type and footings, local council approvals, appropriate codes such as AS1170.2, transport of tower.
- appropriate methods, using appropriate safety procedures, for: raising tower and WECS, lightning protection, tower maintenance, safety in the erection and maintenance of the tower and WECS, site management to minimise environmental impacts.
- appropriate electrical transmission voltage and cable size from the WECS to the load or energy storage.
- appropriate installation, commissioning, fault diagnosis and rectification, using appropriate safety procedures. This will include: WECS power output, voltage regulation, and transmission cable voltage drop, manual and automatic furling, shut-down.

REQUIRED SKILLS AND KNOWLEDGE

- schematic and wiring diagrams for the WECS showing the general circuit layout and protection between the WECS, energy storage, inverter and loads according to AS/NZS3000, AS4509 and lightning protection requirements.
- suitable layout for the location of energy storage to meet AS/NZS 3000, AS 3011.1 and AS4509.
- safety procedures for the installation, commissioning, fault diagnosis of system components.

Maintenance of a LV WECS encompassing:

- appropriate methods, using appropriate safety procedures tower maintenance, safety.
- appropriate maintenance methods using appropriate safety procedures. This will include: WECS power output, voltage regulation, and transmission cable voltage drop, manual and automatic furling, shut-down.
- safety procedures for the maintenance of system components.
- maintenance schedule for the system.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitude competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the

competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

The evidence on which competency in this unit is based shall be considered holistically for each element on at least two occasions comprising:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and

- Apply sustainable energy principles and practices as specified in the performance criteria and range; and
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements. and
- Demonstrate an appropriate level of skills enabling employment; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures; and
- Demonstrated performance across a representative range of contexts from the prescribed items below:
 - Install and set up WECS for LV applications as listed in the 'Range statement' and including:
 - A Assessing customer energy requirements, efficiency improvements and site limitations.
 - B Reading and interpreting drawings related to and apparatus locations and circuit connections.
 - C Placing and securing system components accurately.
 - D Maintaining fire integrity.
 - E Connecting system LV components to comply with requirements.
 - F Testing and commissioning system operation and verifying compliance with standards and job specifications.
 - G Completing necessary documentation including handing over system operational documents to the customer
 - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and
specific
resources for
assessment** **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing wind energy conversion systems for LV applications.

**Method of
assessment** **9.4)**

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEK13 Solve problems in wind energy conversion
0A systems rated up to 10 kW

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated by completing the installation of wind energy conversion systems for LV applications for one mainstream type of WECS on at least two occasions.

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This Competency Standard Unit specifies the outcomes for the collecting, interpretation and application of environmental management information, the identification of environmental impacts and the assessment of risks. It also consists of monitoring while implementing environmentally sustainable work policies and plans and the development of modifications as part of the review process.

Application of the Unit

Application of the Unit 2)

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training. The unit addresses information processes and techniques for the implementation and monitoring of work place procedures that minimise energy use in the workplace.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work.

License to practice

3)

Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|--|
| 1 Prepare/plan to implement and monitor environmentally sustainable work practice management policies and procedures | 1.1 Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are obtained, analysed, if necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination. |
| | 1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures. |
| | 1.3 Relevant requirements (including environmental regulations) and established procedures for the work are given to all personnel and identified for all work sites. |
| | 1.4 Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored to ensure safe systems of work are followed and according to established procedures. |
| | 1.5 Resources including personnel, equipment, tools and personal protective equipment required for the job are identified, scheduled and coordinated and confirmed in a safe and technical working order. |
| | 1.7 Risk management is applied to the job identifying and itemising ways in which energy wastage can be minimised |
| | 1.8 Items for installation are sourced, where |

ELEMENT

PERFORMANCE CRITERIA

- possible, that are recycled or reusable, in consultation with an agreement of the customer.
- 2 Carry out the implementation and monitoring of environmentally sustainable work management policies and procedures
- 2.1 Environmentally sustainable work practice to reduce/ minimise waste and excessive energy use are implemented and monitored in accordance with requirements and/or established procedures with input being sought from specialists where possible
- 2.2 Implementation and monitoring of environmentally sustainable energy management policies and procedures are carried out, in accordance with the work schedule and requirements and/or established procedures.
- 2.3 Essential Knowledge and Associated Skills in the safe implementation and monitoring of environmental and sustainable energy management policies and procedures are applied to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
- 2.4 Solutions to non-routine problems are identified and actioned using acquired Essential Knowledge and Associated Skills according to requirements.
- 2.5 Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality like outcome is achieved for the client/customer and to a community/industry standard.
- 3 Complete the implementation and monitoring of environmental and sustainable energy management policies and procedures
- 3.1 Work undertaken is checked against works schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures.
- 3.2 Work site is rehabilitated, cleaned up and confirmed safe in accordance with established procedures.
- 3.3 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance

ELEMENT

PERFORMANCE CRITERIA

with established procedures.

- 3.4 Materials suitable for recycling and or reuse are identified and are stored for further use or proper disposal.
- 3.5 Policies for implementing and monitoring of sustainable work practices are reviewed and updated from the experience of the current job and new procedures implemented if required.
- 3.6 Relevant work permit(s) are signed off and the work completed/returned to service and advised to client/customer in accordance with requirements.
- 3.7 New targets for energy minimisation are set, in keeping with successful strategies
- 3.8 Successful strategies are promoted and where possible participants rewarded

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired implementing & monitoring, policies & procedures for environmentally sustainable electrotech work practice.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK14 Environmental and sustainable work practice - supervisory 5A responsibilities

Evidence shall show an understanding of environmentally sustainable work practice, supervisory responsibilities to an extent indicated by the following aspects:

T1 Environmentally sustainable work practice principles encompassing:

- Provisions of relevant environmental legislation

REQUIRED SKILLS AND KNOWLEDGE

- Notion of sustainable work practice
- Effects of neglecting sustainable work practice
- The greenhouse effect - causes, consequences.
- International and national greenhouse imperatives.
- The role of regulators and similar bodies
- Economic benefits of sustainable initiatives.
- Techniques for reducing the use of carbon based energy sources and hence greenhouse gas emissions
- domestic, commercial and industrial strategies
- trade related technologies and methods
- renewable energy technologies
- energy efficient retrofits

T2 Implementing and monitoring encompassing:

- Principles and practice of effective sustainable work practice management
- Workplace sustainable work practice non compliance, range and selection of control measures
- Organisational systems and policies and procedures needed for legislative compliance
- Impact of characteristics and composition of the workforce on sustainable work practice management
- Relevance of sustainable work practice management to other organisational management policies, procedures and systems.
- Analysis of entire work environment and judge sustainable work practice interventions
- Analysis of relevant workplace data
- Ability to assess resources needed for risk control.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitude competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

The evidence on which competency in this unit is based shall be considered holistically for each element on at least two occasions comprising:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and

 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements. and
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures; and
 - Implement and monitor, policies and procedures for environmentally and sustainable electrotech work practice as listed in the Range statement' and including

- A Providing environmentally sustainable work practice information to the work group
- B Implementing and monitoring participative arrangements for the management of environmentally sustainable work practice
- C Implementing and monitoring the procedures for identifying procedures for identifying hazards,

assessing risks and controlling risks

- D Implementing the procedures for dealing with hazardous events
- E Implementing and monitoring the procedures for environmentally sustainable work practice
- F Implementing and monitoring the procedures for maintaining environmentally sustainable work practice records
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual implementation and monitoring of environmental and sustainable energy management policies and procedures.

