Evidence shall show that knowledge has been acquired of safe working practices and using drawings, diagrams, schedules and manuals.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE192A Detailed electrotechnology /utilities drawings

Evidence shall show an understanding of detailed electrotechnology /utilities drawings to an extent indicated by the following aspects

T1 Detailed working drawings encompassing:

- definition of detailed working drawings
- usage and types of detailed working drawings
- composition and layout of detailed working drawings
- preparation of detailed working drawings

T2 Advanced (master) sketching techniques encompassing:

- lines and letters
- shapes
- solids
- axonometric views
- building sketch
- isometric views
- object sketch
- perspective; building interior perspective sketch
- detail labelled sketch
- complex surfaces with tangent and curvature continuities
- surfaces manipulation using editing tools
- surfaces analysis for quality and desired characteristics

T3 Drafting/modelling electrotechnology/ utilities encompassing:

- standard documentation practices for block diagrams
- wiring diagrams
- circuit schematics
- control circuits
- creating one-line diagrams
- standard PCB layouts
- printing wiring assemblies
- art masters

REQUIRED SKILLS AND KNOWLEDGE

T4 Electrotechnology/ utilities related drawings encompassing:

- charts and graphs; encompassing alternating current, frequency, electromagnetisms, signals, transmission
- measuring devices and gauges
- power sources, transformers, alternators, motors and related applications
- earthing
- conduits, boxes and fittings, harnesses, cable trays and ducts
- conductor terminations, splices, installations and wiring schedules
- busways
- electric services installations
- protection devices -over current and voltage, circuit breakers, and fuses
- switches, contactors and relays
- control systems and devices
- HV devices and apparatus
- cabinet and panel layouts
- plot and floor plans
- electric lighting
- analogue and digital systems, circuits, electronic components and devices - connections; resistors; capacitors; magnetic devices; piezoelectric devices, crystals and resonators; transducers, sensors and detectors; solid state components and semiconductors; display technologies – filament, LED, LCD, discharge devices, thermionic valves, vacuum tubes; assemblies, modules; prototyping aids; mechanical accessories
- data networks, communication and telecommunications equipment and devices
- pneumatic and hydraulic circuits, including related piping ware and components

T5 AutoCAD – functional for electrotechnology/ utilities encompassing:

- user coordinates systems
- Right-Hand Rule
- 2D geometry extrusion
- 2D views from 3D models and visa-versa
- user coordinate systems creation
- 3D wireframe geometry creation
- 3D faces on wireframe geometry placement
- 3D geometry viewing
- surfaces construction
- working drawings generation
- drawing set up using model space and paper space; encompassing printing and plotting
- plotting
- rendering

REQUIRED SKILLS AND KNOWLEDGE

- 3D models construction
- 3D surface models construction
- 3D models display from different vantage points
- orthographic drawings constructed from 3D models
- rendered images creation
- solid modelling construction using Boolean operations
- scripts writing and tool button macros application
- organisation of writing scripts and tool button macros commands
- advanced drawing, editing, and configuration procedures application
- basic user-level system customisation
- design environment
- basic workflow

T6 AutoCAD – project basics encompassing:

- project manager
- project drawing list
- projects progression/stages
- projects copy and activation

T7 AutoCAD – schematic wiring, editing, components and reporting encompassing:

- wiring and ladders
- wire types, wire numbers
- source and destination signal arrows
- multiple phase and multi wire circuits
- circuits
- connectors and point-2-point wiring
- basic editing utilities
- miscellaneous tools
- data tools
- re-sequence and retag drawings
- using the auditing tools
- schematic symbol annotation
- inserting schematic symbols
- swapping and updating blocks
- inserting schematic components from lists
- generating schematic reports

T8 AutoCAD – panel layouts encompassing:

- creating panel layouts from schematic lists
- din rail utility usage
- panel footprints

REQUIRED SKILLS AND KNOWLEDGE

- terminal strip editor usage
- panel layout annotation and reports

T9 AutoCAD – PLC modules encompassing:

- PLC I/O modules
- PLC modules builder
- PLC database file editor; encompassing insert and edit in parametric PLC modules, nonparametric PLC modules, and stand-alone PLC I/O points
- PLC I/O address-based tagging
- spreadsheet to PLC I/O utility

T10 AutoCAD - detailed settings and configurations – advanced commands encompassing:

- drawing properties
- project properties
- creating wire types
- reference files usage
- creating drawing templates
- installation and search paths

T11 AutoCAD – detailed customised components and customised detailed data encompassing:

- schematic symbols
- icon menu system
- panel footprints
- part catalogue databases usage
- pin list database editor
- title block update and attributes
- terminal properties editor
- reference files usage

T12 AutoCAD – advanced auditing tools, automation tools and integration encompassing:

- auditing tools
- trouble shooting tools
- updating schematics from spreadsheets
- generating automatic reports
- AutoCAD integration
- din rail editor
- footprint with wire annotation
- conduit tools
- cables management

REQUIRED SKILLS AND KNOWLEDGE

T13 AutoCAD – database management and productivity tools encompassing:

- title block attributes automation tools update
- schematics update spreadsheets
- adding wire data to footprints
- managing cables
- using the circuit builder
- working with peer-to-peer

T14 Drawings production using CAD application programs encompassing:

- principals, concepts and applications of drawings production using CAD application programs
- terms, conventions and codes related to drawings production using CAD application programs
- drawing production types using CAD application programs
- CAD advanced commands identification and application for drawings
- CAD advanced commands identification and application for editing drawings
- CAD advanced commands identification and application for hardcopy drawings
- techniques and applications in producing detailed architectural drawings of a floor plan, elevation, and exterior wall section for a residential structure related to electrotechnology/ utilities applications

T15 Utility programs disk and file management encompassing:

- principals, concepts and applications of disk and file management of utility programs
- terms, conventions and codes related to disk and file management of utility programs
- disk operating system commands identification and usage
- utility commands identification and usage
- commands for word processing identification and usage

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Producing detailed electrotechnology /utilities drawings using computer aided design equipment and software as described in 8) Range and including:

- A Producing, modifying and maintaining detailed electrotechnology/ utilities drawings and diagrams using computer-aided design (CAD) equipment and software
- B Producing master sketches of complex electrotechnology/ utilities drawings using pictorial methods and scaling to

- generate relevant dimensional electrotechnology/ utilities images
- C Identifying, selecting and determining uses for a range of materials and equipment used in electrotechnology/ utilities engineering drafting applications
- D Drawing single and multi-part components and detailed electrotechnology/ utilities assemblies
- E Using advanced CAD equipment commands and drawing techniques and processes to produce detailed electrotechnology/utilities drawings
- F Using filing systems for managing, entering and/or retrieving technical information from computer related database programs
- G Applying safety precautions when working with CAD equipment

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to using drawings, diagrams, schedules and manuals.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with units covering the production of detailed drawings using computer aided design equipment and software for other disciplines.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to producing detailed electrotechnology /utilities drawings using computer aided design equipment and software covering:

- Drawings include detailed circuit and wiring diagrams/schedules, block diagrams, schematics, printed circuit board layouts, assembly and installation drawings, modification drawings, and conversion between drawing types.
- Electrotechnology/ utilities specifications, layouts, sketches or verbal instructions in conformance with Australian Standards, enterprise standards and/or design brief.
- Master sketches methods, techniques, procedures and devices encompassing freehand sketching
- Type, form and size of materials from information, abbreviations and symbols supplied on electrotechnology/ utilities engineering drawings, briefs and/or specifications
- Specifications may be obtained from design information, customer requirements, sketches, preliminary layouts and/or field investigations
- Materials and equipment used in electrotechnology/ utilities engineering applications by selecting the correct type, form and size of materials and equipment from information, abbreviations and symbols supplied on detailed electrotechnology/ utilities engineering drawings, briefs and/or specifications
- Advanced computer-aided design (CAD) equipment commands and drawing techniques and processes
- CAD application programs and advanced tools
- Utility programs disk and file management
- Filing systems management including entering/retrieving technical information from computer related database programs for the production, modification and/or maintenance of detailed electrotechnology/ utilities drawings
- Safety precautions when working with CAD equipment
- Detailed working drawings
- Drafting/modelling electrotechnology/ utilities
- Detailed electrotechnology/ utilities drawings including a representative array of relevant 2D and 3D CAD drawings
- Single and multi-part components and detailed electrotechnology/ utilities assemblies for fabrication, assembly, installation and/or modification of products encompassing dimensions encompassing dimensions; fabrication,

RANGE STATEMENT

assembly, installation and/or modification notes, circuit/wiring layouts/schedules and parts lists from specified dimensions, associated tolerances and design specifications.

- Architectural drawings for electrotechnology/ utilities applications
- Organisational procedures for preparation and production of drawings, drawing sets, specifications, drafting documentation and operating and maintenance instructions/manuals for products and systems
- Organisational procedures for processing, filing and saving all graphics, specifications, instructions and related documentation in correct format and location in accordance with work site procedures
- Organisational procedures for collaborating with the client, key stakeholders and other staff in the selection of the preferred option

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Competency Field

Competency Field 11)
Electrotechnology

UEENEEF101A Install and connect cabling for direct access to telecommunications service

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the installation and termination of telecommunications cabling in buildings and premises. It encompasses working safely and to Australian Communications and Media Authority's 'restricted' Cabling Provider Rule, installing telephone line, two-pair (quad) cables, terminating on socket outlets, testing and compliance checks and completing cabling documentation.

Application of the Unit

Application of the Unit **2)**

This unit applies to customer cabling that terminates directly on permitted sockets and the like, and to the installation, maintenance and modification of indoor, external, underground cabling. Customer cabling, for the purpose of this standard, may be used to connect devices for a range of applications, including for example: telecommunications (phones and facsimile), data, including video and multimedia, security and alarms, and fire protection.

Licensing/Regulatory Information

License to practice **3)**

This unit meets the minimum ACMA 'prescribed level of

License to practice

3)

knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved'. Therefore, skills and knowledge described in this unit may only be practised under the requirements set out in ACMA 'Restricted' Cabling Provider Rule.

Practice of this competency standard unit is also subject to regulations directly related to occupational health and safe and contracts of training where they apply.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEF10 6A Solve problems in data and voice communications circuits

OR

Prerequisite Unit(s) 4)

UEENEEE1 04A Solve problems in d.c. circuits

AND

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to lay and connect cabling for direct access to telecommunication services	1.1	OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2	Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.
	1.3	Remote power feeding is identified and established risk control measures prepared.
	1.4	The nature and location of the work is determined from documentation or discussions with appropriate person(s) to establish the scope of work to be undertaken.
	1.5	Cable routes are planned within the constraints of the building structure, significant and regulations.
	1.6	Earthing requirements are determined with consideration of existing earthing arrangements, where applicable and of cable system earth upper and lower resistance limitations.
	1.7	Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
	1.8	Sources of materials that may be required for the work are established in accordance with established routines and procedures.
	1.9	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|---|------|---|
| 2 | Lay and connect cabling for direct access to telecommunication services | 2.1 | Established OHS risk control measures and procedures for carrying out the work are followed. |
| | | 2.2 | Installed support structure is checked to ensure cable will not be exposed to damage during installation and general operation. |
| | | 2.3 | Sufficient excess is allowed at cable ends to facilitate termination. |
| | | 2.4 | Telecommunication outlet ends of cable are uniquely labelled to match identifier at originating location. |
| | | 2.5 | Cable is placed and secured to maintain safety and interference segregation in accordance with legislative and industry standards. |
| | | 2.6 | Cable ties not tightened to the point of causing cable sheath damage or transmission impairment are trimmed flush to prevent risk of personal damage. |
| | | 2.7 | Cables installed as catenaries or supported by catenaries in external environment shall meet minimum above ground clearances and clearances from hazardous electrical services as per AS/ACIF S009. |
| | | 2.8 | Cables installed underground shall meet minimum depth of cover and segregation from hazardous electrical and other services as per AS/ACIF S009. |
| | | 2.9 | Over-voltage protection devices are fitted to all cable pairs, where required, to suppress voltage surges with the devices protectively earthed. In accordance with AS/ACIF S009. |
| | | 2.10 | TRC/CES/Earth wire insulation is protected against damage and TRC/CES and protective earths segregated in accordance with relevant industry and legislative standards AS/ACIF S009. |
| | | 2.11 | Procedures for referring non-routine events to immediate supervisor for directions are followed. |
| | | 2.12 | Cabling is installed efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services. |

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|------|---|
| | 2.13 | Routine quality checks are carried out to ensure cabling complies with requirements. |
| 3. Terminate and test cables and earth wires. | 3.1 | Established OHS risk control measures and procedures for carrying out the work are followed. |
| | 3.2 | Cable sheath removed to allow for correct termination length and without damage to underlying conductors and their insulation. |
| | 3.3 | Network termination device is installed in accordance to manufacturer specifications and cable pairs neatly and sequentially fanned for termination. |
| | 3.4 | Conductors are terminated in accordance with recommended colour code sequence using appropriate termination tools in the manufacturer specified manner. |
| | 3.5 | Cable shield (if applicable) is earthed to manufacturer specifications and relevant industry codes of practice including AS/ACIF S009. |
| | 3.6 | Visual inspection is undertaken to confirm termination colour code sequence has been followed prior to end-to-end testing of wire and pair termination integrity. |
| | 3.7 | Cable pairs are tested and clearly labelled to provide an accurate identification in accordance with requirements. |
| | 3.8 | TRC/CES /Earth wires are terminated with connectors recommended by manufacturers in accordance with relevant industry codes of practice including AS/ACIF S009. |
| | 3.9 | TRC/CES /Earth wire continuity is maintained through out and interface requirements with electrical systems are observed. |
| | 3.10 | TRC/CES /Earthing installation is tested for continuity, insulation resistance and conductive resistance as per relevant industry standards including AS/ACIF S009. |
| | 3.11 | Compatibility of alterations with existing systems is confirmed and new work tested both in isolation and when integrated with existing systems. |
| | 3.12 | Procedures for referring non-routine events to immediate |

ELEMENT

PERFORMANCE CRITERIA

- supervisor for directions are followed.
- 3.13 Cabling is terminated efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services.
- 3.14 Routine quality checks are carried out and defects rectified to ensure cabling comply with requirements.
- 4 Complete cabling work, records and reporting.
- 4.1 OHS work completion risk control measures and procedures are followed.
- 4.2 Work site is cleaned and made safe in accordance with established procedures.
- 4.3 Cabling completion advice is documented and reported in accordance with requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and laying and connecting cabling for direct access to telecommunication services.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EF101A Telecommunications Restricted CPR regulations and installations

Evidence shall show an understanding of telecommunications restricted CPR regulations and installations, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Telecommunication industry overview encompassing:

- Telecommunication Industry
- Overview of Telecommunications network
- Overview of Telecommunications Act 1997
- Role of ACMA and ACIF
- Telecommunications terminology

T2. Telecommunication technical standards encompassing:

- ACMA Technical Standards TS008, TS009
- SAA Communications Cabling Manual (Restricted) (starter kit) as approved by relevant bodies – Standards Australia/ACIF
- International Standards – ISO, IEC, ITU
- Building Code of Australia (BCA)
- AS/NZS 3000 Wiring Rules
- National Association of Testing Authorities NATA

T3. Cabling Provider Rules (CPR) encompassing:

- Australian Communications Media Authority (ACMA)
- Telecommunications Cabling Provider Rules
- CPR registration
- Old Telecommunication Licensing structures
- Inspection of work
- Documentation – TCA1 form

T4. Cable type and identification encompassing:

- Cable types – unshielded twisted pair, shielded twisted pair, indoor, underground and aerial.
- Cable construction
- Cable identification – codes (colour, banded, numbered, lettered)

REQUIRED SKILLS AND KNOWLEDGE

T5. Cable installation encompassing:

- Cable damage
- Cable packaging
- Cable dispensing devices
- Cable insertion and hauling
- Lead-in conduit requirements (including wall box installation)
- Wiring diagrams
- Segregation of cables
- Aerial cable fittings and additional safety aspects required.

T6. Termination of Telecommunication Cables encompassing:

- Sheath stripping – methods, precautions
- Pair identification
- End to end testing
- Filled cable termination
- Termination systems – telephone outlets and sockets, network terminating devices (NTD)
- Connector jointing e.g. external to internal cable where required

T7. Telecommunication earthing and protection encompassing:

- Customer lightning protection (CLP)
- CLP earthing
- Carrier's policy requirement covering materials (including surge suppression devices) and
- Practices (including earth bonding arrangements)

T8. Basic telephony encompassing:

- Basic telephone service
- Telephone
- Exchange number
- Connection equipment / lead in cable
- Dialling signals – pulse dialling, tone dialling, ring equivalence number (REN)

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Laying and connecting cabling for direct access to telecommunication services as described in 8) and including:
 - A Terminating at both network termination device and at least two different outlet types and locations
 - B Placing of cables on support structures and building faces for both internal and external

- locations
- C Securing cables correctly for above locations
 - D Avoiding cable damage such as crushing, burning, kinking, sheath twist, cutting and nicking, bending radius
 - E Reading and interpreting drawings related to outlet and service entry location
 - F Conducting and interpreting cable test results
 - G Correctly interpreting and applying standards and regulations
 - H Completing the required documentation
 - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to laying and connecting cabling for direct access to telecommunication services.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE10 Fabricate, assemble and dismantle utilities
2A industry components

UEENEEE10 Fix and secure electrotechnology equipment
5A

UEENEEE10 Use drawings, diagrams, schedules, standards,
7A codes and specifications

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to cabling installations applicable to single telephone line (two-pair) and directly connected to telephone sockets. It includes terminating, placing of cables on support structures and building faces, securing cables correctly for above locations, avoiding cable damage, reading and interpreting drawings, conducting and interpreting cable test results, applying standards and regulations, and completing the required documentation.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 04A Solve problems in d.c. circuits

Prerequisite Unit(s) 4)

UEENEE105A Fix and secure electrotechnology equipment

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install and maintain cabling.	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2 Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.
	1.3 Remote power feeding is identified and established risk control measures prepared.
	1.4 The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.
	1.5 Cable routes are planned within the constraints of the building structure, significant and regulations.
	1.6 Earthing requirements are determined with consideration of existing earthing arrangements, where applicable and of cable system earth upper and lower resistance limitations.
	1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
	1.8 Sources of materials that may be required for the work are established in accordance with established routines and procedures.
	1.9 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Install and maintain cabling.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Installed support structure is checked to ensure cable will not be exposed to damage during installation and general operation.
	2.3 Catenary supports are secured to building structure and tensioned where necessary to ensure cable weight can be carried in operating conditions with interference and safety segregation maintained including adherence to

ELEMENT

PERFORMANCE CRITERIA

AS/ACIF S009.

- 2.4 Protective earthing of metal work is installed in accordance with requirements and to industry standards.
- 2.5 Cables/wires are handled in accordance with manufacturer's application specifications including tension and bending stress requirements.
- 2.6 Sufficient excess is allowed at cable ends to facilitate termination.
- 2.7 Telecommunication outlet ends of cable are uniquely labelled to match identifier at originating location.
- 2.8 Cable is placed and secured to maintain safety and interference segregation in accordance with legislative and industry standards.
- 2.9 Cable ties not tightened to the point of causing cable sheath damage or transmission impairment are trimmed flush to prevent risk of personal damage.
- 2.10 Cables installed as catenaries or supported by catenaries in external environment shall meet minimum above ground clearances and clearances from hazardous electrical services as per AS/ACIF S009.
- 2.11 Cables installed underground shall meet minimum depth of cover and segregation from hazardous electrical and other services as per AS/ACIF S009.
- 2.12 Over-voltage protection devices are fitted to all cable pairs, where required, to suppress voltage surges with the devices protectively earthed in accordance with AS/ACIF S009.
- 2.13 TRC/CES/Earth wire insulation is protected against damage and TRC/CES and protective earths segregated in accordance with relevant industry and legislative standards AS/ACIF S009.
- 2.14 Procedures for referring non-routine events to immediate supervisor for directions are followed.

ELEMENT

PERFORMANCE CRITERIA

- 2.15 Cabling is installed efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services.
- 2.16 Routine quality checks are carried out to ensure cabling complies with requirements.
- 3. Terminate and test cables and earth wires.
 - 3.1 Established OHS risk control measures and procedures for carrying out the work are followed.
 - 3.2 Cable sheath removed to allow for correct termination length and without damage to underlying conductors and their insulation.
 - 3.3 Terminating modules are installed in accordance to manufacturer specifications and cable pairs neatly and sequentially fanned for termination.
 - 3.4 Conductors are terminated in accordance with recommended colour code sequence using appropriate termination tools in the manufacturer's specified manner.
 - 3.5 Cable shield (if applicable) is earthed to manufacturer specifications and relevant industry codes of practice including AS/ACIF S009.
 - 3.6 Visual inspection is undertaken to confirm termination colour code sequence has been followed prior to end-to-end testing of wire and pair termination integrity.
 - 3.7 Cable pairs are tested and clearly labelled to provide an accurate identification in accordance with requirements.
 - 3.8 TRC/CES/Earth wires are terminated with connectors recommended by manufacturers in accordance with relevant industry codes of practice including AS/ACIF S009.
 - 3.9 TRC/CES /Earth wire continuity is maintained through out and interface requirements with electrical systems are observed.
 - 3.10 TRC/CES /Earthing installation is tested for continuity, insulation resistance and conductive

ELEMENT

PERFORMANCE CRITERIA

- resistance as per relevant industry standards including AS/ACIF S009.
- 3.11 Earthing system is labelled in accordance with requirements.
 - 3.12 Compatibility of alterations with existing systems is confirmed and new work tested both in isolation and when integrated with existing systems.
 - 3.13 Procedures for referring non-routine events to immediate supervisor for directions are followed.
 - 3.14 Cabling is terminated efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services.
 - 3.15 Routine quality checks are carried out and a defect rectified to ensure cabling complies with requirements.
- 4 Complete cabling work, records and reporting.
- 4.1 OHS work completion risk control measures and procedures are followed.
 - 4.2 Work site is cleaned and made safe in accordance with established procedures.
 - 4.3 Record sheets and plans of cable location, type and infrastructure are accurately created or updated and stored in accordance with customer requirements.
 - 4.4 Cable pair record books are created or updated to provide an accurate record of pair locations, inter-connections and usage in accordance with industry codes of practice and AS/ACIF S009.
 - 4.5 Cabling completion advice is documented and reported in accordance with requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and laying and connecting cables for multiple access to telecommunication services.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EF102A

Telecommunications telephony and switching

Evidence shall show an understanding of telecommunications telephony and switching, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Principles and characteristics of sound encompassing:

- Sound characteristics
- Sound waves
- Distortion
- Attenuation
- Resonant frequency
- Sound pressure levels

T2. Transmission of sound encompassing:

- Compression
- Rarefaction
- Sound transmission
- Wavelength
- Inverse square rule (attenuation)
- Basic telephone construction

T3. Telephone transmitters encompassing:

- Telephone transmitter functions
- Telephone transmitter types
- Capacitive transmitters
- Moving coil transmitters

T4. Telephone receivers encompassing:

- Telephone receiver functions
- Telephone receiver types

T5. Telephone circuits encompassing:

- Components
- Operation of basic telephone
- Operation of basic facsimile machine

REQUIRED SKILLS AND KNOWLEDGE

- Cables used, colour and termination types
- T6. Overview of earthing and protection encompassing:
- Function of earthing
 - Earthing requirements
- T7. Customer switching systems (CSS), interfaces and devices encompassing:
- System Distribution Frames (SDF)
 - Power fail and line interface requirements (e.g. Indial, ISDN, Rotary Groups, Extension, Tie-line circuits and the like)
- T8. Installation of CSS encompassing:
- Documentation
 - CPR rules
 - CSS interfaces
 - CPR rules for SDFs
- T9. Installation and termination requirements overview encompassing:
- ACMA regulations and requirements
 - Technical standards
 - Programming of CSS
 - Metering and Public/Pay Phones
- T10. Hazards encompassing:
- Electronic components and circuits
 - Printed circuit boards
 - Physical
 - Static discharge
 - Chemical

KS02-EF102A

Telecommunications Open CPR regulations

Evidence shall show an understanding of telecommunications Open CPR regulations, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1 Cabling provider rules encompassing:
- Cabling registrars, auditors and inspectors
 - Mandatory and voluntary requirements for cabling work
 - Registration
- T2 General installation requirements encompassing:
- Cabling provider rules requirements
 - Earth potential rise
 - Catenary cabling systems
 - Optical fibre and coaxial cabling systems

REQUIRED SKILLS AND KNOWLEDGE

- Conduits
- Surge suppression devices
- T3 Cable distribution devices encompassing:
 - Cable distribution devices
 - Clearances
 - General requirement
- T4 Indoor cabling encompassing:
 - General requirements for indoor cabling
 - Required minimum clearances
 - Damp situations
 - Cables in lift and hoist shafts
- T5 Underground cabling encompassing:
 - Requirements for underground cabling
 - Protection of underground cabling
 - Segregation from other services
- T6 Aerial cabling encompassing:
 - Requirements for aerial cabling
 - Minimum clearances
 - Segregation requirements
- T7 Earthing encompassing:
 - Earthing systems
 - Earthing of equipment
 - Equipotential bonding
- T8 Miscellaneous regulations encompassing:
 - Cabling in heritage buildings
 - Cabling in public places
 - Cabling in hazardous areas

KS03-EF102A

Telecommunications installation practices

Evidence shall show an understanding of telecommunications installation and maintenance practices, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Telecommunication cable types encompassing:

- Construction
- Characteristics
- Applications

T2 Cable identification encompassing:

- Plans and drawing
- Labelling
- Documentation

REQUIRED SKILLS AND KNOWLEDGE

T3 Building structures, materials and sequencing encompassing:

- Building types
- Timber frame
- Brick veneer
- Double brick
- Metal frame
- Parts of a building
- Sequence of construction
- Stages of construction where electrical work is completed
- Environmental and heritage awareness purpose and regulations

T4 Cable installation encompassing:

- Hazards
- Cable damage prevention
- Cable dispensers
- Cable enclosures
- Types
- Fixing
- Regulations
- Distribution boxes and back mounts
- Systems

T5 Termination Boundaries and devices encompassing:

- Electrical connections
- Hazards
- Regulations

T6 Cable preparation and terminations and hauling mechanisms encompassing:

- Indoor Methods
- Outdoor Methods

T7 Earthing concepts encompassing:

- MEN System
- Communication Earthing System
- Telecommunication Reference Conductor
- Earthing Cable Shield
- Testing
- Earth Barriers
- Purpose of earth testing instruments
- Earth Potential Rise
- Earthing test procedures
- Interpretation of results

REQUIRED SKILLS AND KNOWLEDGE

T8 Surge suppression and system encompassing:

- Purpose
- Types
- Operation
- Installation Techniques
- Earthing requirements

T9 Cable shielding and interference encompassing:

- EMI/RFI Principles
- Sources
- Reduction Techniques
- Earthing Cable Shields

T10 Telecommunication earthing systems encompassing:

- Hazards
- Solutions
- Installation
- Termination
- Line taps
- Testing

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships.

However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Lay and connect cables for multiple access to telecommunication services as described in 8) and including:
 - A Terminating systems at both distributor and outlet locations and at least one 50 pair copper cable, with accurate completion of installation records, drawing alterations and compliance forms
 - B Placing of cables on support structures and building faces for both internal and external locations
 - C Securing cables correctly for above locations
 - D Avoiding cable damage such as crushing, burning, kinking, sheath twist, cutting and nicking, bending radius
 - E Reading and interpreting drawings related to cable layouts, outlet location, cable coding system and identifiers, distributor locations
 - F Conducting and interpreting cable test results
 - G Correctly interpreting and applying standards and regulations
 - H Completing the required documentation
 - I Dealing with unplanned events by drawing on

essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to laying and connecting cables for multiple access to telecommunication services.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE10 Fix and secure electrotechnology equipment
5A

UEENEEE10 Use drawings, diagrams, schedules, standards,
7A codes and specifications

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to cable laying and connecting applicable to larger commercial and industry installations involving many lines, multi-pair cables, backbone cabling, multi-story buildings and more complicated termination modules and distributors.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Data and Voice Communications

UEENEEF103A Install and maintain telecommunication cabling for services in lifts

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the installation and maintenance of telecommunications cabling in lift installations. It encompasses working safely and to Australian Communications and Media Authority's 'Lift' Cabling Provider Rule, installing multiple telephone line, multi-pair cables, backbone cabling, terminating in socket outlets, termination modules and distributors, testing and compliance checks and completing cabling documentation.

Application of the Unit

Application of the Unit **2)**

This unit applies to customer cabling terminated on distributors and to the installation, maintenance and modification of indoor, external, underground cabling. Customer cabling, for the purpose of this standard, may be used to connect devices for a range of applications, including for example: telecommunications (phones and facsimile), data including video and multimedia, security and alarms, and fire protection.

Licensing/Regulatory Information

License to practice **3)**

This unit meets the minimum ACMA 'prescribed level of

License to practice

3)

knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved'. Therefore, skills and knowledge described in this unit may only be practised under the requirements set out in ACMA 'Lifts' Cabling Provider Rule.

Practice of this competency standard unit is also subject to regulations directly related to occupational health and safe and contracts of training where they apply.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 04A Solve problems in d.c. circuits

Prerequisite Unit(s) 4)

UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuits
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG1 08A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEG1 16A	Diagnose and rectify faults in lifts systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare to install and maintain cabling in lifts	1.1	OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
		1.2	Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.
		1.3	Remote power feeding is identified and established risk control measures prepared.
		1.4	The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.
		1.5	Cable routes are planned within the constraints of the building structure, significant and regulations.
		1.6	Earthing requirements are determined with consideration of existing earthing

ELEMENT

PERFORMANCE CRITERIA

- arrangements, where applicable and of cable system earth upper and lower resistance limitations.
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
 - 1.8 Sources of materials that may be required for the work are established in accordance with established routines and procedures.
 - 1.9 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Install and maintain cabling in lifts.
- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
 - 2.2 Installed support structure is checked to ensure cable will not be exposed to damage during installation and general operation.
 - 2.3 Catenary supports are secured to building structure and tensioned where necessary to ensure cable weight can be carried in operating conditions with interference and safety segregation maintained including adherence to AS/ACIF S009.
 - 2.4 Protective earthing of metal work is installed in accordance with requirements and to industry standards.
 - 2.5 Cables/wires are handled in accordance with manufacturer application specifications including tension and bending stress requirements.
 - 2.6 Control cubicles, travelling cable supports, junction boxes, line isolator units, back-mount and outlet layout conforms to manufacturer specifications and allows adequate work space for ease of access and avoid overlaying and segregation incoming and outgoing cables.

ELEMENT

PERFORMANCE CRITERIA

- 2.7 Sufficient excess is allowed at cable ends to facilitate termination.
- 2.8 Telecommunication outlet ends of cable are uniquely labelled to match identifier at originating location.
- 2.9 Cable is placed and secured to maintain safety and interference segregation in accordance with legislative and industry standards.
- 2.10 Cable ties not tightened to the point of causing cable sheath damage or transmission impairment are trimmed flush to prevent risk of personal damage.
- 2.11 Cables installed as catenaries or supported by catenaries in external environment shall meet minimum above ground clearances and clearances from hazardous electrical services as per AS/ACIF S009.
- 2.12 Travelling cables installed and secured to maintain safety and in accordance to relevant legislative, industry and manufacturer's standards.
- 2.13 Local Isolation Units are fitted as required by TS001 and AS/ACIF S009.
- 2.14 Over-voltage protection devices are fitted to all cable pairs, where required, to suppress voltage surges with the devices protectively earthed in accordance with AS/ACIF S009.
- 2.15 TRC/CES/Earth wire insulation is protected against damage and TRC/CES and protective earths segregated in accordance with relevant industry and legislative standards AS/ACIF S009.
- 2.16 Procedures for referring non-routine events to immediate supervisor for directions are followed.
- 2.17 Cabling is installed efficiently without waste of materials and energy or damage to apparatus,

ELEMENT

PERFORMANCE CRITERIA

- the surrounding environment or services.
- 2.18 Routine quality checks are carried out to ensure cabling complies with requirements.
3. Terminate and test cables and earth wires in lifts.
- 3.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 3.2 Cable sheath removed to allow for correct termination length and without damage to underlying conductors and their insulation.
- 3.3 Terminating modules are installed in accordance to manufacturer specifications and cable pairs neatly and sequentially fanned for termination.
- 3.4 Conductors are terminated in accordance with recommended colour code sequence using appropriate termination tools in accordance with manufacturer specifications.
- 3.5 Cable shield (if applicable) is earthed to manufacturer specifications and relevant industry codes of practice including AS/ACIF S009.
- 3.6 Visual inspection is undertaken to confirm termination colour code sequence has been followed prior to end-to-end testing of wire and pair termination integrity.
- 3.7 Cable pairs are tested and clearly labelled to provide an accurate identification in accordance with requirements.
- 3.8 TRC/CES/Earth wires are terminated with connectors recommended by manufacturers in accordance with relevant industry codes of practice including AS/ACIF S009.
- 3.9 TRC/CES /Earth wire continuity is maintained through out and interface requirements with electrical systems are observed.
- 3.10 TRC/CES /Earthing installation is tested for continuity, insulation resistance and conductive

ELEMENT

PERFORMANCE CRITERIA

- resistance as per relevant industry standards including AS/ACIF S009.
- 3.11 Earthing system is labelled in accordance with requirements.
 - 3.12 Compatibility of alterations with existing systems is confirmed and new work tested both in isolation and when integrated with existing systems.
 - 3.13 Procedures for referring non-routine events to immediate supervisor for directions are followed.
 - 3.14 Cabling is terminated efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services.
 - 3.15 Routine quality checks are carried out and a defect rectified to ensure cabling complies with requirements.
- 4 Complete cabling work, records and reporting.
- 4.1 OHS work completion risk control measures and procedures are followed.
 - 4.2 Work site is cleaned and made safe in accordance with established procedures.
 - 4.3 Record sheets and plans of cable location, type and infrastructure are accurately created or updated and stored in accordance with customer requirements.
 - 4.4 Cable pair record books are created or updated to provide an accurate record of pair locations, inter-connections and usage in accordance with industry codes of practice and AS/ACIF S009.
 - 4.5 Cabling completion advice is documented and reported in accordance with requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining cabling for telecommunication services in lifts.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EF103A Telecommunications Installation and Maintenance Practices for Lifts

Evidence shall show an understanding of telecommunications installation and maintenance practices for lifts, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Lift telecommunications cabling Regulations and Standards

- Registration of Cablers
- Standards
- Record keeping (cable records)
- Lift boundary

T2. Lift telecommunication cables and termination methods

- Cables identification
- Types of cables
- Round travelling cable
- Flat travelling cable
- Cable wire identification
- colour codes

T3. Installation methods of communication cabling

- Requirements
- Installation techniques
- Cabling installation equipment
- Cable drawing and hauling techniques
- Cable installation and cable stripping
- Termination
- Solder
- Screw
- Insulation crushing screw
- Insulation displacement
- Segregation
- Cable protection methods

REQUIRED SKILLS AND KNOWLEDGE

T4. Testing of communication cabling

- Types of tests
- Continuity
- Correct sequence
- Revised pair
- Transposed or split pair
- Insulation resistance
- Test equipment

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and maintain cabling for telecommunication services in lifts as described in 8) and including:

- A Terminating travelling cables at termination devices and outlet locations with accurate completion of installation records, drawing alterations and compliance forms
- B Placing of cables on support structures and building faces for both internal and external locations
- C Securing cables correctly for above locations
- D Securing trailing cables
- E Avoiding cable damage such as crushing, burning, kinking, sheath twist, cutting and nicking, bending radius
- F Reading and interpreting drawings related to cable layouts, outlet location, cable coding system and identifiers, distributor locations
- G Conducting and interpreting cable test results
- H Correctly interpreting and applying standards and regulations
- I Completing the required documentation
- J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice

using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing and maintaining cabling for telecommunication services in lifts.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and maintaining cabling for telecommunication services in lifts.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Data and Voice Communications

UEENEEF104A Install and modify performance data communication copper cabling

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the installation and termination of high performance data copper cabling in buildings and premises and intended for connection a telecommunications network. It encompasses working safely and to standards, installing multiple data lines and backbones using structured twisted pair cabling, terminating at distributors, termination modules and in socket outlets, testing and compliance checks and completing cabling documentation.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a registration to practise in the workplace subject to requirements set out ACMA 'Open' Cabling Provider Rule. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

License to practice

3)

training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEF10 2A Install and maintain cabling for multiple access to telecommunication services

Prerequisite Unit(s) 4)

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install and/or modify copper cabling.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Installation or modification of wiring is prepared in consultation with others affected by the work and sequenced appropriately.
	1.5 The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.
	1.6 Cable routes are planned within the constraints of the building structure, fire walls, cultural/heritage requirements and regulations.
	1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
	1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
	1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
	1.10 Preparatory work is checked to ensure no damage has occurred and that it complies with requirements.

ELEMENT	PERFORMANCE CRITERIA
2 Install copper cables or modify.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Cables are installed or modification to comply with manufacturer specifications, technical standards and job requirements with sufficient excess to affect terminations.
	2.3 Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.
	2.4 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.5 Ongoing checks of the quality of installed or modified wiring are undertaken in accordance with established procedures.
	2.6 Cable installation/modification is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
3 Terminate copper cables.	3.1 OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Cable termination work area is cleaned and safety measure implemented.
	3.3 Cables are prepared for termination in accordance with manufacturer specifications and technical standards.
	3.4 Over voltage protection devices are fitted to cables with metallic components.
	3.5 Cable shields are earthed in accordance with manufacturer specifications and technical standards.
	3.6 Twist ratio of structured metallic cables is maintained in accordance with manufacturer specifications and technical standards.
	3.7 Twisted pair cables are terminated in accordance

ELEMENT

PERFORMANCE CRITERIA

- with manufacturer specifications and technical standards.
- 3.8 Cable performance tests are conducted accurately and results documented.
- 3.9 Causes of defects indicated by test results are identified and rectified.
- 3.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 3.11 Ongoing checks of the quality of installed wiring are undertaken in accordance with established procedures.
- 3.12 Cable terminations are carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
- 4 Document and verify copper cabling installation and performance.
- 4.1 OHS work completion risk control measures and procedures are followed.
- 4.2 Work site is cleaned and made safe in accordance with established procedures.
- 4.3 Final checks are made to that the installed cabling conforms to requirements.
- 4.4 Documentation certifying system performance is issued to an appropriate person(s).