The resources used for assessment should reflect current industry practices in relation to implementing and monitoring, policies and procedures for environmentally and sustainable electrotech work practice.

Method of assessment 9.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and

Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This competency standard unit covers designing and developing methods to reduce the energy use without compromising occupancy standards in new buildings and structures. The unit encompasses working safely, setting up and conducting evaluation measurements, predicting energy use from plans and specifications and designing and documenting strategies to effectively reduce energy use in the completed installation. It draws on some multi-disciplinary skills.

Application of the Unit

Application of the Unit 2)

This competency standards unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 6.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practice in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design energy management techniques for electrical installations in buildings	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The extent of the electrical design is determined from specifications of building and its services, plant and machinery and discussion with appropriate personnel.
	1.4 Advice is sought from allied trade's areas (e.g. air conditioning) on required energy usage and system design.
	1.5 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.6 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.
2 Design energy management techniques for electrical installations in buildings	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Tests and measurements are carried out in strict accordance with OHS requirements safety procedures.
	2.3 In-depth knowledge of the energy use of building services, plant and machinery is applied to the design process

ELEMENT

PERFORMANCE CRITERIA

	2.4	Energy evaluation tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.
	2.5	Strategies to reduce energy use without compromising occupancy standards are developed from knowledge of energy management and evaluation test results.
	2.6	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.7	Design and evaluation is carried out without unnecessary damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.
3 Design energy management techniques for electrical installations in buildings	3.1	OHS work completion risk control measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Results of design and recommended strategies and their criterion for energy reduction are documented in accordance with established procedures.
	3.4	Plans, wiring diagrams and specifications are forwarded to appropriate persons.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing energy management controls for electrical installations in buildings.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK146 Building management control systems

A

Evidence shall show an understanding of building management systems to an extent indicated by the following aspects:

T1 Functions of a BMS encompassing:

- autonomous functions
- input
- output
- general I/O
- installation management items
- energy management
- risk management
- information processing
- objectives
- building running costs
- smoke control as per AS 1668 part 1

T2 BMS hardware encompassing:

- system architecture
- communication devices
- substations
- personal computers
- interfaces with other systems

T3 Input and output functions encompassing:

- digital inputs/outputs
- digital output with status feedback
- analogue input/output
- sensors
- alarms

REQUIRED SKILLS AND KNOWLEDGE

T4 Energy management encompassing:

- night cycle
- optimum stop/start
- time and event programs
- night purge
- outside air percentage control
- enthalpy control
- power demand control
- duty cycle
- presence detection
- lighting control

T5 Information processing functions encompassing:

- computer systems
- central system management
- programs
- system configuration and security
- operator - machine interface
- data points

Risk and maintenance management encompassing:

- system files
- fire, intruder control
- access control

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

The evidence on which competency in this unit is based shall be considered holistically for each element on at least two occasions comprising:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements; and
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
- Demonstrated performance across a representative range of contexts from the prescribed items below:
 - Design energy management controls for electrical installations in buildings as listed in the Range statement' and including:

- A Determining the extent of the design
- B Setting up and conducting appropriate examinations and tests.
- C Reporting evaluation including recommendation for improving energy efficiency

- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing energy management controls for electrical installations in buildings.

Method of assessment 9.4)

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this

unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to designing energy management controls for electrical installations in buildings on at least two buildings each used for a different purpose.

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Renewable and Sustainable Energy

UEENEEK148A Install, configure and commission LV grid connected photovoltaic power systems

Modification History

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the installation, adjustment and set-up of photovoltaic power systems and connecting to a supply grid inverter. It encompasses working safely and to installation standards, matching components with that specified for a given location, placing and securing system components accurately, making required circuit connections and completing the necessary installation documentation.

Application of the Unit

Application of the Unit 2)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the

recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable, contracts of training such as apprenticeships.

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG105A and all prerequisite units it specifies

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK1 25A Solve basic problems in photovoltaic energy apparatus and systems

UEENEEG1 03A Install low voltage wiring and accessories

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install photovoltaic power systems.	1.1 OHS procedures for a given work area are obtained and understood
	1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented
	1.4 Installation of the system is prepared in consultation with others effected by the work and sequenced appropriately
	1.5 The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken
	1.6 Location of system components is planned within the constraints of the building structure, significants and regulations
	1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others
	1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements
	1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and

ELEMENT

PERFORMANCE CRITERIA

		checked for correct operation and safety
	1.10	Preparatory work is checked to ensure no damage has occurred and complies with requirements
2	Install photovoltaic power systems.	
	2.1	OHS risk control measures and procedures for carrying out the work are followed (Note 1: risk control measures need to incorporate risks associated with dc voltages of extra low voltage and low voltage levels)
	2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4	System components are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance (Note 2: hazards relating to photovoltaic energy apparatus and isolation need to specifically address issues of dc arcing and suitable dc protection systems for dc voltages of extra low voltage and low voltage levels.)
	2.5	Wiring is terminated at components and associated equipment in accordance with manufacturer specifications and functional and regulatory requirements
	2.6	Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented
	2.7	Unexpected situations are dealt with safely and with the approval of an authorised person
	2.8	Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures

ELEMENT	PERFORMANCE CRITERIA
	2.9 System installation is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles
3 Completion and report installation activities.	3.1 OHS work completion risk control measures and procedures are followed
	3.2 Work site is cleaned and made safe in accordance with established procedures
	3.3 Final checks are made so that the installed apparatus conforms to requirements
	3.4 'As-installed' apparatus and associated equipment is documented and appropriate person(s) notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and installing and setting up LV grid connected photovoltaic power systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK148 Photovoltaic LV installations

A

Evidence shall show an understanding of LV photovoltaic array grid connection to the extent indicated by the following aspects:

REQUIRED SKILLS AND KNOWLEDGE

- T1 PV array installation requirements encompassing:
- OH&S requirements and methods for working on roofs.
 - common methods of roof construction (rafters and tile battens) and methods to ensure integrity of waterproofing.
 - common types of roof mounted and free-standing PV array frame construction and methods of tilt angle adjustment.
 - fixing methods for different roof types.
 - array mounting methods for north orientation roof sections and non-north facing roof sections.
 - aesthetic considerations in choosing an appropriate array location and type of mounting.
 - the mounting and fixing methods for at least one type of commercially available building integrated PV product.
- T2 Electrical PV array installation requirements encompassing:
- methods used in wiring and connecting PV arrays as per the Australian Standards AS 4509 and AS5033
 - considerations involved in wiring of series connected PV modules in order to minimise power losses due to shading.
 - PV array wiring diagram including the placement of blocking and bypass diodes.
 - considerations involved in choosing the location of associated system equipment including regulators, d.c. control board, inverters and inverters for grid connected systems.
 - cable route from PV array/s to inverters so as to minimise the route length.
- T3 System installation and maintenance encompassing:
- installation work on a PV power system in accordance with relevant standards and OH&S guidelines.
 - correct isolation and shutdown procedures prior to carrying out maintenance tasks.
 - routine maintenance tasks on PV arrays.
 - required vegetation control to remove or reduce shading or soiling on a PV array
- T4 Inverters encompassing:
- types of inverters used in grid connected systems.
 - AS symbol for a low voltage inverter
 - the basic function of an inverter.
 - simple block diagram of a typical inverter used in grid

REQUIRED SKILLS AND KNOWLEDGE

connected system

- T5 Inverter operation encompassing:
- the basic principle of operation of a single phase inverter (using switch analogue)
 - the operation of an inverter bridge and half-bridge configuration.
 - operation of a FET inverter
 - connection of a grid inverter and measurement of the inverter parameters for various loads
- T6 Inverter characteristics encompassing:
- the characteristics which distinguish inverters suitable for grid connected photovoltaic array application from standard inverters.
 - using waveform diagrams, the function of PWM techniques in square wave, modified square wave and synthesised sine wave inverters
 - output voltage waveforms for square wave, modified square wave and synthesized sine wave inverters showing typical voltages and periodic times
 - the six (6) essential inverter specifications
- T7 PV grid connected system operation encompassing:
- block diagram of a PV grid connected system.
 - operation of grid interactive PV systems including synchronisation, safety feature, power flow control, passive and active anti-islanding, and metered energy for systems.
 - schematic diagrams of common grid connected inverter circuit configurations including metering arrangements, isolation and connection with respect to RCDs in accordance with AS 4777.1.
- T8 Installation of grid connected inverters encompassing:
- major installation requirements for all system components which will ensure correct operation, long life, safety and ease of maintenance consistent with AS 4509, AS 4086.2, AS/NZS 3000 and relevant OH&S guidelines

REQUIRED SKILLS AND KNOWLEDGE

- selection of a suitable location for the PV array, inverter and other components, at a given installation site in accordance with AS2676.2 and AS3011.2, and the considerations given in AS4509 and AS4086.2.
 - typical installation configurations for grid connection of energy systems via inverters
 - the function and operation of a "grid protection device" as specified in AS4777
 - array wiring plan for series connected modules to minimise power loss due to shading at a particular site.
 - installation requirements for a grid connected system.
 - labelling and signage requirements for switchboards supplied with power from grid connected inverters, as set out in AS 4777.1.
 - the additional requirements for UPS systems as specified in AS4777.1.
 - installation of a PV grid connected system
- T9 System commissioning and maintenance encompassing:
- the isolation procedures required for grid connected inverters.
 - relevant commissioning procedures including start-up and shut-down procedures for grid connected inverter systems in accordance with AS 4509.
 - testing a grid connected inverter system for correct operation.
 - location and rectification of an electrical fault within a PV array/inverter and wiring.
 - maintenance schedule for a grid connected PV power system.
 - performing commissioning work on a PV power system in accordance with AS 4509, AS 4086.2, AS/NZS 3000 and AS 3010.1

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and set up grid connected photovoltaic power systems as described in 8) and including:
 - A Reading and interpreting drawings related to and apparatus locations and circuit connections
 - B Placing and securing system components accurately

- C Maintaining fire integrity
- D Connecting system components to comply with requirements
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing and setting up LV grid connected photovoltaic power systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended

primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEK12 Solve basic problems in photovoltaic energy
5A apparatus and systems

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to installing photovoltaic power systems in at least two different types of premises construction or environment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Renewable and Sustainable Energy

UEENEEK149A Verify compliance and functionality of a extra low voltage renewable energy installation

Modification History

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This competency standard unit covers inspection and testing to verify whether a extra low voltage Stand-alone Power System is safe and complies with all requirements. It encompasses working safely, visual inspections and mandatory, optional and functional test procedures, identifying non-compliance defects and mandatory reporting requirements.

Application of the Unit

Application of the Unit **2)**

This competency standard unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do NOT require a licence to practice in the workplace at ELV levels, subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

License to practice

3)

training such as apprenticeships and the like.

Note:

Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation and the like.

Compliance may be required in various jurisdictions relating to currency in first aid, confined space, lifting, risk safety measure and the like.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE1 08A Lay wiring/cabling and terminate accessories for extra-low voltage (ELV)

Prerequisite Unit(s)	4)	
		circuit
	UEENEEE1 19A	Solve problems in multiple path extra low voltage (ELV) a.c. circuits
	UEENEEE1 37A	Document and apply measures to control OHS risks associated with electrotechnology work
	UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
	UEENEEK1 23A	Carry out basic repairs to renewable energy apparatus
	UEENEEK1 27A	Diagnose and rectify faults in renewable energy control systems
	UEENEEK1 28A	Solve problems in stand-alone renewable energy systems
	UEENEEK1 34A	Install ELV stand-alone photovoltaic power systems

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and maths skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to inspect and test an RE installation.	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
	1.4 Documentation or deemed to comply standard on which installation is based is reviewed and understood.
	1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.
	1.7 Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements.
2 Visually inspect and conduct safety testing on the installation.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and

ELEMENT

PERFORMANCE CRITERIA

- when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Wiring is checked for suitability for the environments in which they are installed and suitably protected from damage or overheating.
- 2.5 Cable conductor sizes are acquired as meeting current-carrying capacity requirements and voltage\-\ drop
- 2.6 Protection methods and devices are validated as meeting co-ordination requirements for overload and short-circuit protection.
- 2.7 Switchgear and control gear is validated as being appropriately rated and meeting functional requirements.
- 2.8 Evidence that electrical equipment complies with safety requirements is cited.
- 2.9 Earthing system components are checked that they are correctly located and conductors correctly sized.
- 2.10 Marking on switchboards are checked for accuracy and clarity and comply with requirements.
- 2.11 Visual inspection is conducted to ensure that the system complies with requirements.
- 2.12 Testing is conducted to verify that circuit connections are correct; voltage drop is within limits; circuit protection operates as intended; polarities are correct; charging rates are compliant with specification
- 3 Report inspection and test findings.
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work site is cleaned and made safe in

ELEMENT

PERFORMANCE CRITERIA

- accordance with established procedures.
- 3.3 Non-compliance defects are identified and reported in accordance with established procedures
- 3.4 Recommendations for rectifying defects are made in accordance with established procedures.
- 3.5 Documentation is completed in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of verifying compliance and functionality of renewable energy installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK149 RE installations, ELV installation requirements

A

Evidence shall show an understanding of ELV renewable energy installation requirements to an extent indicated by the following aspects:

- T1 RE installations, ELV installation requirements encompassing:
- Requirements for installation of wiring and equipment
 - Compliant methods for providing protection
 - Requirements for installation planning and selection of equipment
 - Testing and verification requirements
 - Documentation encompassing:
 - results of tests conducted that comply with requirements and ensure the RE - ELV installation is safe, including any formal documents of the results of testing required by authorities.
 - documents of periodic inspection and testing of RE - ELV

REQUIRED SKILLS AND KNOWLEDGE

wiring and equipment including any tagging, in accordance with requirements.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for all training agreements. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered

will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

The evidence on which competency in this unit is based shall be considered holistically for each element on at least two occasions comprising:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements. and
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures; and
- Demonstrated performance across a representative range of contexts from the prescribed items below:
 - Verify compliance and functionality of renewable energy installations as described as described in 8) and including:

- A Selecting correct tools and testing equipment.
- B Identifying visual non-compliance defects.
- C Using effective methods for conducting tests.
- D Identifying non-compliance from test results.
- E Identifying causes of non-compliance.
- F Completing mandatory reporting.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above in Context of and specific resources for assessment, evidence should show demonstrated competency in verifying compliance and functionality of general electrical installations.