REQUIRED SKILLS AND KNOWLEDGE

T7. Distribution boxes and back mounts

- Systems
- Termination Boundaries and devices

T8. Electrical connections

- Hazards
- Regulations

T9. Cable preparation and terminations and hauling mechanisms

- Indoor Methods
- Outdoor Methods

T10. Category 5 and 6 structured cabling

- design principles

T11. Category 5 and 6 structured cabling installation systems

- coaxial cable construction
- uses
- requirements

T12. Category 5 and 6 structured cabling performance requirements

- approved practices
- safety requirements
- connectors
- terminating tools
- continuity tests
- fault diagnosis
- recording results

T13. Selecting cable and cabling hardware

- cable characteristics
- higher performance cable types
- requirements of Australian Standards

T14. Testing Category 5 and 6 cabling

- Testing

T15. Local area network cabling systems

T16. Coaxial cables

- Coaxial cables
- Coaxial cable installation systems
- Twisted pair cable installation systems

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and modify performance data communication structured cabling as described in 8) and including:
 - A Reading and interpreting drawings related to cable layouts, cable schedules and apparatus locations.
 - B Routing, placing and securing cables to comply with requirements

- C Maintaining fire integrity
- D Preparing and terminating each type of cable to comply with requirements.
- E Conducting cable performance test accurately
- F Identifying and rectifying anomalies
- G Completing the necessary documentation accurately.
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing and modifying performance data

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install or modify optical fibre cabling	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Installation or modification of wiring is prepared in consultation with others affected by the work and sequenced appropriately.
	1.5 The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.
	1.6 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
	1.7 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
	1.8 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
	1.9 Preparatory work is checked to ensure no damage has occurred and that it complies with requirements.
2 Install or modify optical fibre cables	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Optical fibres are tested for optical continuity.
	2.2 Cables are installed or modification to comply with manufacturer specifications, technical standards and job requirements with sufficient excess to affect terminations.
	2.4 Established methods for dealing with unexpected situations are discussed with appropriate person(s) and

ELEMENT

PERFORMANCE CRITERIA

		documented.
	2.5	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6	Ongoing checks of the quality of installed wiring are undertaken in accordance with established procedures.
	2.7	Cable installation/modification is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
3	Terminate optical fibre cables.	
	3.1	OHS risk control measures and procedures for carrying out the work are followed.
	3.2	Cable termination work area is cleaned and safety measure implemented, particularly for terminating optical fibre cables.
	3.3	Cables are prepared for termination in accordance with manufacturer specifications and technical standards.
	3.4	Optical fibre connectors are fitted in accordance with manufacturer specifications and technical standards.
	3.5	Appropriate methods are used to splice optical fibre cables in strict accordance with OHS safety measures, manufacturer specifications and technical standards.
	3.6	Cable performance tests are conducted accurately and results documented.
	3.7	Causes of defects indicated by test results are identified and rectified.
	3.8	Unexpected situations are dealt with safely and with the approval of an authorised person.
	3.9	Ongoing checks of the quality of installed wiring are undertaken in accordance with established procedures.
	3.10	Cable terminations are carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.

ELEMENT

PERFORMANCE CRITERIA

4 Document installation or modification, and verify data communication optical fibre cabling performance.	4.1	OHS work completion risk control measures and procedures are followed.
	4.2	Work site is cleaned and made safe in accordance with established procedures.
	4.3	Final checks are made to that the installed cabling conforms to requirements.
	4.4	Documentation certifying system performance is issued to an appropriate person(s).

REQUIRED SKILLS AND KNOWLEDGE

bands.

- Frequency of oscillation and the relationship to wavelength of light.
- Propagation speed and the refractive index.
- Reflection of light and refraction of light.

T6. Optical Fibre Principles of Operation

- Multi Mode Optical Fibres (MMOF)
- Single Mode Optical Fibres (SMOF)
- Advantages and applications
- Refractive index and how it can be employed in optical fibres.
- Transmission path for laser energy within the optical fibre.
- Optical fibre performance and the mechanisms that may result in losses.
- Requirements of optical fibre cables as specified in current Standards

T7. Installation of Cables

- Requirements of the standard AS/ACIF S009 or its replacement.
- AS/NZS 3080 or its replacement.
- Installation requirements of cables by the manufacturer.
- Building Codes of Australia.
- Construction of domestic, commercial and industrial buildings.
- Purpose and procedures for pre-testing optical fibre cable prior to installation
- Bending radii and hauling requirements.
- Cable supporting structures, cable trays and catenaries
- Types of securing devices and anchors.
- Safety precautions

T8. Terminating Fibre Cables

- Precautions required for the use of solvents and cleaning agents.
- Safe handling and disposal of waste materials at the conclusion of termination.
- Safe handling of fibre cables that may carry laser light energy.
- Manual means of stripping and cleaning optical fibre cables.
- Optical devices to safely examine optical fibre cables.
- Mechanical means to terminate or splice optical fibre cables
- Termination devices and methods
- Preparation and splicing techniques.
- Devices used to protect terminations and splices against mechanical damage.
- Colour individual fibre cables and tubes to ensure end to end integrity.

T9. Testing optical fibre cables.

- AS/NZS 3080 Telecommunications Installations
- Concept of measurements in decibels.
- Loss measurements methods at different wavelengths of light

REQUIRED SKILLS AND KNOWLEDGE

- Setting up required equipment for accurate testing and the calibration of that equipment.
- Precautions employed to ensure accurate measurements.
- Operating principles and applications of an Optical Time Domain Reflectometer (OTDR).
- Operating principles and applications of an visible light source and an optical light loss test set
- Extraction and recording of test reports.
- Analyse and interpretation of test reports and corrective action.

T10. Building Construction and the building codes.

- Building Codes of Australia
- Construction of domestic, commercial and industrial buildings

T11. Supporting structures and fixings

- Types of cable supporting structures, cable trays and catenaries
- Types of securing devices for anchoring cable trays and catenaries.

T12. Administration and management (records)

- Completion Compliance Certificate (TCA1)
- Contractual obligations for the provision of test results and reports to customers.
- Requirements to keep and make available copies of test results of individual fibres.
- Requirements to record cable pathways and locations of coiled extra cable length for expansion or re-termination.
- Requirements of labelling Frames, Cabinets and outlets.
- Requirements of record keeping for cross connects and patches.
- How to plan records indicating history of faults or deficiencies attributed to the fibre cable to plan replacement or maintenance.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and modify performance data communication optical fibre cabling as described in 8) and including:
 - A Reading and interpreting drawings related to cable layouts, cable schedules and apparatus locations.
 - B Routing, placing and securing cables to comply with requirements
 - C Maintaining fire integrity

- D Preparing and terminating each type of cable to comply with requirements.
- E Conducting cable performance test accurately
- F Identifying and rectifying anomalies
- G Completing the necessary documentation accurately.
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing and modifying performance data communication optical fibre cabling

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers providing known solutions to predictable problems in single and multiple path circuits operated at extra-low voltage as they apply to various voice and data communications work functions. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable communication circuit problems.

Application of the Unit

Application of the Unit 2)

This unit shall apply to persons entering work in electrotechnology and may be used in school based vocational programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However they are subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work on extra-low voltage voice and data communications circuits	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Solve problems in extra-low voltage voice and data communications circuits	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Established routines are used to solve circuit problems using measured and calculated values

ELEMENT**PERFORMANCE CRITERIA**

		as they apply to single path, single source circuits.
	2.5	Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3	Complete work and document problem solving activities.	
	3.1	OHS work completion risk control measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Justification for solutions used to solve circuit problems is documented.
	3.4	Work completion is documented and appropriate person(s) notified in accordance with established routine procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in extra-low voltage voice and data communications circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EF106A

Electrotechnology communication principles

Evidence shall show an understanding of electrotechnology communication principles, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. The basic electrical circuit

- basic circuit components
- function of basic circuit components
- connection of components
- measurement of circuit parameters
- open-circuit, closed-circuit and short-circuits.

T2. Circuit parameter relationships

- Ohms Law
- calculation of voltage, current and resistance
- power dissipated
- calculation of power.

T3. Measurement instruments (voltage, current & resistance)

- safe working procedures
- handling and storing instruments
- selecting and set up of instruments
- connecting instruments
- read analogue scales and digital readouts.

T4. Effects of electrical current

- physiological effect
- heating effect
- magnetic effect
- chemical effect
- typical uses

T5. EMF sources

- basic generator
- basic thermocouple

REQUIRED SKILLS AND KNOWLEDGE

- photovoltaic cells
- piezo electric
- primary and secondary cells.

T6. D.C. resistive circuits

- series circuits (set-up, measurement and calculations)
- parallel circuits (set-up, measurement and calculations)
- series-parallel circuits (set-up, measurement and calculations).

T7. Capacitance

- construction of capacitors
- operation of capacitors
- units
- charge of a capacitor
- RC series circuit.

T8. Magnetism and electromagnetic induction

- permanent magnets
- electromagnetism
- induced emf
- inductors
- principles of inductance
- unit of inductance
- electromagnetic radiation (EMR)
- cross talk.

T9. A.C. principles

- generation of sinusoidal voltage
- a.c. circuit parameters – frequency, period, amplitude, instantaneous value, maximum value, peak value, peak to peak value and rms value
- calculation of frequency and rms values
- effects of frequency on inductors
- effects of frequency on capacitors
- transformers construction and operating principles.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in solving problems in extra-low voltage data and voice communications circuits as described in 8) and including:
 - A Determining the operating parameters of an existing circuit.
 - B Determining the frequency response of existing circuits

- C Altering an existing circuit to comply with specified operating parameters.
- D Developing circuits to comply with a specified function and operating parameters.
- E Identifying earth faults.
- F Identifying loss of supply.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solve problems in extra-low voltage voice and data communications circuits.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

Single source single and multiple path communication circuits as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following disciplines:

- Voice and Data Communications
- Electronics
- Fire protection
- Renewable and sustainable energy systems, and
- Security technology
- In relation to at least three of the following types of communication circuit problems and on at least two occasions:
 - Determining the operating parameters of an existing circuits
 - Determining the frequency response of an existing circuits
 - Identifying and locating open-circuits
 - Identifying and locating short-circuits
 - Identifying earth faults
 - Identifying loss of supply

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Data and Voice Communications

UEENEEF107A Set up and configure the wireless capabilities of communications and data storage devices

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers entering instructions in wireless devices with simple built-in programming function and verifying that the device operates as intended. It encompasses safe working practices, checking device software installation, following written and oral instruction and procedures and completing necessary documentation.

Note: Examples of wireless devices are personal digital assistants(PDAs), mobile phones, personal computers(PCs) remote controls etc

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a registration to practise in the workplace subject to requirements set out ACMA 'Open' Cabling Provider Rule. Practice in workplace and during training is also

License to practice

3)

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to enter operating instructions.	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been identified are reported and advise on risk control measures are sought from the work supervisor.
	1.4 Work supervisor or customers are consulted to determine which functions of the device are to be use and the parameter of each.
	1.5 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

ELEMENT

PERFORMANCE CRITERIA

	1.6	Device installation is checked for compliance with job specification and regulations where they apply.	
2	Enter operating instructions.	2.1	Established OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
		2.3	The required status of each function of the device is entered and their parameters set in accordance with manufactures programming instructions.
		2.4	Entered data are checked as meeting those specified by the work supervisor or customer.
		2.5	Procedures for referring non-routine events to immediate supervisor for directions are followed.
3	Test device operation and report.	3.1	Device operation is tested in strict accordance OHS requirements and procedures.
		3.2	Operating anomalies are identified and corrected in accordance with established routines.
		3.3	OHS work completion risk control measures and procedures are followed.
		3.4	Work site is cleaned and made safe in accordance with established procedures.
		3.5	Work completion is reported and appropriate person(s) notified in accordance with established routines.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and set up and configuring the wireless capabilities of communications and data storage devices.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies..

KS01-EF107A

Wireless devices

Evidence shall show an understanding of wireless devices, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1. Types and applications
- T2. Operating principles at sub-system level
- T3. Programming functions
- T4. Networking set up

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control

measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set up the wireless capabilities of communications and data storage devices as described in 8) and including:

- A Understanding required operating functions and parameters.
- B Identifying non-compliance conditions of device installation.
- C Entering functions and parameters correctly.
- D Correcting programming anomalies.
- E Testing and verify device operation.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and
specific
resources for
assessment** **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to setting up the wireless capabilities of communications and data storage devices.

**Method of
assessment** **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to entering and verifying operating instruction in at least two types of microprocessor equipped devices with built-in icon-based programmable functions such as programmable relays, timers, temperature controllers, detection devices for security and fire.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers selecting and arranging of wireless access devices, routers and switches for local area and wide area networks intended for connection to a telecommunications network. The unit encompasses selecting compliant equipment, developing LAN/WAN arrangements that comply with regulation, based on calculated and deemed-to-comply solutions and completing network documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired and is therefore not applicable to those entering work.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|--|
| 1 | Prepare to select equipment. | 1.1 | The extent and nature of the communications network is determined from job specifications. |
| | | 1.2 | Safety and other regulatory requirements to which the wireless network area shall comply are identified, obtained and understood. |
| 2 | Arrange locations of equipment and cable routes. | 2.1 | Location of equipment is arranged to comply with job specifications and regulatory requirements. |
| | | 2.2 | Cable routes are planned to ensure maximum lengths specified by standards and the manufacturer are not exceeded. |
| | | 2.3 | Cable routes are planned to comply with job specifications and regulatory requirements. |
| | | 2.4 | Earthing is arranged to comply with job specifications and regulatory requirements. |
| 3 | Select cables and equipment. | 3.1 | Cables types are selected for suitability for the environments in which they are to be installed, performance required, and regulatory requirements. |
| | | 3.2 | Cable sizes are selected to meet capacity and performance requirements. |
| | | 3.3 | Earthing components are selected to meet regulatory and earthing requirements. |
| | | 3.4 | Evidence is obtained that network equipment selected complies with safety requirements. |
| | | 3.5 | Electronic equipment types are selected for |

ELEMENT

PERFORMANCE CRITERIA

- suitability for the environments in which they are to be installed, performance required, and regulatory requirements.
- 4 Document communications network.
- 4.1 Reasons for selections made, including calculations, are documented in accordance with established procedures.
- 4.2 Wireless networks equipment for arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting and arranging equipment for wireless networks.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EF108A

Wireless network equipment, selection and arrangements

Evidence shall show an understanding of wireless network equipment selection and arrangements, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Operating systems and networks

- Operating system fundamentals
- Networking fundamentals
- Physical components of a network
- Transmission Control Protocol / Internet Protocol (TCP / IP) encompassing:
 - Network Services
 - Network Operating Systems
- Installation and boot processes

T2. Wireless network components for local area and wide area networks

- Types of devices, routers, switches and cables
- Construction and operating principles
- Selection of compliant components and cables

T3. Wireless network configurations

- LAN/WAN arrangements and component locations
- Cable routing
- Earthing
- Compliance with job specifications and regulation/s
- Calculated and deemed-to-comply solutions and completing network documentation.

T4. Wireless network security

T5. Wireless network documentation

- Purpose and extent of maintaining work activities records in an enterprise
- Types of records for maintaining work activities in an enterprise
- Methods for recording and maintaining work records
- Work records required by regulation requirements

REQUIRED SKILLS AND KNOWLEDGE

- Established procedures and appropriate person(s).
- Reasons for selections made, including calculations
- Wireless networks equipment for arrangement and specifications for all selected items

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the installation, termination and setting up of data and voice equipment for high performance LANs in buildings and premises and intended for connection to a telecommunications network. It encompasses working safely and to standards, installing hubs, routers, switches, decoders, PABXs connected by structured, coaxial and optical fibre cabling, and completing network documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a registration to practise in the workplace subject to requirements set out ACMA 'Open' Cabling Provider Rule. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

License to practice**3)**

training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical communications equipment and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEF10 2A Install and maintain cabling for multiple access to telecommunication services

Prerequisite Unit(s) 4)

UEENEEF10 4A Install and modify performance data communication copper cabling

UEENEEF10 5A Install and modify optical fibre performance data communication cabling

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install communications equipment and associated equipment.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Installation of communications equipment is prepared in consultation with others affected by the work and sequenced appropriately.
	1.5 The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.
	1.6 A location of communications equipment and associated equipment is planned within the constraints of the building structure, significant and regulations.
	1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
	1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
	1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
	1.10 Preparatory work is checked to ensure no damage has occurred and that it complies with requirements.
2 Install communications equipment and associated equipment.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Tests are carried out in strict accordance with OHS established safety procedures.

ELEMENT**PERFORMANCE CRITERIA**

- | | | | |
|---|--|---|---|
| | 2.3 | Communications equipment is installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance. | |
| | 2.4 | Cabling is terminated at communications equipment in accordance with manufacture's specifications and functional and regulatory requirements. | |
| | 2.5 | Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented. | |
| | 2.6 | Unexpected situations are dealt with safely and with the approval of an authorised person. | |
| | 2.7 | Ongoing checks of the quality of installed communications equipment are undertaken in accordance with established procedures. | |
| | 2.8 | Communications equipment installation is carried out efficiently without waste of materials or damage to communications equipment, circuits, the surrounding environment or services and using sustainable energy principles. | |
| 3 | Completion and report installation activities. | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | | 3.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | | 3.3 | Final checks are made to ensure that the installed communications equipment conforms to requirements. |
| | | 3.4 | 'As-installed' communications equipment is documented in accordance with requirements and appropriate person(s) notified in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and connecting voice and data communications equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EF109A

Voice and Data Communication Equipment

T1. Analogue and digital signals encompassing:

- How information is carried
- Signal distortion

Examples include attenuation, reflection, noise, dispersion, jitter, latency and collisions

T2. Types of networks, network components and hardware

T3. Local Area Network (LAN) architectures

T4. Networking protocols and the OSI model

T8. Internet services

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and connect voice and data communications equipment as described in 8) and including:
 - A Reading and interpreting drawings related to and communications equipment locations and connections.
 - B Placing and securing communications equipment accurately

- C Maintaining fire integrity
- D Connecting communications equipment to comply with requirements
- E Completing the required documentation accurately
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing and connecting voice and data communications equipment.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit

applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEF10 4A Install and modify performance data communication copper cabling

UEENEEF10 5A Install and modify optical fibre performance data communication cabling

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and connecting at least 5 different types of voice and data communications equipment terminating three types of communications cable.

Note:

1. Examples of communications equipment are distribution frames, hubs, routers, switches, decoders, PABXs and the like
2. Example of connecting cables are by structured cable, coaxial cables and optical fibre cabling.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers selecting and arranging data and voice communication cabling routes, socket outlets, termination modules, switches, routers and distributors in LANs intended for connection to a telecommunications network. The unit encompasses selecting compliant equipment, developing LAN arrangements that comply with regulation, based on calculated and deemed-to-comply solutions and completing network documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired and is therefore not applicable to those entering work.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEF10 2A Install and maintain cabling for multiple access to telecommunication services

UEENEEF10 4A Install and modify performance data communication copper cabling

UEENEEF10 5A Install and modify optical fibre performance data communication cabling

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to select equipment.	1.1 The extent and nature of the communications network is determined from job specifications.
	1.2 Safety and other regulatory requirements to which the communications network area shall comply are identified, obtained and understood.
2 Arrange locations of equipment and cable routes.	2.1 Location of equipment is arranged to comply with job specifications and regulatory requirements.
	2.2 Cable routes are planned to ensure maximum lengths specified by standards and the manufacturer are not exceeded.
	2.3 Cable routes are planned to comply with job specifications and regulatory requirements.
	2.4 Earthing is arranged to comply with job specifications and regulatory requirements.

ELEMENT	PERFORMANCE CRITERIA
3 Select cables and equipment.	3.1 Cables types are selected for suitability for the environments in which they are to be installed, required performance and regulatory requirements.
	3.2 Cable sizes are selected to meet capacity and performance requirements.
	3.3 Earthing components are selected to meet regulatory and earthing requirements.
	3.4 Evidence is obtained that network equipment selected complies with safety requirements.
	3.5 Electronic equipment types are selected for suitability for the environments in which they are to be installed, required performance and regulatory requirements.
4 Document communications network.	4.1 Reasons for selections made, including calculations, are documented in accordance with established procedures.
	4.2 Communications network arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting and arranging equipment for local area networks.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EF110A Local Area Network equipment, selection and arrangements

Evidence shall show an understanding of Local Area Network fundamentals, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Local Area Network fundamentals

- Analogue and digital signals encompassing:
 - How information is carried
 - Signal distortion

Examples include attenuation, reflection, noise, dispersion, jitter, latency and collisions

- Types of networks, network components and hardware
- Local Area Network (LAN) architectures
- Networking protocols and the OSI model
- Network signal propagation
- Transmission Control Protocol / Internet Protocol (TCP/IP)
- Basics of Encoding Networking Signals
- Internet services

T2. PABX fundamentals encompassing:

- Programming methods
- Configuration options
- Programming options

T3. Switches, hubs and routers encompassing:

- Purpose and function
- Selection
- Circuit configurations
- Connection arrangements
- System protocols

T4. Decoders encompassing:

- Purpose and function

REQUIRED SKILLS AND KNOWLEDGE

- Selection
 - Circuit configurations
 - Connection arrangements
 - System protocols
- T5. Coaxial cable installation and terminations encompassing:
- Coaxial cable types encompassing:
 - Structure of qualshield and trishield coaxial cables armour plated coaxial cable
 - Typical applications
 - Selection
 - Coaxial cabling installation and termination encompassing:
 - Separation and segregation requirements and techniques.
 - Coaxial cable connectors compatible with the cable type and the environment
 - Installation requirements and techniques applicable to coaxial cables
 - Coaxial cable connectors and termination techniques
- T6. Enterprise work activities records encompassing:
- Purpose and extent of maintaining work activities records in an enterprise
 - Types of records for maintaining work activities in an enterprise
 - Methods for recording and maintaining work records
 - Work records required by regulation requirements

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this

shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Select and arrange equipment for local area networks as described in 8) and including:

- A Arranging network to comply with safety and other regulatory and functional requirements.
- B Selecting appropriate types and sizes of cables.
- C Arranging network equipment.
- D Selecting appropriate earthing components.
- E Documenting installation arrangement, specification for items selected and reasons for the selections made.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a

workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to selecting and arranging equipment for local area networks.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEED10 Use basic computer applications relevant to a
1A workplace

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to selecting and arranging equipment for local area networks comprising a distribution frame, at least 20 telecommunication and 20 data outlets PABX and server.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers testing for certification finding and repairing faults in telecommunication installations and local area networks. The unit encompasses working safely, reading cabling diagrams, performance testing, applying logical fault finding procedures, testing functionality of the network, conducting repairs and completing the necessary documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a registration to practise in the workplace subject to requirements set out ACMA 'Open' Cabling Provider Rule. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

License to practice**3)**

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical communications equipment and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEF10 2A Install and maintain cabling for multiple access to telecommunication services

UEENEEF10 Install and modify performance data

Prerequisite Unit(s)

4)

4A communication copper cabling

UEENEEF10 Install and modify performance data

5A communication optical fibre cabling

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to test, report and rectify faults.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Health and safety risks are identified, and established risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
	1.4 Testing is prepared in consultation with others affected by the work and sequenced appropriately.
	1.5 The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.
	1.6 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
	1.7 Material needed for the testing, reporting and rectifying work is obtained in accordance with established procedures and checked against job requirements.
	1.8 Tools, equipment and testing devices needed to for the work are obtained in accordance with established procedures and checked for correct operation and safety.
	1.9 Preparatory work is checked to ensure no damage has occurred and that it complies with requirements.
2 Test and rectify faults	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Tests are carried out in strict accordance with OHS established safety procedures.
	2.3 Tests are prepared and conducted in accordance with test equipment operating instructions and

ELEMENT	PERFORMANCE CRITERIA
	requirements.
	2.4 Cable performance tests are conducted accurately and results documented in accordance with established procedures.
	2.5 Causes of defects or faults indicated by test results are identified and rectified in accordance with established procedures.
	2.6 Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.
	2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8 Ongoing checks of the quality of installed equipment are undertaken in accordance with established procedures.
	2.9 Testing and rectifying faults is carried out efficiently without waste of materials or damage to equipment, circuits, the surrounding environment or services and using sustainable energy principles.
3 Document and verify installation performance.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Service reports are completed, when necessary in accordance with established procedures.
	3.4 Documentation certifying system performance is issued to an appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and testing, reporting and rectifying faults in voice and data installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EF111A Data and voice cabling testing devices and techniques

Evidence shall show an understanding of data and voice cabling testing devices and techniques, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Networking fundamentals

- Analogue and digital signals encompassing:
 - How information is carried
 - Signal distortion

Examples include attenuation, reflection, noise, dispersion, jitter, latency and collisions

- Types of networks, network components and hardware
- Local Area Network (LAN) architectures
- Networking protocols and the OSI model
- Network signal propagation
- Transmission Control Protocol / Internet Protocol (TCP/IP)
- Basics of Encoding Networking Signals
- Internet services

T2. Basic electrical testing and measuring devices and techniques encompassing:

- Types and applications of testing/measuring devices including voltage testers, multimeters, clamp meters, continuity testers and insulation resistance testers.
- Features of testing/measuring devices including safety, user calibration and parameter and range settings.
- Connection of test/measuring devices into a circuit
 - safety procedures
 - circuit arrangement of test/measuring devices
- Taking readings
- Storage, maintenance and care of test/measuring devices.
- Australian Standard quality assurance requirements for test equipment calibration certification.

T3. Performance parameters associated with copper cables, coaxial cables and

REQUIRED SKILLS AND KNOWLEDGE

optical cables encompassing:

- Open circuit, short circuit and pair continuity
- Split pair and crossed pair
- Attenuation
- Return loss
- Insulation Resistance (leakage)
- Near end cross talk (NEXT)
- Attenuation to cross talk ratio (ACR)
- Loop resistance
- Noise (Impulse noise and average noise)
- Characteristic impedance

Note: Structured cabling including, twisted pair cabling, shielded twisted pair (STP), unshielded twisted pair (UTP) and higher performance cabling.

T4. Test results for compliance with required regulation, standards, and or codes for structured copper cables, coaxial; and optical fibre cables encompassing:

- Tests required to evaluate a given performance parameter
- Test equipment and leads needed to evaluate a given performance parameter.
- Operation of test equipment for correct evaluation of specific cable performance parameters and to obtain accurate and reliable results.
- Transmission performance requirements.

T5. Testing and validation of a customer premises cabling installation encompassing:

- Requirements of current Standard of site certification for high performance copper cables, coaxial cable and optical fibre cables
- Reporting requirements for the completion of work related to conformity of a cabling installation.
- Documentation required in certifying a cabling installation conforms to relevant standards and specifications.

T1. Optical Time Domain Reflectometer (OTDR) operating principles, applications and calibration procedures encompassing:

T2. Typical causes of non compliant test results.

T3. Recording, reporting and maintaining test results encompassing:

- Purpose and extent of maintaining work activities records in an enterprise
- Types of records for maintaining work activities in an enterprise
- Methods for recording and maintaining work records
- Work records required by regulation requirements

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Test, report and rectify faults in voice and data installations as described in 8) and including:

- A Reading and interpreting drawings and schedules of the installation
- B Preparing and conducting appropriate test accurately
- C Interpreting test results correctly

- D Identifying defects/faults from test results
- E Rectifying faults effectively
- F Completing the required documentation accurately.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to testing, reporting and rectifying faults in voice and data installations

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and

incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEF10 Install and modify performance data
4A communication copper cabling

UEENEEF10 Install and modify optical fibre performance data
5A communication cabling

UEENEEF10 Install and connect voice and data communications
9A equipment

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to testing, reporting and rectifying faults in voice and data installations comprising two different items of customer premises equipment and a local area network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEF10 2A Install and maintain cabling for multiple access to telecommunication services

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install aerial communication cables	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|------|---|
| 1.3 | Safety hazards that have not previously been identified are noted and established risk control measures are implemented. |
| 1.4 | Cabling installation is prepared in consultation with others affected by the work and sequenced appropriately. |
| 1.5 | The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken. |
| 1.6 | Cable routes are planned within the constraints of the precinct, structure, significant and regulations. |
| 1.7 | Advice is sought from appropriate persons to ensure the work is coordinated effectively with others. |
| 1.8 | Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements. |
| 1.9 | Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety. |
| 1.10 | Preparatory work is checked to ensure no damage has occurred and that it complies with requirements. |
| 2 | Install aerial communication cables. |
| 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| 2.2 | Poles are checked for soundness in accordance with established procedures. |
| 2.3 | Catenary cables are installed ensuring sufficient clearances are maintained in compliance with requirements. |
| 2.4 | Cables are attached to the catenary without |

ELEMENT**PERFORMANCE CRITERIA**

- strain or damage.
- 2.5 Cable ends are protected from damage in preparation for termination.
- 2.6 Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.
- 2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.8 Ongoing checks of the quality of installed aerial communication cables are undertaken in accordance with established procedures.
- 2.9 Cable installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
- 3 Document and verify cabling installation
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work site is cleaned and made safe in accordance with established procedures.
- 3.3 Documenting cable installation.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing aerial communication cables.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EF112A Telecommunication aerial cabling requirements and techniques

Evidence shall show an understanding of telecommunication aerial cabling, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Hazards and control measures in aerial cabling working environment encompassing:

- Risk management and assessment of risk:
 - Principle and purpose of risk management, and
 - Processes for conducting a risk assessment
- Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
 - Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
 - Parts of an electronic systems and equipment where high-currents are likely.
- Risks and control measures associated with high-voltage encompassing:
 - Parts of an electronic systems and equipment that operate at high-voltage,
 - The terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of high-voltage, and
 - Control measures used for dealing with the hazards of high-voltage.
- Risks and control measures associated with low voltage encompassing:
 - Risks associated with installation, fault finding, maintenance and repair.
 - Control measures before, while and after working on electronic systems or equipment
 - Isolation and tagging-off procedures.
 - Risks and restrictions in working live.
 - Control measures for working live
- Risks and control measures associated with working on aerial cables encompassing:
 - Soundness of pole for aerial cabling
 - Use of aerial safety equipment

REQUIRED SKILLS AND KNOWLEDGE

- Procedure to apply pole top rescue
- T2. Aerial construction methods and regulations
- T3. Joining aerial cables

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

- Install aerial communication cables as described in 8) and including:

- A Reading and interpreting drawings related to cable schedules and routes
- B Installing catenary cables correctly
- C Attaching communications cable to catenary without damage
- D Protecting cable ends
- E Completing the necessary documentation accurately
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing aerial communication cables.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no current assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing a representative range of aerial communication cables each, on at least two occasions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers installation of underground conduits and ducts and drawing-in communication cables. The unit encompasses working safely and to standard and specifications, preparing and filling trenches, placing conduits and ducts, drawing cables, and completing necessary documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a registration to practise in the workplace subject to requirements set out ACMA 'Open' Cabling Provider Rule. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various

License to practice**3)**

jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical communications equipment and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEF10 2A Install and maintain cabling for multiple access to telecommunication services

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to set up and configure basic data communication systems.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 The extent of set-up and configuration work is determined from job specifications and in consultation with appropriate person(s).
	1.3 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
	1.4 Hardware and software needed for the work are obtained in accordance with established procedures and checked against job requirements.
	1.5 Preparatory work is checked to ensure no damage has occurred and that it complies with requirements.
	1.6 OHS processes and procedures for a given work area are identified, obtained and understood.
2 Set up, configure and maintain basic data communication equipment.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Layout of data communications hardware, cabling and outlets is determined from job

ELEMENT**PERFORMANCE CRITERIA**

- specifications or in consultation with appropriate person(s).
- 2.3 Hardware is installed in accordance with the data communications system requirements. (Note 1)
- 2.4 Data communications software is installed and configured in accordance with network requirements. (Note 2)
- 2.5 Data communications operations are tested and anomalies identified and corrected.
- 2.6 Reported data communications failures and faults are responded to and appropriate tools and methods are used.
- 2.7 Identified causes of reported problems are rectified and the data communications link is tested in accordance with established procedures.
- 2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.9 Set-up configuration and maintenance are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete work and document activities.
- 3.1 OHS risk control work completion measures and procedures are followed.
- 3.2 Work site is cleaned and made safe in accordance with established procedures.
- 3.3 Data communications configuration and maintenance records are maintained in accordance with established procedures.
- 3.4 Service report is completed and forward to appropriate person(s) in accordance with established procedures.

Notes.

1. Examples of hardware include cables and connectors, dial up modems, and cable modems.

ELEMENT

PERFORMANCE CRITERIA

2. Examples of configuration include data communications protocols, user options and permissions, security, driver software.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and in setting up and configuring basic data communications systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EF114A

Data communication fundamentals

Evidence shall show an understanding of data communication fundamentals, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Process of data transmission encompassing:

- codes used in data communications
- asynchronous and synchronous transmission
- bits per second and baud rate
- DCEs and DTEs.
- error control, parity and CRC.

T2. Characteristics and limitations of the types of transmission media encompassing:

- information as a quantity.
- information content of symbols.
- redundancy in communications.
- common types of media used in data communications: twisted pair, coaxial.
- other communication systems: HF radio, satellite and cellular.

T3. Simple protocols encompassing:

- reason for protocols.
- simple protocols: teletype, X modem, half-duplex and full duplex.

T4. Types, characteristics and limitations of modems and interface standards encompassing:

- operation and types of modems
- Note: Examples include serial, parallel, USB, firewire, broadband, ADSL, cable modems
- modulation techniques: FSK, PSK and QAM.
- interface and signalling standards:
Note: Examples include RS232, V.24, Current loop, RS422, RS423, RS449, RS485, V35, X21 and G703.
- Limitations interface standards, speed and distance.

REQUIRED SKILLS AND KNOWLEDGE

T5. Types, characteristic specifications and limitations of fibre optic systems encompassing:

- fundamentals of light and how it travels in a fibre.
- typical fibre composition, multimode and single mode propagation
- laser and other light sources and detectors.
- fibre cable and splice fibre cable.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination

- legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set up and configure basic data communications systems as described in 8) Range: and including:
 - A Establishing the extent of work schedule.
 - B Obtaining specified hardware and software according to the work.
 - C Laying out network in accordance with requirements.
 - D Installing hardware as specified.
 - E Installing and configuring software to requirements.
 - F Identifying and correcting anomalies.
 - G Finding the cause of faults/malfunctions.
 - H Rectifying the cause of malfunctions.
 - I Documenting network configurations and activity results for future referencing.
 - J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in context of assessment', which should also be used in the formal

learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to setting up and configuring basic data communications systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to setting up and configuring basic data communications systems that include:

- Standard serial and parallel ports
- High-speed ports (e.g. USB, Firewire)
- 1 dial-up modem
- 1 broadband modem

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)

UEENEEF115A Assemble and connect telecommunication frames and cabinets

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor 1) Scope:

1.1) Descriptor

This unit covers assembly and connection of telecommunication frames and cabinets. The unit encompasses working safely, following standards, specifications and component/ manufacturer requirements, matching equipment with that specified, terminating and connecting communication wiring and completing necessary documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in a workplace specifically for the purpose of assembling and connecting communication frames and cabinets. In other skills and knowledge described in this unit may only be practised under the requirements set out in ACMA 'Open' Cabling Provider Rule. In addition, practice in this unit is subject to regulations directly related to occupational health and

License to practice

3)

safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to assemble and connect telecommunication frames and cabinets	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures for work preparation are followed.
	1.3 Work instructions, including layout and wiring diagrams, are identified, obtained and understood.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Materials required for the work are obtained in accordance with established routines and procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

ELEMENT	PERFORMANCE CRITERIA	
2 Assemble and connect telecommunication frames and cabinets	2.1	Established OHS risk control work measures are followed.
	2.2	Equipment is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.3	Frames/cabinets and communication components are fitted in accordance with work instructions, standards and established routines.
	2.4	Interconnections are made in accordance with work instructions, standards and established routines.
	2.5	Routine quality checks are carried out in accordance with work instructions.
	2.6	Completed communication frames/cabinets are checked/tested against work instructions and industry standards and in strict accordance with OHS risk control measures.
	2.7	Procedures for referring non-routine events to immediate supervisor for directions are followed.
	2.8	Work is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Check quality of assembled telecommunication frames and cabinets	3.1	Established OHS risk control measures for work completion are followed.
	3.2	Quality of assembled frames/cabinets is checked/tested against work instructions and industry standards and in accordance with established routines.
	3.3	Prescribed solutions are used where corrective actions to assembled components are necessary.
	3.4	Work report forms are completed accurately and appropriate person(s) notified in

ELEMENT

PERFORMANCE CRITERIA

accordance with established routine.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assembling and connecting telecommunication frames and cabinets.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EF115A and terminations

Voice and data cabinet assembly, cabling

Evidence shall show an understanding of voice and data cabinet assembly, cabling and terminations, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Cabinet internal cable routing and management provisions

T2. Cabinet ventilation requirements

T3. Cabinet structure encompassing:

- internal framework
- cable entry
- removable panels
- multiple cabinets
- doors, locks and hinges
- mounting rails
- access to equipment and cabling
- earthing arrangements and methods

T4. Mounting requirements for components that include

- rack units
- patch panels
- routers
- servers

T5. Communication cable and conductor terminations:

- approved termination devices and sockets
- special termination tools and their use
- cable colour coding up to 100 pair indoor and outdoor cable

T6. Methods of terminating cables:

- cables less than twenty pair
- twenty pair cable and greater
- structured cables
- coaxial cables

REQUIRED SKILLS AND KNOWLEDGE

- optical fibre cables
 - termination safety practices
- T7. Cable labelling devices
- Quality checks and tests

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to

be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Assemble and connect communication frames and cabinets as described in 8) and including:

- A Following assembly instructions
- B Selecting and placing equipment correctly
- C Making connection without damaging switchgear/control
- D Adhering to quality procedures
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a

workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to assembling and connecting telecommunication frames and cabinets.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to assembling and connecting telecommunication frames and cabinets each on at least two occasions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers ascertaining correct operation of single and three phase machines and solving machine problems as they apply to servicing, fault finding, installation and compliance work functions. It encompasses safe working practices, machine connections circuit arrangements, issues related to machine operation, characteristics and protection and solutions to machine problems derived from calculated and measured parameters.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, dismantle, assemble of electrotechnology components

UEENEEE104A Solve problems in d.c circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuit

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

2.2) Further Information:

For the full prerequisite chain details for this unit please

Prerequisite Unit(s) 2)

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to solve single and three phase low voltage machines problems.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
	1.4 The nature of the machine (s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.6 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Solve single and three phase low voltage machine problems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Established methods are used to solve machine problems from measure and calculated values as they apply to single and three-phase low voltage machines.
	2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|--|---|
| | 2.6 | Unexpected situations are dealt with safely and with the approval of an authorised person. |
| | 2.7 | Problems are solved without damage to machines, circuits, the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete work and document problem solving activities. | |
| | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | 3.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | 3.3 | Justification for solutions used to solve machine problems is documented. |
| | 3.4 | Work completion is documented and an appropriate person or persons notified in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in single and three phase low voltage machines.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EG006A

Single and three-phase transformers

Evidence shall show an understanding of single and three phase transformers to an extent indicated by the following aspects:

T1 Transformer construction encompassing:

- types of lamination style and core construction used in single-phase, three phase, double wound, auto transformers and instrument transformers.
- identification of different winding styles/types used in transformers.
- methods used to insulate low and high voltage transformers.
- construction of transformer tanks for distribution transformers.
- transformer auxiliary equipment. (Bushings, surge-diverters, tap-changers, hot oil & winding indicators, breather, Buchholz relay and conservator).
- function of transformer auxiliary equipment.
- types of information stated on transformer nameplates.
- application of transformers.
- performing basic insulation resistance, continuity and winding identification tests.