**Method of
assessment**

9.4)

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to verifying compliance and functionality of at least two electrical installations comprising a PV Array of at least 450 W, a battery bank, an inverter, a battery charger (or Inverter/Charger) and a generating set with reference to AS 4509, AS 4086 and AS/NZS 5033, AS 3010 including relevant sections of AS/NZS 3000.

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Renewable and Sustainable Energy

UEENEEK151A Develop effective engineering strategies for energy reduction in buildings

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers evaluating energy used in buildings and developing and documenting strategies/methods to effectively reduce energy use without compromising occupancy standards. It encompasses working safely, setting up and conducting evaluation measurements and evaluating energy use from measured parameters.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEK1 32A Develop strategies to address environmental and sustainability issues in the energy sector

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop strategies for effective energy reduction in buildings.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work
	1.3 The extent of evaluation is determined from specifications of building(s) and services, plant and machinery and discussed with appropriate personnel
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
	1.5 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety
2 Develop strategies for effective energy reduction in buildings.	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2 Tests and measurements are carried out in strict accordance with OHS requirements safety procedures
	2.3 In-depth knowledge of the energy use of building services, plant and machinery is applied to the evaluation process
	2.4 Energy evaluation tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny

ELEMENT	PERFORMANCE CRITERIA
	2.5 Strategies to reduce energy use with compromising occupancy standards are developed from knowledge of energy management and evaluation test results.
	2.6 Unexpected situations are dealt with safely and with the approval of an authorised person
	2.7 Evaluation is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices
3 Document and report strategies for effective energy reduction in buildings	3.1 OHS work completion risk control measures and procedures are followed
	3.2 Work site is cleaned and made safe in accordance with established procedures
	3.3 Results of energy use evaluation and recommended strategies and their criterion for energy reduction are documented in accordance with established procedures
	3.4 Energy reduction report is forwarded to appropriate persons

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and developing strategies for effective energy reduction in buildings.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK151A Energy efficient building design

Evidence shall show an understanding of energy efficient building

REQUIRED SKILLS AND KNOWLEDGE

design to an extent indicated by the following aspects:

- T1 Climate and thermal comfort encompassing:
- characteristics of the different Australian climatic types.
 - use of climatic data in published and electronic forms to extract the quantities relevant to energy efficient design.
 - relationship between climate and comfort using bioclimatic or psychrometric charts.
 - calculation of heating or cooling degree days or degree hours for various locations.
 - calculation of thermal neutrality for a given location.
- T2 Solar geometry and radiation encompassing:
- definition of the terms: declination, hour angle, zenith angle, azimuth and altitude angles, the equation of time.
 - conversion of solar time to local time and vice versa.
 - position of the sun and the length of shadows with the aid of algorithms, tables, sun charts or computer software.
 - daily irradiation incident on a wall, window or roof of a given tilt and orientation.
 - relative summer and winter irradiation of windows facing the cardinal orientations.
- T3 Heat transfer encompassing:
- thermal processes of conduction, convection and radiation apply to the transfer of heat in buildings.
 - calculation of the summer and winter U-values of building elements using tables and software.
 - calculation of the infiltration heat transfer in a building.
- T4 Glazing Systems encompassing:
- different types of glazing systems and their characteristics.
 - different types of shading devices and the window orientations for which they are most appropriate.
 - solar heat gain for different glazing types and angles of incidence
 - calculation of the average daily irradiation of a window partly shaded by eaves, using computer software.
 - calculation of the average daily heat gain through a window partly shaded by eaves.
- T5 Insulation encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- different types of insulation and where they are used.
 - how different types of insulation are installed in roofs, walls and floors.
 - determination of the minimum R-values of roof insulation for different locations using Australian Standard AS2627 or similar standards.
- T6 Thermal mass encompassing:
- advantages and disadvantages of using substantial thermal mass in different climate types and for different heating and cooling regimes.
 - where thermal mass can be located in a building.
 - explain what is meant by the following terms: time lag, decrement factor, admittance, response factor.
- T7 Comfort control strategies encompassing:
- interpretation of the usefulness of a design strategy with the aid of a psychrometric chart showing control potential zones for a particular location.
 - selection of the most useful comfort control strategies for Australian climatic regions.
- T8 Energy efficiency in buildings encompassing:
- determination of the direction of the following: both true and magnetic, north winter and summer sunrise, winter and summer sunset.
 - solar access in summer and winter to various possible house locations on a site and room locations within the house.
 - how vegetation can be used to both funnel and deflect wind.
 - using cross ventilation as a cooling strategy.
- T9 Thermal performance of a building encompassing:
- heating requirements of a building using the heating degree day or hour method.
 - dynamic performance predicted by a computer simulation program such as NatHERS or BERS.
- T10 Integration of active solar systems encompassing:
- active solar system types available which can provide hot water, space heating and cooling.
 - the best location on the roof, and the optimum tilt and orientation of the collector panels.
 - function of the main components of an air or water-based

REQUIRED SKILLS AND KNOWLEDGE

- solar space heating system.
 - schematic of the fluid circuit of an air or water- based space heating system.
 - main solar cooling system types.
- T11 Energy rating schemes encompassing:
- differences in approach used by house energy rating schemes in Australia.
 - energy performance of a number of houses using a computer simulation program such as NatHERS or BERS.
 - other methods to reduce energy consumption within and outside a building including appliance efficiency, human behaviour changes, building management strategies and transportation minimisation.
 - additional cost of energy efficiency measures and cost savings using life cycle cost or simple pay back methods according to Aust. Standard AS3595 and AS4536.
- T12 Sustainable and safe building materials encompassing:
- common building materials and their embodied energy content.
 - environmental impact of the production of various building materials.
 - problems associated with the use or disposal of building materials.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment,

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also

comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop strategies for effective energy reduction in buildings as described in 8) and including:
 - A Determining the extent of the evaluation.
 - B Setting up and conducting appropriate examinations and tests.
 - C Reporting evaluation including recommendation for improving energy efficiency
 - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a

workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing strategies for effective energy reduction in buildings.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to developing strategies for effective energy reduction in at least two buildings each used for a different purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Renewable and Sustainable Energy

UEENEEK152A Develop strategies to address sustainability issues for electrical installations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers developing strategies to address greenhouse gases and sustainability issues for residential, commercial and industrial electrical installations. It encompasses working safely, apply extensive knowledge of electrical installations and components and their operating parameters, gathering and analysing data, applying problem solving techniques, developing and documenting alternatives solutions.

Application of the Unit

Application of the Unit **2)**

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

License to practice

3)

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG1 05A Verify compliance and functionality of low voltage general electrical installations.

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare to develop strategies to address sustainability issues. | 1.1 OHS processes and procedures for a given work area are identified, obtained and understood |
| | 1.2 Established OHS risk control measures and procedures are followed in preparation for the work |
| | 1.3 The extent of the sustainability issues are determined from performance specifications and situation reports and in consultation with relevant persons |
| | 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work |
| | 1.5 Effective strategies are determined to ensure solution development and implementation is carried out efficiently |

ELEMENT	PERFORMANCE CRITERIA
2 Develop strategies to address sustainability issues	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2 Knowledge of sustainability is applied to developing strategies to address greenhouse gas and sustainability issues
	2.3 Parameters, specifications and performance requirements in relation to sustainability issues are set in accordance with established procedures
	2.4 Approaches to resolving sustainability issues are analysed to provide most effective solutions
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy
	2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards
3 Document strategies to address sustainability issues.	3.1 Solutions to sustainability issues are tested to determine their effectiveness and modified where necessary
	3.2 Adopted solutions are documented, including instructions for implementation that incorporates risk control measures to be followed
	3.3 Appropriately competent and qualified persons required to implement solutions to sustainability issues are coordinated in accordance with regulatory requirements and enterprise policy (See Note)
	3.4 Justification for strategies used to solve sustainability issues is documented for inclusion in work/project development records in accordance with professional standards

Note:

A licence or permit to practise in the workplace is required for specified work on building and premises

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and developing strategies to address sustainability issues.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK1 Electrical installation energy sustainability strategies 52A

Evidence shall show an understanding of electrical installation energy sustainability strategies to an extent indicated by the following aspects:

T1 Energy management, legislation and regulation encompassing:

- Energy Management
- Climate Change
- Greenhouse Effect/Greenhouse Gases
- Standards and codes
- Legislation and regulations
- Energy Audits

T2 Electrical motors, pumps and fans encompassing:

- Motor Construction, Components & Losses
- Motor efficiency (MEPS - AS/NZS 1359.5)

T3 Appliances encompassing:

- Energy Star ratings
- Washing machines
- Clothes dryers
- Dishwashers
- Televisions and computers
- Standby Management strategies

T4 Energy efficient lighting encompassing:

- Lighting efficiency
- Efficient Lighting design
- Ballasts
- Lighting controls

T5 Water Heating encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Water heating systems and losses
 - Electric, gas, oil, heat pump and solar water heater design
 - Control strategies
- T6 Space Heating and cooling encompassing:
- Space heating systems and losses
 - Space cooling systems and losses
 - Heating - Electric, gas, oil, heat pump and solar heater design
 - Cooling – Direct expansion, chilled water and ventilation
 - Control strategies
- T7 Solar energy encompassing:
- System design fundamentals
 - Solar PV design elements
 - Solar PV system performance
 - Analysis of system capital and operating cost performance

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some

circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range

statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop strategies to address sustainability issues as described in 8) and including:

- A Understanding the extent of the electrical installation energy problem/s
- B Forming effective strategies for solution development and implementation
- C Obtaining energy system/component parameters, specifications and performance requirements appropriate to each problem
- D Testing solutions to energy problems
- E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed
- F Documenting justification of solutions implemented in accordance with professional standards
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be

clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE101A and other discipline specific occupational health and safety unit(s) must be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to developing strategies to address sustainability issues for at least two types of electrical installations.

Note.

Typical sustainability issues are those encountered in meeting sustainability performance standards, such as reducing needs for energy use, reducing causes of greenhouse gas emissions, revising a energy system operating parameters and dealing with energy system efficiencies.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare to assess residential, office and retail premises for energy efficiency evaluation. | 1.1 OHS processes and procedures for a given work area are identified, obtained and understood |
| | 1.2 Established OHS risk control measures and procedures are followed in preparation for the work |
| | 1.3 The extent of the energy assessment are determined from premises orientation, premises floor plans, building structure plans, energy accounts, and situation reports and in consultation with relevant persons |
| | 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work |
| | 1.5 Effective strategies are determined to ensure solution development and implementation is carried out efficiently |

ELEMENT	PERFORMANCE CRITERIA
2 Assess residential, office and retail premises for energy efficiency evaluation.	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2 Knowledge of energy loads is applied to developing energy efficient strategies to address energy use.
	2.3 Parameters, specifications and performance requirements in relation to energy use are set in accordance with established procedures
	2.4 Approaches to resolving sustainability issues are analysed to provide most effective solutions
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy
	2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards
3 Document assessment of residential, office and retail premises for energy efficiency.	3.1 Solutions to energy use are tested to determine their effectiveness and modified where necessary
	3.2 Adopted solutions are documented, including instructions for implementation that incorporates risk control measures to be followed
	3.3 Appropriately competent and qualified persons required to implement solutions to energy use are coordinated in accordance with regulatory requirements and enterprise policy (See Note)
	3.4 Justification for strategies used to solve energy use is documented for inclusion in work/project development records in accordance with professional standards

Note:

A licence or permit to practise in the workplace is required for specified work on building and premises

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and assessment of energy loads in residential, office and retail premises.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK15 Residential, office and retail premises energy efficiency assessment 3A

Evidence shall show an understanding of residential, office and retail premises energy efficiency assessment to an extent indicated by the following aspects:

T1 Energy management, legislation and regulation relevant to residential, office and retail premises encompassing:

- National Building Code of Australia
- State Building Codes
- Standards Australia for Energy Auditing
- Mandatory Disclosure
- State based legislation for energy management in business
- NABERS Tenancy
- NABERS Basix
- Minimum Renewable Energy T
- NatHERS ratings
- Renewable Energy Credits
- Small Technology Credits

T2 Water Supply and Use encompassing:

- collect and analyse information on household water use and on ways to improve water efficiency in the home
- ability to analyse the water consumption index for different sectors.
- ability to analyse domestic water use and ways to minimize the use of water.
- understanding on the methodology applied to water savings
- Perform water star rating calculations

T3 Greenhouse Gas Emissions encompassing:

- concept of Greenhouse Gas Emissions and Global Warming

REQUIRED SKILLS AND KNOWLEDGE

- Fossil Fuel Resource Depletion and Mining impacts the environment
- breakdown of Energy Consumption in the Australian Domestic Sector

T4 Environmental Context – Ecological Impacts and Resource Use encompassing:

- concept of Greenhouse Gas Emissions and Global Warming
- Fossil Fuel Resource Depletion and Mining impacts the environment
- breakdown of Energy Consumption in the Australian Domestic Sector
- breakdown of Water Consumption in the Australian Domestic Sector

T5 Energy Efficiency Methodologies encompassing:

- Energy Services Approach and how it relates to energy auditing
- End User Focus and how it relates to energy auditing
- Opportunistic Approach and how it relates to energy auditing
- Understand and explain an Energy Management Strategy in relation to energy efficiency, energy management, demand management, fuel switching and renewable energy
- Explain what is meant by Financially Viable Best Practice Solutions
- Understand and explain a Water Management Strategy in relation to water efficiency, water management, source switching and water reuse/recycling
- understanding of the Opportunistic Best Practice Solutions in relation to water and explain how this differs from Financially Viable Best Practice Solutions
- Benchmarking with reference to Statistical Benchmarks, Technology Benchmarks and Best Practice Financially Viable Benchmark Methodologies
- Explain and calculate Best Practice Energy and Water Star Ratings
- Explain the Property Cost and Environmental Impact Tables in relation to reporting energy audit outcomes
- Explain the Sustainable Initiative Investment Tables in relation to reporting energy audit outcomes

T6 Energy and Society encompassing:

- understanding of Electricity Charges
- drivers of the predicted Electricity Price Increases in Australia