T2 Transformer operation encompassing:

- principles of mutual induction of a transformer.
- factors that determine the induced voltage in a transformer winding.
- determining the value of a transformers secondary voltage and current given one winding's electrical details and turns ratio.
- identification of voltage and current components of a phasor diagram for a transformer on no-load.
- principles of power transferred from the primary to secondary when a load is connected using a phasor diagram neglecting impedance drops.
- selecting transformers for specific application/s.
- safety features specified in AS/NZS3000 with respect to transformers and isolating transformers.

T3 Transformer losses, efficiency and cooling encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- power losses which occur in a transformer.
- tests which allow the power losses of a transformer to be determine.
- determination of transformer losses and efficiency using test results.
- relationship between transformer cooling and rating.
- methods used for natural and forced cooling of transformers.
- properties of transformer oil.
- tests conducted on transformer oil.

T4 Transformer voltage regulation and percent impedance encompassing:

- voltage regulation as applicable to a transformer.
- reasons for voltage variation in the output of a transformer.
- determine the voltage regulation of a transformer from voltage and percentage impedance values.
- percentage impedance as applied to transformers.
- determine the percent impedance by using test results.
- determine percent impedance of a transformer by calculation.

T5 Parallel operation of transformers and transformer auxiliary equipment encompassing:

- determine polarity markings for an unidentified single phase double wound transformer.
- need for parallel operation of transformers.
- conditions/restrictions required before two transformers can be connected in parallel.
- connecting transformers in parallel to supply a single load (loading on transformers operating in parallel).
- the consequences/effect of an incorrect connection.

T6 Auto-transformers and instrument transformers encompassing:

- identification of auto-transformers, voltage transformers and current transformers from their winding diagrams.
- determining voltage and current in the windings of an auto-transformer by calculation.
- advantages and disadvantages of an auto-transformer.
- AS/NZS3000 requirements with respect to transformers.
- construction of voltage transformers.
- ratings of voltage transformers.
- construction of current transformers.
- ratings of current transformers.
- precautionary measures taken to connect and disconnect instrument transformers.
- connection diagrams for instrument transformers.
- applications for auto-transformers and instrument transformers.

REQUIRED SKILLS AND KNOWLEDGE

KS02-EG006A

Alternating current rotating machines

Evidence shall show an understanding of alternating current rotating machines to an extent indicated by the following aspects:

T1 Operating Principles of three phase induction motors encompassing:

- determining circuit operating characteristics by using the right hand (grip) rule for conductors and solenoids and Fleming's left and right hand rules.
- characteristics of the magnetic field produced by a single, two and three-phase windings.
- speed of rotation of a rotating magnetic field.
- relationship between the rotor speed, slip and rotor frequency.
- basic principle of operation of an induction motor.
- reversing the direction of rotation of a three phase induction motor

T2 Three phase induction motor construction encompassing:

- basic component parts of a three-phase induction motor.
- types of rotors used in three-phase induction motors.
- connecting three-phase induction motor in both star and delta.
- dismantling three-phase induction motors.
- testing insulation resistance of a three-phase induction motor prior to connection to the supply.
- testing winding resistance (ohmic value and continuity) of a three-phase induction motor prior to connection to the supply

T3 Three phase induction motor characteristics encompassing:

- relationship between torque, speed, and power and interpretation of speed/torque curves of induction motors.
- squirrel cage motors operating characteristics conditions necessary for an induction motor to produce maximum torque.
- operating characteristics of an induction motor from name plate information and by measurement.
- induction motors efficiency and minimum energy performance standards (MEPS).
- full load efficiency and power factor of induction motors.

T4 Single phase motors – split phase encompassing:

- common types of single phase motor.
- principles of operation of a split phase induction motor.
- construction and basic characteristics of a split phase induction motor.
- applications of split phase induction motors.
- connecting, running and reversing a split phase induction motor.

T5 Single phase motors – capacitor and shaded pole types encompassing:

- identification of single phase induction motors including capacitor start, capacitor

REQUIRED SKILLS AND KNOWLEDGE

start/capacitor run, permanent split capacitor (PSC) and shaded pole

- principles of operation of each motor type listed above.
- operating characteristics and typical applications of each motor type listed above.
- connection and running each type of motor listed.
- reversing the direction of rotation of each of the capacitor type motors.

T6 Single phase motors – universal encompassing:

- principles of operation of a series universal motor.
- identification and functions of each of the basic parts of a series universal motor.
- operating characteristics and typical uses for a series universal motor.
- connecting, running and reversing a series universal motor.

T7 Motor protection encompassing:

- reasons why motor protection is required.
- requirements of the AS/NZS3000 Wiring rules with regards to motor protection.
- types of motor overload protection.
- operating principles of microtherm devices, thermal and magnetic motor protection devices.
- electrical features of motor protection HRC fuses.
- effects of under voltage and over voltage on motors and motor circuits.
- effects of repetitive starting and/or reversing on motors.
- special requirements for motor protection, in high humidity or moist environments, high temperature areas and corrosive atmospheres.
- operating principles of phase failure protection.
- selecting suitable protective devices for a given motor and starter combination.

T8 Three phase synchronous machines- operation principles and construction encompassing:

- power transfer diagram of an a.c. synchronous machine.
- need for the generation of a sinusoidal waveform.
- principles of operation of a synchronous alternator.
- principles of operation of a synchronous motor.
- principles of operation of an asynchronous generator (induction generator).
- identification of main parts of a synchronous alternator/motor.
- methods used to provide the excitation of a synchronous alternator/motor.
- block diagram of an alternator voltage regulator.
- advantages gained by the parallel operation of alternators.
- starting methods of synchronous motors.

T9 Alternators and generators encompassing:

- effects on the generated voltage of variations in excitation.
- effects on generated voltage of variations in load.
- identification of characteristic curves of an alternator.

REQUIRED SKILLS AND KNOWLEDGE

- types of prime movers used with single and three phase portable/standby alternators.
- manual operation of single and three phase portable/standby alternators.
- ratings of single and three phase portable/standby alternators.
- applications of single and three phase portable/standby alternators.
- construction details of single and three phase portable/standby alternators.
- common faults found in portable/standby alternators.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on

EVIDENCE GUIDE

the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in single and three phase low voltage machines as described as described in 8) and including:
 - A Determining the operating parameters of existing machines.
 - B Altering an existing machine to comply with specified operating parameters.

EVIDENCE GUIDE

- C Developing machines/circuits to comply with a specified function and operating parameters.
- D Determining the cause of low efficiency in an existing machine.
- E Determining conditions causing an existing circuit to be unsafe.
- F Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in single and three phase low voltage machines.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit

EVIDENCE GUIDE

other units

UEENEEE001B and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to any four of the following problems in single and three-phase low voltage machine and circuits.

- Determining the operating parameters of existing machines
- Altering an existing machine circuit to comply with specified operating parameters
- Developing machine circuits to comply with a specified function and operating parameters

Note:

Operating parameters include voltage, current, torque, efficiency, power, energy and power factor

- Determining the cause of low efficiency in an existing machine.
- Determining problems in existing machines to malfunction

Note:

Problems include bearing noise/faults, vibration, undervoltage, unbalanced windings

- Determining conditions causing an existing machine/circuit to be unsafe.

Note:

Examples of unsafe circuits includes electric shock hazard from indirect contact with conductive parts, insufficiently low impedance of a fault current path and inadequate fault protection

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers ascertaining correct operation of single and three phase low voltage electrical apparatus and circuits and solving circuit problems as they apply to servicing, fault finding, installation and compliance work functions. It encompasses safe working practices, apparatus circuit arrangements, issues related to operation, characteristics and protection and solutions to apparatus/circuit problems derived from calculated and measured parameters.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, dismantle, assemble of electrotechnology components

UEENEEE104A Solve problems in d.c circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuit

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

2.2) Further Information:

For the full prerequisite chain details for this unit please

Prerequisite Unit(s) 2)
refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)
This unit contains Employability Skills
The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit 4)
4.1) General Application
This unit applies to all qualifications, competencies and/or Skill Sets which require an electrical licence.
4.2) Importation
RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to solve single and three phase low voltage electrical apparatus/ circuit problems.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
	1.4 The nature of the apparatus/circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.6 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Solve single and three phase low voltage electrical apparatus/circuit problems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Apparatus/circuits/plant is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Established methods are used to solve apparatus/circuit problems from measure and calculated values as they apply to single and three-phase low voltage apparatus/circuit.
	2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or

ELEMENT

PERFORMANCE CRITERIA

- persons and documented.
- 2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.7 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Complete work and document problem solving activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work site is cleaned and made safe in accordance with established procedures.
- 3.3 Justification for solutions used to solve apparatus/circuit problems is documented.
- 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in single and three phase low voltage electrical apparatus and circuits.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EG033A

Electrical apparatus and circuits

Evidence shall show an understanding of electrical apparatus and circuits to an extent indicated by the following aspects:

T1 Lighting circuits – looping at the light/switch encompassing:

- the “loop at the light” method of wiring lighting circuits.
- the “loop at the switch” method of wiring lighting circuits
- wiring diagrams for the lighting circuit of an installation that incorporates one-way, two-way and two-way and intermediate switching of light points using the loop at the light/switch methods of TPS wiring.
- TPS cabling requirement for the loop at the light/switch circuit.
- installation methods of accessories and wiring for a lighting circuit incorporating one-way, two-way and two-way and intermediate switching of lighting points using the loop at the light/switch method of TPS wiring.
- correct operation of the install circuits including testing for correct compliance with Australian Standards.

T2 Circuits for socket outlets encompassing:

- the purpose of socket outlets.
- requirements concerning the polarity of switched socket outlets.
- correct cable size to supply 10 A, 15 A and 20 A socket outlets (single and three phase), for given installation conditions.
- number of socket outlets connected to a 16 A and 20 A circuit breaker.
- installation methods of a single phase socket outlet circuits.
- correct operation of the installed circuits including testing (dead testing only) for correct compliance with Australian Standards.

T3 Final sub-circuits and segregation encompassing:

- purpose of mixed circuits.
- circuit loading for a mixed circuit.
- purpose of segregation of circuits and the AS/NZS3000 requirements.

REQUIRED SKILLS AND KNOWLEDGE

- Installation methods a single phase mixed circuits.
- correct operation of the installed circuits including testing for correct compliance with Australian Standards.

T4 Electrical heating control devices encompassing:

- methods of manual heat control.
- methods of automatic heat control.
- types and application for common thermostats.
- operation of common thermostats.
- sensitivity and differential of thermostats.
- testing of a thermostat (including differential and correct operation)
- applications of simmerstats (infinite controls).
- operation of a simmerstat.
- electronic heat control (phase control and zero voltage switching).

T5 Fixed electrical heating appliances encompassing:

- Terms: heat energy, temperature, specific heat capacity, thermal conductivity and thermal stability.
- determining the heat energy in joules and kWh in a simple heating process.
- methods of heat transfer.
- Determining the heat energy input and output of a heating process.
- connections to a two phase stove.
- operation of reverse cycle air conditioning.

T6 Electrical water heater operation encompassing:

- types of water heaters (instantaneous and storage) and their methods of control.
- intrinsic safety (pressure relief and thermal cut-out).
- testing of over temperature cut-out point of a thermostat.
- switchboard requirements to supply a controlled load water heater.
- internal circuit of a twin element water heater, and supply connections.
- tariffs employed by local supply authorities.
- solar heating system and its integration into an installation.

T7 Alternative supplies encompassing:

- reasons for the installation of alternative supplies.
- types of alternative supply systems.
- characteristics and operation of UPSs.
- Australian Standards and local requirements for safety services supply systems.

T8 Installation of batteries encompassing:

- common types of primary cells and secondary batteries and typical applications.
- terminal voltage of common primary cells and secondary cells.
- correct storage, handling and disposal techniques for cells and batteries.

REQUIRED SKILLS AND KNOWLEDGE

- charge/discharge cycle for a secondary cell.
- effect of internal resistance on a secondary cell.
- state of charge of a secondary cell.
- installation of batteries as per AS/NZS3011
- commissioning procedures for various secondary batteries.
- safe working procedures when working with secondary cells and batteries.

T9 Fire protection – residential fire and smoke alarms encompassing:

- types of fire and smoke alarms.
- regulations and standards requirements regarding residential fire and smoke alarms.
- locations for residential fire and smoke alarms.
- wiring methods for residential fire and smoke alarms.
- operation of typical residential fire and smoke alarms

T10 Emergency and evacuation lighting and lighting control encompassing:

- factors and requirements of emergency and evacuation lighting concerning illumination levels, luminaire positioning and operating period.
- characteristics of maintained, non maintained and sustained emergency lighting systems.
- arrangement of batteries in point and central bank emergency lighting supply systems.
- lighting control methods

T11 Lighting concepts and incandescent lighting encompassing:

- basic concepts of lighting.
- terminology, principles and standards relevant to lighting (energy efficiency as per BCA new lamp types and permitted replacements and their efficacy)..
- basic types of luminaries.
- operation of an incandescent lamp.
- types of incandescent lamps.
- expected lamp life, colour rendering and efficacy for typical incandescent lamps.
- lighting layout in terms of visual comfort and relevant Australian standards

T12 Fluorescent low intensity discharge lighting encompassing:

- types of low intensity discharge lamps.
- expected lamp life, colour rendering and efficacy for typical types of low intensity discharge lamps.
- operation of low intensity discharge luminaires including their control equipment.
- Australian Standard and local requirements for low intensity discharge lighting.
- methods for satisfying Australian Standards and local supply authority requirements regarding low intensity discharge lighting.

T13 High intensity discharge lighting encompassing:

- types of high intensity discharge lamps.

REQUIRED SKILLS AND KNOWLEDGE

- expected lamp life, colour rendering and efficacy for typical types of high intensity discharge lamps.
- operation of high intensity discharge luminaires including their control equipment.
- Australian Standard and local requirements for high intensity discharge lighting.
- methods for satisfying Australian Standards and local supply authority requirements regarding high intensity discharge lighting.
- LED lighting and its applications.
- Neon, Argon and Xenon lighting and their applications.
- comparison of incandescent, low intensity discharge, high intensity discharge, LED and other types of lighting

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

EVIDENCE GUIDE

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in single and three phase low voltage electrical apparatus and circuits as described as described in 8) and including:
 - A Determining the operating parameters of existing apparatus/circuits.
 - B Altering an existing apparatus/circuit to comply with specified operating parameters.
 - C Developing apparatus/circuits to comply with a specified function and operating parameters.
 - D Determining the cause of low efficiency in an existing apparatus/circuit.
 - E Determining conditions causing an existing apparatus/circuit to be unsafe.
 - F Dealing with unplanned events

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in electromagnetic circuits.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to any four types of problems for both single and three-phase apparatus and circuits and three types of circuit/equipment as listed below.

- | | |
|------------------|--|
| Type of problems | <ul style="list-style-type: none">• Determining the operating parameters of existing apparatus/circuit• Altering an existing apparatus/circuit to comply with specified operating parameters• Developing apparatus/circuits to comply with a specified function and operating parameters |
|------------------|--|

Note:

Operating parameters include voltage, current, efficiency, power, energy and power factor

- Determining the cause of low efficiency in an existing apparatus/circuit.
- Determining conditions causing an existing apparatus/circuit to be unsafe.

Note:

Examples of unsafe circuits includes electric shock hazard from indirect contact with conductive parts, insufficiently low impedance of a fault current path and inadequate fault protection

- | | |
|-----------------------------|--|
| Types of circuits/equipment | <ul style="list-style-type: none">• Lighting circuits• Power circuits• Rotating machines• Electrical heating• Lighting |
|-----------------------------|--|

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Electrical

UEENEEG063A Arrange circuits, control and protection for general electrical installations

Modification History

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the arrangement and termination of circuits, control and protection devices and systems for electrical installations operating at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses knowledge and application of schemes for protection of persons and property, correct functioning, ensuring compatibility with the supply, arranging installation into circuits and selecting and arranging switchgear/controlgear and protective devices to meet compliance requirements and documenting arrangement decisions.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, dismantle, assemble of electrotechnology components

UEENEEE104A Solve problems in d.c circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c.

- Prerequisite Unit(s)** 2)
circuit
UEENEEG106A Terminate cables, cords and accessories for low voltage circuits
- 2.2) Further Information:**

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to arrange electrical installations circuits, control and protection	1.1 The extent and nature of the electrical installation is determined from job specifications.
	1.2 Safety and other regulatory requirements to which the electrical installation shall comply are identified, obtained and understood.
	1.3 Load requirements for individual current-using equipment is determined from job specifications or from consultation with appropriate persons.
2 Arrange electrical installations circuits, control and protection	2.1 Circuits, control and protective devices are arranged to ensure safe and functional operation of the installation and to comply with technical standards and job specifications and requirements.
	2.3 Earthing is arranged and terminated to comply with the MEN system requirements.
	2.4 Protective devices are selected to meet the required switching and tripping currents, co-ordination and discrimination for overload and short-circuit protection.
	2.5 Residual current devices are selected to meet the required circuit, switching and tripping currents required.
	2.6 Switchgear/control gear is selected to meet current, voltage and IP ratings and functional requirements.
	2.7 Switchboards are arranged to accommodate control and protective devices, links, safety services, and other distributor equipment in accordance with requirements.
	3 Document electrical installation circuits, control and protection arrangements
	3.2 Reasons for selections made, including calculations, are documented in accordance with

ELEMENT

PERFORMANCE CRITERIA

established procedures.

- 3.3 Electrical installation arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of arranging electrical installations circuits, control and protection.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG063A Electrical installations — arrangement, control and protection

Evidence shall show an understanding of circuit arrangements, control and protection of electrical installations that comply with the Wiring Rules and Service Rules to an extent indicated by the following aspects:

T1 Safety principles to which electrical systems in building and premises shall comply.

- Safety principles are given in Part1 (Section 1) of the Wiring Rules AS/NZS 3000 with deemed-to-comply requirements given in Sections 2 to 8.
- Compliant methods for providing protection - include those for providing protection against direct and indirect contact; thermal effects; unwanted voltages; overcurrent; fault currents; overload; overvoltage; injury from mechanical movement.
- Requirements for installation design and selection of equipment - includes compliant protection arrangements; correct functioning; compatibility with supply; estimation of maximum demands; voltage drop considerations; arrangement of circuits and the like

T2 Circuit and control arrangements encompassing:

- reason for dividing electrical installations into circuits
- factors that shall be considered in determining the number and type of circuits required for an installation.
- daily and seasonal demand for lighting power, heating and other loads in a given installation.
- number and types of circuits required for a particular installation.
- diagrams/schedules of circuits for given installations.
- application and arrangements of SELV and PELV circuits
- application and arrangement of an isolated supply

T3 Hazards and risks in an electrical installation encompassing:

- effects on the human body of various levels of a.c. and d.c. current and duration of current flow for various current paths.

REQUIRED SKILLS AND KNOWLEDGE

- risk of ignition of flammable materials due the thermal effects of current or electric arcs in normal service of an electrical installation.
- risk of injury from mechanical movement of electrically actuated equipment.
- Protection against direct contact (basic protection)
- acceptable methods
- use of extra-low voltage

T4 Protection against indirect contact encompassing:

- indirect contact with live parts of an electrical installation may occur.
- methods and devices that comply with the Wiring Rules for providing protection against indirect contact.
- components of the 'automatic disconnection of supply' method of protection against indirect contact.
- the terms 'touch voltage' and 'touch current'.
- the current path when a short circuit fault to exposed conductive parts of an appliance occurs.
- protection against indirect contact is by the use of Class II equipment and by electrical separation.
- additional protection by use of Residual Current Devices (RCDs)
- protection against indirect contact by use of extra-low voltage and electrical separation.
- Protection requirements for damp situations.

T5 Earthing encompassing:

- the terms: earthed, earthed situation, earth electrode, equipotential bonding, multiple earthed neutral (MEN) system, protective earth-neutral (PEN) conductor, main earthing conductor, protective earthing (PE) conductor, functional earthing, MEN link.
- selection of minimum size-earthing conductor for a range of active conductor sizes and materials.
- parts of an earthing system and the purpose of each.
- typical arrangement for a MEN earthing system.
- arrangements of protective earthing conductors that comply with the Wiring Rules.
- requirements for equipotential bonding in a range of installation situations.
- Installation of a MEN earthing system for a single phase installation

T6 Protection against overload and short circuit current encompassing:

- overload current or fault currents in an electrical installation.
- equivalent circuit of an earth fault-loop
- level of fault current possible at a given point in an installation from the fault-loop impedance and data from the electricity distributor.
- methods and devices that comply with the Wiring Rules AS/NZS 3000 for providing protection against the damaging effects of overload and fault current

REQUIRED SKILLS AND KNOWLEDGE

- requirements for co-ordination between protective devices and conductors
- requirements for co-ordination of protection devices for discrimination and back-up protection.

T7 Devices for automatic disconnection of supply encompassing:

- operating principles of thermal/magnet circuit breakers.
- operating principles of common types of fuses.
- operating principles of residual current devices (RCD).
- time/current curves tripping characteristics of various types of circuit breakers that comply with the requirements of the Wiring Rules.
- time/current curves fusing characteristics of various types of fuses that comply with the requirements of the Wiring Rules.
- time/current curves tripping characteristics of various types of RCDs that comply with the requirements of the Wiring Rules.
- factors in a fault loop that will affect the impedance of the circuit.
- maximum impedance of an earth fault-loop to ensure operating of a protection device.
- selecting a fuse for fault current limiting protection.
- drawing switchboard wiring arrangements of 2-pole RCDs, 4-pole RCDs, combination RCD/MCBs.

T8 Protection against over voltage and under voltage encompassing:

- causes of over voltage and how this may affect the electrical system.
- methods for protection against over voltage.
- causes of under voltage and how this may affect the electrical system.
- methods for protection against under voltage.

T9 Control of an electrical installation and circuits encompassing:

- switch types, current and voltage ratings and IP rating and where these apply.
- switching requirements for isolation, emergency, mechanical maintenance and functional control.
- control arrangement for complete installations with and without safety services and an alternative supply.

T10 Switchboards / distribution boards encompassing:

- Purpose, types and applications.
- Physical and circuit arrangements for whole current and CT metering.
- Physical and circuit arrangements of main switches, circuit protection devices, fault-current limiters and metering equipment and other distributor equipment.
- compliance requirements (includes location and access, arc fault protection, identification, construction suitability, equipment marking, wiring, fire protection and arc-fault protection).

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers the installation and/or replacement of low voltage CT metering for measurement of energy use by consumers under choice of supplier arrangement. It encompasses working safely and to installation and set up standards, evaluating the integrity of metering wiring and earthing systems, fixing metering, making power and communication connections, setting meter parameters and completing the necessary documentation.

Application of the Unit

Application of the Unit 4)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace subject to regulations for undertaking of electrical work.

Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable, contracts of training such as apprenticeships.

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG105A and all prerequisite units it specifies

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Note: Those holding an 'Unrestricted Electrician's Licence' or equivalent issued in an Australian State or Territory meet the pre-requisite requirements of this unit.

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install or replace CT energy metering.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented. (Note 1: Examples of hazards likely to be encountered are asbestos reinforced switchboard panels, deteriorating switchgear and cabling and location of the switchboard.)
	1.4 Switchboard on which the meter(s)/CTs is/are to be installed is inspected and evaluated for compliance with safety and functionality standards. (Note 2: Safety and

ELEMENT**PERFORMANCE CRITERIA**

- functionality standards include the clear identification of switchboard components and their function, sound electrical insulation of wiring and components, sound MEN and main earth connections, fire integrity and access.)
- 1.5 Approval to rectify safety and/or functionality defects of the switchboard is sought from person of higher authority in accordance with established procedures.
- 1.6 Installation of the meter and rectification work is prepared in consultation with others affected by the work and sequenced appropriately.
- 1.7 Material needed for the work is obtained in accordance with established procedures and checked against job requirements.
- 1.8 Tools, equipment and testing devices needed to for the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Install or replace CT metering.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Existing metering is checked as being isolated in strict accordance OHS requirements and procedures.
- 2.4 Approved rectification work is carried out to comply with standards and in accordance with established procedures.
- 2.5 Meters and CTs are installed/replaced to comply with technical standards and job specifications and requirements.
- 2.6 Metering power and communication connections (where necessary) are made in accordance with manufacturer's specifications and functional and regulatory requirements.
- 2.7 Meter operating parameters are set in accordance with manufacturer's specifications and functional and

ELEMENT	PERFORMANCE CRITERIA
	regulatory requirements.
	2.8 Unexpected situations are dealt with safely and with the approval of an authorised person
	2.9 Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures.
	2.10 Metering/CT installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
3 Complete and report metering installation activities.	3.1 OHS work completion risk control measures and procedures are followed and supply is reinstated to the installation.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Final checks are made to that the installed metering and CTs conform to requirements.
	3.4 'As-installed' metering and CTs and rectification work is documented and appropriate persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and setting up interval metering.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG076A

Low voltage current transformer metering

Evidence shall show an understanding of low voltage current transformer metering to an extent indicated by the following aspects:

T1 Current Transformers (CTs) encompassing:

- uses and functions
- AS60044.1-2007 requirements
- characteristics and saturation
- differences between metering and protection CTs
- standard ratios and outputs
- accurate range of loading
- thermal current limit
- burden and connecting cable length
- short circuiting secondary as a safety issue
- accuracy class

T2 Revenue meter types used with CTs encompassing:

T3 CT installations encompassing:

- uses in the regulated market and relevant regulations
- types and mounting methods
- switchboard layouts (various Distributors)
- minimum spacing of CTs
- connections to single and polyphase revenue meters
- consequence of polarity reversal in one phase of a polyphase meter

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview 9.1)

of

Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical 9.2)

aspects of

evidence

required to

demonstrate

competence

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines

EVIDENCE GUIDE

y in this unit

- UEE07'. Evidence shall also comprise:
- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
 - Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install /replace low voltage CT metering as described in 8) and including:
 - A Inspecting and evaluating safety and functionality compliance of the switchboard accurately.
 - B Following established procedures to obtain approval to rectify non-compliance aspects of the switchboard.
 - C Carrying out preparation work effectively.
 - D Rectifying compliance defects.
 - E Placing and securing metering correctly.
 - F Making power and communications connections in accordance with manufacture's specifications and functional and regulatory requirements.
 - G Setting meter parameters in accordance with manufacture's specifications and functional and regulatory requirements.
 - H Reinstating supply to the installation safely.
 - I Documenting CT metering and rectification work and notifying appropriate persons in accordance with

EVIDENCE GUIDE

established procedures.

- J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in 'Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing and setting up interval metering.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with 9.5)

There are no concurrent assessment recommendations for this unit.

EVIDENCE GUIDE

other units

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to the installation of at least a:

- low voltage CT installation using single phase meters
- low voltage CT installation using a polyphase meter
- metering installation where compliance rectification work is required

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers determining correct operation of electromagnetic devices and related circuits and providing solutions as they apply to electrical installations and equipment. It encompasses working safely, power circuit problems solving processes, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in electromagnetic devices and related circuits.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE104A Solve problems in d.c circuits

2.2) Further Information:

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit 4)

4.1) General Application

This unit applies to all qualifications, competencies and/or Skill Sets which require an electrical licence.

4.2) Importation

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to work on electromagnetic devices and circuits.	1.1	OHS procedures for a given work area are identified, obtained and understood.
	1.2	OHS risk control work preparation measures and procedures are followed.
	1.3	The nature of the device(s)/circuit(s) problem is obtained from documentation or from work supervisor

ELEMENT**PERFORMANCE CRITERIA**

		to establish the scope of work to be undertaken.
	1.4	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5	Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2	Solve electromagnetic devices/circuit problems.	2.1 OHS risk control work measures and procedures are followed.
		2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
		2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
		2.4 Established methods are used to solving circuit problems from measure and calculated values as they apply to electromagnetic devices/circuits.
		2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
		2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3	Complete work and document problem solving activities.	3.1 OHS work completion risk control measures and procedures are followed.
		3.2 Work site is cleaned and made safe in accordance with established procedures.
		3.3 Justification for solutions used to solve circuit problems is documented.
		3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in electromagnetic devices and related circuits.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EG101A

Electromagnetic devices and circuits

Evidence shall show an understanding of electromagnetic devices and circuits to an extent indicated by the following aspects:

T1 Magnetism encompassing:

- magnetic field pattern of bar and horse-shoe magnets.
- magnets attraction and repulsion when brought in contact with each other.
- common magnetic and non-magnetic materials and groupings (diamagnetic, paramagnetic and ferromagnetic materials).
- principle of magnetic screening (shielding) and its applications.
- practical applications of magnets
- construction, operation and applications of reed switches.

T2 Electromagnetism encompassing:

- conventions representing direction of current flow in a conductor.
- magnetic field pattern around a single conductor and two adjacent conductors carrying current.
- Using the “right hand rule” to determine the direction of magnetic field around a current carrying conductor.
- direction of force between adjacent current carrying conductors.
- effect of current, length and distance apart on the force between conductors (including forces on bus bars during fault conditions).
- magnetic field around an electromagnet.
- Using the “right hand rule” to determine the direction of magnetic field around a current carrying coil.
- magnetomotive force (m.m.f.) and its relationship to the number of turns in a coil and the current flowing in the coil.
- practical applications of electromagnets.

T3 Magnetic circuits encompassing:

- magnetic characteristic curve for various materials and identify the various regions.
- Identify the various conditions of a magnetic material from its Hysteresis loop.

REQUIRED SKILLS AND KNOWLEDGE

- factors which determine losses in magnetic material.
- methods used to reduce electrical losses in a magnetic circuit.
- magnetic flux (definition, unit and symbol).
- reluctance as the opposition to the establishment of magnetic flux.
- permeability (definition, symbol and unit).
- difference for magnetic and non-magnetic materials in regards to reluctance and permeability.
- calculation of m.m.f., flux or reluctance given any two values.
- flux density (definition, symbol, unit and calculation).
- magnetising force (definition, symbol, unit and calculation).
- common magnetic circuit types.
- effect of an air gap in a magnetic circuit.
- terms “magnetic leakage” and “magnetic fringing”.

T4 Electromagnetic induction encompassing:

- principle of electromagnetic induction (Faraday’s law of electromagnetic induction).
- applying “Fleming’s right hand rule” to a current carrying conductor under the influence of a magnetic field.
- calculation of induced e.m.f. in a conductor given the conductor length, flux density and velocity of the conductor.
- calculation of induced e.m.f. in a coil given the number of turns in a coil and the rate of change of flux.
- calculation of force on a conductor given the flux density of the magnetic field, length of the conductor and the current being carried by the conductor.
- Lenz’s law
- applications of electromagnetic induction

T5 Inductance encompassing:

- construction of an inductor, including a bifilar winding inductor.
- Australian Standard circuit diagram symbol for the four types of inductor.
- effect of physical parameters on the inductance of an inductor.
- common types of inductor cores.
- applications of the different types of inductors.
- definition of terms self induction, inductance and mutual inductance.
- calculation of value of self induced e.m.f. in a coil.
- mutual induction occurs between two coils.
- graphical relationship between load voltage, current and self induced e.m.f. in a single d.c. circuit having inductance.
- practical applications for the effects of self and mutual induction.
- undesirable effects of self and mutual induction.
- definition of term “time constant” and draw the characteristic curve as applied to a series circuit containing an inductor and a resistor. (LR circuit) Calculation of value

REQUIRED SKILLS AND KNOWLEDGE

of the time constant for an LR circuit given the values of the components.

- time constants required for the current in an LR circuit to reach its final value.
- determining of instantaneous values of voltage and current in an LR circuit using a universal time constant chart.

T6 Measurement Instruments encompassing:

- moving coil, moving iron, dynamometer meter movements and clamp testers.
- practical applications for moving coil, moving iron and dynamometer meter movements.
- Calculation of resistance of shunts and multipliers to extend the range of ammeters and voltmeters.
- factors to be considered in selecting meters for a particular application.
- safety category of meters and their associated applications.
- steps and procedures for the safe use, care and storage of electrical instruments.

T7 Magnetic devices encompassing:

- construction, operation and applications of relays.
- construction, operation and applications of contactors.
- magnetic methods used to extinguish the arc between opening contacts.
- construction, operation and applications of Hall Effect devices.
- operation and applications of magnetostriction equipment.
- construction, operation and application of magnetic sensing devices.

T8 Machine principles encompassing:

- basic operating principle of a generator.
- applying Fleming's right hand rule for generators.
- basic operating principle of a motor.
- applying Fleming's left hand rule for motors.
- calculation of force and torque developed by a motor.

T9 Rotating machine construction, testing and maintenance encompassing:

- components of a d.c. machine.
- difference between a generator and a motor in terms of energy conversion.
- nameplate of a machine.
- using electrical equipment to make electrical measurements and comparison of readings with nameplate ratings.
- Identification of faults in a machine from electrical measurements.
- care and maintenance processes for rotating machines
- safety risks associated with using rotating machinery.

T10 Generators encompassing:

- basic operation of a d.c generator.
- calculation of generated and terminal voltage of a d.c. shunt generator

REQUIRED SKILLS AND KNOWLEDGE

- prime movers, energy sources and energy flow used to generate electricity.
- types of d.c. generators and their applications.
- methods of excitation used for d.c. generators.
- equivalent circuit for a d.c. generator.
- importance of residual magnetism for a self excited generator.
- open circuit characteristics of d.c. generators.
- load characteristics of a d.c. generator.
- reversing the polarity of a d.c. generator
- Connect and test a d.c. generator on no-load and load
- Identify safety risks associated with using generators.

T11 Motors encompassing:

- operation of a motor and its energy flow.
- effect of back e.m.f. in d.c. motors
- torque as the product of the force on the conductors and the radius of the armature/rotor.
- types of d.c. motors and their applications.
- circuit diagrams for the types of d.c. motors.
- equivalent circuit for the types of d.c. motors.
- calculation of power output of a motor.
- characteristics of the different types of d.c. motors.
- connection and testing a d.c. shunt motor on no-load and load
- reversing the direction of rotation of a d.c. motor.
- safety risks associated with using motors (include risks of series d.c. motors).

T12 Machine efficiency encompassing:

- losses that occur in a d.c. machine.
- methods used to determine the losses in a d.c. machine.
- calculation of losses and efficiency of a d.c. machine.
- efficiency characteristic of a d.c. machine and the conditions for maximum efficiency.
- application of Minimum Energy Performance standards (MEPS).
- methods used to maintain high efficiency.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

EVIDENCE GUIDE

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also

EVIDENCE GUIDE

comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in electromagnetic circuits as described as described in 8) and including:
 - A Using methodological techniques to solve problems in circuits with an electromagnetic device from measure and calculated values
 - B Determining the operating parameters of an existing circuit with an electromagnetic device.
 - C Alternating an existing circuit with an electromagnetic device to comply with specified operating parameters.
 - D Developing circuits with electromagnetic devices to comply with a specified function and operating parameters.
 - E Dealing with unplanned events

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in electromagnetic devices and related circuits.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving problems in electromagnetic devices and related circuits by:

- Determining the operating parameters of an existing circuits with electromagnetic devices
- Altering an existing circuit with an electromagnetic device to comply with specified operating parameters
- Developing circuit with an electromagnetic device to comply with a specified function and operating parameters

AND

In relation to the following on more than one occasions:

Solving problems

- Connecting circuits,
- Using methodological problem solving techniques,
- Solving electromagnetic device problems,
- Demonstrate an understanding of the behaviour of current and voltage in circuits with electromagnetic devices
- Calculating circuit parameters accurately,

Circuit and device testing

- Choose correct instruments and ranges for testing,
- Connect meters to measure parameters in circuits with electromagnetic devices,

and

At least four of the following electromagnetic devices

- Reed switches
- Solenoids
- Relays
- Contactors
- Inductive limit switches
- Bells

RANGE STATEMENT

- Lifting magnets
- Core balance devices
- Magnetic overloads
- Motors
- Generators
- Magnetic brakes
- Magnetic circuit breakers

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to solve low voltage a.c. circuit problems.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards, which have not previously been identified, are noted and established risk control

ELEMENT	PERFORMANCE CRITERIA
2 Solve low voltage a.c. circuit problems.	<p>measures are implemented.</p> <p>1.4 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.6 Sources of materials that may be required for the work are established in accordance with established procedures.</p> <p>1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p> <p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Established methods are used to solve circuit problems from measure and calculated values as they apply to single and three-phase low voltage circuit.</p> <p>2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.</p> <p>2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.</p>
3 Complete work and document problem solving activities.	<p>3.1 OHS work completion risk control measures and procedures are followed.</p> <p>3.2 Work site is cleaned and made safe in accordance with established procedures.</p> <p>3.3 Justification for solutions used to solve circuit problems is documented.</p>

ELEMENT**PERFORMANCE CRITERIA**

- 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and Solving single and three phase low voltage circuit problems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG102A Alternating current power circuits

Evidence shall show an understanding of alternating currents power circuits to an extent indicated by the following aspects:

T1 Alternating Current Quantities encompassing:

- sine, cosine and tangent ratios of a right angle triangle
- Pythagoras Theorem to a right angle triangle.
- use of the CRO to measure d.c. and a.c. voltage levels
- sinusoidal voltage generated by a single turn coil rotated in a uniform magnetic fields
- terms 'period', 'maximum value', 'peak-to-peak value', 'instantaneous value', 'average value', 'root-mean-square (r.m.s.) value', in relation to a sinusoidal waveform.
- calculation of the instantaneous value of induced voltage of a generated sinusoidal waveform.
- measurement of instantaneous, peak, peak-to-peak values and the period of a sinusoidal waveform.
- calculation of root-mean-square (r.m.s.) value and frequency of a sinusoidal waveform from values of peak voltage and period.

T2 Phasors Diagrams encompassing:

- purpose of phasor diagrams
- 'in-phase', 'out-of-phase', 'phase angle' lead' and 'lag'.
- phase angle between two or more alternating quantities from a given sinusoidal waveform diagram.
- convention for representing voltage, current and the reference quantity in a phasor diagram.
- drawing phasor diagrams to show the relationship between two or more a.c. values of voltage and/or current.
- determination of phase relationship between two or more sinusoidal waveforms from a given diagram and measurements.

T3 Single Element a.c. circuits encompassing:

- setting up and connect a single-source resistive a.c. circuit and take voltage and current

REQUIRED SKILLS AND KNOWLEDGE

measurements to determine the resistance

- determining the voltage, current resistances from measure of given values of any two of these qualities.
- relationship between voltage drops and current in resistive a.c. circuit
- applications of resistive a.c. circuits
- defining 'inductive reactance'.
- calculation of inductive reactance for a given inductor and the relationship between inductive reactance and frequency.
- applying Ohm's Law to determine voltage, current of inductive reactance in a purely inductive a.c. circuit given any two to these quantities.
- applications of inductive a.c. circuits.
- calculation of capacitive reactance
- applying Ohm's Law to determine voltage, current or capacitive reactance in a purely capacitive a.c. circuit given any two of the quantities.
- applications of capacitive a.c. circuits

T4 RC and RL Series a.c. circuits encompassing:

- impedance and impedance triangle.
- determining the impedance, current and voltages for a series RC circuit given the resistance, capacitance and supply voltage.
- drawing and labelling the impedance triangle for a series RC circuit
- drawing phasor diagrams for a series RC circuit
- AS/NZS 3000 requirements for the installation of capacitors.
- examples of capacitive components in power circuits and systems and the effect on the phase relationship between voltage and current.
- determining the impedance, current and voltages for a series RL circuit given the resistance, inductance and supply voltage.
- drawing and labelling the impedance triangle for a series RL circuit
- drawing the equivalent circuit of a practical inductor
- Draw phasor diagrams for a series RL circuit.
- examples of inductive components in power circuits and systems and describe their effect on the phase relationship between voltage and current

T5 RLC Series a.c. circuits encompassing:

- measuring component voltages in a series RLC circuit and using a phasor diagram to determine the supply voltage and phase angle between circuit voltage and circuit current.
- determining the impedance, current and voltages for a series RLC circuit given resistance, inductance, capacitance and supply voltage.
- drawing and labelling the impedance triangle for a series RLC circuit.
- calculation of total impedance for a series RLC circuit.
- calculation of voltage drop for cables using the values for reactance and a.c. resistance from AS/NZS 3008.

REQUIRED SKILLS AND KNOWLEDGE

- comparison of current limiting characteristics of inductors and resistors.
- practical examples of RLC series circuits

T6 Parallel a.c. Circuits encompassing:

- determining the branch currents of a parallel circuit that contain RL, RC or LC in two branches.
- using a phasor diagram to determine the total circuit current and phase angle in parallel RL, RC or LC circuits.
- determining the total circuit impedance of parallel RL, RC or LC circuits.
- measuring the branch currents in a parallel RLC circuit and use a phasor diagram to determine the total current and phase angle between circuit voltage and circuit current.
- determining the branch impedances, branch currents and phase angles voltages for a parallel RLC circuit given resistance, inductance, capacitance and supply voltage.
- calculation of impedance for a parallel RLC circuit.
- practical examples of parallel circuits.

T7 Power in an a.c. circuit encompassing:

- difference between true power, apparent power and reactive power and the units in which these quantities are measured.
- drawing the power triangle to show the relationships between true power, apparent power and reactive power
- defining the term "power factor" and phase angle.
- methods used to measure single phase power, energy and demand.

T8 Power Factor Improvement encompassing:

- effects of low power factor.
- requirements for power factor improvement.
- methods used to improve low power factor of an installation.
- local supply authority and AS/NZS 3000 wiring rules requirements regarding the power factor of an installation and power factor improvement equipment.
- methods used to measure single phase power factor.
- using manufacturers catalogues to select power factor equipment for a particular installation

T9 Harmonics and Resonance Effect in a.c. Systems encompassing:

- term "harmonic" in relation to the sinusoidal waveform of an a.c. power system.
- sources in a.c. systems that produce harmonics.
- problems that may arise in a.c. circuits as a result of harmonics and how these are overcome.
- methods and test equipment used to test for harmonics
- methods used to reduce harmonics in a.c. power system
- conditions in a series a.c. circuit that produce resonance.
- dangers of series resonance circuits

REQUIRED SKILLS AND KNOWLEDGE

- conditions in a parallel a.c. circuit that produce resonance.
- dangers of parallel resonance circuits
- AS/NZS3000 and the local supply authority requirements concerning harmonics and resonance effect in a.c. power systems.

T10 Three Phase Systems encompassing:

- features of a multiphase system.
- comparison of voltages generated by single and multiphase alternators.
- reasons for the adoption of three phases for power systems.
- how three phases is generated in a single alternator.
- Calculation of r.m.s. value of voltage generated in each phase given the maximum value.
- relationship between the phase voltages generated in a three phase alternator and the conventions for identifying each.
- term "phase sequence" (also, referred to as "phase rotation").
- determining the phase sequence of a three phase supply

T11 Three phase star-connections encompassing:

- connecting a three phase star-connection load.
- phase relationship between line and phase voltages and line and phase currents of a star-connected system.
- determining the r.m.s. value of line and phase voltage given any one of these quantities.
- determining the r.m.s. value of line and phase current given any one of these quantities.
- terms "balanced load" and "unbalanced load".
- effect of a reversed phase winding of a star connected alternator.
- example of balanced and unbalanced loads in typical power systems.

T12 Three phase four wire systems encompassing:

- purpose of the neutral conductor in a three phase four wire systems.
- determining the effects of an high impedance in the neutral conductor of a three phase four wire system supplying an unbalanced load where MEN earthing is employed.
- determining the value and phase relationship of neutral current in an unbalanced three phase four wire systems given line currents and power factors.
- AS/NZS 3000 requirements regarding neutral conductors.
- AS/NZS 3008.1.1 method for determining voltage drop in unbalanced three phase circuits

T13 Three phase delta-connections and Interconnected systems encompassing:

- connecting three phase delta loads.
- phase relationship between line and phase voltages and line and phase currents of a delta-connected system.
- determining the r.m.s. value of line and phase voltage given any one of these quantities.
- determining the r.m.s. value of line and phase current given any one of these quantities.

REQUIRED SKILLS AND KNOWLEDGE

- limitations and uses of open delta connections
- effect of a reversed phase winding of a delta connected transformer
- example of loads in typical power systems.
- drawing the typical combinations of three phase interconnected systems using star-connections and a delta-connection.
- relationship between line and phase voltages and line and phase currents in the typical interconnected systems using star-connections and delta-connections.

T14 Energy and power requirements of a.c. systems encompassing:

- purposes for measuring power, energy, power factor and maximum demand of a.c. power systems and loads.
- difference between true power, apparent power and reactive power and the units in which these quantities are measured in a three phase system.
- drawing the power triangle to show the relationships between true power, apparent power and reactive power in a three phase system.
- methods used to measure three phase power, energy, power factor and demand.
- determining how the power factor of a three phase installation can be improved.
- using manufacturers catalogues to select measurement equipment for a particular installation

T15 Fault Loop Impedance encompassing:

- term fault loop impedance of a a.c. power system
- determining fault loop impedance using resistance and reactance values from AS/NZS 3008.1.1
- measuring fault loop impedance of typical circuits
- procedures for testing fault loop impedance

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that

EVIDENCE GUIDE

can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in single and three phase circuits as described as described in 8) and including:
 - A Using methodological techniques to solve problems in circuits in a.c. circuits from measure and calculated values
 - B Determining the operating parameters of existing circuits
 - C Altering an existing circuit to comply with specified operating parameters.
 - D Developing circuits to comply with a specified function and operating parameters.
 - E Determining the cause of low power factor in an existing circuit.
 - F Determining conditions causing an existing circuit to be unsafe.
 - G Dealing with unplanned events

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving single and three phase low voltage circuit problems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving problems in a.c. circuit by:

- Determining the operating parameters of existing circuits
- Altering an existing circuit to comply with specified operating parameters
- Developing circuits to comply with a specified function and operating parameters of voltage, current, impedance, power and power factor
- Determining the cause of low power factor in an existing circuit.
- Determining conditions causing an existing circuit to be unsafe includes electric shock hazard from indirect contact with conductive parts, insufficiently low impedance of a fault current path and inadequate fault protection.

In relation to the following on more than one occasions:

Single phase circuits

- Connecting single-phase circuits
- Choosing correct instruments
- Taking measurements correctly and accurately.

Three-phase circuits

- Connecting three-phase circuits
- Choosing correct instruments
- Taking measurements correctly and accurately.

AND

At least four of the following applications

- Series a.c. circuits
- Parallel a.c. circuits
- Series / parallel a.c. circuits
- Single phase motors / controls
- Three phase motors / controls
- Synchronous machines
- Transformers / Auxiliary components

RANGE STATEMENT

- Star connected circuits
- Delta connected circuits
- Star-Delta interconnected circuits
- Open Delta circuits

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field**2.2) Literacy and numeracy skills**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

Custom Content Section**Competency Field**

5)

Electrical

UEENEEG103A Install low voltage wiring and accessories

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the installation in building and premises of wiring enclosures, cable support systems, cables and accessories and designed to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to installation standards, routing cables to specified locations, terminating cables and connecting wiring at accessories and completing the necessary installation documentation.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, dismantle, assemble of electrotechnology components

UEENEEE104A Solve problems in d.c circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

Prerequisite Unit(s)	2) UEENEEG101A Solve problems in electromagnetic devices and related circuits UEENEEG102A Solve problems in low voltage a.c. circuit UEENEEG106A Terminate cables, cords and accessories for low voltage circuits UEENEEG107A Select wiring systems and cables for low voltage general electrical installations UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits UEENEEG109A Develop and connect electrical control circuits
-----------------------------	---

2.2) Further Information

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills	3) This unit contains Employability Skills The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.
-----------------------------	---

Application of the Unit	4) 4.1) General Application This unit applies to all qualifications, competencies and/or Skill Sets which require an electrical license. 4.2) Importation RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy
--------------------------------	--

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install wiring and accessories.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.</p> <p>1.4 Installation of wiring is prepared in consultation with other affected by the work and sequenced appropriately.</p> <p>1.5 The nature and location of the work is determined from documentation or other appropriate person to establish the scope of work to be undertaken.</p> <p>1.6 Cable routes are planned within the constraints of the building structure, significant and requirements.</p> <p>1.7 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.</p> <p>1.8 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.</p> <p>1.9 Preparatory work is checked to ensure no damage has occurred and complies with requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
2 Install wiring and accessories.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Wiring and accessories are installed to comply with technical standards and job specifications and requirements with sufficient excess to affect terminations.
	2.5 Accessories are installed straight and square in the required locations and within acceptable tolerances.
	2.6 Cables and conductors are terminated at accessories in accordance with manufacture's specifications and regulatory requirements.
	2.7 Ongoing compliance and safety inspection of installed wiring systems and testing of installed circuits is undertaken.
	2.8 Defects revealed through on-going compliance and safety inspection and tests are rectified.
	2.9 Cable installation and termination is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
	2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
3 Completion and report installation activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 'As-installed' cables/wiring and accessories is documented and an appropriate person or persons

ELEMENT

PERFORMANCE CRITERIA

notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing wiring and accessories for low voltage circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry standards, technologies and practices.

KS01-EG103A

Installation of wiring systems

Evidence shall show an understanding of the installation of wiring systems that comply with standards to an extent indicated by the following aspects:

T1 Standards, codes and requirements applicable to the installation of wiring systems encompassing:

- Cables and methods of mechanical protection and support
- Protection against and from other services.
- Prohibited cable locations
- Building codes affecting the installation of cables in buildings, structures and premises (limitation on penetration of structural elements, maintenance of fire protection integrity, and wiring above suspected ceilings)
- Issues affecting electrical installations in heritage buildings and premises (limitation on penetration of structural and finished elements, accessing cable routes, types and colour of exposed accessories).

T2 Use of other installation standards called up by the Wiring Rules for special situations encompassing:

- standards that apply to Electromedical treatment areas.
- additional requirements for construction and demolition sites.
- Relocatable installations and their site supply
- additional requirements for caravan park.
- additional requirements for marinas and pleasure craft at low voltage.
- additional requirements for shows and carnivals.

T3 Hazardous areas encompassing:

- Conditions that apply in an areas that require them to be classified as a 'Hazardous area'.
- Responsibility for classifying a hazardous area
- Awareness of standards called up by the Wiring Rules for selection of equipment and installations in Hazardous areas. (AS/NZS 3000 requirements for hazardous areas).

T4 Requirement for the installation of cables and accessories in damp situations and

REQUIRED SKILLS AND KNOWLEDGE

ELV installations encompassing:

- restricted zones around baths, showers, fixed water containers, pools, sauna heaters and fountains/water features for given installations.
- selecting equipment suitable for installation in given damp situations.
- voltage range that defines extra-low voltage.
- 'Separated extra-low voltage (SELV) system' and a 'Protected extra-low voltage (PELV) system'.
- AS/NZS 3000 requirements for selecting extra-low voltage systems and devices for a range of installations and conditions.

T5 Aerial cabling encompassing:

- Describe the types of aerial cabling.
- State the AS/NZS 3000 and local supply authority requirements for aerial cabling.
- Termination of aerial cables in accordance with AS/NZS 3000 and local requirements.
- installation of consumers mains for connection via overhead consumers terminals in accordance with AS/NZS 3000 and local requirements.
- Testing of installed cables compliance with Australian Standards

T6 Underground cabling encompassing:

- Describe permissible underground cabling systems.
- Identify other underground services.
- State the AS/NZS 3000 and local supply authority requirements for underground cabling.
- List the advantages and disadvantages of underground wiring systems
- selection of underground consumers mains in accordance with AS/NZS 3000 and local requirements

T7 Techniques for installing cables and wiring systems encompassing:

- Typical cable routes through buildings, structures and premises.
- Application of wiring accessories
- Drawing-in, placing and fixing of cables
- Cable and conductor terminations
- Maintaining fire rating integrity.
- Inspecting and testing installed and terminated cables to ensure they comply with continuity and insulation resistance and are safe to connect to the supply.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with

EVIDENCE GUIDE

the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall

EVIDENCE GUIDE

be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install wiring and accessories for low voltage circuits as described as described in 8) and including:
 - A Reading and interpreting drawings related to cable layouts, cable schedules and apparatus locations.
 - B Planning cable routes and obtaining installation materials.
 - C Sequencing the installation effectively with other affected by the work.
 - D Routing, placing and securing cables in compliance with requirements.
 - E Placing and securing accessories accurately.
 - F Maintaining fire integrity.
 - G Terminating cable and conductors to comply with requirements.

EVIDENCE GUIDE

- H Undertaking on-going compliance and safety inspection and testing of installed circuits.
- I Rectifying any defects revealed through on-going inspection and testing
- J Correctly documenting 'as-installed' cables/wiring and accessories.
- K Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing wiring and accessories for low voltage circuits.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and

9.5)

For optimisation of training and assessment effort, competency

EVIDENCE GUIDE

relationship with other units

development in this unit may be arranged concurrently with unit:

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to at least three different types of cable enclosure/support systems in combination with four different cable types and circuits for five different purposes as listed below.

Wiring systems enclosures and supports:

- Metallic conduit
- Non-metallic conduit
- Trunking
- Duct
- Cable tray/ladder
- Catenary
- Posts/poles/struts

Cable types:

- Thermoplastic insulated cable (TPI)
- Flat thermoplastic sheathed (TPS)
- Circular thermoplastic sheathed (TPS)
- Steel wire armoured (SWA)
- Fire rated cable (HT or HF or MIMS)
- Flexible cables
- Aerial cable

Circuit purpose:

- Consumers mains
- Submains
- Alternative supply
- Lighting;
- Socket outlets
- Single phase fixed appliance
- Single phase motor
- Three phase motor
- Control

RANGE STATEMENT

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)
 Electrical

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the installation of appliances protection devices, switchgear, controlgear, switchboards, and accessories designed to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to installation standards, matching appliances and accessories with that specified, making required circuit connections and completing the necessary installation documentation.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, dismantle, assemble of electrotechnology components

UEENEEE104A Solve problems in d.c circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

Prerequisite Unit(s)

2)

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuit

UEENEEG103A Install low voltage wiring and accessories

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

2.2) Further Information:

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills

3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit

4)

4.1) General Application

This unit applies to all qualifications, competencies and/or Skill Sets which require an electrical license.

4.2) Importation

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install appliances, switchgear and associated accessories.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.</p> <p>1.4 Installation is prepared in consultation with others affected by the work and sequenced appropriately.</p> <p>1.5 The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken.</p> <p>1.6 Locations of appliances, switchgear and accessories is planned within the constraints of the building structure, significant and requirements.</p> <p>1.7 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.</p> <p>1.8 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.</p> <p>1.9 Preparatory work is checked to ensure no damage has occurred and complies with requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
2 Install appliances, switchgear and associated accessories.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Appliances, switchgear and accessories are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance.
	2.5 Accessories are installed straight and square in the required locations and within acceptable tolerances.
	2.6 Wiring is terminated at appliances, switchgear and accessories in accordance with manufacture's specifications and functional and regulatory requirements.
	2.7 Ongoing compliance and safety inspections of the installed appliances, switchgear and accessories is undertaken.
	2.8 Defects revealed through on-going compliance and safety inspection are rectified.
	2.9 Installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
3 Completion and report installation activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.4 'As-installed' appliances, switchgear and accessories

ELEMENT

PERFORMANCE CRITERIA

is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing low voltage electrical appliance, switchgear and accessories.

All knowledge and skills detailed in this unit should be contextualised to current industry standards, technologies and practices

KS01-EG104A

Installation of appliances, switchgear and accessories

Evidence shall show an understanding of the installation of appliances (current-using equipment) and accessories to an extent indicated by the following aspects:

T1 Installation standards, codes and requirements applicable to installing electrical equipment encompassing.

- Protection against thermal effects
- Connection of electrical equipment (appliances, switchgear and accessories include switchgear and controlgear, switchboards, socket-outlets, lighting equipment and accessories, lamps and luminaires, smoke and fire detectors, cooking appliances, appliances producing hot water or steam, room heaters, electric heating cables for floors and ceilings, space heating, duct heaters, electricity converters, motors, transformers, capacitors, and batteries).
- Required and permitted locations current-using equipment and accessories
- Control, switching and over current and RCD protection

T2 Terminal configuration for connection of phase, neutral and protective earthing conductors for each type of equipment.

T3 Building codes affecting the installation of current-using equipment and accessories in buildings, structures and premises encompassing:

- maintenance of fire protection integrity, requirements for emergency services (safety services) and the like.

T4 Issues affecting electrical installations in heritage buildings and premises encompassing:

- limitation on types and colour of exposed accessories.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required

9.2)

Before the critical aspects of evidence are considered all

EVIDENCE GUIDE

to demonstrate competency in this unit

prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install low voltage electrical apparatus and associated equipment as described as described in 8) and including:
 - A Reading and interpreting drawings related to and apparatus locations and circuit connections.
 - B Planning installation of appliances, switchgear and accessories and obtaining installation materials.
 - C Sequencing the installation effectively with other affected by the work.
 - D Placing and securing appliances, switchgear and accessories accurately in their planned location and in compliance with standards.

EVIDENCE GUIDE

- E Maintaining fire integrity.
- F Terminating and connecting appliances, switchgear and accessories to comply with requirements.
- G Undertaking on-going compliance and safety inspections
- H Rectifying any defects revealed through on-going inspections
- H Correctly documenting 'as-installed' appliances, switchgear and accessories.
- I Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing low voltage electrical apparatus and associated equipment.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG103A Install low voltage wiring and accessories

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installation and connection of appliances, switchgear and associated accessories as follows:

Each of the following

- Installing and connecting main switches, protective devices and links on a main switchboard and preparing the switchboard for the installation of metering
- Installing and connecting a custom switchboard;
- Socket-outlets;
- Lighting equipment and accessories;
- Luminaires, and

At least four of the following

- Cooking appliances
- Smoke and fire detectors
- Water heaters and controls
- Three phase motor starter and control switches
- Fixed electric heating system (room heaters)
- Transformers
- Appliances producing hot water or steam
- Electric heating cables for floors and ceilings
- Trace heating
- Duct heaters
- Electricity converters
- Capacitors.
- Batteries.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

Custom Content Section

Competency Field	5)
	Electrical

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor 1)

1.1) Descriptor

This unit covers inspection and testing to verify whether an electrical installation is safe and complies with all requirements. It encompasses working safely, visual inspections and mandatory, optional and functional testing following verification procedures, identifying non-compliance defects and mandatory reporting requirements.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, dismantle, assemble of electrotechnology components

UEENEEE104A Solve problems in d.c circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

Prerequisite Unit(s) 2)

UEENEEG102A Solve problems in low voltage a.c. circuit

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

2.2) Conditions

- Those holding an 'Unrestricted Electrician's Licence' or equivalent issued in an Australian State or Territory meet the requirements of this unit and its pre-requisite requirements.
- A 'licensed electrician' applying for an 'electrical contractors licence' may be required to undertake this unit to demonstrate their currency with verification of compliance requirements. In this case they are deemed to have met the pre-requisites for this unit provided that:
 - they hold a current 'electricians licence' or its equivalent issued in an Australian State or Territory and
 - have recently been in permanent employment as a licensed electrician sufficient to evidence current knowledge of applicable standards and regulations.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit 4)

4.1) General Application

This unit applies to all qualifications, competencies and/or Skill Sets which require an electrical licence.

Work which requires an electrical licence includes work on and/or supervision of electrical installations at or above low voltage.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to inspect and test an electrical installation.	1.1 OHS measures for the site are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|-----|---|
| | 1.4 | Documentation or deemed to comply standard on which installation is based is reviewed and understood. |
| | 1.5 | Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site. |
| | 1.6 | Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety. |
| | 1.7 | Preparatory work is checked to ensure no damage has occurred and complies with requirements. |
| 2 | 2.1 | Visually inspect and conduct safety testing on the installation. OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
| | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures. |
| | 2.4 | Wiring is checked for suitability for the environments in which they are installed and suitably protected from damage or overheating. |
| | 2.5 | Cable conductor sizes are confirmed as meeting current-carrying capacity requirements and voltage-drop and fault-loop impedance limitations. |
| | 2.6 | Protection methods and devices are validated as meeting co-ordination requirements for overload and short-circuit protection. |
| | 2.7 | Switchgear and control gear is validated as being appropriately rated and meeting functional requirements. |
| | 2.8 | Evidence that electrical equipment complies with safety requirements is cited. |

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|--------------------------------------|---|
| | 2.9 | Earthing system components are checked that they are correctly located and conductors correctly sized. |
| | 2.10 | Marking on switchboards are checked for accuracy and clarity and comply with requirements. |
| | 2.11 | Mandatory tests are conducted to verify that: earthing conductor resistance is sufficiently low; insulation resistance is sufficiently high; all polarities are correct; and circuit connections are correct as per AS/NZS3000. |
| | 2.12 | Testing is conducted to verify that: fault-loop impedance is sufficiently low and residual current devices operates as intended as per AS/NZS3000. |
| 3 | Report inspection and test findings. | |
| | 3.1 | OHS risk control work completion measures and procedures are followed. |
| | 3.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | 3.3 | Non-compliance defects are identified and reported in accordance with established procedures. |
| | 3.4 | Recommendations for rectifying defects are made in accordance with established procedures. |
| | 3.5 | Mandatory documentation is completed in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of general electrical installations.

All knowledge and skills detailed in this unit should be contextualised to current industry standards, technologies and practices.

KS01-EG105A Electrical installations — verification and testing

Evidence shall show an understanding of electrical installations testing and verification to an extent indicated by the following aspects:

T1 Electrical safety encompassing:

- Safety procedures for working on electrical systems, circuits and apparatus.
- Safe working practices as a normal part of carrying out electrical installation work
- Isolation and lockout procedures
- Tools and equipment needed to conduct electrical installation compliance inspection and testing.

T2 Legislated regulations encompassing:

- legislation and regulations that require installations and equipment to be inspected and tested to ensure they are safe.
- the person/bodies responsible for the various aspects of ensuring electrical installations are safe.
- results of tests that show an electrical installation is safe for connection to the supply.
- results of periodic inspection and tests that show construction site wiring and equipment is safe to use.
- results of periodic inspection and tests that show electrical equipment are safe to use.

T3 Visual inspection of installations for compliance with the Wiring Rules encompassing:

- Protection requirements
- General condition
- Consumers mains/submains
- Switchboards
- Wiring systems
- Equipment and accessories
- Earthing

T4 Testing installations encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- tests to ensure: insulation resistance is adequate; earth continuity is such that it will ensure the operation of protection devices under earth fault conditions; polarity of active/s and neutral for mains, submains and final subcircuits is correct; there is no transposition of earthing and neutral conductors; fault-loop impedance is sufficiently low; RCD for correct operation and sensitivity.
- functional tests to ensure active/s and neutral for the same circuit are clearly identified with their circuit protection device.
- tests that show all circuits and devices operate as intended.
- tests to determine the fault level at a particular point in an installation.

T5 Documentation encompassing:

- results of tests conducted on an installation to comply with requirements and ensure the installation is safe.
- documents of the results of testing an installation as required by the local supply authority.
- documents of periodic inspection and testing of construction site wiring and equipment in accordance with requirement.
- documents of periodic testing and inspection of electrical equipment including tagging requirements.

KS02-EG105A Electrical installations and equipment — principles and requirements

Evidence shall show an understanding of electrical installations and equipment principles and requirements to an extent indicated by the following aspects:

T1 Effects of electric current encompassing:

- Physiological effects of current.
- Basic principles by which an electric current can produce heat, light, motion and a chemical reaction.

T2 Single path practical circuit encompassing:

- Arrangement of energy source, protection device, switch and load in a circuit.
- The purpose of each component in the circuit.
- Consequences of an open-circuits, closed-circuits and short-circuits.

T3 Single-source multiple-path d.c. circuits encompassing:

- Circuit configurations and connection.
- Relationship between the parameters of voltage, current, resistance and power dissipation in the whole or any part of the circuit.
- Safely measuring the parameters for the whole or any part of the circuit.
- Methods of determining circuit behaviour for variation in any of the parameters from measured and calculated values.

T4 Alternating voltage and current generation, phase relationships, energy in an a.c. circuit encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Sinusoidal voltage generation and resulting current.
- The terms period; maximum value; peak-to-peak value; instantaneous value; average value; root-mean-square (r.m.s.) value; and frequency.
- Three-phases generation.
- Relationship between the phase voltages generated in a three-phase alternator and the conventions for identifying each.
- Method of determining the phase sequence or phase rotation of a three-phase supply.
- Methods of determining power and energy supplied by three phase circuits.

T5 Fundamental safety principles of the AS/NZS 3000 Part 1 (Section 1) and deemed to comply solution given in Part 2 encompassing:

- Definition of terms
- Fundamental safety principles of protection against direct and indirect contact with live parts; thermal effects; overcurrent; earth faults; abnormal voltages; spread of fire; mechanical injury and external influences.
- Fundamental principles of installation design; selection and installation of equipment; means of compliance (including alterations, additions and repairs) and verification of compliance.

T6 Electric motor selection, starting method and overload protection encompassing:

- Types of motor enclosures suitable for given environmental conditions
- Criteria for selecting motor starters and overload protection.
- Types and connection arrangements for direct-on-line and reduced voltage starters.
- Thermal, magnetic and thermistor overload protection methods.

T7 Ability to apply AS/NZ 3000 requirements for protective and functional earthing encompassing:

- Purpose of protective and functional earthing.
- Parts of the protective earthing systems.
- Earthing arrangements, earthing of equipment and equipotential bonding.
- Methods of determining the maximum fault loop impedance for a circuit.
- Selection of protective conductor and active conductor sizes for each circuit to ensure earth-fault loop impedance is sufficiently low to operate the circuit protective device.

T8 MEN system and its application encompassing:

- The roles of the protective earthing (PE) and neutral (N) conductors in an a consumer's installation and their relationship to the protective earth neutral (PEN) conductor in the electricity distributor's system or sub-main to an outbuilding.
- The importance of the MEN link when a fault occurs.
- The likely consequences of the absence of the MEN link or high impedance in the PEN conductor when a fault occurs.
- The requirements for installation of an MEN link in an installation and an outbuilding.

REQUIRED SKILLS AND KNOWLEDGE

T9 Knowledge of the application of transformers encompassing:

- Transformers used in distribution and transmission systems and large consumer installations.
- Transformers used in welding machines.
- Applications in appliances
- Risks and safety control measures associated with connection and disconnection of instrument transformers
- Safe working procedures when connecting and testing transformers.
- AS/NZS 3000 requirements and restriction on the installation and use of transformers.

T10 Ability to apply AS/NZ 3000 requirements for protection of circuit against overcurrent and abnormal voltages encompassing:

- Minimum fault levels specified by electricity distributors
- Methods and arrangement for protection against short-circuit currents and overload currents.
- Coordination of overload and short-circuit protection devices.
- Coordination between conductors and overload protection devices.
- Causes of over and undervoltage.
- Device and requirements for protection against over and undervoltage.

T11 Additional protection by use of RCDs and use of extra-low voltage for basic and fault protection encompassing:

- Limitation of an RCD to protect against contact with live parts
- AS/NZS 3000 requirements for use of RCDs.
- Conditions for use of extra-low voltage to provide for basic and fault protection
- AS/NZS 3000 requirements for installation of SELV and PELV systems

T12 Ability to select cables for single and three phase mains and sub-mains for single and multiple installations that comply with requirements of AS/NZS 3000 and AS/NZS 3008.1 encompassing:

- Methods of determining maximum demand.
- Types of cables available.
- Installation methods and external influences effecting cable current-carrying capacity
- Voltage drop limitation
- Short-circuit performance consideration.

T13 Ability to select cables for final sub-circuits that comply with requirements of AS/NZS 3000 and AS/NZS 3008.1 encompassing:

- Maximum demand of final sub-circuits.
- Types of cables available.
- Installation methods and external influences effecting cable current-carrying capacity
- Effect of earth-fault loop impedance and voltage drop limitations on circuit route

REQUIRED SKILLS AND KNOWLEDGE

length.

- Short-circuit performance considerations.

T14 Ability to apply AS/NZS 3000 requirements for control and protection of installations encompassing:

- Devices for functions of isolation; emergency; Mechanical maintenance and functional control.
- Method for assessing prospective short circuit current.
- Devices and arrangement for protection against overload and short-circuit current.
- Additional protection by RCD
- Protection against switchboard internal arc faults.

T15 Ability to apply AS/NZS 3000 requirements for the installation of electrical equipment in given damp situations encompassing:

- Limitation of installation of equipment in classified zones.
- Selection and location of equipment suitable for installation in given classified zones.
- Additional protection by RCD.
- Equipotential bonding in showers and bathrooms and swimming and spa pools.

T16 Ability to install, modify and test electrical equipment for construction and demolition sites, complying with AS/NZS 3012 and applicable workplace safety legislation encompassing:

- Supply and installation requirements.
- Protection of circuits.
- Initial and periodic inspection and testing
- Portable tool safety testing and tagging system in accordance with AS/NZS 3760.

T17 Knowledge of AS/NZS 3000 requirements for the installation of aerial conductors and underground wiring encompassing:

- Types and application of aerial conductors
- Aerial span limitations and required clearances
- Selection of aerial supporting poles/post and struts for a given application.
- Use and requirements of catenary support systems
- Acceptable cable types and protection for underground wiring categories.
- Underground wiring depth layer and protection
- Underground wiring clearances from other services

T18 Knowledge of AS/NZS 3000 requirements for electrical installations in hazardous areas encompassing:

- Types of areas classified as a hazardous area
- Standards to which the selection, installation and maintenance of electrical equipment shall comply.
- Additional training required to work competently with electrical equipment for hazardous areas

REQUIRED SKILLS AND KNOWLEDGE

- T19 Ability to verify compliance of an electrical installation in accordance with AS/NZS 3000 encompassing:
 - Visual inspection to determine whether the installation complies with requirements set out in Section 2 to 7 of AS/NZS 3000 and relevant specific installation standards.
 - Mandatory tests following guidance given in AS/NZS 3017

T20 Ability to perform effective safe isolation of any equipment encompassing:

- Preparation of a 'safe work method statement' (SWMS) or Job Safety Analysis (JSA) for effective safe isolation.
- Safe methods for identifying source of supply to be isolated.
- Switching-off, lock-out and tagging procedures.
- Safe methods for confirming effective and safe isolation

T21 Ability to apply AS/NZS 3000 requirements to install and terminate thermoplastic insulated cables; elastomer sheathed cables; XLPE sheathed cables; and high temperature cables; armoured cables; and neutral screened cables in a wide range of applications.

T22 Ability to perform the circuit tests required for electrical cables in a range of installations and final sub-circuit encompassing:

- Following safe testing procedures.
- Tests to show if the earth continuity and earth-fault loop impedance are sufficiently low.
- Testing to show if insulation resistance is sufficiently high.
- Testing to show if the polarity and circuit connections are correct.

T23 Ability to install final sub-circuit wiring into switchboards and connect to switchboard equipment in accordance with AS/NZS 3000 and electricity distributor's requirements.

T24 Ability to apply AS/NZS 3000 and electricity distributor's requirements for the installation and connect consumers mains encompassing:

- Installing of underground and overhead consumers mains
- Terminating consumers mains at pillars, pits mains connection boxes and consumers switchboard.
- Install unprotected consumers mains to reduce the risk of short-circuit current to a minimum.
- Installing bonding conductors where required.

T25 Ability to read, sketch and interpret electrical diagrams encompassing:

- Purpose and characteristics of schematic, block and wiring diagrams, plans and schedules.
- Conventions used in documenting electrical information
- Read and interpret schematic, block and wiring diagrams, plans and schedules
- Sketch electrical diagrams using conventional symbols

T26 Knowledge and understanding occupational safety and health encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Basics of Occupational Safety and Health regulations
- Legal responsibilities for employers and employees
- Employers' and employees' own "duty of care".
- Safety committees and their role

T27 Knowledge and understanding of the requirements for personal safety in the workplace encompassing:

- Purpose and use of Safe Work Method Statements (SWMS) or Job Safety Analysis (JSA).
- Purpose and process of reporting OHS incidents.
- Safety procedures for working with electrical circuits and equipment.
- Procedures for safe and effective isolation of electrical supply.
- Regulations for the supervision of apprentices and trainees.

T28 Process in rescuing a person in contact with live electrical conductors or equipment and the primary importance of the safety of the rescuer.

T29 Application of emergency first aid requirements for an electric shock victim encompassing:

- Calling for help.
- Applying cardiopulmonary resuscitation (CPR).
- Selection and use of fire extinguishers to control electrical fire at accident site.

T30 Dangers of high voltage equipment and distribution systems encompassing:

- Step and touch and induced voltages.
- Sources of induced voltage and stored energy
- Creepage and clearance requirements.
- Application of safe working procedures in the vicinity of HV equipment.

T31 Systematic method of commissioning and decommissioning electrical equipment and installations encompassing:

- Commissioning safety procedures
- Circuit voltage testing
- Phase rotation checks
- Functional testing
- Instrument and control parameter settings
- Decommissioning safety procedures.
- Identification of circuits with their control and protection devices.
- Impact of isolation on other parts of an installation.
- Tagging, testing and earthing.
- Safe removal of equipment.

T32 Diagnosing and rectifying faults in electrical apparatus and associated circuits encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Faults such as open-circuit; short-circuit; incorrect connections; insulation failure; unsafe condition; apparatus/component failure; related mechanical failure;
- Apparatus such as control devices; fixed appliances/accessories; lighting; electrical machines motors and controls; socket outlets, transformers; protection and metering devices.
- Circuits such as those supplying fixed appliances; lighting; socket outlets; motors and controls circuits; transformers; electronic or computer based equipment.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to

EVIDENCE GUIDE

be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Verify compliance and functionality of general electrical installations as described as described in 8) and including:
 - A Selecting correct tools and testing equipment.
 - B Identifying visual non-compliance defects.
 - C Using effective methods for conducting mandatory and optional tests.
 - D Identifying non-compliance from test results.
 - E Identifying causes of non-compliance.
 - F Completing mandatory reporting.
 - G Dealing with unplanned events

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to verifying compliance and functionality of general electrical installations.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to selecting and selecting wiring systems and cables for at least two general electrical installations comprising a main switchboard, supplying more than one circuit each for, lighting, socket outlets, and fixed appliances. One of the installations shall include a distribution board separate from the main switchboard and at least one circuit supplying a three-phase load and a fire pump.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.3) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

2.3) Literacy and numeracy skills

Competency Field 5)

Electrical

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the termination of cables and cords and their conductors at accessories and current-using devices designed to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to standards, understanding wiring system and cable types and applications, selecting appropriate termination accessories, preparing and terminating cables and cords, terminating cables/cord conductors and ensuring completed termination complies with requirements.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, dismantle, assemble and electrotechnology components

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107B Use drawings, diagrams, schedules, standards, codes and specifications

2.2) Further Information:

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit 4)

4.1) General Application

This unit applies to competency development entry-level employment based programs incorporated in approved contracts of training.

4.2) Importation

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to terminate cables, cords and conductors	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Health and safety risks are identified and established risk control measures and procedures in preparation

ELEMENT	PERFORMANCE CRITERIA
	for the work are followed.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 The junction box/ terminal enclosures and terminal types are inspected to select the type and size of cable and conductor termination devices needed.
	1.5 Tools, materials and testing devices needed to for terminating cables and cords are obtained in accordance with established procedures and checked for correct operation and safety.
2 Terminate cables, cords and conductors	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.3 Cable/cord ends are cut and sheath/insulation stripped with sufficient length to prevent stain on terminations and without undue waste.
	2.4 Cable glands/retaining devices are fitted and secured to ensure cable/cord cannot be pulled out of entry into junction box/ terminal enclosure
	2.5 Conductors are prepared to suit the type of terminal at which there are to be connected.
	2.6 Conductors are terminated to ensure continuity across the terminal.
	2.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
3 Test terminated cables and cords	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Terminated cables are tested to ensure continuity

ELEMENT

PERFORMANCE CRITERIA

and insulation resistance comply with requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and terminating cables, cords and accessories for low voltage circuits.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EG106A

Wiring systems types, application and terminations

Evidence shall show an understanding of wiring systems types, application and terminations to an extent indicated by the following aspects:

T1 Cable types and terminations encompassing:

- cable variates (single cables, flexible cables, flexible cords, shielded cables, armoured cables, ribbon cables, other similar and like cables)
- structural components of cables and their purpose (conductor material, stranding, insulation type, voltage rating, screening, sheathing, armour and serving)
- Australian and International colour standards for cords and cables
- construction of common cables
- identification of cords and cables by conductor size, type and rating
- application of various cords and cables types
- identification of hardware used in terminating cords and cables
- preparation and termination of cords and cables
- termination of cords and cables using crimp lugs, tunnel connectors, soldering and solderless lugs
- requirements to protect and support cables adequately (protection against mechanical damage, protection from adverse temperatures and corrosion and protection from magnetic field that may affect the performance of the cable).

T2 Cords, cables and plugs encompassing:

- selection of flexible cords for given applications
- preparation of cord ends for connection
- fitting standard three pin plug tops to a flexible cords
- fitting standard three pin extension sockets to a flexible cords
- connecting variety of plugs to different flexible cord types
- requirements of AS/NZS 3000 for flexible cords, cables and plugs
- using test equipment to test and locate various faults in flexible cords and cables.