REQUIRED SKILLS AND KNOWLEDGE

- Network Charge and Retail Charge Increases and how they relate to electricity price
 - The Carbon Pollution Reduction Scheme impact on electricity prices
 - Renewable Energy Target impact on electricity prices
- T7 Energy Auditing Theory and Practice encompassing:
- scope of Australian Standards for energy auditing
 - understanding of the Energy Audit Process in relation to Data collection, Analysis and the Communication of results
 - understanding of Accounts, Bills and Data, Tariff Structures and the identification of Domestic Tariff Types
 - understating of and proficiency in Energy and Energy Balance Calculations including power calculations, usage time calculations, power factor calculations and energy conversions from kWh to MJ
 - understanding for the process involved in Onsite Assessment in a domestic and small business energy audit.
 - knowledge on ways of gathering information on household energy use and costs
 - Identify and mitigate the Risks and Hazards associated in a domestic and small business energy audit.
 - Performing energy and power calculation
 - Determine the Power Rating of Equipment and Metering and Measurement in a domestic and small business energy audit.
 - Perform energy balance calculations
 - Provide advice on ways to improve energy efficiency
 - ability to perform Greenhouse Emission calculations, Emissions Factors, Carbon Intensity of Electricity vs. Natural Gas and LPG and Global Warming Potential and CO₂ Equivalents
 - ability to perform Financial Analysis in terms of Simple Payback and Simple Payback Period and Return on Investment or Rate of Return
 - understanding for Reporting and Communication of energy audit results
- T8 Water Auditing Services Theory and Design encompassing:
- understanding of water flow rates of taps, showers and irrigation, toilets, washing machines, dishwashers and filtration and top up water use for pool systems
 - Performing a residential water meter reading
 - understanding on the trends of water use and charges

REQUIRED SKILLS AND KNOWLEDGE

- understanding of the Water Efficiency Labeling (WELS) Scheme as it relates to water auditing
- Identifying water efficiency opportunities in home sustainability assessments.
- operation of a Greywater System
- understanding of the factors that impact on Garden Water Demand

T9 Lighting Services Theory and Efficient Design encompassing:

- understanding for fundamental Illumination design for domestic and small business
- understanding for Illumination in terms of Light Output, Light Level and Brightness
- determine target light levels for differing tasks
- understanding of the characteristics of light sources including Efficacy, Colour Temperature and Colour Rendering Index
- understanding for the different Ballast types, their efficiency and benefits
- understanding of Incandescent Lamps, Halogen Lighting, Domestic Fluorescent Lighting and comparisons between these and applications for the domestic and small business sector
- understanding of the application of Lighting Methodology for Best Practice Energy Efficiency design
- understanding of Energy Saving Lighting Opportunities in the domestic and small business sector

T10 Thermal Performance and Climate Control encompassing:

- understanding of the Thermal Performance of a building impacts on Heating, Ventilation and Air Conditioning energy use including Orientation, Thermal Mass, Insulation, Glazing, Shading and Ventilation
- understanding of the Air Conditioning Designs including Ducted systems, Split-system air conditioners, Multi-headed split systems, Individual Room Air Conditioners (RAC), Through Wall / Window and Portable units
- Identifying ways for improving the thermal performance of a residential building envelop elements
- ability to apply the knowledge of Australian climate zones
- understanding of Air Conditioning Technologies including Refrigerated type air conditioning, Inverter type air conditioning, Reverse cycle air conditioning, Evaporative air conditioners, Breeze power systems and Digital Scroll Compressors

REQUIRED SKILLS AND KNOWLEDGE

- understanding and the application of Energy Efficiency Ratio (EER) and Coefficient of Performance (COP) and show proficiency in EER and COP calculations
- understanding and the application of the Air Conditioning Star Ratings
- understanding of Gas and Electric Heating Options and air (ducted) heating
- understanding of the operation of an Air Conditioning System and describe each components including the compressor, evaporator, condenser, expansion valve and fan coil
- understanding of ceiling and pedestal fans and ventilation climate control
- understanding of the factors that impact on Climate Control Energy Consumption
- understanding of best practice Climate Control Methodology as applied to the domestic and small business sector
- understanding of the domestic and small business Climate Control Saving Opportunities
- ability to conduct a thermal performance assessment of a domestic residence

T11 Food Storage Services Theory and Efficient Design encompassing:

- understanding of refrigeration system basics operation
- understanding of different refrigeration models
- understanding of refrigeration characteristics including operation, automatic defrost, cooling temperature control, ice maker, ice and water dispenser, door seals and hinges
- understanding for the factors that impact on refrigerator energy use including size, configuration temperature setting, clearance around cabinet and ambient conditions, making ice, ice and water antisweat heaters, seals, insulation, compressor efficiency and age
- understanding of refrigerator & freezer star ratings
- understanding of food storage saving opportunities

T12 Food Preparation Services Theory and Efficient Design encompassing:

- understanding of different food preparation appliances
- understanding of the different operation of Gas and Electric hot plates and ovens and the advantages and disadvantages of each
- understanding for EMI food preparation methodology

REQUIRED SKILLS AND KNOWLEDGE

- understanding for Food Preparation Saving Opportunities
- Food Preparation Services Theory and Efficient Design

T13 Water Heating Services Theory and Efficient Design encompassing:

- understanding for different water heaters including Electric and Gas Storage, Gas Instantaneous (Continuous Flow), Electric Heat Pump and Solar Hot Water Heaters
- understanding for solar water heater configurations and characteristics including Passive (or thermo siphon) systems and Active (or pumped) systems Solar Collector types, One Shot Booster
- knowledge of how RECs relate to Solar Water Heater RECs
- understanding of factors that influence water heater Energy Use including Pipework and Fitting Insulation, Atmospheric Conditions, Water Efficiency, Temperature Setting and Maintenance & Operation
- understanding of and proficiency in Water Heating / Cooling Calculations
- understanding of EMI Water Heating Methodology
- understanding of domestic Water Heating Saving Opportunities
- understanding of types of entertainment and administration appliances found in domestic residences

T14 Entertainment and Administration Services Theory and Efficient Design encompassing:

- understanding of appliance Standby Power including the different mode; Passive and Active Standby
- understanding of appliance Energy Star ratings
- understanding of MEPS and Labelling Requirements for Televisions
- an understanding of Computers energy consumption including computer power management
- understanding of Entertainment & Administration Saving Opportunities

T15 Cleaning Services Theory and Efficient Design encompassing:

- understanding of Clothes Washers types including Vertical axis and Horizontal axis
- understanding of factors that impact on clothes washing energy use
- understanding of energy and water MEPS Star Ratings and how they apply to clothes washers

REQUIRED SKILLS AND KNOWLEDGE

- understanding of Clothes Dryer types including Spin Dryer, Condenser dryers, gas dryers and Heat pump dryers
- understanding of Clothes Dryer Controls
- understanding of Dishwasher types
- understanding of vacuum cleaner types
- understanding of EMI Cleaning Methodology
- understanding of domestic Cleaning Saving Opportunities

T16 Pumping Systems (and Pools) Theory and Efficient Design encompassing:

- understanding of Pumping Services in relation to domestic and the small business sector
- understanding of Pumping Types including centrifugal and positive displacement and pump selection and design
- understanding of Pumping Theory including Pressure Head, Pressure pumping vs. Transfer pumping, Pump Curves, Pump Best Efficiency (Operating) Point BEP, Variable Speed Drive, Energy Balance for a Typical Pumping System and Electric Motors
- understanding of the operation of domestic pools in terms of Pool Pumps, Pool Backwashing, Cartridge Filters, Pools Turnovers, Pool Water Use and Pool Heating
- understanding of energy efficiency pool systems design methodology
- understanding of domestic pool systems saving opportunities

T17 Smart Metering Solutions encompassing:

- understanding and benefits of the different metering available to the domestic and the small business sector
- understanding of metering opportunities relation to domestic and the small business sector

T18 Renewable Energy (Solar PV) encompassing:

- understanding of design of Solar PV Systems and different panel types including Mono-crystalline, Poly-crystalline and Amorphous
- understanding of solar panel characteristics and choice of selection
- understanding of the Balance of Systems, Rules of Thumb, Shading, Orientation and Shading of strings in an on grid solar power system
- performing Solar PV energy calculations and calculate REC Entitlement for a Small Solar PV System

REQUIRED SKILLS AND KNOWLEDGE

- understanding of the different Feed-in Tariff Schemes and how they apply to solar PV
- T19 Energy Audit System encompassing:
- understanding of Domestic and Small Business Energy Audit Forms and Legend
 - ability to conduct an Energy and Water Audit for the domestic and the small business sector
 - understanding of Domestic and Small Business Sector Energy Audit Report

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may

be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or

licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Carryout energy assessments to address energy efficiency issues as described in 8) and including:

- A Identifying and quantifying the extent of the energy use, loads and patterns of usage for electrical and energy installation energy problem/s.
- B Identifying and quantifying the extent of the energy use, loads and patterns of usage for electrical and energy installation energy problem/s.
- C Identifying the operational patterns in control of the user that impact on energy use and the energy services supplied by the energy technology that allow the quantifying energy use.
- D Perform an energy balance to model the current energy use to the existing energy bills.
- E Identifying effective energy saving opportunities to reduce energy use from
- F Understand the extent of the scope of the electrical and energy installation design problems, constraints and likely cost of installation.
- G Obtain energy system/component parameters, specifications and performance requirements appropriate to each problem.
- H Test and commission energy saving opportunity solutions to energy problems.
- I Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
- J Document and report financial and technical justification of solutions implemented in

accordance with professional standards

- K Deal with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires

assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE101A and other discipline specific occupational health and safety unit(s) must be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to carrying out energy assessments and documenting energy efficiency strategies on at least two types of residential, office or small retail premises.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Renewable and Sustainable Energy

UEENEEK154A Assess energy loads and uses for energy efficiency in commercial facilities

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the undertaking of energy audits of commercial facilities to evaluate the energy efficiency of the facilities and to make recommendation on design implementations. It encompasses working safely, apply extensive knowledge of commercial electrical installations and components and their operating parameters, gathering and analysing data, applying problem solving techniques, developing and documenting engineering solutions.

Application of the Unit

Application of the Unit 2)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

License to practice

3)

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK1 53A Assessment of energy loads and uses for energy efficiency in residential, office and retail dwellings.

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare to assess commercial facilities for energy efficiency evaluation. | 1.1 OHS processes and procedures for a given work area are identified, obtained and understood |
| | 1.2 Established OHS risk control measures and procedures are followed in preparation for the work |
| | 1.3 The extent of the energy assessment are determined from facilities orientation, facilities floor plans, building structure plans, energy accounts, and situation reports and in consultation with relevant persons |
| | 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work |
| | 1.5 Effective strategies are determined to ensure solution development and implementation is carried out efficiently |

ELEMENT	PERFORMANCE CRITERIA
2 Assess commercial facilities for energy efficiency evaluation.	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2 Knowledge of energy loads is applied to developing energy efficient strategies to address energy use.
	2.3 Parameters, specifications and performance requirements in relation to energy use are set in accordance with established procedures
	2.4 Approaches to resolving energy uses are analysed to provide most effective solutions
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy
	2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards
3 Document assessment of commercial facilities for energy efficiency.	3.1 Solutions to energy use are tested to determine their effectiveness and modified where necessary
	3.2 Adopted solutions are documented, including instructions for implementation that incorporates risk control measures to be followed
	3.3 Appropriately competent and qualified persons required to implement solutions to energy use are coordinated in accordance with regulatory requirements and enterprise policy (See Note)
	3.4 Justification for strategies used to solve energy use is documented for inclusion in work/project development records in accordance with professional standards

Note:

A licence or permit to practise in the workplace is required for specified work on building and facilities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and assessment of energy loads in commercial facilities.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EK15 Commercial facilities energy efficiency assessment 4A

Evidence shall show an understanding of commercial facilities energy efficiency assessment to an extent indicated by the following aspects:

T1 Energy management, legislation and regulation relevant to residential, office and retail premises encompassing:

- National Building Code of Australia
- State Building Codes
- Standards Australia for Energy Auditing
- State based legislation for energy management in business
- NABERS Tenancy
- NABERS Office
- Building Energy Efficiency Certificates
- Minimum Renewable Energy
- Renewable Energy Credits
- Small Technology Credits

T2 Water supply and use encompassing:

- collecting and analysis of information for commercial facilities water use and methods to improve water efficiency in the home
- ability to analyse the water consumption index for different commercial sectors.
- ability to analyse commercial facilities water use and ways to minimize the use of water.
- understanding on the methodology applied to water savings
- calculate water star rating

T3 Environmental context – greenhouse gas emission, ecological impacts and resource use encompassing:

- concept of greenhouse gas emissions and global warming
- fossil fuel resource depletion and how mining impacts the

REQUIRED SKILLS AND KNOWLEDGE

environment

- breakdown of energy consumption in the Australian commercial sector
- breakdown of water consumption in the Australian commercial sector

T4 Energy efficiency methodologies encompassing:

- Energy services approach and relationship to energy auditing
- End user focus and relationship to energy auditing
- Opportunistic approach and relationship to energy auditing
- Energy management strategy in relationship to energy efficiency, energy management, demand management, fuel switching and renewable energy
- Financially viable best practice solutions; including net present value and internal rate of return
- Water management strategy in relationship to water efficiency, water management, source switching and water reuse/recycling
- Opportunistic best practice solutions in relationship to water and the differences to the financially viable best practice solutions
- Benchmarking with reference to statistical benchmarks, technology benchmarks and best practice financially viable benchmark methodologies
- Calculate best practice energy and water star ratings
- Property cost and environmental impact tables in relationship to reporting energy audit outcomes
- Sustainable initiative investment tables in relationship to reporting energy audit outcomes

T5 Energy and society encompassing:

- understanding of electricity charges
- drivers of the predicted electricity price increases in Australia
- Network charge and retail charge increases and how they relate to electricity price
- The Carbon tax or similar and impact on electricity prices
- Renewable Energy Target and impact on electricity prices
- Impact of electricity prices to commercial facilities

T6 Energy auditing and practice encompassing:

- scope of Australian Standards for energy auditing
- Energy audit process in relationship to data collection, analysis and the communication of results

REQUIRED SKILLS AND KNOWLEDGE

- Accounts, bills and data, tariff structures and the identification of commercial tariff types
- Calculate energy and energy balance including power calculations, usage time calculations, power factor calculations and energy conversions from kWh to MJ
- process involved in onsite assessment in a commercial facilities energy audit.
- gathering information on commercial facilities energy use and costs
- Risks and hazards associated in a commercial facilities energy audit.
- Calculate energy and power
- Power rating of equipment and metering and measurement in a commercial facilities energy audit.
- Calculate energy balance for commercial facilities
- Advice on ways to improve energy efficiency
- Calculate greenhouse emission, emissions factors, carbon intensity of electricity vs. natural gas and LPG and global warming potential and CO₂ equivalents
- Financial analysis in terms of simple payback and simple payback period and return on investment or rate of return
- Reporting and communication of energy audit results