REQUIRED SKILLS AND KNOWLEDGE

T3 Flat TPS wiring systems encompassing:

- Australian Standards requirements for the termination and protection of flat TPS cable
- Installation of flat TPS cable in trunking and duct for the supply of socket outlets
- using flat TPS cable for lighting looms
- testing circuits to ensure they are safe and operate as intended

T4 Circular TPS wiring systems encompassing:

- Australian Standards requirements for the installation of circular TPS cable
- installation of circular TPS cables on cable ladder/tray
- installation of circular TPS cable
- testing circuits to ensure they are safe and operate as intended

T5 Thermoplastic insulated cables in non-metallic enclosures encompassing:

- Australian Standards requirements for the installation of non-metallic enclosures
- cutting and setting rigid non-metallic ducting, trunking and conduit and accessories
- installation of circuits using TPI cables in non-metallic enclosures
- testing circuits to ensure they are safe and operate as intended

T6 Thermoplastic insulated cables in metallic enclosures encompassing:

- Australian Standards requirements for the installation of metallic enclosures
- fitting metallic conduit to metallic trunking and accessories
- cutting, threading and setting metallic conduit
- installation of circuits using thermoplastic insulated cables in metallic conduit, ducting and trunking
- testing circuits to ensure they are safe and operate as intended

T7 Fire protection cabling and systems encompassing:

- Australian Standards requirements for the installation of fire protection cable and mineral insulated metal sheathed cables
- requirements when passing a wiring system through a fire rated wall or floor
- recognising different fire protection cable types including Pyrolex, Radox and MIMS
- termination of fire protection cable.
- installation of circuits using fire protection cable.
- testing circuits to ensure they are safe and operate as intended

T8 Steel wire armoured (SWA) cables encompassing:

- Australian Standards requirements for the installation of SWA cables
- identifying accessories used with SWA cables
- installation of circuits using SWA cables
- testing circuits to ensure they are safe and operate as intended

REQUIRED SKILLS AND KNOWLEDGE

T9 Trailing cables and catenary systems encompassing:

- Australian Standards requirements for the installation of trailing cables and catenary wiring
- identifying equipment used with trailing cable and catenary systems
- installation of catenary wiring systems
- installation of trailing cable systems supplying pendant sockets
- testing the installation to ensure it is safe and operates as intended

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material

EVIDENCE GUIDE

carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install wiring and accessories for low voltage circuits as described as described in 8) and including:
 - A Selecting appropriate cable/cord and conductor devices
 - B Cutting cable ends and stripping sheath/insulation to a sufficient length
 - C Fitting and securing cable glands/retaining devices correctly
 - D Preparing and terminating conducts to suit the type of terminal at which there are to be connected.
 - E Testing completed cables to ensure compliant continuity and insulation resistance
 - F Dealing with unplanned events

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing wiring and accessories for low voltage circuits.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by terminating at least five different types of cables each at a junction box and a device terminal enclosure.

Cable types with copper conductors:

- Thermoplastic insulated cable (TPI)
- Flat thermoplastic sheathed (TPS)
- Circular thermoplastic sheathed (TPS)
- Steel wire armoured (SWA)
- Mineral insulated metal sheathed (MIMS)
- Flexible cables
- Flexible cords
- Aluminium conductor/cable

AND

Terminate their conductors at each of the follow

Terminal types

- Tunnel terminal
- Stud terminal
- Screw terminal

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers selecting wiring systems and cables for electrical installations operating at voltages up to 1,000V a.c. or 1,500 V d.c. It encompasses knowledge and application of wiring systems and cable types, selecting wiring system compatible with the installation conditions, selecting cables that comply with required current-carrying capacity and voltage drop and earth fault-loop impedance limitations, coordination between protective devices and conductors and documenting selection decisions

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, dismantle, assemble of electrotechnology components

UEENEEE104A Solve problems in d.c circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase

Prerequisite Unit(s)

2)

electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuit

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to select wiring systems and cables for general electrical installations	1.1 The extent and nature of the electrical installation is determined from job specifications.
	1.2 Safety and other regulatory requirements to which the electrical installation shall comply area are identified, obtained and understood.
	1.3 Cable routes, the route lengths of cables and the conditions in which the wiring system is to operate is determined from job specifications or from consultation with appropriate persons.
2 Select wiring systems and cables for general electrical installations	2.1 Wiring systems are selected for suitability for the environments in which they are to operate.
	2.2 Cable conductor sizes are selected to meet current-carrying capacity requirements and voltage-drop and earth fault-loop impedance limitations.
	2.3 Circuit protective devices are selected to meet requirement for co-ordination with conductor current-carrying capacity.
	2.4 Earthing system components are selected to meet requirements of an MEN system.
	2.5 Evidence is obtained that electrical equipment selected complies with safety requirements.

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-------------------------------------|--|
| 3 Document electrical installation. | 3.1 Evidence is obtained from manufacturers/suppliers that electrical equipment selected complies with safety requirements. |
| | 3.2 Reasons for selections made, including calculations, are documented in accordance with established procedures. |
| | 3.3 Electrical installation arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s). |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of selecting wiring systems and cables for general electrical installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG107A

Electrical installation — cable selection and

co-ordination

Evidence shall show an understanding of selecting cables and ensuring co-ordination between protection device and conductors in electrical installations that comply with the Wiring Rules, Selection of cables standards and Service Rules to an extent indicated by the following aspects:

T1 Performance requirements - design and safety encompassing:

- harmful effects against which the design of an electrical installation must provide protection.
- performance standards of a correctly functioning electrical installation.
- supply characteristics that shall be considered when designing an electrical installation.
- acceptable methods for determining the maximum demand in consumer's mains and sub-mains.
- AS/NZS 3000 requirements limiting voltage drop in an installation.
- reason for dividing electrical installations into circuits and the factors that shall determine their number and type.
- typical external factors that may damage an electrical installation and that shall be considered in the installation design.
- methods for protecting persons and livestock against direct and indirect contact with conductive parts and the typical application of each.
- acceptable methods of protection against the risks of ignition of flammable materials and injury by burns from the thermal effects of current, in normal service.
- likely sources of unwanted voltages and the methods for dealing with this potential hazard.
- acceptable methods for protecting persons and livestock against injury and property against damage from the effects of over current.
- requirement for protection against fault current.
- requirement for protection against the harmful effects of faults between live parts of circuits supplied at different voltages.
- need for protection against injury from mechanical movement and how this may be achieved.

REQUIRED SKILLS AND KNOWLEDGE

- features of 'fire rated construction' and how the integrity of the fire rating can be maintained in relation to electrical installation.
- T2 Final subcircuit arrangements encompassing:
- factors that shall be considered in determining the number and type of circuits required for an installation.
 - daily and seasonal demand for lighting, power, heating and other loads in a given installation.
 - number and types of circuits required for a particular installation.
 - current requirements for given final subcircuits.
 - layout/schedule of circuits for given installations.
- T3 Factors affecting the suitability of wiring systems encompassing:
- wiring systems typically used with various construction methods and particular environments.
 - installation conditions that may affect the current-carrying capacity of cables.
 - external influences that may affect the current-carrying capacity and/or may cause damage to the wiring system.
 - AS/NZS 3000 requirements for selecting wiring systems for a range of circuits, installation conditions and construction methods into which the wiring system is to be installed. Note: Wiring systems include cable enclosures, underground wiring, aerial wiring, catenary support, emergency systems, busbar trunking and earth sheath return.
- T4 Maximum demand on consumer's mains/submains encompassing:
- acceptable methods for determining the maximum demand on an installation's consumer's mains and submains.
 - maximum demand for the consumer's mains for given installations up to 400 A per phase.
 - maximum demand for given submains.
- T5 Cable selection based on current carrying capacity requirements encompassing:
- installation conditions for a range of wiring systems and applications.
 - external influences that require the use of a derating factor.
 - AS/NZS 3000 requirements for coordination of cables and protection devices.
 - AS/NZS 3008 used to select conductor size based on the maximum current requirement for a given installation condition including any applicable derating factors.
- T6 Cable selection based on voltage drop requirements encompassing:
- AS/NZS 3000 requirements for maximum voltage drop in an installation.
 - relevant tables in AS/NZS 3008 for unit values of voltage drop.
 - calculation of the expected voltage drop in a given circuit.
 - selecting cables to satisfy voltage drop requirements in addition to current carrying capacity requirements.
- T7 Cable selection based on fault loop impedance requirements encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- AS/NZS 3000 requirements for maximum fault loop impedance in an installation.
- relevant tables in AS/NZS 3008 to determine cable impedances.
- calculation of the expected fault loop impedance for a given circuit arrangement.
- selecting cables to satisfy fault loop impedance requirements in addition to current carrying capacity requirements and voltage drop requirements.

T8 Selecting protection devices encompassing:

- acceptable methods of protection against indirect contact.
- AS/NZS 3000 requirements for selecting methods and devices to protect against indirect contact for a range of installation types and conditions.
- coordination between conductors and protection devices to ensure the protection of cables from over heating due to over current.
- possible injuries to persons and livestock from hazards due to a short circuit.
- AS/NZS 3000 requirements for selecting devices to protect against overload current for a range of circuits and loads.
- AS/NZS 3000 requirements for selecting devices to protect against short-circuit current for a range of installation conditions.

T9 Selecting devices for isolation and switching encompassing:

- requirements for the provision of the isolation of every circuit in an electrical installation.
- need for protection against mechanical movement of electrically activated equipment.
- AS/NZS 3000 requirements for selecting devices for isolation and switching for a range of installations and conditions.

T10 Switchboards encompassing:

- AS/NZS 3000 and local supply authority requirements for switchboards.
- tariff structures for the supply of electricity.
- equipment installed at the main switchboards with capacities up to 400 A per phase.
- layout of a main switchboard for an installation supplied with single phase single tariff whole current metering.
- layout of a main switchboard for an installation supplied with single phase multiple tariff whole current metering.
- layout of a main switchboard for an installation supplied with multiphase single tariff whole current metering.
- layout of a main switchboard for an installation supplied with multiphase multiple tariff whole current metering.
- layout of a main switchboard for a multiple tenancy installation with whole current metering.
- layout of a main switchboard, including metering, for an installation supplied with three phase CT metering.
- local supply authority requirements for connection of an electrical installation to the electrical supply system

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

EVIDENCE GUIDE

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Selecting wiring systems and cables for general electrical installations as described as in 8) and including:
 - A Determining the extent and nature of the installation for job specifications
 - B Obtaining and understand the safety and other regulatory requirements to which the electrical installation shall comply
 - C Determining cable routes, the route lengths of cables and the conditions in which the wiring system is to operate.

EVIDENCE GUIDE

- D Selecting wiring system suitable for the environment requirements.
- E Selecting cable conductors sizes in consideration to current-carrying capacity and voltage-drop / earth fault-loop limitation.
- F Ensuring co-ordination between circuit protective device and conductor current-carrying capacity.
- G Selecting compliant earthing system components
- H Documenting wiring systems and cables to be used, specification for items selected and reasons for the selections made.
- I Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to selecting and arranging equipment for general electrical installations.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEE063A	Arrange circuits, control and protection for general electrical installations
------------	---

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to selecting and selecting wiring systems and cables for at least two general electrical installations comprising a main switchboard, supplying more than one circuit each for, lighting, socket outlets, and fixed appliances. One of the installations shall include a distribution board separate from the main switchboard and at least one circuit supplying a three-phase load and a fire pump.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers trouble-shooting and repairing faults in electrical apparatus and interconnecting circuits and equipment operating at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely, reading circuit diagrams, sketching diagrams from traced wiring, logically applying fault finding procedures, conducting repairs and completing the necessary service documentation.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, dismantle, assemble of electrotechnology components

UEENEEE104A Solve problems in d.c circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

Prerequisite Unit(s) 2)

UEENEEG102A Solve problems in low voltage a.c. circuit

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

2.2) Further Information

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit 4)

4.1) General Application

This unit applies to all qualifications, competencies and/or Skill Sets which require an electrical license.

4.2) Importation

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to trouble-shoot and rectify faults.	1.1 The extent and nature of the electrical installation is determined from job specifications.
	1.2 Safety and other regulatory requirements to which the electrical installation shall comply area are identified, obtained and understood.
	1.3 OHS procedures for a given work area are identified, obtained and understood.
	1.4 OHS risk control measures and procedures in preparation for the work are followed.
	1.5 The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).
	1.6 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
2 Trouble-shoot and repair faults.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	2.5 Trouble-shooting is approached methodically drawing on knowledge of electrical circuits and apparatus using measured and calculated values of circuit/apparatus parameters.
	2.6 Circuit/apparatus components are dismantled where necessary and parts stored to protect them

ELEMENT	PERFORMANCE CRITERIA
	against loss or damage.
	2.7 Faulty circuits/components are rechecked and their fault status and acquired.
	2.8 Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.
	2.9 Effectiveness of the repair is tested in accordance with established procedures.
	2.10 Apparatus is reassembled, finally tested and prepared for return to service.
	2.11 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.12 Trouble-shooting and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Completion and report trouble-shoot and repair activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Written justification is made for repairs to apparatus.
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and trouble-shooting and repairing faults in electrical apparatus and circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG108A Electrical circuit and equipment faults and fault finding techniques

Evidence shall show an understanding of electrical circuit and equipment faults and fault finding techniques to an extent indicated by the following aspects:

T1 Troubleshooting concepts encompassing:

- need to understand the correct operation of a circuit or equipment, switching and control circuit arrangements.
- common faults with circuits and equipment including operator faults, incorrect connections, open-circuits, short-circuits, device faults (mechanical), supply faults.
- typical faults symptoms and their causes: operation of circuit protective device, appliance does not operate, single phase motor does not develop enough torque to drive the load, three phase motor does not develop enough torque to drive the load, motor overload trips
- factors to consider in clarifying the nature of a fault: initial fault report, confirmation of symptoms of the fault, comparison of symptoms with normal operation
- effect to cause reasoning — assumptions of possible causes
- methods for testing assumptions: visual inspection, component isolation, test equipment, sectional testing, split-half tests
- repairing the fault and the steps needed to ensure fault doesn't re-occur
- dealing with intermittent faults (typical causes of intermittent faults are vibration, shock, changes in temperature and electromagnetic interference).
- final testing and re commissioning

T2 Troubleshooting water heater and appliance circuits/equipment encompassing:

- circuit diagrams of common single phase and three phase hot water systems
- single phase and three phase element resistance values (determined from measurement and calculation from power and voltage ratings)
- testing single and three phase elements for correct insulation resistance and continuity
- element replacement techniques
- operation of thermostats, thermal cut-outs and pressure relief valves, flow switches and checking sacrificial anodes

REQUIRED SKILLS AND KNOWLEDGE

- locating faults in common single and three phase hot water systems
- repairing faulty water heating systems

T3 Troubleshooting electrical appliance circuits/equipment encompassing:

- circuit diagrams of common single phase and three phase appliances
- methods to determine the cause of an RCD operation
- identification of appliances that is causing an RCD to trip
- testing single and three phase appliances for correct insulation resistance and continuity
- operation of appliances controls
- locating faults in common single and three phase appliances
- repairing faulty appliances

T4 Troubleshooting lighting circuits encompassing:

- circuit and wiring diagrams of common lighting circuits including single light controlled by a single switch, multiple lights controlled by a single switch, two and three way switching using the loop at the light method and the loop at the switch method.
- causes of wiring faults from supplied symptoms and circuit and/or wiring diagrams
- causes of faults in ELV lighting devices, include transformer (iron core or electronic), voltage drop, heat, over-voltage, poor connections, incompatible dimmers
- diagrams of a basic fluorescent light circuit including lamp, ballast and starter
- locating faults in fluorescent light circuits
- operation of a range of lighting control including passive infra-red (PIR), dimmers, photo electric or day-light switches and time clocks
- locating faults in lighting control circuits

T5 Troubleshooting single phase motor and control circuits encompassing:

- circuit diagrams of split phase, capacitor start, capacitor start capacitor run, universal and shaded pole single phase motors
- causes of single phase motor faults from supplied symptoms and circuit diagrams
- causes of electrical faults in single phase motors, include open and partially open circuit winding, short and partially short circuit winding, open circuit rotor, burnt out winding, coil shorted to frame.
- reasons for a thermal overload trip and how often they are to be reset before investigating a cause
- internal mechanical faults and their consequences, include bearings, fans, bent shaft, locked rotor, blocked air vents, centrifugal switches, environmental factors
- faults on driven loads and couplings and their consequences, include slipping belts, poorly aligned coupling (shims), vibration, loads bearing failing, load stalling.
- locating faults in single phase motors and their controls

T6 Troubleshooting three phase induction motor encompassing:

- circuit diagrams of three phase induction motors
- causes of three phase motor faults from supplied symptoms and circuit diagrams
- causes of electrical faults in three phase motors, include open and partially open circuit

REQUIRED SKILLS AND KNOWLEDGE

phase winding, short and partially short circuit phase winding, open circuit rotor, burnt out phase winding, coil shorted to frame.

- reasons for a thermal overload trip and how often they are to be reset before investigating a cause
- internal mechanical faults and their consequences, include bearings, fans, bent shaft, locked rotor, blocked air vents, environmental factors.
- faults on driven loads and couplings and their consequences, include slipping belts, poorly aligned coupling (shims), vibration, loads bearing failing, load stalling.
- locating faults in three phase induction motors and their controls

T7 Troubleshooting electrical installations encompassing:

- circuit diagrams, wiring diagrams, cable schedules and specifications of electrical installations
- causes of electrical installation faults from supplied symptoms and circuit diagrams include open and partially open circuit wiring, short and partially short circuit wiring, low insulation resistance, incorrect polarity, transposition of conductors, RCD tripping.
- locating faults in electrical installations
- repairing faulty electrical installation circuits components and wiring.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and

EVIDENCE GUIDE

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit . It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in electrical apparatus and circuits as described as described in 8) and including:
 - A Envisaging the likely extent of the fault and the work from fault/breakdown reports and/or discussion to elicit information on the fault/breakdown with appropriate person(s).
 - B Using appropriate tools and resources, and methodical fault finding techniques.
 - C Locating and trouble-shooting faults efficiently.
 - D Conducting tests or measurements in strict accordance with OHS and electrical safe working requirements.
 - E Rectifying faults effectively.
 - F Reporting cause of the fault and justifying the repairs undertaken.
 - G Dealing with unplanned events

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to trouble-shooting and repairing faults in electrical apparatus and circuits.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

-------------	---

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in trouble-shooting and repairing faults in electrical apparatus and circuits designed for voltages up to 1000 V a.c. or 1500 V d.c in at least:

Four of the following **equipment and associated circuit**

- Switchboards
- Protective devices
- Lighting
- Heating
- Socket outlets
- Control devices

and

Three of the following **machines and associated control circuits**

- Single phase motors
- Single phase motor controls
- Three phase motors
- Three phase motor controls
- Synchronous machines
- DC machines
- DC machines controls
- Transformers and auxiliary components

RANGE STATEMENT

Notes.

1. The different types of faults include; Open-circuit; Short-circuit; Incorrect connections; Insulation failure; Unsafe condition; Apparatus/component failure; Related mechanical failure; Other electrical apparatus and circuit faults
2. Examples of apparatus are Control devices; Fixed appliances/accessories; Lighting; Single phase motors and their controls; Socket outlets Three phase motors and their controls, synchronous machines and their controls, transformers and their controls, switchboards and/or distribution boards and their controls, protection and/or metering devices, a.c./d.c. machines and their controls other like equipment/accessories.
3. Examples of circuits include those supplying fixed appliances; lighting; single-phase motors; socket outlets; three phase motors and controls circuits; machines and transformers; electronic or computer based equipment other like equipment/accessories.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop and prepare to connect electrical control circuits.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
	1.4 Control scenarios are determined from discussions with appropriate person(s) and documented in accordance with established procedures.
	1.5 Agreement for the control scenarios is sought from appropriate person(s) and documented in accordance with established procedures.
	1.6 Schematic arrangement of control circuits that complies with agreed scenarios is documented in accordance with established procedures.
	1.7 Materials needed to connect control circuits are obtained in accordance with established procedures and checked against job requirements.
	1.8 Tools, equipment and testing devices needed to connect control circuits are obtained in accordance with established procedures and checked for correct operation and safety.
	1.9 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
2 Connect and test electrical control circuits.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

ELEMENT	PERFORMANCE CRITERIA
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Control circuit components are connected to comply with the agreed control scenario.
	2.5 Control circuit operation is tested for agreed functionality and in strict accordance with OHS requirements and established safety procedures.
	2.6 Non-compliant control functions are rectified to comply with the agreed control scenario.
	2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8 Control circuits are connected and tested efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practice.
3 Completion and document circuit development activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 'As-connected' control circuits are documented using standard drawing conventions and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing and connecting control circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG109A

Electrical control devices and circuits

Evidence shall show an understanding of electrical control devices and circuits to an extent indicated by the following aspects:

T1 Basic relay circuits encompassing:

- Identification of given circuit diagrams (schematic) symbols and explain the operation of the components represented
- labelling wires and terminal (numbering systems)
- control relay - operating principles, basic contact configurations and identification and common applications
- push button - switching configurations and common applications
- selecting pushbuttons/pilot lamps from manufacturer's catalogues for specific applications
- development of simple stop-start relay circuit that incorporates pilot lights and latching circuit.
- connection and testing of control circuits

T2 Relay circuits and drawing conventions encompassing:

- circuit diagram drawing conventions
- selecting relays from manufacturers' catalogue for specified applications
- circuit development of electrical control circuit in accordance with a written description (specification) and list the sequence of operation of the circuit
- connecting simple electrical control circuit from circuit diagrams
- applying safe working practices when testing an electrical control circuit

T3 Remote STOP-START control and electrical interlocking encompassing:

- operation of local and remote start-stop control of relays
- operation of an electrically interlocked relay circuit
- development of a relay circuit incorporating local and remote start and stop buttons and electrical interlocking.
- connecting electrical circuits with local and remote start-stop control and with electrical interlocking.

REQUIRED SKILLS AND KNOWLEDGE

- applying circuit checking and testing techniques to an electrical control circuit.

T4 Time delay relays encompassing:

- timers - operating principles, basic contact configurations and identification and common applications
- selecting timers for specified functions from manufactures' catalogues
- development of timer controlled circuits from a written description and list the sequence of circuit operation
- connecting a timer controlled circuit using a circuit diagram as a guide.
- timer circuit checking and testing procedures.

T5 Circuits using contactors encompassing:

- contactors - operating principles, basic contact configurations and identification and common applications
- thermal overloads - operating principles, basic contact configurations and identification and common applications
- circuit diagram symbols
- circuit development using a contactor
- using contactors for motor control.
- compliance requirements for devices for isolating circuits.

T6 Jogging and interlocking encompassing:

- purpose and application of jogging control of motors
- operation of motor control using start, stop and jog buttons
- purpose and application of electrical/mechanical interlocking
- developing a multiple motor starting circuit from a description of the circuit operation including jog and interlock functions.
- selecting circuit components using manufacturers' catalogues for appropriate duty ratings
- connecting and testing a multiple motor starting circuit which incorporates start, stop and jog control.

T7 Control devices encompassing:

- common control devices used in automatic control circuits: limit switches, proximity switches, photoelectric cells, pressure switches, float switches, light sensors and temperature sensors
- basic operating principles of common control devices
- advantages and disadvantages of common control devices
- applications for common control devices
- selecting control devices using manufacturers' catalogues for specified applications
- connection of control devices into control circuits

T8 Programmable relays encompassing:

- programmable relays - advantages over electromagnetic relay circuit control.

REQUIRED SKILLS AND KNOWLEDGE

- typical applications of programmable relays.
- block diagram representation and basic operating principles
- input and output parameters, listing, connections and output types.
- connecting input and output devices to a programmable relay using a diagram
- basic programming of ladder circuits consisting of inputs, outputs i.e. stop-start circuit
- using the monitoring facility of the programmable relay to verify each ladder circuit operation.
- programming timers and using the monitoring facility of the programmable relay to check the values of the timer
- external devices
- implications of programming normally closed field devices
- conversion of control circuits
- installation of programmable control relays
- common faults and their symptoms

T9 Three-phase induction motor starters encompassing:

- reasons for limiting the starting current of large motors.
- requirements of the wiring rules (AS/NZS 3000) and the local supply authority service rules, with regard to starting and control of induction motors.
- DOL starter operating principles, applications and circuits
- electronic (soft) starter operating principles, applications and circuits
- connecting a DOL motor starter and testing the operation of the power and control circuits
- installation of DOL and soft starters

T10 Three-phase induction motor starters- reduced voltage encompassing:

- star-delta starter operating principles and circuits
- primary resistance starter operating principles and circuits
- auto-transformer starter operating principles and circuits
- secondary resistance starter operating principles and circuits
- common applications for each starter type
- comparison of motor starters basic characteristics
- selecting the most suitable motor starter for a given situation
- connecting motor starter power and control circuits for correct operation
- measuring starting current and torque of selected motor starters
- installation of reduced voltage starters

T11 Three-phase induction motor reversal and braking encompassing:

- reversing operating principles and control circuits
- plug braking operating principles and circuits
- dynamic braking operating principles and circuits
- regenerative braking operating principles and circuits

REQUIRED SKILLS AND KNOWLEDGE

- eddy current brakes operating principles and circuits
- mechanical brakes operating principles and circuits
- comparison of the difference braking methods used.
- typical applications for each braking method.
- connecting a circuit with a braking feature to operate a three-phase motor.
- installation of motor braking control circuits

T12 Three-phase induction motor speed control encompassing:

- pole changing operating principles and circuits
- variable frequency drives operating principles and circuits
- slip-ring motors operating principles and circuits
- installation of motor speed controllers.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required

EVIDENCE GUIDE

and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop and connect control circuits as described as described in 8) and including:
 - A Determining control scenarios specifications.
 - B Developing schematic arrangement of control circuits that meets the required scenario as specified.
 - C Connecting control circuit to function as specified.
 - D Conducting safety and functional testing correctly
 - E Identifying and correcting non-compliant control functions.
 - F Documenting 'as-connected' control circuit.
 - G Dealing with unplanned events

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to development and connecting electrical control circuits.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG108B	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
-------------	--

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing, connecting and safety and functional testing on more than one occasion of at least four of the following control circuits:

- Multiple light switching circuit
- Master control circuit
- Single stop-start circuit
- Multiple stop-start circuit
- Time controlled circuit
- Machine interlocked circuit
- Motor jogging circuit
- Machine safety circuit

and,

using at least five of the following devices

- Multi-way switches
- Switches with more than two positions and Off
- Push buttons
- Electromechanical relays
- Programmable relays
- Contactors
- Reversing contactors
- Three phase starters
- Reduced voltage starters

and

with at least two of the following transducers/sensors:

RANGE STATEMENT

- Timers
- Limit switches
- Proximity switches
- Photoelectric cells
- Pressure switches
- Float switches
- Light sensors
- Temperature sensors

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers finding and repairing faults in electrical apparatus and interconnecting circuits and equipment operating at voltages up to 1,500 V d.c. It encompasses working safely, reading circuit diagrams, sketching diagrams from traced wiring, applying logical fault finding procedures, conducting repairs and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities components
UEENEEE1 04A	Solve problems in d.c circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuit
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG1 08A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

Prerequisite Unit(s) 4)

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information**Employability Skills 5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to find and rectify faults.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.
2 Find and repair faults.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	2.5 Fault finding is approached methodically drawing on knowledge of d.c. circuit and apparatus using measured and calculated values of circuit/apparatus parameters.

ELEMENT**PERFORMANCE CRITERIA**

- 2.6 Circuit/apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
- 2.7 Faulty circuits/components are rechecked and their fault status and acquired.
- 2.8 Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.
- 2.9 Effectiveness of the repair is tested in accordance with established procedures.
- 2.10 Apparatus is reassembled, finally tested and prepared for return to service.
- 2.11 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.12 Fault finding and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault finding and repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.
- 3.3 Maintenance work activities are documented in accordance with established procedures.
- Note.
Examples of documentation are component faults reports, test results, authorisations, permits, parts/component dispatch and stores records.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in LV d.c. electrical apparatus and circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG110A

Direct current machines and controls

Evidence shall show an understanding of d.c. motor control methods to an extent indicated by the following aspects:

T1 Direct current machines encompassing:

- Purpose, types and applications
- Operating principles
- Installation and starting/running requirements and limitations
- Connection arrangements
- Typical fault symptoms and related conditions

T2 Direct current motor starters and their operating principles encompassing:

- back emf
- series-lockout
- timed starters
- electronic controllers

T3 Power and control connection arrangements encompassing:

- Built-in stop/start control
- Remote stop/start control
- Overload protection
- Interlocking with other starters and controls

T4 Braking methods encompassing:

- Dynamic,
- Plugging,
- Electromechanical, and
- Regenerative.

T5 Speed control methods encompassing:

- Field control
- Rheostatic control

REQUIRED SKILLS AND KNOWLEDGE

- Voltage control
- T6 Protection of d.c. motors

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing

on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in d.c. electrical apparatus and

circuits as described in 8) and including:

- A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s).
- B Using methodical fault finding techniques.
- C Finding faults efficiently.
- D Rectifying faults effectively.
- E Completing documentation correctly.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and repairing faults in d.c. electrical apparatus and circuits.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is

expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG10 Develop and connect electrical control circuits
9A

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing faults and their cause in d.c. electrical apparatus and circuits. Finding and repairing fault types in electrical apparatus and interconnecting circuits and equipment operating at voltages up to d.c include the following:

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Apparatus/component failure
- Related mechanical failure
- Other electrical apparatus and circuit faults
- Any five of the above shall apply.

Note:

1. Examples of apparatus are d.c switchboards/distribution boards, protective devices such as circuit breakers and fuses, and d.c machines and associated control devices.
2. Examples of circuits include those related to d.c. apparatus; d.c machines and controls circuits.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit deals with the repair and/or replacement of mechanical and electrical components of electrical apparatus. It encompasses safe working practices, following written and oral instruction and procedures, basic testing and techniques for dismantling and assembling apparatus and disconnecting and reconnecting components

Application of the Unit

Application of the Unit 2)

This unit may apply to persons entering work in electrotechnology and may be used in school based vocational programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

License to practice**3)**

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

| | | 3.3 | Work area is cleaned and made safe in accordance with established procedures. |
| | | 3.4 | Work supervisor is notified of the completion of the repair work in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out basic repairs to electrical apparatus.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG111A

Electrical basic equipment repair

Evidence shall show an understanding of electrical workshop and metal cutting and an ability to carry out those activities to an extent indicated by the following aspects:

T1 Basic cable and conductor terminations encompassing:

- Insulation removal and replacement
- General aspects and soldering involving pins on electronic components and stranded conductors carrying current up to 25 amperes.
- Application of connecting devices for conductors and terminals
- Continuity through connections and insulation resistance testing
- Stress release on cables/conductors

T2 Electrical workshop machines encompassing:

- Fixed position power tools
- Tooling used on drilling machines
- Twist drills features, sharpening and faults
- Drilling operations
- Off hand grinding safety and machine set up

T3 Principles of metal cutting encompassing:

- Factors influencing the action of cutting tools
- Principles of chip formation
- Effects of cutting tool geometry
- Effects of coolants and cutting fluids

T4 Selection of cutting tools encompassing:

- Factors influencing tool selection
- Cutting tool materials
- Turning cutting tool design
- Milling cutting tool design

REQUIRED SKILLS AND KNOWLEDGE

- Principles of chip control
 - Identification and selection of carbides
- T5 Metal cutting conditions encompassing:
- Conditions under which tools cut best
 - Determining cutting data
- T6 Cutting tool defects encompassing:
- Identification of types of tool failures
 - Causes of tool failure
- T7 Overcoming causes of tool failure

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place,

access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or

licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Carry out basic repairs to electrical apparatus as described as described in 8) and including:

A Following manufactures service instructions for access to components.

B Removing at least three different types of components specified in the work instructions.

C Replacing components to manufacturer's requirements.

D Terminating internal wiring correctly.

E Reassembling the apparatus correctly.

F Testing apparatus operation.

G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and
specific
resources for
assessment** 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal

learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to carrying out basic repairs to electrical apparatus.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE10 Fabricate, assemble and dismantle utilities
2A industry components

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) 8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out basic repairs electrical apparatus limited to replacement or repair of components in which the fault has been previously established. This shall include at least two different electrical apparatus in which three different types of components are faulty one of which requires disconnecting and reconnecting internal wiring to affect repairs.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the installation and maintenance of fire and smoke control, emergency supplies and early warning systems in buildings and premises. It encompasses working safely and to installation and maintenance standards, complying with maintenance schedules and completing the necessary documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work

License to practice**3)**

platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities components
UEENEEE1 04A	Solve problems in d.c circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE1 37A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits

Prerequisite Unit(s)

4)

- UEENEEG063A Arrange circuits, control and protection for general electrical installations
- UEENEEG101A Solve problems in electromagnetic devices and related circuits
- UEENEEG102A Solve problems in low voltage a.c. circuit
- UEENEEG103A Install low voltage wiring and accessories
- UEENEEG106A Terminate cables, cords and accessories for low voltage circuits
- UEENEEG107A Select wiring systems and cables for low voltage general electrical installations
- UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
- UEENEEG109A Develop and connect electrical control circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills

5)

This unit contains Employability Skills

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1 Prepare to install and maintain emergency safety systems	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Installation/maintenance is prepared in consultation with other affected by the work and sequenced appropriately.
	1.5 The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken.
	1.6 Location of apparatus and associated equipment is planned within the constraints of the building structure, significant and regulations.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|---|---|
| | 1.7 | Advice is sought from appropriate persons to ensure the work is coordinated effectively with others. |
| | 1.8 | Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements. |
| | 1.9 | Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety. |
| | 1.10 | Preparatory work is checked to ensure no damage has occurred and complies with requirements. |
| 2 | Install and maintain emergency safety systems | |
| | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
| | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures. |
| | 2.4 | Apparatus and associated equipment are installed and maintained to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance. |
| | 2.5 | Wiring is terminated at apparatus and associated equipment in accordance with manufacture's specifications and functional and regulatory requirements. |
| | 2.6 | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented. |
| | 2.7 | Unexpected situations are dealt with safely and with the approval of an authorised person. |

ELEMENT	PERFORMANCE CRITERIA
	2.8 Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures.
	2.9 Apparatus installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
3 Completion and report installation and maintenance activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Final checks are made to that the installed and maintained apparatus conforms to requirements.
	3.4 'As-installed' emergency safety systems apparatus and associated equipment is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining emergency safety systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG113A

Electrical installations, emergency safety systems

Evidence shall show an understanding of installing and maintaining electrical emergency safety systems to an extent indicated by the following aspects:

T1 Cells and batteries in common use encompassing:

- Primary cells
- Secondary cells
- Discharging
- Recharging
- Terminal voltages
- Capacity
- Discharge and recharge characteristics
- Battery configurations and applications
- Cell and battery safety practices.

T2 Electrical installations, emergency systems encompassing:

- Principles and practices of electrical emergency safety systems for electrical installations as contained in relevant Australian Standards, Australian building code and associated hazards documentation
- Arrangement and requirements for fire and smoke control equipment
- Arrangement and requirements for emergency warning and intercommunications systems
- Arrangement and requirement for emergency power supplies

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and maintain emergency safety systems as described in 8) and including:
 - A Determining the operating parameters of existing electrical safety systems.
 - B Using established problem solving methods.
 - C Directing personnel to take relevant measurements.
 - D Interpreting measured values appropriately.

- E Providing effective solutions to electrical safety system problems.
- F Giving written justification of solutions provided.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing and maintaining emergency systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to fire and smoke control, warning systems and emergency supplies.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Electrical

UEENEEG116A Diagnose and rectify faults in traction lift systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers diagnosing and rectifying faults in traction lift systems and equipment. It encompasses working safely, replacing and/or adjustment of lift circuit and associated components, diagnosing and repairing of faults in lift circuits and associated components (including governors, brakes, safety gear, safety devices, lift machines, door components and controllers) and releasing passengers from lifts which have become immobilised.

Application of the Unit

Application of the Unit **2)**

This unit applies to any formal recognition for this standard at the aligned AQF 3 level or higher.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

License to practice 3)
training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities components
UEENEEE1 04A	Solve problems in d.c circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuit
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits

Prerequisite Unit(s) 4)

UEENEEG1 08A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 5

Employability Skills Information**Employability Skills 5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to diagnose and rectify faults.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The likely extent of work to be undertaken is envisaged from maintain procedures or fault/breakdown reports and/or discussions with appropriate person(s).
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.
2 Diagnose and rectify faults.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measured and devised and implemented in consultation with appropriate personnel.
	2.5 Logical diagnostic methods are applied to diagnose lift system apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
	2.6 Suspected fault scenarios are tested as being the cause(s) of system fault.