T7 Energy management encompassing:

- energy management strategies.
- practice based energy management.
- technology based energy management.
- Interaction between human resources and practice based control.
- Application of technology based energy management.
- Identify potential energy savings from application of energy management

T8 Power and energy data recording encompassing:

- Identify the structure and purpose of power and energy data recording for whole systems and equipment.
- Review or develop single line schematic of electrical system of a commercial facility
- Establish the power and energy data gap from the energy audit in T7 to achieve Australian Standard compliant energy audits.
- Identify electrical loads that need contribute more than 5% of energy use

REQUIRED SKILLS AND KNOWLEDGE

- Understand and explain the operation seven different power and energy monitoring equipment available
 - Understand the implications of data recording intervals for monitoring equipment
 - Develop a power and energy monitoring strategy for a commercial facility
 - Deploy commercial facility power and energy monitoring strategy
 - Draw conclusions and report on power and energy data collection in a commercial facility
- T9 Water auditing services and design encompassing:
- Water flow rates of taps, showers and irrigation, toilets, washing machines, dishwashers and filtration and top up water use for cooling towers and pool systems
 - Commercial facility water meter reading
 - Trends of water use and charges for commercial facilities
 - Water Efficiency Labelling (WELS) Scheme as it relates to water auditing
 - Identification of water efficiency opportunities in commercial facility assessments.
 - Operation of a rain water and grey water systems
 - Factors that impact on landscape water demand
- T10 Lighting services and efficient design encompassing:
- Fundamental illumination design for commercial facilities
 - Illumination terms: light output, light level and brightness
 - Determining target light levels for differing tasks
 - Characteristics of light sources including efficacy, colour temperature and colour rendering index
 - Ballast types, their efficiency and benefits
 - Incandescent lamps, LED, Induction Lamps, halogen lighting, commercial fluorescent lighting, metal halide, mercury vapour and comparisons between these and applications for the commercial facilities
 - Application of lighting methodology for best practice energy efficiency design
 - Energy saving lighting opportunities in the commercial facilities
- T11 Thermal performance and climate control encompassing:
- Thermal performance of a building impacts on heating, ventilation and air conditioning energy use including

REQUIRED SKILLS AND KNOWLEDGE

- orientation, thermal mass, insulation, glazing, shading and ventilation
 - Air conditioning designs including central, ducted systems, split-system air conditioners, multi-headed split systems, individual room air conditioners (RAC), through wall / window and portable units
 - Improvement to air movement systems in commercial facilities including diffusers
 - Improvement to ventilation systems in commercial facilities
 - improvement of thermal performance of a commercial building envelop elements
 - ability to apply the knowledge of Australian climate zones
 - Air conditioning technologies including refrigerated type air conditioning, inverter type air conditioning, reverse cycle air conditioning, evaporative air conditioners, breeze power systems and digital scroll compressors
 - application of Energy Efficiency Ratio (EER) and Coefficient of Performance (COP) and show proficiency in EER and COP calculations
 - application of the Air Conditioning Star Ratings to commercial facilities
 - Gas and electric heating options and air (ducted) heating
 - operation of an air conditioning system and describe each components including the compressor, evaporator, condenser, expansion valve and fan coil
 - ceiling and pedestal fans and ventilation climate control
 - factors that impact on climate control energy consumption
 - best practice climate control methodology as applied to the commercial facilities
 - commercial facilities climate control saving opportunities
 - conducting thermal performance assessment of a commercial facilities
- T12 Food storage services and efficient design encompassing:
- refrigeration system basics operation
 - different refrigeration models
 - refrigeration characteristics including operation, automatic defrost, cooling temperature control, ice maker, ice and water dispenser, door seals and hinges
 - factors that impact on refrigerator energy use including size, configuration temperature setting, clearance around cabinet and ambient conditions, making ice, ice and water antisweat heaters,

REQUIRED SKILLS AND KNOWLEDGE

- seals, insulation, compressor efficiency and age
 - Refrigerator and freezer star ratings
 - Cold room and freezer room energy saving opportunities
 - Food storage saving opportunities
- T13 Food preparation services and efficient design encompassing:
- different food preparation appliances
 - different operation of gas and electric hot plates and ovens and the advantages and disadvantages of each
 - EMI food preparation methodology
 - Food preparation saving opportunities
 - Food preparation services and efficient design
- T14 Water heating services and efficient design encompassing:
- different water heaters including electric and gas storage, gas instantaneous (continuous flow), electric heat pump and solar hot water heaters
 - solar water heater configurations and characteristics including passive (or thermo siphon) systems and active (or pumped) systems solar collector types, one shot booster
 - RECs and STCs and how these relate to solar water heater STCs
 - factors that influence water heater energy use including pipework and fitting insulation, atmospheric conditions, water efficiency, temperature setting and maintenance & operation
 - Water heating / cooling calculations
 - EMI water heating methodology
 - commercial water heating saving opportunities
 - types of entertainment and administration appliances found in commercial residences
- T15 Entertainment and administration services and efficient design encompassing:
- appliance standby power including the different mode; passive and active standby
 - appliance energy star ratings
 - MEPS and labelling requirements for televisions
 - Network standby management strategies
 - Computers energy consumption including computer power management
 - Entertainment and administration saving opportunities
- T16 Cleaning services and efficient design encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- clothes washers types including vertical axis and horizontal axis
- factors that impact on clothes washing energy use
- energy and water MEPS star ratings and how they apply to clothes washers
- Clothes dryer types including spin dryer, condenser dryers, gas dryers and heat pump dryers
- Clothes dryer controls
- Dishwasher types
- vacuum cleaner types
- EMI cleaning methodology
- commercial cleaning saving opportunities

T17 Pumping systems (and pools) and efficient design encompassing:

- Pumping services in relation to commercial sector
- Pumping types including centrifugal and positive displacement and pump selection and design
- Pumping theory including pressure head, pressure pumping vs. transfer pumping, pump curves, pump best efficiency (operating) point bep, variable speed drive, energy balance for a typical pumping system and electric motors
- operating of commercial pools in terms of pool pumps, pool backwashing, cartridge filters, pools turnovers, pool water use and pool heating
- Energy efficiency pool systems design methodology
- Energy efficiency hot water, chilled and condenser water pumping systems
- Commercial pool systems saving opportunities

T18 Smart metering solutions encompassing:

- benefits of the different metering available to the commercial sector
- metering opportunities relation to commercial sector

T19 Renewable energy (solar PV) encompassing:

- design of solar PV systems and different panel types including mono-crystalline, poly-crystalline and amorphous
- solar panel characteristics and choice of selection
- solar power system utility approval process
- Balance of systems, rules of thumb, shading, orientation and shading of strings in an on grid solar power system
- Solar PV energy calculations and calculate REC entitlement for

REQUIRED SKILLS AND KNOWLEDGE

- a small solar PV system
 - different feed-in tariff schemes and how they apply to solar PV
- T20 Energy audit system encompassing:
- Commercial facilities energy audit forms and legend
 - Conducting energy and water audit for the commercial sector
 - Commercial facilities sector energy audit report

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity,

electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.