ELEMENT	PERFORMANCE CRITERIA
	2.7 Cause of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of the lift systems.
	2.8 Faults in the lift components of the system are rectified to raise apparatus and system to its operational standard.
	2.9 System is tested to verify that the system operates as intended and to specified requirements
	2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.11 Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Completion and report fault diagnosis and rectification activities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.
	3.3 Rectification of faults is documented in accordance with established procedures. Note. Examples of documentation are components fault reports, test results, authorisations, permits, parts/component dispatch and store records
	3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in lifts systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG116A

Traction lift systems

Evidence shall show an understanding of the operation of the various types of lifts and the emergency procedures for the release of trapped passengers to an extent indicated by the following aspects:

T1 Technical standards, regulations and codes for lifts and escalators encompassing:

- Lift Code
- Australian Standards relevant to lift systems

T2 Lift systems – drive types, construction and operation of passenger, goods and service lifts encompassing:

- Drive types
- Drive constructions
- Drive operations
- Single and team manual handling
- Communication on site
- Emergency procedures
- Passenger
- Goods
- Service

T3 Lift machine room encompassing:

- access
- Machine
- Controller
- Governor
- Floor selector

T4 Lift well equipment encompassing:

- Guide rails
- Landing doors and locks
- Limit switches/operating devices
- Ropes

REQUIRED SKILLS AND KNOWLEDGE

- Roping systems
- Counterweights

T5 Lift pit encompassing:

- access
- Buffers
- Compensators
- Safety equipment

T6 Lift car encompassing:

- access
- Frame
- Superstructure
- Door operator
- Travelling cable
- Buttons and indicators
- Communication devices
- Safety gear

T7 Lift control circuits using relay logic encompassing:

- Button circuit
- Indicator/lantern circuit
- Key switch circuits
- Fans
- Mains supply
- Power circuits
- Floor selector circuitry
- Motor room control (selector)
- Well control (transducer)
- Directional circuitry
- Slowing and stopping circuitry
- Re-levelling circuitry
- Door operator circuitry
- Acceleration circuits

T8 Lift safety circuits encompassing:

- Landing door locks
- Car door locks
- Emergency stop
- Pit switch
- Car trap-door limit switch
- Fire service

REQUIRED SKILLS AND KNOWLEDGE

- Car top switch
- Tappet switch
- Governor/switch
- Safety gear switch
- Reverse phase relay
- Phase failure relay
- Overloads
- Circuit breakers
- Limit switches
- Terminal stopping
- Door protection
- Circuit switches

T9 Lift components - electro-mechanical employing relay logic encompassing:

- Button circuit
- Indicator/lantern circuit
- Key switch circuits
- Fans
- Mains supply
- Power circuits
- Floor selector circuitry
- Motor room control (selector)
- Well control (transducer)
- Directional circuitry
- Slowing and stopping circuitry
- Re-levelling circuitry
- Door operator circuitry
- Acceleration circuits

T10 Lift components - electro-mechanical safety circuits encompassing:

- Landing door locks
- Car door locks
- Emergency stop
- Pit switch
- Car trap-door limit switch
- Fire service
- Car top switch
- Tappet switch
- Safety gear switch
- Terminal stopping
- Circuit switches are all highlighted

REQUIRED SKILLS AND KNOWLEDGE

T11 Lift components - electronic encompassing:

- Encoders
- Transducers
- Electronic boards
- Selectors
- Rectifiers
- Capacitors
- Resistors
- Processor board
- I/O board

T12 Lift components – electrical encompassing:

- Relays; reverse phase and phase failure
- Tachos
- Limit switches
- Brushes
- Selectors
- Motor/generator
- Transformers
- Fuses
- Lamps
- Terminals

T13 Lift electrical layout and special requirements encompassing:

- Lift Code and AS 3000 requirements
- Special lift symbols
- Conduits
- Travelling cable
- Troughing
- Colour coding and labelling
- Segregation LV/ELV
- Communication cabling

T14 Traction encompassing:

- Speed/load characteristics
- Efficiency
- Application
- Brakes
- Electric prime mover (motor types and control)

T15 Geared types including rack and pinion and chain encompassing:

- Speed/load characteristics

REQUIRED SKILLS AND KNOWLEDGE

- Efficiency
- Application
- Brakes
- Electric prime mover (motor types and control)
- Drum

T16 Electric lifts – mechanics encompassing:

- Governors Governor types including; vertical shaft, overspeed devices, horizontal shaft
- Governor operation testing and rope tension testing
- Safety gear Types; A instantaneous, B flexible guide clamp, C wedge clamp and D oil buffer
- Release procedures for each type of safety gear/governor combination
- Statutory requirements

T17 Maintenance, replacement and adjustment of mechanical lift components encompassing:

- Air cords
- Selectors
- Bearings; roller, sleeve, guide shoes, and slipper
- Door guides
- Landing doors
- Car doors
- Tapes/chains

T18 Brake types, function, operation, inspection and adjustment, circuitry, manual release and statutory requirements encompassing:

- Geared machine brakes
- Gearless machine brakes
- Brake function and statutory requirements
- Internal and external mechanical brakes
- Electrical operations including; stall motor, solenoid and hydraulic
- inspection and adjustment of mechanical and electrical brakes
- Brake circuitry
- Manual release devices and safe procedures
- Statutory requirements

T19 Electro-hydraulic lifts circuitry, controls and components encompassing:

- Electrical circuitry
- Pump motor, starter
- Governor switch
- Over travel limits
- Up, down solenoids

REQUIRED SKILLS AND KNOWLEDGE

- Up, down limit switches
- Levelling switch
- Stop button
- Faulty components diagnosis
- Hydraulic components
- Hydraulic circuitry
- Servicing

T20 Electro-hydraulic lifts - mechanical operation – fluid power principles and components, operation, arrangements, lift code and other requirements and emergency passenger release encompassing:

- Fluids
- Hydraulics
- Pascal's Law
- Safety considerations of fluids under pressure
- Pump
- Control of hydraulic pressure
- Solenoid valves
- Directional flow including pressure gauge
- Ram/cylinders, including single and multi stage
- Oil cooler
- Oil reservoir
- Filters
- Seals
- Bleeding lines
- General operation
- Types of arrangements including; side acting, direct and suspended
- Requirements of Lift Code/Standards including; viewing communication windows, labelling circuit breakers, head room/top of car, pump installation under car, anti-creep devices and closing of landing doors

T21 Emergency release procedures - trapped passengers – OHS considerations and communication with passengers encompassing:

- Enterprise requirements and procedures
- Passenger safety
- Moving under power
- Hand winding
- Determining numbers and condition of passengers
- Direction of lift travel before stopping
- Fault indication
- Status of doors
- Warnings about using controls

REQUIRED SKILLS AND KNOWLEDGE

- Warnings about standing near doors
- Information related to impending movement
- Information relating to opening of doors
- Reassurance as to safety of passengers
- Emergency medical support

T22 Escalators and moving walks components encompassing:

- Machine Brakes
- Controller
- Safety devices
- Balustrade lighting
- Steps/pallets/belts
- Hand rail
- Drive chain
- Truss
- Track systems
- Step/pallet chains
- Rollers, Tension carriage
- Hand rail earthing

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment

is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace

procedures and practices including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose and rectify faults in lift systems as described as described in 8) and including:
 - A Governors.
 - B Brakes.
 - C Safety gear.
 - D Safety devices.
 - E Lift machines.
 - F Door components.
 - Replace and/or adjustment of lift equipment in at least three types of lift equipment as described below
 - A Electro-hydraulic lift.
 - B Electric traction lift.
 - C Passenger lift.
 - D Goods lift.
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in lifts systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency

development in this unit may be arranged concurrently with unit:

UEENEEG10 Trouble-shoot and repair faults in low voltage
8A electrical apparatus and circuits

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

Competency shall be demonstrated in relation to diagnosing and rectifying faults in lift circuits and associated components for at least three (3) types of lift circuits/components as listed:

- Governors
- Brakes
- Safety gear
- Safety devices
- Lift machines
- Door components
- Controllers
- Release passengers from a lift, which has become immobilised

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
Electrical

UEENEEG118A Maintain operation of electrical mining equipment and systems

Modification History

Unit Descriptor

Unit Descriptor 1) Scope:

1.1) Descriptor

This unit covers servicing of electrical systems and equipment in underground and open-cut mines. It encompasses working safely, applying knowledge of mining electrical systems and equipment, reading circuit and reticulation diagrams, applying logical fault diagnosis procedures, following fault rectification procedures and maintaining the necessary documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulations for undertaking of electrical work and working in mines. Competencies in working in hazardous areas and with explosion-protected equipment are required where the workplace includes hazardous areas such as

License to practice**3)**

underground coalmines.

Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities components

UEENEEE1 04A Solve problems in d.c circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 Use drawings, diagrams, schedules,

Prerequisite Unit(s)	4)
	07A standards, codes and specifications
	UEENEEG006A Solve problems in single and three phase low voltage machines
	UEENEEG033A Solve problems in single and three phase electrical apparatus and circuits
	UEENEEG063A Arrange circuits, control and protection for general electrical installations
	UEENEEG101A Solve problems in electromagnetic devices and related circuits
	UEENEEG102A Solve problems in low voltage a.c. circuit
	UEENEEG106A Terminate cables, cords and accessories for low voltage circuits
	UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills
The required outcomes described in this unit of

Employability Skills

5)

competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1	Prepare to maintain operation of electrical mining equipment.	1.1	OHS procedures for a given work area are identified, obtained and understood.
		1.2	OHS risk control measures and procedures in preparation for the work are followed.
		1.3	The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).
		1.4	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
		1.5	Sources of materials that may be required for the work are established in accordance with established procedures.
		1.6	Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.

ELEMENT	PERFORMANCE CRITERIA
2 Maintain operation of electrical mining equipment.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	2.5 Fault finding is approached methodically drawing on knowledge of mining electrical equipment and circuits using measured and calculated values of circuit/apparatus parameters.
	2.6 Circuit/apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
	2.7 Faulty circuits/components are rechecked and their fault status and acquired.
	2.8 Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.
	2.9 Effectiveness of the repair is tested in accordance with established procedures.
	2.10 Apparatus is reassembled, finally tested and prepared for return to service.
	2.11 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.12 Fault finding and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.

ELEMENT**PERFORMANCE CRITERIA**

- | | | | |
|---|--|-----|---|
| 3 | Complete and report on maintaining operation of electrical mining equipment. | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | | 3.2 | Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares. |
| | | 3.3 | Maintenance work activities are documented in accordance with established procedures. |

Note.

Examples of documentation are component faults reports, test results, authorisations, permits, and parts/component dispatch and stores records.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining operation of electrical mining equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG118A

Electrical mining equipment and systems

Evidence shall show an understanding of maintaining the operation of mining equipment to an extent indicated by the following aspects:

T1 Technical standards, regulations and codes for mining encompassing:

- Regulation governing mining and related activities
- Standards and Codes that apply to mining electrical systems
 - Standards mandated under regulation or by an authority, deemed-to-comply standard and local service requirements.
 - Codes - applicable to electrical safe working practices
- Applying standards, regulations and codes to mining electrical systems encompassing:
 - Protection for safety
 - Installation arrangement
 - Certified/approved electrical equipment
 - Installation of electrical equipment
 - Testing and verification

T2 Electrical mining systems overview encompassing:

- Mine reticulation
- Substations
- Transmission lines
- Switchgear
- Earthing

T3 Electrical control and protection in mines encompassing:

- Types of protection
- Operation of protection devices and systems
- Prospective fault currents
- Discrimination

T4 Mining cables encompassing:

- Handling
- Storage

REQUIRED SKILLS AND KNOWLEDGE

- Testing
- T5 Operation and safety of mining equipment encompassing:
- Battery charging
 - Battery operated vehicles
 - Conveyors
 - Mine winder and package systems
 - Ore extraction machinery
 - Shuttle cars
 - Ventilation fans
- T6 Environmental monitoring and control encompassing:
- Basic principles
 - Types and application of sensors
 - Control methods
- T7 Equipment monitoring methods
- T8 Fire detection, warning and control systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the

competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range

statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Maintain operation of electrical mining equipment as described in 8) and including:
 - A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s).
 - B Using methodical fault finding techniques.
 - C Finding faults efficiently.
 - D Rectifying faults effectively.
 - E Completing documentation correctly.
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment,

conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to maintaining operation of electrical mining equipment.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE11 Solve problems in multiple path extra low voltage
9A (ELV) a.c. circuits

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to maintaining operation of electrical mining equipment by rectifying any four of the following faults in mining equipment and circuits.

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Apparatus/component failure
- Related mechanical failure

Note:

1. Examples of apparatus are switchboards/distribution boards, protective devices such as circuit breakers, and earth leakage devices, control equipment, socket outlets, electric vehicles and motor starters and associated control devices.

2. Examples of circuits include those supplying fix equipment; lighting; motors; socket outlets; trailing cable and within electric vehicles.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the servicing of electrical systems and equipment on vessels and ships. It encompasses working safely, applying knowledge of marine electrical systems and equipment, reading circuit and reticulation diagrams, applying logical fault diagnosis procedures, following fault rectification procedures and maintaining the necessary operational documentation.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulations for undertaking of electrical work and maritime regulations. Competencies in working in hazardous areas and with explosion-protected equipment are required where the workplace includes hazardous

License to practice**3)**

areas such as in gain handling and fuel pumping facilities.

Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities components

UEENEEE1 04A Solve problems in d.c circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 Use drawings, diagrams, schedules,

Prerequisite Unit(s)	4)

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining operation of electrical marine equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG119A

Marine Electrical Systems

Evidence shall show an understanding of maintaining the operation of marine electrical equipment to an extent indicated by the following aspects:

T1 Cells and batteries in common use encompassing:

- Primary cells
- Secondary cells
- Discharging
- Recharging
- Terminal voltages
- Capacity
- Discharge and recharge characteristics
- Battery configurations and applications
- Cell and battery safety practices

T2 Marine electrical systems overview encompassing:

- Switchboards
- Instrumentation
- Earthing

T3 Alternators encompassing:

- Construction
- Characteristics
- Synchronised operation

T4 Switchboards and protection encompassing:

- Purpose
- Testing and maintenance
- Equipment removal

T5 Lighting systems purpose and types

T6 Power supplies encompassing:

- UPS systems
- Batteries

REQUIRED SKILLS AND KNOWLEDGE

- Maintenance
 - Safety procedures - battery banks
- T7 Cathodic protection
- Purpose
 - Operating parameters
 - Corrosion factors
- T8 Safety equipment and codes and regulations
- T9 Electrical system commissioning requirements and surveys

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Maintain operation of electrical marine equipment as described as described in 8) and including:
 - A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s).
 - B Using methodical fault finding techniques.
 - C Finding faults efficiently.
 - D Rectifying faults effectively.
 - E Completing documentation correctly.
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in context of assessment, which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to maintaining operation of electrical marine equipment.

Method of assessment**9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units**9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE11 Solve problems in multiple path extra low voltage
9A (ELV) a.c. circuits

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to maintaining operation of electrical marine equipment by rectifying any four of the following faults in marine equipment and circuits.

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Apparatus/component failure
- Related mechanical failure

Note:

1. Examples of apparatus are switchboards/distribution boards, protective devices such as circuit breakers, and earth leakage devices, control equipment, socket outlets, electric vehicles and motor starters and associated control devices.

2. Examples of circuits include those supplying fix equipment; lighting; motors; socket outlets; trailing cable and within electric vehicles.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers selecting and arranging electrical equipment into distribution circuits for installations in caravan parks, construction and demolition sites, marinas, medical treatment areas and moveable premises operating at voltages up to 1,000V a.c. or 1,500 V d.c. The unit encompasses schemes for protection of persons and property, correct functioning, compatibility with the supply, arrangement of circuits and selection of switchgear, controlgear, protection devices and wiring based on calculated and deemed-to-comply solutions.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired and is therefore not applicable to those entering work.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of

License to practice

3)

training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

- UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace
- UEENEEE1 02A Fabricate, dismantle, assemble of utilities components
- UEENEEE1 04A Solve problems in d.c circuits
- UEENEEE1 05A Fix and secure electrotechnology equipment
- UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications
- UEENEEG0 06A Solve problems in single and three phase low voltage machines
- UEENEEG0 33A Solve problems in single and three phase electrical apparatus and circuits
- UEENEEG0 63A Arrange circuits, control and protection for general electrical installations
- UEENEEG1 01A Solve problems in electromagnetic devices and related circuits
- UEENEEG1 02A Solve problems in low voltage a.c. circuit
- UEENEEG1 06A Terminate cables, cords and accessories for low voltage circuits

Prerequisite Unit(s) 4)

UEENEEG1 07A Select wiring systems and cables for low voltage general electrical installations

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills
 The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to select equipment.	1.1 The extent and nature of the electrical installation is determined from job specifications.
	1.2 Safety and other regulatory requirements to which the electrical installation shall comply are identified, obtained and understood.
2 Arrange installation into circuits.	2.1 Circuits are arranged to ensure safe and functional operation of the installation.
	2.2 Circuits are arranged to comply with technical standards and job specifications and requirements.
	2.3 Earthing is arranged to comply with the MEN system requirements.
3 Select cables, protection and switchgear.	3.1 Wiring is selected for suitability for the environments in which they are installed.
	3.2 Cable conductor sizes are selected to meet current-carrying capacity requirements and voltage-drop and fault-loop impedance limitations.
	3.3 Protection methods and devices are selected to meet co-ordination requirements for overload and short-circuit protection.
	3.4 Switchgear and control gear is selected to meet current, voltage and IP ratings and functional requirements.
	3.5 Earthing system components are selected to meet requirements of the MEN system.
	3.6 Evidence is obtained that electrical equipment selected complies with safety requirements.

ELEMENT	PERFORMANCE CRITERIA
4 Document electrical installation.	4.1 Reasons for selections made, including calculations, are documented in accordance with established procedures.
	4.2 Electrical installation arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting and arranging equipment for special electrical installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG120A

Special electrical installations planning

Evidence shall show an understanding of the selection and arrangement of equipment for special electrical installations to an extent indicated by the following aspects:

T1 Technical standards, regulations and codes for special electrical installations encompassing:

- Additional requirements for special installations
- caravan parks
- construction and demolition sites
- marinas
- medical treatment areas
- moveable premises
- HV installation in consumer's premises

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Select and arrange equipment for special electrical installations as described as described in 8) and including:
 - A Arranging electrical installations to comply with safety and other regulatory and functional requirements.
 - B Selecting appropriate type and size of cables.
 - C Selecting protection methods and devices that meet co-ordination requirements for overload and short-circuit protection.

- D Selecting switchgear and control gear that meet current, voltage and IP ratings and functional requirements.
- E Selecting appropriate earthing components.
- F Documenting installation arrangement, specification for items selected and reasons for the selections made.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to selecting and arranging equipment for special electrical installations

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary

equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEED10 Use computer applications relevant to a workplace
1A

UEENEEG10 Select wiring systems and cables for low voltage general electrical
7A installations

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by, selecting and arranging equipment for at least two of the following types of installations.

- Caravan parks,
- Construction and demolition sites.
- Marinas,
- Medical treatment areas,
- Moveable premises

The electrical installations shall comprise consumer's mains, main earthing system and main switchboard and sub-mains, earthing system and distribution boards, final sub circuits and requirement particular to the installation type.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers testing and visual inspection for verifying that an electrical installation in caravan parks, construction and demolition sites, marinas, medical treatment areas, moveable premises installation in consumer's premises are safe and comply with requirements. The unit encompasses procedures for safely conducting mandatory and optional tests, conducting visual inspections, identifying non-compliance defects and mandatory reporting requirements.

Application of the Unit

Application of the Unit 2)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safe and contracts of

License to practice

3)

training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities components

UEENEEE1 04A Solve problems in d.c circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE1 37A Document and apply measures to control OHS risks associated with electrotechnology work

Prerequisite Unit(s)

4)

UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuit
UEENEEG1 03A	Install low voltage wiring and accessories
UEENEEG1 04A	Install appliances, switchgear and associated accessories for low voltage electrical installations
UEENEEG1 05A	Verify compliance and functionality of low voltage general electrical installations
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG1 07A	Select wiring systems and cables for low voltage general electrical installations
UEENEEG1 08A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEG1 09A	Develop and connect electrical control circuits
UEENEEG1 20A	Select and arrange equipment for special LV electrical installations

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| <p>1 Prepare to inspect and test an electrical installation.</p> | <p>1.1 OHS measures for the site are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are</p> |

ELEMENT

PERFORMANCE CRITERIA

- followed.
- 1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
 - 1.4 Documentation or deemed to comply standard on which installation is based is reviewed and understood.
 - 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
 - 1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.
 - 1.7 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
- 2 Visually inspect the installation.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
 - 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
 - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
 - 2.4 Wiring is checked for suitability for the environments in which they are installed and suitably protected from damage or overheating.
 - 2.5 Cable conductor sizes are acquired as meeting current-carrying capacity requirements and voltage-drop and fault-loop impedance limitations.
 - 2.6 Protection methods and devices are validated as meeting co-ordination requirements for overload and short-circuit protection.

ELEMENT

PERFORMANCE CRITERIA

- 2.7 Switchgear and control gear is validated as being appropriately rated and meeting functional requirements.
- 2.8 Evidence that electrical equipment complies with safety requirements is cited.
- 2.9 Earthing system components are checked that they are correctly located and conductors correctly sized.
- 2.10 Marking on switchboards are checked for accuracy and clarity and comply with requirements.
- 3 Conduct safety testing.
 - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
 - 3.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
 - 3.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
 - 3.4 Mandatory tests are conducted to verify that:
 - Earthing conductor resistance is sufficiently low
 - Insulation resistance is sufficiently high
 - Polarities are correct
 - Circuit connections are correct
 - Other tests required by a Standard
 - 3.5 Testing is conducted to verify that:
 - Fault-loop impedance is sufficiently low
 - Residual current devices operate as intended.
- 4 Report inspection and test findings.
 - 4.1 OHS risk control work completion measures and procedures are followed.
 - 4.2 Work site is cleaned and made safe in accordance with established procedures.

ELEMENT

PERFORMANCE CRITERIA

- 4.3 Non-compliance defects are identified and reported in accordance with established procedures.
- 4.4 Recommendations for rectifying defects are made in accordance with established procedures.
- 4.5 Mandatory documentation is completed in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of special electrical installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG121A Electrical installations, testing and verification of special installations

Evidence shall show an understanding of compliance and functionality verification of special electrical installations to an extent indicated by the following aspects:

T1 Technical standards, regulations and codes for special electrical installations encompassing:

- Additional requirements for special installations
- caravan parks
- construction and demolition sites
- marinas
- medical treatment areas
- moveable premises
- HV installation in consumer's premises

T2 Mandatory and optional testing and verification requirements applicable to special installations encompassing:

- Testing techniques
- Features of special installations that can be visually inspected
- caravan parks
- construction and demolition sites
- marinas
- medical treatment areas
- moveable premises
- HV installation in consumer's premises

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Verify compliance and functionality of special electrical installations as describe as described in 8) and including:
 - A Selecting correct tools and testing equipment.
 - B Identifying visual non-compliance defects.
 - C Using effective methods for conducting mandatory and optional tests.

- D Identifying non-compliance from test results.
- E Identifying causes of non-compliance.
- F Completing mandatory reporting.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to verifying compliance and functionality of special electrical installations.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily

intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by verifying compliance and functionality of at least two of the following types of installations

- Caravan parks
- Construction and demolition sites
- Marinas
- Medical treatment areas
- Moveable premises

The electrical installations shall comprise consumer's mains, main earthing system and main switchboard and sub-mains, earthing system and distribution boards, final sub circuits and requirement particular to the installation type.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers inspection of single phase domestic installations for demand not exceeding 100 A for varying compliance with electrical safety regulations. It encompasses working safely, conducting tests and inspections, documenting non-compliance defects, taking/recommending actions resulting from non-compliance defects, applying regulatory requirements and completing inspection reports.

Application of the Unit

Application of the Unit **2)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safe and contracts of

License to practice

3)

training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities components

UEENEEE1 04A Solve problems in d.c circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE1 37A Document and apply measures to control OHS risks associated with electrotechnology work

Prerequisite Unit(s)	4)
	UEENEEG0 06A Solve problems in single and three phase low voltage machines
	UEENEEG0 33A Solve problems in single and three phase electrical apparatus and circuits
	UEENEEG0 63A Arrange circuits, control and protection for general electrical installations
	UEENEEG1 01A Solve problems in electromagnetic devices and related circuits
	UEENEEG1 02A Solve problems in low voltage a.c. circuit
	UEENEEG1 03A Install low voltage wiring and accessories
	UEENEEG1 04A Install appliances, switchgear and associated accessories for low voltage electrical installations
	UEENEEG1 05A Verify compliance and functionality of low voltage general electrical installations
	UEENEEG1 06A Terminate cables, cords and accessories for low voltage circuits
	UEENEEG1 07A Select wiring systems and cables for low voltage general electrical installations
	UEENEEG1 08A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
	UEENEEG1 09A Develop and connect electrical control circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each

scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.
---	---

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|-----|--|
| 1 Prepare to conduct compliance inspection. | 1.1 | OHS procedures for a given work area are identified, obtained and understood. |
| | 1.2 | Established OHS risk control measures and procedures in preparation for the work are followed. |
| | 1.3 | Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate person(s). |
| | 1.4 | Documentation or deemed to comply standard |

ELEMENT

PERFORMANCE CRITERIA

- on which installation is based is reviewed and understood.
- 1.5 Appropriate person(s) are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Conduct compliance inspect.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Detailed inspection of the consumer's mains and main switchboard is conducted methodically to ascertain compliance of protection, metering, earthing, circuit arrangements and markings.
- 2.5 Detailed inspection of circuits is conducted methodically to ascertain the compliance of the installed wiring, accessories, switchgear / control gear and current-using devices.
- 2.6 Where deemed necessary, evidence that electrical equipment complies with safety requirements is sought from appropriate person(s) and sighted.
- 2.7 Detailed inspection is conducted to verify compliance of earthing, insulation, polarity, circuit connections and operation of Residual current devices.
- 2.8 Fault-loop impedance is ascertained as being sufficiently low by testing, calculation or deemed to comply with arrangement of the

ELEMENT	PERFORMANCE CRITERIA
	installation.
	2.9 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
3 Act and report on inspection findings.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Non-compliance defects are identified with appropriate clauses in regulatory standards and documented in accordance with established procedures.
	3.3 Actions are taken as a result of non-compliance within the scope of inspection responsibilities and authority and documented.
	3.4 Inspection report is made and issued to appropriate person(s) in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conducting compliance inspection of single phase electrical installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG122A **inspections**

Electrical installations, single phase

Evidence shall show an understanding of conducting compliance inspections on single phase electrical installations to an extent indicated by the following aspects:

T1 Enterprise customer relations protocols encompassing:

- Purpose of customer relations
- Procedures for dealing with customers
- Dealing with customer issues

T2 Electricity regulatory safety requirements encompassing:

- Regulatory requirements for ensuring the safety and integrity of electrical installations.
 - Regulatory requirements are relative to the jurisdiction for which competency is sought
- Types and scope of electrical inspections and safety audits
- Authority of electrical inspectors

T3 Electrical installations, single phase inspections encompassing:

- Scope of inspection of single phase installations.
- Processes for inspection of single supply arrangements, main switchboard and earthing
- Actions and procedures for dealing with non-compliance defects.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Conduct compliance inspection of single phase electrical installations as described as described in 8) and including:
 - A Obtaining appropriate documentation and equipment in preparation for the inspection.
 - B Conducting Detailed inspections and testing methodically.
 - C Identifying non-compliance defects.
 - D Relating non-compliance defects with appropriate clause in

regulatory standards.

E Acting within the inspection authority when dealing with non-compliance defects.

F Documenting and reporting inspection findings.

G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to conducting compliance inspection of single phase electrical installations.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate

the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by conducting compliance inspection of at least two domestic electrical installations comprising a single phase, two wire supply with a maximum demand not exceeding 100 amperes containing, consumer's mains, main earthing system and those parts of a main switchboard related to the control of the installation and protection against spread of fire.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

UEENEEE1 04A Solve problems in d.c circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE1 37A Document and apply measures to control OHS risks associated with electrotechnology work

Prerequisite Unit(s)

4)

UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuit
UEENEEG1 03A	Install low voltage wiring and accessories
UEENEEG1 04A	Install appliances, switchgear and associated accessories for low voltage electrical installations
UEENEEG1 05A	Verify compliance and functionality of low voltage general electrical installations
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG1 07A	Select wiring systems and cables for low voltage general electrical installations
UEENEEG1 08A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEG1 09A	Develop and connect electrical control circuits
UEENEEG1 22A	Conduct compliance inspection of single phase LV electrical installations

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.
---	---

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare to conduct compliance inspection. | 1.1 OHS procedures for a given work area are identified, obtained and understood. |
| | 1.2 Established OHS risk control measures and procedures in preparation for the work are |

ELEMENT

PERFORMANCE CRITERIA

- followed.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate person(s).
 - 1.4 Documentation or deemed to comply standard on which installation is based is reviewed and understood.
 - 1.5 Appropriate person(s) are consulted to ensure the work is coordinated effectively with others involved on the work site.
 - 1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Conduct compliance inspect.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
 - 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
 - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
 - 2.4 Detailed inspection of the consumer's mains and main switchboard is conducted methodically to ascertain compliance of protection, metering, earthing, circuit arrangements and markings.
 - 2.5 Detailed inspection of circuits is conducted methodically to ascertain the compliance of the installed wiring, accessories, switchgear / control gear and current-using devices.
 - 2.6 Where deemed necessary, evidence that electrical equipment complies with safety requirements is sought from appropriate person(s) and sighted.

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|---|--|
| | 2.7 | Detailed inspection is conducted to verify compliance of earthing, insulation, polarity, circuit connections and operation of Residual current devices. | |
| | 2.8 | Fault-loop impedance is ascertained as being sufficiently low by testing, calculation or deemed to comply with arrangement of the installation. | |
| | 2.9 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes. | |
| 3 | Act and report on inspection findings. | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | | 3.2 | Non-compliance defects are identified with appropriate clauses in regulatory standards and documented in accordance with established procedures. |
| | | 3.3 | Actions are taken as a result of non-compliance within the scope of inspection responsibilities and authority and documented. |
| | | 3.4 | Inspection report is made and issued to appropriate person(s) in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conducting compliance inspection of electrical installations with demand exceeding 100 A per phase.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG123A Electrical installations, inspections and safety compliance audits

Evidence shall show an understanding of conducting compliance testing of installations with demand of over 100 amperes per phase to an extent indicated by the following:

T1 Electrical installations, inspections and safety compliance audits encompassing:

- Inspection types and their scope.
- inspection of general electrical installations, special electrical installations, hazardous areas installations, safety audits and investigations.
- Inspection procedures
- Processes for confirming that performance standards have been met.
- Actions and procedures for dealing with non-compliance defect

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that

can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated

within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Conduct compliance inspection of electrical installations with demand exceeding 100 A per phase as described in 8) and including:

A Obtaining appropriate documentation and equipment in preparation for the inspection.

B Conducting detailed inspections and testing methodically.

C Identifying non-compliance defects.

D Relating non-compliance defects with appropriate clause in regulatory standards.

E Acting within the inspection authority when dealing with non-compliance defects.

F Documenting and reporting inspection findings.

G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice

using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to conducting compliance inspection of electrical installations with demand exceeding 100 A per phase.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by conducting compliance inspection of at least two electrical installations comprising consumer's mains, main earthing system and main switchboard and sub-mains, earthing system and distribution boards related to the control of an individual occupier's portion of a multiple installation and final sub circuits.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers inspection of electrical installation in marinas, moveable premises and caravan parks, medical treatment centres, construction and demolition sites in consumer's premises for verifying compliance with electrical safety regulations. It encompasses working safely, conducting tests and inspections, documenting non-compliance defects, taking/recommending actions resulting from non-compliance defects, applying regulatory requirements and completing inspection reports.

Note:

Competency in verifying compliance of installations for hazardous areas is covered by "M" units:

Application of the Unit

Application of the Unit **2)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities components

UEENEEE1 04A Solve problems in d.c circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

Prerequisite Unit(s)	4)
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE1 37A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuit
UEENEEG1 03A	Install low voltage wiring and accessories
UEENEEG1 04A	Install appliances, switchgear and associated accessories for low voltage electrical installations
UEENEEG1 05A	Verify compliance and functionality of low voltage general electrical installations
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG1 07A	Select wiring systems and cables for low voltage general electrical installations
UEENEEG1 08A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEG1 09A	Develop and connect electrical control circuits
UEENEEG1 20A	Select and arrange equipment for special LV electrical installations
UEENEEG1	Verify compliance and functionality of

Prerequisite Unit(s)

4)

21A special LV electrical installations

UEENEEG1 22A Conduct compliance inspection of single phase LV electrical installations

UEENEEG1 23A Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills

5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to conduct compliance inspection.	1.1 OHS procedures for a given work area are identified, obtained and understood. 1.2 Established OHS risk control measures and procedures in preparation for the work are followed. 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate person(s). 1.4 Documentation or deemed to comply standard on which installation is based is reviewed and understood. 1.5 Appropriate person(s) are consulted to ensure the work is coordinated effectively with others involved on the work site. 1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.
2 Conduct compliance inspect.	2.1 OHS risk control measures and procedures for carrying out the work are followed. 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. 2.3 Circuits/machines/plant are checked as being

- isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Detailed inspection of the consumer's mains and main switchboard is conducted methodically to ascertain compliance of protection, metering, earthing, circuit arrangements and markings.
 - 2.5 Detailed inspection of circuits is conducted methodically to ascertain the compliance of the installed wiring, accessories, switchgear / control gear and current-using devices.
 - 2.6 Where deemed necessary, evidence that electrical equipment complies with safety requirements is sought from appropriate person(s) and sighted.
 - 2.7 Detailed inspection is conducted to verify compliance of earthing, insulation, polarity, circuit connections and operation of Residual current devices.
 - 2.8 Fault-loop impedance is ascertained as being sufficiently low by testing, calculation or deemed to comply with arrangement of the installation.
 - 2.9 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 3 Act and report on inspection findings.
- 3.1 OHS work completion risk control measures and procedures are followed.
 - 3.2 Non-compliance defects are identified with appropriate clauses in regulatory standards and documented in accordance with established procedures.
 - 3.3 Actions are taken as a result of non-compliance within the scope of inspection responsibilities and authority and documented.
 - 3.4 Inspection report is made and issued to appropriate person(s) in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conducting compliance inspection of special electrical installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG124A

Inspection LV special electrical installations

Evidence shall show an understanding of conducting compliance inspections of special electrical installations to an extent indicated by the following aspects:

T1 Technical standards, regulations and codes for special electrical installations encompassing:

- Additional requirements for special installations
- caravan parks
- construction and demolition sites
- marinas
- medical treatment areas
- moveable premises
- HV installation in consumer's premises

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment,

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Conduct compliance inspection of special electrical installations as described in 8) and including:

A Obtaining appropriate documentation and equipment in preparation for the inspection.

B Conducting Detailed inspections and testing methodically.

C Identifying non-compliance defects.

D Relating non-compliance defects with appropriate clause in regulatory standards.

E Acting within the inspection authority when dealing with non-compliance defects.

F Documenting and reporting inspection findings.

G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice

using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to conducting compliance inspection of special electrical installations.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by conducting compliance inspection of at least three of the following types of installations.

- Caravan parks,
- Construction and demolition sites,
- Marinas,
- Medical treatment areas,
- Moveable premises

The electrical installations shall comprise consumers' mains, main earthing system and main switchboard and sub-mains, earthing system and distribution boards, final sub circuits and requirement particular to the installation type.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the planning of circuit and equipment for electrical installations where standardised arrangements for service and CT metering equipment are used, not exceeding 400 A per phase. This encompasses schemes for protection of persons and property, correct functioning, compatibility with the supply, arrangement of circuits, metering and control, cable route planning, specifying type and rating of switchgear, controlgear, protection devices and wiring based on calculated and deemed-to-comply solutions and planning documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the work place. However practice in this unit is subject to regulations directly

License to practice

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to plan electrical installations.	1.1 OHS risk control measures and procedures for carrying out the work are followed.
	1.2 The extent and nature of the electrical installation is determined from job specifications.
	1.3 Safety and other regulatory requirements to which the electrical installation shall comply are identified, obtained and understood.
	1.4 Electricity tariffs required are discussed with appropriate person(s) to ascertain control and metering needs of the installation.
2 Arrange installation circuits, control and metering.	2.1 Circuits are arranged to ensure safe and functional operation of the installation.
	2.2 Circuits are arranged to comply with technical standards and job specifications and requirements.
	2.3 Control and metering of the installation is arranged in accordance with regulatory and local requirements and consumer needs.
	2.4 Earthing is arranged to comply with the standards and local energy supplier's requirements.
3 Specify cables, protection and switchgear.	3.1 Fault levels at each relevant point of the installation are determined from calculations and/or information from the local energy supplier's.
	3.2 Suitability of the wiring systems selected is determined to meet requirements for protection against environmental factors and job specifications.
	3.3 Cable conductor sizes are determined to meet current-carrying capacity requirements and voltage-drop and fault-loop impedance limitations and short circuit performance.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|--|--|
| | 3.4 | Protection methods and devices are specified to meet co-ordination requirements for overload and short-circuit protection. |
| | 3.5 | Switchgear and control gear are specified to meet fault levels, current, voltage and IP ratings and functional requirements. |
| | 3.6 | Earthing system components are specified to meet requirements of the earthing system used. |
| | 3.7 | Evidence is obtained that electrical equipment selected complies with safety requirements. |
| 4 | Document electrical installation plan. | |
| | 4.1 | Equipment specified for the installation is documented together with supporting calculations in accordance with established procedures. |
| | 4.2 | Electrical installation arrangement, equipment locations, cable routes and schedules and requirements are documented in accordance with established procedures and forwarded to appropriate person(s). |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning electrical installations with a LV demand up to 400 A per phase.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG125A

Planning electrical installations – 400 A

Evidence shall show an understanding of planning a low voltage electrical installation with demand of up to 400 amps per phase to an extent indicated by the following aspects:

T1 Electrical metering arrangements encompassing:

- Purpose, types and applications.
- Metering equipment.
- Arrangements for metering

statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Plan electrical installations with a LV demand up to 400 A per phase as described in 8) and including:

A Arranging electrical installations to comply with control, metering, safety and other regulatory and functional requirements.

B Specifying appropriate type and size of cables.

C Specifying protection methods and devices that meet co-ordination requirements for overload and short-circuit protection.

D Specifying switchgear and control gear that meet fault level, current, voltage and IP ratings and functional requirements.

E Selecting appropriate earthing system components.

F Documenting installation plan, specifications of equipment, equipment locations, cable routes and schedules and supporting calculations.

G Arranging electrical installations to comply with control, metering, safety and other regulatory and functional requirements.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to

undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to planning electrical installations with a LV demand up to 400 A per phase.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEED10 Use computer applications relevant to a workplace
1A

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to planning electrical installations with a LV demand up to 400 A per phase. The installation shall comprise a main switchboard CT metering, multiple tariffs or tenants, distribution boards single and three phase final sub circuits.

The electrical installations shall comprise consumers' mains, main earthing system and main switchboard and sub-mains, earthing system and distribution boards, final sub circuits and requirement particular to the installation type.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the installation and maintenance of electrical field power and distribution systems intended to operate at voltages to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to standards, positioning site generator sets, routing cables to specified locations, matching equipment with that specified for a given location terminating cables and connecting accessories and completing the necessary installation documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities components
UEENEEE1 04A	Solve problems in d.c circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuit
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG1 07A	Select wiring systems and cables for low voltage general electrical installations
UEENEEG1 08A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

Prerequisite Unit(s) 4)

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install and maintain field power and distribution systems.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Nature of the work and location of power equipment is determined by site inspection and from job instructions, specifications and/or diagrams.
	1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
	1.6 Materials needed for the installation, maintenance/repair work are obtained in accordance with established procedures and checked against job requirements.
	1.7 Tools, equipment and testing devices needed to install or maintain/repair power supplies are obtained in accordance with established procedures and checked for correct operation and safety.
2 Install field power and distribution systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Generator set are located and installed to comply with technical standards and job specifications and requirements.
	2.3 Cable sets are selected to comply with load requirements and voltage drop limitations.
	2.4 Cable sets are installed terminated to comply with technical standards and job specifications and requirements.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|---|--|
| | 2.5 | Tests are conducted to ensure installed power supply complies with specifications and functions as intended. |
| | 2.6 | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented. |
| | 2.7 | Installation of power supply is carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Maintain/repair field power and distribution systems. | |
| | 3.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | 3.2 | Correct functioning of equipment is established from reference to manuals, system specifications and commissioning data. |
| | 3.3 | Faults are identified by reference to appropriate technical information and applying knowledge of field power and distribution systems to logical fault finding techniques. |
| | 3.4 | Faulty, worn, damaged or insecure components are replaced, repaired or secured in accordance with manufacturer's specifications and enterprise requirements. |
| | 3.5 | Tests are conducted to ensure maintained/repared power and distribution system complies with specifications and functions as intended. |
| | 3.6 | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented. |
| | 3.7 | Maintenance and repair of power and distribution system is carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|--|-----|--|
| 4 Complete installation and maintenance of field power and distribution systems. | 4.1 | OHS work completion risk control measures and procedures are followed. |
| | 4.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | 4.3 | Work completion is documented and an appropriate person or persons notified in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining field power and distribution systems with a LV demand up to 200 A per phase.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG126A

Field power and distribution systems

Evidence shall show an understanding of installing and maintaining field power and distribution systems with a low voltage demand up to 200 amps per phase to an extent indicated by the following aspects:

T1 Single phase alternators encompassing:

- Purpose, types and applications
- Operating principles and characteristics
- Installation and starting/running requirements and limitations
- Connection arrangements
- Typical fault symptoms and related conditions

T2 Three phase alternators encompassing:

- Purpose, types and applications
- Operating principles and characteristics
- Installation and starting/running requirements and limitations
- Connection arrangements
- Typical fault symptoms and related conditions

T3 Field power and distribution systems encompassing:

- Types applications and components
- Regulator and safety requirements and standard
- Equipment installation and commissioning
- Testing requirements

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and maintain field power and distribution systems with a LV demand up to 200 A per phase as described in 8) and including:
 - A Interpreting specifications and circuit diagrams correctly.
 - B Maintaining, repairing and installing power and distribution systems correctly.

- C Using appropriate diagnostic and fault finding techniques.
- D Following relevant codes of practice, procedures and requirements.
- E Completing relevant records and documentation.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing and maintaining field power and distribution systems with a LV demand up to 200 A per phase.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and maintaining at least two field power and distribution systems with a LV demand up to 200 A per phase. The installation shall comprise a generator set, main switchboard, earthing system, at least one distribution board, flexible cable/plug sets, final sub circuits supplying lighting and power. One installation is to include a three phase load.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the design of supply and distribution arrangements, control, protection and selection of equipment for electrical installations with low voltage demand greater than 400 amperes per phase. This encompasses designing schemes for protection of persons and property and correct functioning, compatibility with the supply, and arrangement of circuits, determination of fault levels, effective switchgear, control gear, and protection against over current and over and under voltage and wiring based on calculations to meet required safety and performance standards and functional requirements.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the work place. However

License to practice

3)

practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities components
UEENEEE1 04A	Solve problems in d.c circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuit

Prerequisite Unit(s) 4)

UEENEEG1 06A Terminate cables, cords and accessories for low voltage circuits

UEENEEG1 07A Select wiring systems and cables for low voltage general electrical installations

UEENEEG1 25A Plan electrical installations with a low voltage demand up to 400 A per phase

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to plan electrical installations.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2	The extent and nature of the electrical installation is determined from design brief.
	1.3	Safety and other regulatory requirements to which the electrical installation shall comply are identified, obtained and understood.
	1.4	Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work.
2 Develop installation design.	2.1	Knowledge of electrical installation performance standards, compliance methods and electrical equipment and is applied to designing the installation.
	2.2	Alternative arrangements for the installation design are considered based on the requirements outlined in the design brief.
	2.3	Safety, functional and budgetary considerations are incorporated in the installation design.
	2.4	Installation design draft is checked for compliance with the design brief and regulatory requirements.
	2.5	Installation design is documented for submission to appropriate person(s) for

ELEMENT

PERFORMANCE CRITERIA

- acceptance and approval.
- 2.6 Solutions to unplanned situation are provided consistent with organisation's policy.
- 3 Obtain approval for installation design.
- 3.1 Installation design is presented and explained to client representative and/or other relevant person(s).
- 3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
- 3.3 Final design is documented and approval obtained from appropriate person(s).
- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing electrical installations with a LV demand greater than 400 A per phase.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG127A Electrical installations, advanced methods of cable and protection selection

Evidence shall show an understanding of designing low voltage electrical installations with a demand greater than 400 A per phase to an extent indicated by the following aspects:

T1 Electrical installations, determination of demand encompassing:

- Acceptable methods for determining demand in mains and submains
- Applying calculation and assessment methods of determining demand in mains and submains

T2 Electrical installations, overcurrent protection encompassing:

- Application of acceptable methods for determining prospective fault current.
- Relationship between prospective fault current and characteristics of protective devices.
- Relationship between overcurrent protections at various points in an electrical distribution system.

T3 Electrical installations, overvoltage and undervoltage protection encompassing:

- Application of acceptable methods for determining the need for overvoltage and undervoltage protection
- Methods and devices providing overvoltage and undervoltage protection

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning switchboard and control panel layouts.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies..

KS01-EG128A

Switchboard/control panel planning

Evidence shall show an understanding of planning switchboard and control panel layouts to an extent indicated by the following aspects:

T1 Electrical metering arrangements encompassing:

- Purpose, types and applications.
- Metering equipment.
- Arrangements for metering

T2 Switchgear/controlgear encompassing:

- Types and applications
- Operating principles
- Interlocking systems
- Control and protection
- Installation requirements

T3 Control panel wiring encompassing:

- Equipment layout methods and accessories
- Connection identification methods
- Wiring techniques

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Plan switchboard and control panel layouts as described in 8) and including:
 - A Developing outlines of alternative layouts.
 - B Selecting equipment that complies with safety and functional requirements and budget limitations.
 - C Developing the layout within the safety and functional requirements and budget limitations.

- D Successfully negotiating layout alteration requests.
- E Obtaining approval for final layout design.
- F Documenting layout and equipment specifications clearly.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and
specific
resources for
assessment** 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to planning switchboard and control panel layouts.

**Method of
assessment** 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEED10 Use computer applications relevant to a workplace
1A

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to planning one switchboard layout and one control panel layout. The switchboard shall be in more than one section and comprise essential and general supply controls, CT metering, sub main controls, local distribution board and load monitoring and fault indication. The control panel shall consist of controls for more than two electrical machines, electro-mechanical and/or electronic control devices such as relays, timers, logic controllers, indicators and switches/push buttons.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the overhauling and repairing switchgear/controlgear rated in excess of 20 kA. It requires the ability to establish and document the level of work required, arranging for the overhaul/repair to be carried out, verify compliance of overhauled/repared switchgear/controlgear and complete the necessary documentation.

Application of the Unit

Application of the Unit **2)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the workplace where plant and switchgear/control gear operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions subject to regulations. Practice in the workplace and during training is also subject to

License to practice**3)**

regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities components

UEENEEE1 04A Solve problems in d.c circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG1 11A Carry out basic repairs to electrical components and equipment

UEENEEG1 64A Repair and maintain mechanical components of electrical machines

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills

indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| <p>1 Prepare for overhaul/repair of switchgear/control gear.</p> | <p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.</p> <p>1.4 Instructions on the extent of overhaul and/or</p> |
|--|---|

ELEMENT**PERFORMANCE CRITERIA**

- repair are received and expected outcomes of the work acquired with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Switchgear/control gear service and repair documentation is read and understood.
- 1.7 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.8 Tools, equipment and testing devices needed to work are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Overhaul switchgear/control gear.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Switchgear and control gear is dismantled and parts tagged and stored to prevent loss or damage.
- 2.5 The state of switchgear/control gear components is determined by measurements, tests and inspections and results recorded.
- 2.6 Materials/replacement parts required to complete the work are sourced and obtained in accordance with established procedures.
- 2.7 Effectiveness of the repairs is tested in accordance with established procedures.
- 2.8 Specifications and instructions for the overhaul/repair work are documented in

ELEMENT**PERFORMANCE CRITERIA**

ELEMENT	PERFORMANCE CRITERIA
	accordance with requirements.
3 Document overhaul/repair work.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.
	3.3 Overhaul/repair work is documented in accordance with requirements stating that the switchgear/control gear complies with the overhaul specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and overhauling and repairing major switchgear/controlgear.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG129A Switchgear and controlgear – 20 kA

Evidence shall show an understanding of the switchgear and controlgear to an extent indicated by the following aspects:

T1 Types and applications of switchgear and controlgear

T2 Operating principles of switchgear and controlgear

T3 Interlocking systems encompassing:

- external interlocking systems such as Castell Key systems
- internal interlocking systems for either safety or that operate in conjunction with say Castell Key systems

T4 Control and protection of switchgear and controlgear

T5 Installation requirements encompassing:

- operating specifications for equipment
- areas requiring repairs and maintenance
- determining if repairs/maintenance are to be carried in situ or in workshop environment
- relevant legislation and Standards applicable to the installation
- OHS issues with regard to removing/ re-installing heavy equipment
- electrical safety issues with regard to removing/ re-installing equipment
- understanding of CFC units

T6 Electrical switchgear and controlgear protection methods encompassing:

- understanding of the operation of switchgear when it opens under load
- understanding on the settings and operation required for both magnetic short-circuit and thermal overload with equipment
- determining the earth fault loop impedance requirements required to keep touch voltage values within requirements
- thermal imaging techniques
- time/current curves from manufacturers specifications
- equipment to safely test switchgear after repairs or maintenance
- effectiveness of arc suppression installed within the equipment
- modern types of switchgear that are computer controlled and programmed

REQUIRED SKILLS AND KNOWLEDGE

- modern types of switchgear that are interconnected to other protective devices
- certification process for any repair or maintenance work performed
- phase-failure systems
- Verifying the correct fault-level for the installation is consistent with the kA rating of the equipment
- x-ray and ultrasonic detection systems with regard to metallurgy
- different types of lubricants required for different locations, temperatures and humidity

T7 Electrical safe working practices of working safely on or around electrical equipment encompassing:

- determining safe working Standards and codes of practice for equipment and installations over 20 kA
- OHS requirements for equipment and installations over 20 kA
- working knowledge of operating within the vicinity of live conductors, such as barriers
- procedures for working on switchgear over 20 kA
- risks and control measures associated with harmful dusts and airborne contaminants - sources include thermal insulation, fibrous cement materials and asbestos and other fibre reinforced switchboard materials
- checks and storage methods for maintaining the safety of testing devices

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for

apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Overhaul and repair major switchgear/controlgear as described in 8) and including:
 - A Interpreting service and repair documentation correctly.
 - B Determining the state of switchgear/control gear correctly.
 - C Repairing switchgear/control gear effectively.
 - D Completing documentation correctly.
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to overhauling and repairing major switchgear/controlgear.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency

development in this unit may be arranged concurrently with unit:

UEENEEC00 Maintain documentation
1B

UEENEEC00 Source and purchase material/parts for installation
2B or service jobs

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to overhauling at least two types of low voltage switchgear/control gear rated above 20 kA and any high voltage switchgear/control gear.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the design of supply and distribution arrangements, control, protection and selection of equipment for switchboards with low voltage demand greater than 400 amperes per phase. This encompasses designing schemes for protection of persons and property and correct functioning, compatibility with the supply, and arrangement of circuits, determination of fault levels, effective switchgear, control gear, and protection against over current, over and under voltage and wiring based on calculations to meet required safety and performance standards and functional requirements.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the work place. However practice in this unit is subject to regulations directly

License to practice

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design switchboards.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 The extent and nature of the switchboard is determined from design brief.
	1.3 Safety and other regulatory requirements to which the switchboard shall comply are identified, obtained and understood.
	1.4 Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work.
2 Develop installation design.	2.1 Knowledge of switchboard performance standards, compliance methods and electrical equipment and is applied to designing the installation.
	2.2 Alternative arrangements for the switchboard design are considered based on the requirements outlined in the design brief.
	2.3 Safety, functional and budgetary considerations are incorporated in the installation design.
	2.4 Switchboard design draft is checked for compliance with the design brief and regulatory requirements.
	2.5 Switchboard design is documented for submission to appropriate person(s) for acceptance and approval.
	2.6 Solutions to unplanned situation are provided consistent with organisation's policy.
3 Obtain approval for installation design.	3.1 Switchboard design is presented and explained to client representative and/or other relevant person(s).
	3.2 Requests for alterations to the design are negotiated with relevant person(s) within the

ELEMENT

PERFORMANCE CRITERIA

constraints of organisation's policy.

- 3.3 Final design is documented and approval obtained from appropriate person(s).
- 3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing switchboards rated for high fault levels.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG130A

Switchboard design

Evidence shall show an understanding of the design of low voltage switchboards rated for high fault currents to an extent indicated by the following aspects:

T1 Trade calculations encompassing:

- mathematical techniques
- relevant calculations
- linear measurement, areas, volumes, ratios

T2 Engineering mechanics encompassing:

- base physical quantities
- concepts, principles, S.I. units, their applications in
- engineering calculations in relation to physical quantities and
- associated formulae
- mass, velocity, acceleration, force, weight, density, angles
- energy/work/power
- moments/torque
- centre of gravity
- mechanical advantage
- levers
- pulley blocks
- efficiency
- friction
- vectors
- resolution of forces
- forces in strung conductors
- forces on poles and towers
- determination of sag
- pressure/stress
- elementary fluid mechanics

T3 Engineering materials encompassing:

- classification
- ferrous and non-ferrous metals

REQUIRED SKILLS AND KNOWLEDGE

- steels, alloys,
- properties
- tensile strength
- temperature and expansion in metals
- stress and strain
- ductility
- applications
- corrosion
- galvanic corrosion
- hardwoods and soft woods

T4 Fault current calculations encompassing:

- Calculation of fault currents
- Calculation/Determination of positive, negative and zero sequence impedances
- Determination of fault current breaking and let-through energy capacities of protection devices
- The influence of fault/arc impedances
- Impedances operative for phase-to-phase and phase-to-earth faults
- Calculation of fault currents for phase-to-phase and phase-to-earth faults
- Approximation calculations by selecting the components with the major impedance

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this

shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design switchboards rated for high fault levels as described in 8) and including:
 - A Developing outlines of alternative designs.
 - B Developing the design within the safety and functional requirements and budget limitations.
 - C Documenting and presenting design effectively.
 - D Successfully negotiating design alteration requests.
 - E Obtaining approval for final design.
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment

environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing switchboards rated for high fault levels.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers testing of electrical apparatus for compliance with a standard and regulation for the purpose of certification, approval and/or product quality maintenance. The unit encompasses safe working practices, determining performance requirements, inspecting, setting up performance tests, evaluating inspection and test results and documenting test outcomes.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as

License to practice

3)

apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 Apply Occupational Health and Safety
01A regulations, codes and practices in the
workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’.

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|--|
| 1 | Prepare to evaluate electrical apparatus | 1.1 | OHS procedures for a given work area are identified, obtained and understood. |
| | | 1.2 | Established OHS risk control measures and procedures in preparation for the work are followed. |
| | | 1.3 | Examination and testing area is checked for safety hazards and risk control measures implemented in strict accordance with safety policy and procedures. |
| | | 1.4 | Relevant documentation is obtained and read to determine the certification/approval specifications for which the equipment is to be assessed. |

Note:

Examples of documentation are those

ELEMENT**PERFORMANCE CRITERIA**

		specifying safety requirements, technical standard, as marketed technical performance and product quality endorsement standards.
	1.5	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.6	Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.
2	Evaluate electrical apparatus	
	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3	Circuits/apparatus/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4	In depth knowledge of the performance requirements of electrical apparatus and testing methods are applied to the assessment process.
	2.5	Apparatus examination and tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.
	2.6	Apparatus examination and tests are carried out methodically and results and comments systematically noted.
	2.7	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8	Assessment is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Complete work and document evaluate results	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Examination and test results are evaluated and non-compliance issues identified.
	3.4 Examination, test results and comments on non-compliance issues are documented and reported to appropriate person(s) in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating performance of electrical apparatus.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG131A Performance standards and regulatory requirement for electrical equipment

Evidence shall show an understanding of evaluating the performance of electrical apparatus to an extent indicated by the following aspects:

T1. Performance standards and regulatory requirements for electrical equipment encompassing:

- Standards philosophy and format
- How to read and apply a standard
- Performance standards requirements and machine efficiency
- Regulations

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Evaluate performance of electrical apparatus as described in 8) and including:
 - A Interpreting compliance documents.
 - B Setting up and conducting appropriate examinations and tests.
 - C Identifying non-compliance issues.
 - D Reporting examination and test results and non-compliance

issues clearly and accurately.

E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and
specific
resources for
assessment** 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to evaluating performance of electrical apparatus.

**Method of
assessment** 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to at least two different current-using apparatus and two different control apparatus.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
Electrical

UEENEEG132A Carry out low voltage electrical field testing and report findings

Modification History

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers field testing of electrical systems, circuits and apparatus to determine the cause of faults, malfunctions or compliance. It encompasses working safely and to standards, applying knowledge of electrical measurement and testing, following appropriate test procedures, documenting, evaluating and reporting test results.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as

License to practice**3)**

apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities components

UEENEEE1 04A Solve problems in d.c circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE1 37A Document and apply measures to control OHS risks associated with electrotechnology work

Prerequisite Unit(s)	4)
	UEENEEG0 06A Solve problems in single and three phase low voltage machines
	UEENEEG0 33A Solve problems in single and three phase electrical apparatus and circuits
	UEENEEG0 63A Arrange circuits, control and protection for general electrical installations
	UEENEEG1 01A Solve problems in electromagnetic devices and related circuits
	UEENEEG1 02A Solve problems in low voltage a.c. circuit
	UEENEEG1 03A Install low voltage wiring and accessories
	UEENEEG1 04A Install appliances, switchgear and associated accessories for low voltage electrical installations
	UEENEEG1 05A Verify compliance and functionality of low voltage general electrical installations
	UEENEEG1 06A Terminate cables, cords and accessories for low voltage circuits
	UEENEEG1 07A A Select wiring systems and cables for low voltage general electrical installations
	UEENEEG1 08A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
	UEENEEG1 09A Develop and connect electrical control circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills

indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

|---|--|-----|---|
| 3 | Complete electrical field testing and report findings. | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | | 3.2 | Apparatus is reassembled after testing where necessary, and work area is cleaned and made safe in accordance with established procedures. |
| | | 3.3 | Test findings are reported including recommendation for any action to be taken to rectify/modify conditions or parameters shown by the tests. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out electrical field testing and report findings.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG132A

Electrical field testing and measurement techniques

Evidence shall show an understanding of carrying out electrical field testing and reporting findings to an extent indicated by the following aspects:

T1 Advance electrical testing and measuring devices encompassing:

- Test/measuring devices and their application
- Circuit arrangement and safety procedures for connection of testing/measuring devices into a circuit
- Taking readings
- Storage, maintenance and care of test/measuring devices

T2 Measurement concepts encompassing:

- notion of error, accuracy, resolution
- sources of measurement error and uncertainties
- instrument specifications and calibration certificates
- test and measuring instrument safety certification levels and their application

T3 Types of field measuring instruments and their application encompassing:

- instrument meter movements and readouts

Note

These include moving coil, moving iron and dynamometer meter movements, LCD digital and screen readouts.

- Role of a microprocessor/controller in measuring instrument

T4 Measuring low voltages and direct and alternating currents encompassing:

- low voltage and current measurement techniques embodied in microprocessor based instruments.
- causes of inaccuracies and overcoming them.
- test instrument set up and safety procedures
- interpreting test readings

T5 Measuring high voltages and direct and alternating currents encompassing:

- high voltage and current measurement techniques embodied in microprocessor based instruments

REQUIRED SKILLS AND KNOWLEDGE

- causes of inaccuracies and overcoming them
- test instrument set up and safety procedures
- interpreting test readings

T6 Measuring fault levels and (earth) fault loop impedance encompassing:

- fault and fault loop impedance measurement techniques embodied in microprocessor based instruments
- causes of inaccuracies and overcoming them
- test instrument set up and safety procedures
- interpreting test readings

T7 Measuring power, energy, reactive power, power factor and maximum demand encompassing:

- power measurement techniques embodied in microprocessor based instruments.
- causes of inaccuracies and overcoming them.
- test instrument set up and safety procedures
- interpreting test readings

T8 Measuring power quality encompassing:

- power measurement techniques embodied in microprocessor based instruments.
- causes of inaccuracies and overcoming them.
- test instrument set up and safety procedures
- interpreting test readings.

Note.

Power quality measurement includes waveform distortion, harmonics, power factor and transients.

T9 Power cable faults and fault detection techniques encompassing:

- poor connection (high resistance
- open-circuit
- insulation breakdown and arcing.
- b) Varley and Murray loop tests
- Pulse test
- Echo test
- Radio based tests

T10 Application and limitations of the various cable fault detection techniques encompassing:

- cable fault detection techniques embodied in microprocessor based instruments.
- causes of inaccuracies and overcoming them.
- test instrument set up and safety procedures
- interpreting test readings.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Carry out electrical field testing and report findings as described in 8) and including:
 - A Envisaging the extent of work from situation reports and discussion with appropriate person(s).
 - B Using methodical testing techniques appropriate to each type of test and situation.
 - C Selecting and setting up appropriate

testing/measuring instruments in accordance with manufacturer's instructions and industry standards.

- D Writing test findings and recommendations of actions to be taken.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

The resources used for assessment should reflect current industry practices in relation to carrying out electrical field testing and report findings.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out and reporting findings of electrical field tests for the purpose of:

Locating faults

Examining operating parameters

Assessing compliance with regulations

Evaluating quality compliance

Note.

Examples of tests are earth system testing including HV installations; Varley loop testing; earth resistance measurements in electro-medical areas; temperature rise and thermography; circuit breaker residual current testing; illumination measurements and interpretation; industrial power factor measurements; radiation leakage in microwave ovens; antennae field strength measurement

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Electrical

UEENEEG143A Develop engineering solution for synchronous machine and control problems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers developing engineering solutions to resolve problems with synchronous machines and their controls. It encompasses working safely, apply extensive knowledge of synchronous machine operation, construction and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical machine problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 6

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace for work involving

License to practice

3)

direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG1 49A Provide engineering solutions to problems in complex polyphase power circuits

UEENEEE1 25A Provide engineering solutions for problems in complex multiple path circuit

UEENEEE1 26A Provide solutions to basic engineering computational problems

AND

UEENEEE1 Solve electrotechnical engineering

Prerequisite Unit(s)	4)
	29A problems
	OR
	UEENEEE1 Apply Occupational Health and Safety 01A regulations, codes and practices in the workplace
	UEENEEE1 Solve problems in d.c. circuits 04A
	UEENEEG1 Solve problems in electromagnetic devices 01A and related circuits
	OR
	UEENEEH1 Troubleshoot resonance circuits in an 14A electronic apparatus
	UEENEEE1 Apply Occupational Health and Safety 01A regulations, codes and practices in the workplace
	AND
	UEENEEE1 Solve problems in d.c. circuits 04A

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.
---	---

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to develop engineering solution for synchronous machine problems.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2	Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3	The extent of the machine problem is determined from performance specifications and situation reports and in consultations with relevant persons.
	1.4	Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5	Effective strategies are formed to ensure solution development and implementation is carried out

ELEMENT	PERFORMANCE CRITERIA
	efficiently.
2 Develop engineering solution for synchronous machine problems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of synchronous machine construction, operation, characteristics and applications are applied to developing solutions to synchronous machine problems.
	2.3 Parameters, specifications and performance requirements in relation to each machine problem are obtained in accordance with established procedures.
	2.4 Approaches to resolving synchronous machine problems are analysed to provide most effective solutions.
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
	2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.
3 Test, document and implement engineering solution for synchronous machine problem.	3.1 Solutions to machine problems are tested to determine their effectiveness and modified where necessary.
	3.2 Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.
	3.3 Appropriately competent and qualified person(s) required to implement solutions to synchronous machine problems are coordinated in accordance with regulatory requirements and enterprise policy. (Note)
	3.4 Justification for solutions used to solve synchronous machine problems is documented for inclusion in work/project development records in accordance with professional

ELEMENT

PERFORMANCE CRITERIA

standards.

Note:

A license to practice in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing engineering solution for synchronous machine problems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG143A

Synchronous machine diagnostics

Evidence shall show an understanding of developing engineering solutions for synchronous machine problems to an extent indicated by the following aspects:

T1 a.c. generators – construction, types and cooling encompassing:

- construction of stator and rotor windings
- rotor construction (cylindrical and salient pole)
- advantages of rotating field construction
- excitation methods
- cooling methods
- prime movers

T2 a.c. generators – operating principles and characteristics encompassing:

- a.c. generator equivalent circuits (synchronous reactance and resistance components)
- tests – open circuit, short circuit, stator impedance
- voltage regulation, island generator's terminal voltage load power factor
- determination of excitation voltage and load angle

T3 Synchronising a.c. generators encompassing:

- conditions for synchronising (infinite bus)
- methods for synchronising (lamp methods, synchroscope)
- alternator load sharing, parallel operation

T4 a.c. generators power, torque and efficiency encompassing:

- power input, input torque, speed
- power losses
- output power, load power factor, rotor angle, pu power
- efficiency
- performance chart interpretation

T5 Voltage regulation (AVR) encompassing:

- need for AVR's
- features of AVR's
- effects of rotor inductance

REQUIRED SKILLS AND KNOWLEDGE

- connections of AVRs
- operation of AVRs

T6 a.c. generator operational stability encompassing:

- power output, VAR effects, rotor angle, excitation
- control of VAR (OLTC transformers)
- voltage dependant nature of stability
- critical clearance angle of a.c. generator
- stability limits

T7 a.c. generator protection encompassing:

- restricted, unrestricted primary, back up and duplicated protection
- overcurrent, short circuit, differential, reverse power, load unbalance, rotor overload, loss-of-field, rotor earth fault, station earth fault, under frequency protection
- external fault protection

T8 Induction generator encompassing:

- types operating principles, characteristics
- excitation methods
- losses and efficiency
- synchronising and paralleling

T9 Three phase synchronous motors encompassing:

- construction – rotor, stator, windings
- excitation methods
- operating principles (equivalent circuits, synchronous impedance)
- hunting and stability limits
- power factor correction
- paralleling and synchronisation techniques
- starting methods
- braking methods

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop engineering solution for synchronous machine problems as described in 8) and including:
 - A Understanding the extent of the machine problem.
 - B Forming effective strategies for solution development and implementation.
 - C Obtaining machine parameters, specifications and performance requirements appropriate to each

- problem.
- D Testing and solutions to machine problems.
 - E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
 - F Documenting justification of solutions implemented in accordance with professional standards.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing engineering solution for

synchronous machine problems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG14 Provide engineering solutions to problems in
9A complex polyphase power circuits

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) 8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing engineering solution for at least four synchronous machine problems.

Note.

Typical machine problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers developing engineering solutions to resolve problems with d.c. machines and their controls. It encompasses working safely; apply extensive knowledge of d.c machine operation and construction and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical machine problems are those encountered in meeting performance requirements and compliance standards, revising machine operating parameters and dealing with machine malfunctions.

Application of the Unit

Application of the Unit **2)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 6

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the workplace for work involving

License to practice

3)

direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 25A Provide engineering solutions for problems in complex multiple path circuit

UEENEEE1 26A Provide solutions to basic engineering computational problems

AND

UEENEEE1 29A Solve electrotechnical engineering problems

OR

Prerequisite Unit(s)

4)

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEG1 01A Solve problems in electromagnetic devices and related circuits

OR

UEENEEH1 14A Troubleshoot resonance circuits in an electronic apparatus

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

AND

UEENEEE1 04A Solve problems in d.c. circuits

OR

UEENEEH1 69A Solve problems in basic electronic circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare to develop engineering solution for d.c. machine problems.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood.
		1.2	Established OHS risk control measures and procedures in preparation for the work are followed.
		1.3	The extent of the machine problem is determined from performance specifications and situation reports and in consultations with relevant persons.
		1.4	Activities are planned to meet scheduled timelines in consultation with others involved in the work.
		1.5	Effective strategies are formed to ensure solution development and implementation is carried out efficiently.

ELEMENT	PERFORMANCE CRITERIA
2 Develop engineering solution for d.c. machine problems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of d.c machine construction, operation, characteristics and applications are applied to developing solutions to d.c machine problems.
	2.3 Parameters, specifications and performance requirements in relation to each machine problem are obtained in accordance with established procedures.
	2.4 Approaches to resolving d.c. machine problems are analysed to provide most effective solutions.
	2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
	2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.
3 Test, document and implement engineering solution for d.c. machine problems.	3.1 Solutions to machine problems are tested to determine their effectiveness and modified where necessary.
	3.2 Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.
	3.3 Appropriately competent and qualified person(s) required to implement solutions to d.c machine problems are coordinated in accordance with regulatory requirements and enterprise policy. (Note)
	3.4 Justification for solutions used to solve d.c. machine problems is documented for inclusion in work/project development records in accordance with professional standards.

Note:

A license to practice in the workplace is required for work involving

ELEMENT

PERFORMANCE CRITERIA

direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing engineering solutions for d.c. machine problems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG144A

Direct current machine diagnostics

Evidence shall show an understanding of developing engineering solutions for d.c. machine problems to an extent indicated by the following aspects:

T1 Basic d.c. machine construction and operation encompassing:

- General principles of operation
- Applications of d.c. machines
- Construction of d.c. machines
- d.c. machine configurations; series, shunt, compound long shunt and compound short shunt
- Armature and field currents
- Insulation
- Ratings
- Cooling paths
- Bearings
- General maintenance of d.c. machines

T2 Construction and use of lap and wave windings encompassing:

- coils and elements
- generated voltage equation for generator
- generated voltage equation for motors
- application of lap and wave windings

T3 Commutation process encompassing:

- use of interpoles
- loading of machines
- brush shifting
- brush selection
- classes of brush grades

Note:

Examples include: natural graphite, hard carbon, electrographite, metal-graphite, metal-carbon, “treated” grades

- carbon brush contact characteristics

Note:

REQUIRED SKILLS AND KNOWLEDGE

Examples include: specific resistance, thermal conductivity, density and porosity, elastic properties, contact properties

- carbon brush factors

Note:

Examples are: pressure, current, polarity, speed

- brush construction

Note:

Examples are: dimensions, tolerances, preferred sizes, surfaces, edges, bevels, flexible shunts, connection of flexible shunt to brush, insulation of flexible connections

- brush holders

Note:

Examples are: types, brush angles, trailing holders, reaction holders, top bevel angles, reversible rotation, cantilever holders, effective arc of contact, construction of brush holders, pressure mechanism

- mounting of brush holders and brushes

Note:

Examples are: clearances, brush angle, brush arm spacing, alignment, staggering, brush bedding, brush pressure

- brush operation

Note:

Examples are: temperature rise, number and size of brushes, current distribution between brushes, slotting brushes, polarity effects, arc of contact, materials for commutators, mica

- selection of brush grades

Note:

Examples are: machine data, current density, commutator peripheral speed, brush arc, pitch of segments, number of segments covered by brush, cooling surface

T4 Armature reaction in d.c. machines encompassing:

- effect of armature reaction on d.c. machine characteristics
- use of compensating winding

T5 d.c. generators encompassing:

- relative advantages and disadvantages of the various dc generator configurations and their performance under various load conditions
- voltage regulation as a percentage or per unit value
- operation in parallel

T6 d.c. motors encompassing:

- relative advantages and disadvantages of the various dc motor configurations and their performance under various load conditions

REQUIRED SKILLS AND KNOWLEDGE

- shape of motor speed/torque curves
- reversal of rotation

T7 Starting and protection of d.c. motors encompassing:

- types of d.c. motor starters in use
- d.c. motor protection

T8 Speed regulation and speed control of d.c. motors encompassing:

- methods in use
- effect on motor design and operation caused by the use of SCR
- speed control equipment

T9 Braking of d.c. motors encompassing:

- Plugging
- Dynamic
- Regenerative
- Mechanical

T10 Losses, heating and efficiency encompassing:

- Copper losses
- Iron losses
- Mechanical losses
- Efficiency

T11 Acceleration of d.c. motors and loads encompassing:

- characteristics of typical loads
- matching a suitable motor to a given load
- heating of windings
- derating of motors

T12 Special d.c. motors construction, operation and applications encompassing:

- permanent-magnet motors
- brushless motors (e.c. motors)
- coreless and moving coil motors
- linear motors
- printed circuit motor
- stepping motors
- voice-coil motors

T13 Maintenance of d.c. machines encompassing:

- routine maintenance
- breakdown repairs

T14 types of faults encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- brushes/brush gear problems

Note:

Examples are: sparking, excessive heating, excessive wear of brushes, commutator or slip rings, bad surface conditions, excessive maintenance, flexible burning, flexible corrosion, separation or grooving, blackening, copper picking, copper dragging, brush noise

T15 adjustment of machines encompassing:

- correct brush position
- machining and finishing of commutators

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop engineering solutions for d.c. machine problems as described in 8) and including:
 - A Understanding the extent of the machine problem.
 - B Forming effective strategies for solution development and implementation.
 - C Obtaining machine parameters, specifications and performance requirements appropriate to each problem.
 - D Testing and solutions to machine problems.
 - E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
 - F Documenting justification of solutions implemented in accordance with professional standards.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment

environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing engineering solutions for d.c. machine problems.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing engineering solutions for induction machines and their control problems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG145A

Induction machines diagnostics

Evidence shall show an understanding of developing engineering solutions for induction motor problems to an extent indicated by the following aspects:

T1 Operating principles of polyphase induction motors encompassing:

- rotating magnetic field torque slip
- MMF relationships
- Leakage fluxes

T2 Construction of polyphase induction motors encompassing:

- squirrel cage motors
- slip-ring motors
- construction considerations in minimisation of tooth locking

T3 Speed-torque relationships in induction motors encompassing:

- maximum torque
- torque – slip relationships
- squirrel cage rotor types
- power flow in the motors
- power distribution
- torque units
- slip ring rotors

T4 Induction motor performance testing encompassing:

- no-load tests
- locked rotor tests
- development of motor equivalent circuit from test results
- analysis of motor performance using circle diagrams

T5 Induction motor starters encompassing:

- starting requirements
- type of starters
- starting torque
- starting dynamics
- static friction

REQUIRED SKILLS AND KNOWLEDGE

- mechanical loads
- starting duration

T6 Reduced voltage starting encompassing:

- starting dynamics
- change over conditions
- starting duration
- acceleration curves

T7 Speed control of induction motors encompassing:

- constant torque, constant power concepts
- torque-flux-voltage relationships
- rotor resistance control
- stator impedance control
- variable frequency control (e.g. PAM, PWM, Flux vector control)

T8 Braking of induction motors encompassing:

- electrical braking systems (plugging, d.c. dynamic, regenerative, capacitor-magnetic)
- mechanical braking systems (mechanical drum, demag, eddy current)

T9 Motor protection encompassing:

- overload
- earth fault
- phase failure

T10 Motor selection criteria and RMS rating

T11 Induction motor maintenance/repair encompassing:

- routine maintenance schedules
- type of repairs (mechanical, electrical)

T12 Single phase induction motors encompassing:

- operating principles (especially RMF)
- construction types
- speed-torque relationships
- testing

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop engineering solutions for induction machine problems as described in 8) and including:
 - A Understanding the extent of the machine problem.
 - B Forming effective strategies for solution development and implementation.
 - C Obtaining machine parameters, specifications and performance requirements appropriate to each

- problem.
- D Testing and solutions to machine problems
 - E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
 - F Documenting justification of solutions implemented in accordance with professional standards.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing engineering solutions for

induction machine problems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG14 Provide engineering solutions to problems in
9A complex polyphase power circuits

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing engineering solution for at least two types of induction machine problems.

Note.

Typical machine problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers determining correct operation of complex polyphase power circuits and providing solutions as they apply to electrical power engineering work functions. It encompasses working safely, problem solving procedures, including using electrical measuring devices, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

Application of the Unit

Application of the Unit 4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuitss

and

UEENEEG102A Solve problems in low voltage a.c. circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to provide engineering solutions to problems in complex polyphase power circuits.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct

ELEMENT

PERFORMANCE CRITERIA

ELEMENT	PERFORMANCE CRITERIA
	operation and safety.
2 Provide engineering solutions to problems in complex polyphase power circuits.	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Established methods are used for solving circuit problems from measure and calculated values as they apply to complex polyphase power circuits.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document solutions for problem solving activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to solve circuit problems is documented.
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing solutions for problems in complex polyphase power circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG149A

Polyphase power circuit analysis

Evidence shall show an understanding of polyphase power circuit analysis to an extent indicated by the following aspects:

T1 Polyphase supply system encompassing:

- advantage of three phase system compared to single phase systems
- double subscript notation
- phase sequence
- 120 degree operator
- given circuit component parameters, solve practically based problems using:
- equivalent circuits of transformers, lines and loads.
- component values using rectangular and polar notation.
- current divider and potential divider rules using complex impedances.
- The “per unit” values of voltage, current, VA and impedance to a common VA base.

T2 Types of three phase system connections encompassing:

- supply to balanced star, 3 and 4 wire loads
- supply to delta connected loads
- effects of phase reversal
- representation of currents and voltages as complex phasors for 3 phase and 3 phase and neutral quantities.
- calculation the values of and draw labeled phasor diagrams, not to scale, to represent complex values of current and voltage for balanced and unbalanced loads for star and delta systems.
- calculation of values of P, Q and S for balanced and unbalanced systems.
- draw and label single phase diagrams to represent 1 phase of a complex 3 phase system.
- represent unbalanced voltages or currents as symmetrical components.
- Phase to phase currents
- Phase to neutral/earth currents.

T3 Balanced three phase loads encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- calculations of balanced loads connected in star
- calculations of balanced loads connected in delta
- calculation of steady state values of fault current for various configurations.
- evaluation of the symmetrical component impedances for the various distribution system components. Transformers (earthed neutral case). Generators (high impedance earth)
- calculation of fault currents using the per unit approach.
- calculation using the “worst case” values based on transformer impedance only (ie., a short circuit fault)
- estimation of peak values using accepted multipliers.
- effects of the d.c. component on the instantaneous magnitudes of fault currents in transformers and generators.

T4 Unbalanced three phase loads encompassing:

- Star – 4 wire systems
- Delta systems
- Star – 3 wire systems
- Star 4 wire with neutral impedance

T5 Power in three-phase circuits encompassing:

- summation of phase powers and power in balanced loads
- measurement of power in balanced loads – 2 Wattmeter methods

T6 Reactive three phase power encompassing:

- power triangle calculation
- measurement of VAR
- power factor correction

T7 Fault currents encompassing:

- symmetrical components
- positive, negative and zero sequence impedance
- fault current breaking and let-through energy capacities of circuit breakers, fuses
- importance of fault/arc impedance
- calculation of fault currents - phase-to-earth faults
- calculation of fault currents - phase-to-phase faults
- analysis of asymmetrical faults currents.

T8 Harmonics in three phase systems encompassing:

- presence of triple in harmonics in 3 phase systems
- effects of 3 phase harmonics for different star and delta connections.
- methods for reducing harmonics in three phase systems.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

EVIDENCE GUIDE

competency in this unit

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit . It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in complex polyphase power circuits as described in 8) and including:
 - A Determining the operating parameters of existing circuit.
 - B Using established problem solving methods.
 - C Taking relevant measurements accurately.
 - D Interpreting measured values appropriately.
 - E Providing effective solutions to circuit problems from measurements and calculations.
 - F Giving written justification of solutions provided.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above

EVIDENCE GUIDE

listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing engineering solutions for solving problems in complex polyphase power circuits.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to providing engineering solutions to complex polyphase power circuits as they apply to problems related to electrical power engineering diagnosis and development work functions in any of the following types of circuit problems:

- - Determining the operating parameters of an existing complex circuit
 - Altering an existing complex circuit to comply with specified operating parameters
 - Developing complex circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers setting up coil former and winding machines and winding coils for static and rotating electrical machines. It encompasses working safely, using hand and powered tools, measuring, applying basic knowledge of electrical circuits, following technical instructions and set procedures and recording work activities.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to wind coils.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures for work preparation are followed.
	1.3 Work instructions are identified, obtained and understood.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Materials required for the work are obtained in accordance with established routines and procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Wind coils.	2.1 Established OHS risk control work measures are followed.
	2.2 Winding machines are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.3 Winding wire and insulation is selected in accordance with work instructions and established routines.
	2.4 Winding formers and machine is set-up in

ELEMENT	PERFORMANCE CRITERIA
	accordance with routine instructions.
	2.5 Prescribed solutions are used to resolve work completion issues.
	2.6 Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.
	2.7 Work is completed in acceptable timeframe given environment and workplace conditions.
3 Complete work report.	3.1 OHS measures work completion risk control are followed.
	3.2 Work report forms/data sheets are completed accurately.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and winding coils.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies

KS01-EG150A

Coil winding and coil testing

Evidence shall show an understanding of coil winding and coil testing to an extent indicated by the following aspects:

T1 Coil data to be collected:

- Type of wire.
- Gauge.
- Number of turns.
- Type of coil.
- Type of insulation.
- Coil shape.

T2 Coil former types and construction/set up

- Coil shapes
- Factors which govern coil shape:
 - end room;
 - coil flexibility;
 - bore size of stator iron core;
 - depth of iron below the slots, in the iron core;
 - pressure points between the coils
- Types coil winding formers

T3 Coil winding machines

- Identify machine types:
 - foot pedal,
 - variable speed,
 - winding head fitted with a chuck;
 - Remote foot switch on a flexible lead, variable speed fitted with a face plate;
 - layer winding machine;
 - computer operated
- Operational safety precautions

T4 Coil insulations.

- Purpose

REQUIRED SKILLS AND KNOWLEDGE

- Temperature ratings
- Common insulating materials
- Polyester film backed elephantide; Nomex;
- Mylar;
- Nomex/mylar/nomex; Dacron/mylar/dacron;
- cloth, tape, and adhesive tape (glass); polyester glass laminate;
- sheet, tape, and adhesive tape (polyester film);
- Bakelite paper laminates

T5 Rewind small and medium size solenoid coils

- Strip and record data
- Prepare/insulate coil formers
- Wind each type of coil
- Finishing off process
- Test procedures

T6 Types of testing devices

- Multimeter;
- Series light;
- Insulation resistance tester;
- Wheatstone bridge

T7 Purpose of testing devices

- Multimeter;
- Series lamp;
- Insulation resistance tester;
- Wheatstone bridge

T8 Types of tests

- Continuity
- Short circuited turns
- Insulation resistance

T9 Testing techniques to identify faulty coils

- Physical inspection.
- Using a testing device.

Evidence Guide

EVIDENCE GUIDE

Electrical winding and connections

Evidence shall show an understanding of electrical winding and connections to an extent indicated by the following aspects:

T1 Winding wires.

- Types of winding wires.
- Winding wire varnishes.
- Varnish temperature ratings.
- Varnish removal methods.
- Types of varnish.
 - Air drying
 - Baking
 - Epoxy
- Dangers relating to handling
- Methods of application.
 - Brush.
 - Spray.
 - Dip.
 - Trickle.
- Measuring wires.
 - Gauge.
 - Micrometer.`

T2 Applications of winding wires

- Solenoid
- Stator windings
- Armature windings.
- Transformer windings
- Induction coils.

T3 Methods of winding wire connection

- Conductor preparation.
- Joining methods – soft soldering

REQUIRED SKILLS AND KNOWLEDGE

- Types of soldering irons and tips
- Types of solder
- Fluxes: purpose; types; dangers
- Soldering process
- Inspection
- Hard soldering - Silver soldering
 - Advantages
 - Types of silver soldering wire
 - Types of flux
 - Operation and safe working procedures with the oxy acetylene welding torch
 - Preparation of join
 - Silver soldering process and inspection
- Fusing
 - Advantages
 - Preparation of join
 - Fusing process
 - Safe working procedures

T4 Insulation methods.

T5 Basic techniques in insulating coils for electrical static and rotating machines.

- Methods of insulating coils.
- Types of insulation used.
- Precautions.

T6 Coil types.

- Universal motor field coils (single phase);
- Distributed concentric coil group (single phase/three phase);
- Distributed “D” or mush shape coil group (three phase);
- Distributed round end (three phase);
- Distributed diamond shape coil group wound as individual coils (three phase)

T7 Basic techniques in placing coils for electrical static and rotating machines

- Record data
- Manufacture for universal field coils
- Coil finishing:
 - insertion into slots;
 - taping (where applicable);
 - connection for correct polarity
- Electrical testing

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Place and connect coils as described as described in 8) and including:
 - A Following winding specifications.
 - B Selecting correct coils and insulation.
 - C Cutting insulation and place insulation and coils without damage.

- D Connecting coils correctly.
- E Adhering to quality procedures.
- F Completing work report/forms accurately.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to placing and connecting coils.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to placing and connecting electrical coils for a small armatures/stators and single phase transformers or solenoid equipped devices in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electrical

UEENEEG152A Rewind single phase machines

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers dismantling and winding stators for single-phase machines. It encompasses working safely, using hand and powered tools, measuring, applying basic knowledge of electrical circuits and winding data, following technical instructions, and set procedures and recording work activities.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, assemble and dismantle utilities industry components
UEENEEE1 04A	Solve problems in d.c. circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuits
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG1 50A	Wind electrical coils
UEENEEG1 51A	Place and connect electrical coils

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| <p>1 Prepare to rewind single phase machines.</p> | <p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures for work preparation are followed.</p> |
|---|--|

ELEMENT**PERFORMANCE CRITERIA**

- | | | | |
|---|-------------------------------|--|--|
| | 1.3 | Work instructions are identified, obtained and understood. | |
| | 1.4 | Advice is sought from the work supervisor to ensure the work is coordinated effectively with others. | |
| | 1.5 | Single phase machine is dismantled and parts tagged and stored to prevent loss or damage. | |
| | 1.6 | Winding data is obtained from record or from work supervisor in accordance with established routines. | |
| | 1.7 | Winding is stripped from stator in accordance with established routines. | |
| | 1.8 | Materials required for the work are obtained in accordance with established routines and procedures. | |
| | 1.9 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety. | |
| 2 | Rewind single phase machines. | 2.1 | Established OHS risk control work measures are followed. |
| | | 2.2 | Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures. |
| | | 2.3 | Single phase machine is dismantled and parts tagged and stored to prevent loss or damage. |
| | | 2.4 | Winding is stripped from stator in accordance with established routines. |
| | | 2.5 | Stator is wound and insulated in accordance with winding data and established routines. |
| | | 2.6 | Machine is assembled and prepares for testing. |
| | | 2.7 | Prescribed solutions are used to resolve work completion issues. |

ELEMENT	PERFORMANCE CRITERIA
	2.8 Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.
	2.9 Work is completed in acceptable timeframe given environment and workplace conditions.
3 Complete work report.	3.1 OHS measures work completion risk control is followed.
	3.2 Work report forms/data sheets are completed accurately in accordance with established routines.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and rewinding single phase machines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG152A Single phase machine winding

Evidence shall show an understanding of electrical winding and connections to an extent indicated by the following aspects:

T1 Techniques of winding single phase machines.

- Electrical machine insulation types and applications
- Coil placement techniques
- Coil connection arrangements and terminations
- Winding insulation methods

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'.  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Rewind single phase induction machines as described as described in 8) and including:
 - A Dismantling machine and storing parts securely.
 - B Preparing stator for winding.
 - C Following winding specifications.
 - D Selecting correct coils and insulation.
 - E Winding and connecting stator correctly.

- F Assembling machine and preparing for testing.
- G Adhering to quality procedures.
- H Completing work report/forms accurately.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and
specific
resources for
assessment** 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to rewinding single phase machines.

**Method of
assessment** 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1 Prepare to rewind three phase induction machines. | 1.1 OHS procedures for a given work area are identified, obtained and understood. |
| | 1.2 Established OHS risk control measures for work preparation are followed. |

ELEMENT**PERFORMANCE CRITERIA**

- | | | | |
|---|--|--|--|
| | 1.3 | The extent of the work is determined from job sheets, specifications and regulatory requirements. | |
| | 1.4 | Advice is sought from the work supervisor to ensure the work is coordinated effectively with others. | |
| | 1.5 | Induction machine is dismantled and parts tagged and stored to prevent loss or damage. | |
| | 1.6 | Winding data is obtained from winding data records or directly from measurements of stator and recorded in accordance with established procedures. | |
| | 1.7 | Winding is stripped from stator in accordance with established procedures. | |
| | 1.8 | Materials required for the work are obtained in accordance with established procedures and procedures. | |
| | 1.9 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety. | |
| 2 | Rewind three phase induction machines. | 2.1 | Established OHS risk control work measures are followed. |
| | | 2.2 | Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures. |
| | | 2.3 | Induction machine is dismantled and parts tagged and stored to prevent loss or damage. |
| | | 2.4 | Winding is stripped from stator in accordance with established procedures. |
| | | 2.5 | Stator is wound and insulated in accordance with winding data and established procedures. |
| | | 2.6 | Machine is assembled and prepares for final testing in accordance with established procedures. |

ELEMENT**PERFORMANCE CRITERIA**

- | | | | |
|---|-----------------------|--|---|
| | 2.7 | Prescribed solutions are used to resolve work completion issues. | |
| | 2.8 | Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape. | |
| | 2.9 | Work is completed in acceptable timeframe given environment and workplace conditions. | |
| 3 | Complete work report. | 3.1 | OHS measures work completion risk control is followed. |
| | | 3.2 | Work report forms/data sheets are completed accurately in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and rewinding three phase induction machines rated for low voltage.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG153A Low voltage three phase motor winding techniques

Evidence shall show an understanding of single phase machine winding to an extent indicated by the following aspects:

T1 Alternator windings encompassing:

- Elementary single-phase stator winding
- Elementary three-phase stator winding
- Half-coil and whole-coil windings
- Concentrated and distributed windings
- Chain, lap and wave windings
- Pole-pitch and coil-span
- Half-coil winding for a three-phase alternator
- Whole-coil stator winding for a three-phase alternator

T2 Rating, cooling and regulation encompassing:

- Rating of alternators
- Cooling of alternators
- The voltage regulator

T3 Testing techniques encompassing:

- Continuity
- Insulation testing
- Use of 'growler'
- Magnetic field testing

T4 Techniques of winding three phase motors.

- Electrical machine insulation types and applications
- Coil placement techniques
- Coil connection arrangements and terminations
- Winding insulation methods

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to rewind direct current machines.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures for work preparation are followed.
	1.3 The extent of the work is determined from job sheets, specifications and regulatory requirements.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Induction machine is dismantled and parts tagged and stored to prevent loss or damage.
	1.6 Winding data is obtained from winding data records or directly from measurements of stator and recorded in accordance with established procedures.

ELEMENT	PERFORMANCE CRITERIA
	1.7 Winding is stripped from stator in accordance with established procedures.
	1.8 Materials required for the work are obtained in accordance with established procedures and procedures.
	1.9 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Rewind direct current machines.	2.1 Established OHS risk control work measures are followed.
	2.2 Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.3 Induction machine is dismantled and parts tagged and stored to prevent loss or damage.
	2.4 Winding is stripped from stator in accordance with established procedures.
	2.5 Armature and fields are wound and insulated in accordance with winding data and established procedures.
	2.6 Machine is assembled and prepares for final testing in accordance with established procedures.
	2.7 Prescribed solutions are used to resolve work completion issues.
	2.8 Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.
	2.9 Work is completed in acceptable timeframe given environment and workplace conditions.
3 Complete work report.	3.1 OHS measures work completion risk control is followed.
	3.2 Work report forms/data sheets are completed accurately in accordance with established

ELEMENT

PERFORMANCE CRITERIA

procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and rewinding direct current machines rated for low voltage.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG154A

Direct current motor winding techniques

Evidence shall show an understanding of direct current motor winding techniques to an extent indicated by the following aspects:

T1 Principles and construction encompassing:

- Direct-current machine types
- Construction of direct-current machine
- Types of armature windings
- Parallel circuits in armature windings
- Value of generated e.m.f.

T2 Direct current armature windings encompassing:

- Terms used in armature winding
- Lap and wave windings
- Progressive and retrogressive windings.

T3 Simplex lap windings encompassing:

- Simplex lap armature winding
- Commutator pitch
- Number and position of brushes
- Characteristics of simplex lap windings
- Equalising connections for armature windings
- Applications for lap windings.

T4 Simplex wave windings encompassing:

- Simplex wave armature winding
- Commutator pitch
- Number and position of brushes
- Dummy coils
- Characteristics of simplex wave windings
- Applications of wave windings
- Comparison of lap and wave windings
- Armature winding calculations.

T5 Commutation and interpoles encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Principles of commutation
- Conditions for sparkless commutation
- Methods used to reduce sparking
- Resistance commutation
- e.m.f. commutation
- Interpoles or commutating poles
- Advantages of interpoles.

T6 Testing techniques encompassing:

- Continuity
- Insulation testing
- Use of 'growler'
- Magnetic field testing

T7 Critical details and measurements when stripping a stator of a DC machine.

- Types of windings.
- Wave winding.
- Lap winding with equalisers
- Winding layout.

T8 Procedures and precautions required when inspecting and/or re-using a commutator

- Removal of armature leads on TIG welded commutator.
- Dimensioned to be checked.
- TIG Welded and soft soldered commutators.
- Coil position and commutator segment relationship.
- Commutator wear ring.

T9 Preparation for rewinding.

- Checking the condition of a:
- Stripped core.
- Commutator.
- Removing of old winding.
- Core loss test.
- Hot spots in armature core.
- Testing commutator before use.

T10 Selection of appropriate insulation.

- Reason for selecting a particular insulation.
- Dielectric strength.
- Temperature rating.
- Manufactures recommendations.
- Standards.

REQUIRED SKILLS AND KNOWLEDGE

- Insulation properties, method of application and specific uses for:
- B stage insulation
- VPI insulation
- Insulations used on the slot portion and overhang.

T11 Calculations and insulation specifications.

- Preparation of coils and equalisers.
- Manufactures specifications.
- Calculation of a half coil length and the amount of copper required.
- Preparation of copper prior to insulating coils and equalisers on armatures;
 - Commutators.
 - TIG welded.
 - Soft soldered.
 - Identification of insulation specifications.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in

accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as

- specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
 - Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Rewind direct current machines rated for low voltage as described as described in 8) and including:
 - A Dismantling machine and storing parts securely.
 - B Preparing stator for winding.
 - C Following winding specifications.
 - D Selecting correct coils and insulation.
 - E Winding and connecting armature and fields correctly.
 - F Assembling machine and preparing for testing.
 - G Adhering to quality procedures.
 - H Completing work report/forms accurately.
 - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to rewinding direct current machines rated for low voltage.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG15 Conduct electrical tests on LV electrical machines
7A

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to dismantling and winding armatures and field coils for at least three different direct current machines in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers preparing, placing and connecting coils and insulating three phase stators and rotors rated for high voltage to 3.3 kV. It encompasses working safely, using hand and powered tools, measuring, applying knowledge of electrical circuits and HV stator windings, applying technical and quality standards and keeping winding records.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG1 50A Wind electrical coils

UEENEEG1 51A Place and connect electrical coils

UEENEEG1 53A Rewind three phase low voltage induction machines

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare to rewind three phase induction machines. | 1.1 OHS procedures for a given work area are identified, obtained and understood. |
| | 1.2 Established OHS risk control measures for work preparation are followed. |
| | 1.3 The extent of the work is determined from job sheets, specifications and regulatory requirements. |
| | 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others. |
| | 1.5 Induction machine is dismantled and parts tagged and stored to prevent loss or damage. |
| | 1.6 Winding data is obtained from winding data records or directly from measurements of stator and recorded in accordance with established procedures. |

ELEMENT

PERFORMANCE CRITERIA

- 1.7 Winding is stripped from stator in accordance with established procedures.
- 1.8 Materials required for the work are obtained in accordance with established procedures and procedures.
- 1.9 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Rewind three phase induction machines.
 - 2.1 Established OHS risk control work measures are followed.
 - 2.2 Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures. (see Note 1).
 - 2.3 Induction machine is dismantled and parts tagged and stored to prevent loss or damage.
 - 2.4 Winding is stripped from stator in accordance with established procedures.
 - 2.5 Stator is wound and insulated to 3.3 kV standards in accordance with winding data and established procedures.
 - 2.6 Machine is assembled and prepares for final testing in accordance with established procedures.
 - 2.7 Prescribed solutions are used to resolve work completion issues.
 - 2.8 Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.
 - 2.9 Work is completed in acceptable timeframe given environment and workplace conditions.
- 3 Complete work report.
 - 3.1 OHS measures work completion risk controls are followed.
 - 3.2 Work report forms/data sheets are completed accurately in accordance with established

ELEMENT

PERFORMANCE CRITERIA

procedures.

Note 1:

Particular attention shall be given to following risk control measure related to high voltage hazards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and rewinding three phase induction machines rated for high voltage to 3.3 kV.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG155A High voltage three phase motor winding techniques rated to 3.3 kV

Evidence shall show knowledge and skills of high voltage three phase motor winding techniques rated to 3.3 kV to an extent indicated by the following aspects:

T1 HV winding conductors and their applications.

T2 HV winding wire connection methods encompassing:

- Conductor handling
- Conductor preparation
- Connection mediums

T3 Insulation types and methods

T4 Critical details and measurements when stripping a stator encompassing:

- Winding types

Note.

Example are hairpin wound stator and lap wound stator

- Winding diagram
- Wedges of a radially ventilated machine
- Factors to be considered when selecting cables for a stator.

T5 Procedures for checking the condition of a stripped in preparation for rewind encompassing:

- Manufacturers' specifications.
- Sequence of events between the removal of the old winding and the start of rewinding.
- Core loss test, the effect this test may have on the core and expected test results
- Methods of overcoming hot spots in a stator core.
- Level of insulation required to insulate the steel bracing rings that support the overhang.
- Difference between the slot liners and packers of a 3.3 kV machine.

REQUIRED SKILLS AND KNOWLEDGE

T6 Procedures for the fitting of coils to core, wedging and bracing.

- Significance of the slot portion of coils for machines
- Method of inserting the coils of a ribbon winding into slots.
- Effects of undue mechanical stress on B stage insulated coils.
- Importance of coil pitch and why it is important. Sequence of events in fitting the first pole pitch group of coils in a lap winding
- Sequence of events in fitting the coils of a concentric winding
- Purpose and location of the excess packing in a slot.
- Difference between the wedges for a lap and hairpin winding.
- Method of fitting a wedge.
- Difference that may be encountered between the wedges for a radial ventilated and the wedges for an axially ventilated machine.
- Methods used to brace and strengthen the overhang of a lap winding and a hairpin winding

T7 Procedures for making inter turn and inter coil connections on a hairpin winding and inter coil connections on a lap and bar winding encompassing:

- Sequence of events in making turn to turn connections, and insulating the turns of a lap winding

Note.

Connection methods include silver solder or brazing and soft solder

- Sequence of events, from hand forming the coil to final insulation, in making the turn to turn connections in a hairpin winding, using a welded joint.
- Sequence of events in making the coil to coil connections in a bar winding.

T8 Testing according to British and IEC standards.

Note.

Examples of testing are 3.3 kV B stage insulated winding test and VPI winding test.

T9 Materials, procedures, tests and precautions required during and after the impregnation of completed windings according to Australian, British and IEC standards.

- Precautions to be taken when handling and using varnishes and resins.
- Important features of an oven used to cure large impregnated machines.
- Application and features of various impregnating materials

Note.

Examples are water based varnish, Xylol base varnish and 100% solids resin

- Method of carrying out a gel test on a resin and a viscosity test on a varnish
- Typical quality procedures carried out on an impregnating varnish.
- Procedure and precautions for carrying out the a hot dip impregnation, a flood coat impregnation and a VPI impregnation

REQUIRED SKILLS AND KNOWLEDGE

- Tests to be carried out after impregnation and bake on a 3.3kV B stage insulated winding and a VPI winding

T10 Winding to terminal connections according to British and IEC standards.

- Criteria for selection of winding to terminal cables

Note.

Examples are voltage rating, full load current and fault capacity.

- Common types of terminal boxes and their structure.

Note.

Example are phase segregated, phase separated and phase insulated

- Method of making the joint between winding and terminal cables and insulating such a joint.

T11 Procedures and precautions to be followed when performing static electrical testing of a completed rewind according to Australian, British and IEC standards encompassing:

- Types and purpose of tests
- Testing safety precautions
- Testing procedures

Note.

Examples of tests are repetitive surge test, loss tangent test, polarisation index (PI) test, cold resistance test and polarity test.

- Interpretation of test results
- Calculation of winding cold resistance and line and phase resistance

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment,

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement

 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Rewind three phase induction machines rated for high voltage to 3.3 kV as described as described in 8) and including:
 - A Dismantling machine and storing parts securely.
 - B Preparing stator for winding.
 - C Following winding specifications.
 - D Selecting correct coils and insulation.
 - E Winding and connecting stator correctly.
 - F Assembling machine and preparing for testing.
 - G Adhering to quality procedures.
 - H Completing work report/forms accurately.
 - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to rewinding three phase induction machines rated for high voltage to 3.3 kV

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency

development in this unit may be arranged concurrently with unit:

UEENEEG15 Conduct electrical tests on HV electrical machines
8A

The critical aspects of occupational health and safety covered in unit UEENEEG101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to dismantling and winding stators for at least two different three phase induction machines at for HV to 3.3 kV in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

| | 1.6 | Winding data is obtained from winding data |

ELEMENT

PERFORMANCE CRITERIA

- records or directly from measurements of stator and recorded in accordance with established procedures.
- 1.7 Winding is stripped from stator in accordance with established procedures.
- 1.8 Materials required for the work are obtained in accordance with established procedures and procedures.
- 1.9 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Rewind three phase induction machines.
- 2.1 Established OHS risk control work measures are followed.
- 2.2 Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures. (See Note 1).
- 2.3 Induction machine is dismantled and parts tagged and stored to prevent loss or damage.
- 2.4 Winding is stripped from stator in accordance with established procedures.
- 2.5 Stator is wound and insulated to 3.3 kV standards in accordance with winding data and established procedures.
- 2.6 Machine is assembled and prepares for final testing in accordance with established procedures.
- 2.7 Prescribed solutions are used to resolve work completion issues.
- 2.8 Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.
- 2.9 Work is completed in acceptable timeframe given environment and workplace conditions.

ELEMENT

PERFORMANCE CRITERIA

3 Complete work report.

3.1 OHS measures work completion risk controls are followed.

3.2 Work report forms/data sheets are completed accurately in accordance with established procedures.

Note 1:

Particular attention shall be given to following risk control measures related to high voltage hazards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and rewinding three phase induction machines rated for high voltage above 3.3 kV.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG156A High voltage three phase motor winding techniques rated above 3.3 kV

Evidence shall show knowledge and skills of high voltage three phase motor winding techniques rated above 3.3 kV to an extent indicated by the following aspects:

T1 HV winding conductors and their applications.

T2 HV winding wire connection methods encompassing:

- Conductor handling
- Conductor preparation
- Connection mediums

T3 Insulation types and methods

T4 Critical details and measurements when stripping a stator encompassing:

- Winding types
Note.
Example are hairpin wound stator and lap wound stator
- Winding diagram
- Wedges of a radially ventilated machine
- Factors to be considered when selecting cables for a stator.

T5 Procedures for checking the condition of a stripped in preparation for rewind encompassing:

- Manufacturers' specifications.
- Sequence of events between the removal of the old winding and the start of rewinding.
- Core loss test, the effect this test may have on the core and expected test results
- Methods of overcoming hot spots in a stator core.
- Level of insulation required to insulate the steel bracing rings that support the overhang.
- Difference between the slot liners and packers of a 6.6 kV machine.

T6 Procedures for the fitting of coils to core, wedging and bracing.

- Significance of the slot portion of coils for machines above 3.3 kV
- Method of inserting the coils of a ribbon winding into slots.

REQUIRED SKILLS AND KNOWLEDGE

- Effects of undue mechanical stress on B stage insulated coils.
- Importance of coil pitch and why it is important.
- Sequence of events in fitting the first pole pitch group of coils in a lap winding
- Sequence of events in fitting the coils of a concentric winding
- Purpose and location of the excess packing in a slot.
- Difference between the wedges for a lap and hairpin winding.
- Method of fitting a wedge.
- Difference that may be encountered between the wedges for a radial ventilated and the wedges for an axially ventilated machine.
- Methods used to brace and strengthen the overhang of a lap winding and a hairpin winding

T7 Procedures for making inter turn and inter coil connections on a hairpin winding and inter coil connections on a lap and bar winding encompassing:

- Sequence of events in making turn to turn connections, and insulating the turns of a lap winding

Note.

Connection methods include silver solder or brazing and soft solder

- Sequence of events, from hand forming the coil to final insulation, in making the turn to turn connections in a hairpin winding, using a welded joint.
- Sequence of events in making the coil to coil connections in a bar winding.

T8 Testing according to British and IEC standards.

Note.

Examples of testing are 6.6 kV B stage insulated winding and VPI winding test.

T9 Materials, procedures, tests and precautions required during and after the impregnation of completed windings according to Australian, British and IEC standards.

- Precautions to be taken when handling and using varnishes and resins.
- Important features of an oven used to cure large impregnated machines.
- Application and features of various impregnating materials

Note.

Examples are water based varnish, Xylol base varnish and 100% solids resin

- Method of carrying out a gel test on a resin and a viscosity test on a varnish
- Typical quality procedures carried out on an impregnating varnish.
- Procedure and precautions for carrying out the a hot dip impregnation, a flood coat impregnation and a VPI impregnation
- Tests to be carried out after impregnation and bake on a a 6.6 kV B stage insulated winding and a VPI winding

T10 Winding to terminal connections according to British and IEC standards.

- Criteria for selection of winding to terminal cables

REQUIRED SKILLS AND KNOWLEDGE

Note.

Examples are voltage rating, full load current and fault capacity.

- Common types of terminal boxes and their structure.

Note.

Example are phase segregated, phase separated and phase insulated

- Method of making the joint between winding and terminal cables and insulating such a joint.

T11 Procedures and precautions to be followed when performing static electrical testing of a completed rewind according to Australian, British and IEC standards encompassing:

- Types and purpose of tests
- Testing safety precautions
- Testing procedures

Note.

Examples of tests are repetitive surge test, loss tangent test, polarisation index (PI) test, cold resistance test and polarity test.

- Interpretation of test results
- Calculation of winding cold resistance and line and phase resistance

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment

is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace

procedures and practices including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Rewind three phase induction machines rated for high voltage above 3.3 kV as described as described in 8) and including:

A Dismantling machine and storing parts securely.

B Preparing stator for winding.

C Following winding specifications.

D Selecting correct coils and insulation.

E Winding and connecting stator correctly.

F Assembling machine and preparing for testing.

G Adhering to quality procedures.

H Completing work report/forms accurately.

I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in 'Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to rewinding three phase induction machines rated for high voltage above 3.3 kV.

Method of assessment **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG15 Rewind HV three phase induction machines rated for voltages to 3.3 kV
5A

UEENEEG15 Conduct electrical tests on HV electrical machines
8A

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to dismantling and winding stators for at least two different three phase induction machines at for HV above 3.3 kV in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electrical

UEENEEG157A Conduct electrical tests on LV electrical machines

Modification History

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers electrical safety and functional testing of electrical machines designed to operate at low voltage. The unit encompasses working safely, setting up and conducting continuity, insulation and short circuit and inspection and testing of iron circuit, interpreting and documenting test results and any resulting corrective actions.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, assemble and dismantle utilities industry components
UEENEEE1 04A	Solve problems in d.c. circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuits
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
AND	
UEENEEG1 50A	Wind electrical coils
UEENEEG1 51A	Place and connect electrical coils
UEENEEG1	Rewind three phase low voltage induction

Prerequisite Unit(s)	4)
	53A machines
	OR
	UEENEEG0 33A Solve problems in single and three phase electrical apparatus and circuits
	UEENEEG0 63A Arrange circuits, control and protection for general electrical installations
	UEENEEG1 08A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
	For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to conduct electrical tests on three phase induction machines.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures for work preparation are followed.
	1.3 The extent of the work is determined from job sheets, specifications and regulatory requirements.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Winding data is obtained from winding data records or directly from measurements of stator and recorded in accordance with established procedures.
	1.6 Winding is stripped from stator in accordance with established procedures.
	1.7 Materials required for the work are obtained in accordance with established procedures.
	1.8 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Conduct electrical tests on three phase induction machines.	2.1 Established OHS risk control work measures are followed.
	2.2 Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

ELEMENT	PERFORMANCE CRITERIA
	2.3 All necessary electrical tests are conducted to established cause of faults or operational condition of the machine.
	2.4 Status of the machine is determined from test results and recorded.
	2.5 Prescribed solutions are used to resolve work completion issues.
	2.6 Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.
	2.7 Work is completed in acceptable timeframe given environment and workplace conditions.
3 Complete work report.	3.1 OHS measures work completion risk controls are followed.
	3.2 The status of the machine is documented in accordance with established procedures and appropriate person(s) notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conducting electrical tests on low voltage electrical machines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG157A Low voltage motor testing devices and techniques

Evidence shall show an understanding of electric motor mechanical measuring and testing devices and techniques to an extent indicated by the following aspects:

T1 Test/measuring devices and their application

- Test/measuring devices
 - multimeter.
 - growler.
 - Insulation resistance tester
 - Hi-pot testing
- Application.
 - continuity.
 - insulation.
 - short circuit
 - testing of magnetic circuit.

T2 Connection of test/measuring devices into a circuit encompassing:

- safety procedures.
- circuit arrangement of test/measuring devices.

T3 Taking and interpreting readings

With regards to:

- continuity.
- insulation.
- short circuit
- testing of magnetic circuit.

T4 Storage, maintenance and care of test/measuring devices

- Storage.
- Maintenance
- Care.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. UEENEEE1 02A	Fabricate, assemble and dismantle utilities industry components
UEENEEE1 04A	Solve problems in d.c. circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuits
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
AND	
UEENEEG1 50A	Wind electrical coils
UEENEEG1 51A	Place and connect electrical coils
UEENEEG1	Rewind three phase low voltage induction

Prerequisite Unit(s)	4)
	53A machines
	OR
	UEENEEG0 33A Solve problems in single and three phase electrical apparatus and circuits
	UEENEEG0 63A Arrange circuits, control and protection for general electrical installations
	UEENEEG1 08A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
	For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to conduct mechanical tests on electrical machines.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures for work preparation are followed.
	1.3 The extent of the work is determined from job sheets, specifications and regulatory requirements.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Machine data is obtained from data records or directly from measurements and recorded in accordance with established procedures.
	1.6 Winding is stripped from stator in accordance with established procedures.
	1.7 Materials required for the work are obtained in accordance with established procedures.
	1.8 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Conduct mechanical tests on three phase induction machines.	2.1 Established OHS risk control work measures are followed.
	2.2 Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

Note:

ELEMENT

PERFORMANCE CRITERIA

Particular attention shall be given to following risk control measure related to high voltage hazards

- 2.3 All necessary mechanical tests/measurements are conducted to established cause of faults or operational condition of the machine.
 - 2.4 Status of the machine is determined from test results and recorded.
 - 2.5 Prescribed solutions are used to resolve work completion issues.
 - 2.6 Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.
 - 2.7 Work is completed in acceptable timeframe given environment and workplace conditions.
- 3 Complete work report.
- 3.1 OHS measures work completion risk controls are followed.
 - 3.2 The status of the machine including specifications for any repair work required is documented in accordance with established procedures and appropriate person(s) notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conducting mechanical tests on electrical machines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG159A Electric motor mechanical measuring and testing devices and techniques

Evidence shall show an understanding of electric motor mechanical measuring and testing devices and techniques to an extent indicated by the following aspects:

T1 Devices and techniques for measuring geometric attributes encompassing:

- Measuring device for geometric attributes.
- Dynamic balancing.
- Alignment of shafts.

T2 Operational Test/measuring devices and their application encompassing:

- Operational test/measuring devices.
- Applications.

T3 Setting up test/measuring devices encompassing:

- safety procedures
- set up procedures

T4 Taking and interpreting readings encompassing:

- Correct method.
 - Taking and interpreting reading
 - Dynamic balancing
 - Aligning shafts
 - Measuring roundness

T5 Storage, maintenance and care of test/measuring devices encompassing:

- Storage of mechanical measuring and testing devices.
- maintenance of mechanical measuring and testing devices.
- Care of mechanical measuring and testing devices

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Conduct mechanical tests on electrical machines as described in 8) and including:
 - A Dismantling machine and storing parts securely.
 - B Setting up tests correctly.
 - C Taking test/measurements reading accurately.
 - D Determining the status of the machine correctly from test result.

E Documenting the status of the machine clearly.

F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to conducting mechanical tests on electrical machines.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires

assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG15 Conduct electrical tests on LV electrical machines
7A

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to conducting mechanical tests on at least two different electrical mechanical with one of the machines having at least two mechanical faults. The purpose of the tests is to establishing:

- The causes of faults in machines, and
- Whether a machine has been correctly repaired and complies with all requirements

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electrical

UEENEEG160A Evaluate performance of LV electrical machines

Modification History

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers electrical and mechanical safety and performance evaluation of electrical machines across their load range. The unit encompasses working safely, setting up and conducting evaluation measurements, evaluating performance from measured parameters and documenting results and recommending any resulting corrective actions.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

License to practice**3)**

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG1 57A	Conduct electrical tests on LV electrical machines
UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, assemble and dismantle utilities industry components
UEENEEE1 04A	Solve problems in d.c. circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0	Solve problems in single and three phase

Prerequisite Unit(s)	4)
	06A low voltage machines
	UEENEEG1 01A Solve problems in electromagnetic devices and related circuits
	UEENEEG1 02A Solve problems in low voltage a.c. circuits
	UEENEEG1 06A Terminate cables, cords and accessories for low voltage circuits
	AND
	UEENEEG1 50A Wind electrical coils
	UEENEEG1 51A Place and connect electrical coils
	UEENEEG1 53A Rewind three phase low voltage induction machines
	OR
	UEENEEG0 33A Solve problems in single and three phase electrical apparatus and circuits
	UEENEEG0 63A Arrange circuits, control and protection for general electrical installations
	UEENEEG1 08A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
	AND
	UEENEEG1 43A Develop engineering solution for synchronous machine and control problems
	UEENEEG1 49A Provide engineering solutions to problems in complex polyphase power circuits
	UEENEEE1 25A Provide engineering solutions for problems in complex multiple path circuit

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to evaluate electrical machines.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Examination and testing area is checked for safety hazards and risk control measures implemented in strict accordance with safety policy and procedures.
	1.4 Relevant documentation is obtained and read to determine the certification/approval specifications for which the equipment is to be

ELEMENT**PERFORMANCE CRITERIA**

- assessed.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Evaluate electrical machines.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 In depth knowledge of the performance requirements of the particular electrical machine under scrutiny is applied to the assessment process.
- 2.5 Machine examination and tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.
- 2.6 Machine examination and tests are carried out methodically and results and comments systematically noted.
- 2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.8 Assessment is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Complete work and document evaluate results.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Examination and test results are evaluated and non-compliance issues identified.
	3.4 Examination, test results and comments on non-compliance issues are documented and reported to appropriate person(s) in accordance with established procedures.

Note 1:

Examples of documentation are those specifying safety requirements, technical standard, as marketed technical performance and product quality endorsement standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating performance of electrical machines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG160A Performance standards and regulatory requirements for the electrical rotating machine

Evidence shall show an understanding of evaluating the performance of electrical machines to an extent indicated by the following aspects:

T1 Additional technical standards, regulations and codes for special electrical installations encompassing:

- caravan parks
- construction and demolition sites
- marinas
- medical treatment areas
- moveable premises
- HV installation in consumer's premises

T2 Electrical machines, performance monitoring encompassing:

- Methods of testing the condition of bearings
- Methods of testing the condition of windings and terminal boxes.
- Methods of testing the condition of the coolers
- Problems likely to be created due to lack of maintenance on brush gear.
- Method of testing the general condition of a machine by vibration analysis
- Methods of checking the condition of couplings, pulleys, belts and the like.
- Determining machine operating efficiency

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design and develop modifications to electrical machines.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 The extents of modifications required are determined from performance test results and customer's requirements.
	1.3 Original specification documents for the machine are sought and received in order to check currency of compliance requirements. (see note 1)
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in or relying on outcomes of the work.
2 Design modifications to electrical machines.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 In depth knowledge of electrical machine and sustainable energy policies in improving machine efficiency is applied to modification design.
	2.3 Modifications are designed to comply with the requirements of Standards and regulations.
	2.4 Acceptance/approval for modification design is sought from appropriate person(s) in accordance with established procedures.
	2.5 Specifications and instructions for the modification work are documented and

ELEMENT	PERFORMANCE CRITERIA
	processed in accordance with requirements.
	2.6 Solutions to unplanned or unforeseen events are provided consistent with safety and work outcomes.
3 Arrange modification work.	3.1 OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Arrangements are made for the modification work to be done in accordance with established procedures.
	3.3 A copy of modification specifications and instructions is provided to personnel responsible for carrying out the work.
	3.4 Strategies are implemented that verify that modification conforms to specifications.
	3.5 Solutions to unplanned or unforeseen events are provided consistent with safety and work outcomes.
4 Complete work and report	4.1 OHS work completion risk control measures and procedures are followed.
	4.2 Arrangements are made for formal certification of modifications where required by regulation or customer.
	4.3 Machine marking is revised to comply with performance parameters resulting from modifications.
	4.4 Modification and machine performance standard are documented and report issued to appropriate person(s) in accordance with established procedures.

Note 1:

Examples of documentation are those specifying safety requirements, technical standard, as marketed technical performance and product quality endorsement standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and developing modifications to electrical machines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG161A

Electrical machine design

Evidence shall show an understanding of the design and development of modifications to electrical machines to an extent indicated by the following aspects:

T1 Motor windings principles and construction encompassing

- direct-current machine types
- construction of direct current machine
- types of armature windings
- parallel circuits in armature windings
- magnitude of generated e.m.f.

T2 Direct current armature windings encompassing:

- terms used in armature winding
- effects of chording
- lap and wave windings
- progressive and retrogressive windings

T3 Simplex lap windings encompassing:

- simplex lap armature winding
- commutator pitch
- number and position of brushes
- characteristics of simplex lap windings
- equalising connections for armature windings
- applications for lap windings

T4 Simplex wave windings encompassing:

- simplex wave armature winding
- commutator pitch
- number and position of brushes
- dummy coils
- characteristics of simplex wave windings
- applications of wave windings
- comparison of lap and wave windings
- armature winding calculations

REQUIRED SKILLS AND KNOWLEDGE

T5 Commutation and interpoles encompassing:

- principles of commutation
- conditions for sparkless commutation
- methods used to reduce sparking
- resistance commutation
- e.m.f. commutation
- interpoles or commutating poles
- advantages of interpoles

T6 Alternator windings encompassing:

- elementary single-phase stator winding
- elementary three-phase stator winding
- half-coil and whole-coil windings
- concentrated and distributed windings
- chain, lap and wave windings
- pole-pitch and coil-span
- half-coil winding for a three-phase alternator
- whole-coil stator winding for a three-phase alternator

T7 Breadth factor and sinusoidal output encompassing:

- breadth factor
- e.m.f. equation for an alternator
- methods of obtaining sinusoidal wave form
- star and delta connection of alternator windings

T8 Rating, cooling and regulation encompassing:

- rating of alternators
- cooling of alternators
- the voltage regulator

T9 Testing techniques encompassing:

- continuity
- insulation testing
- use of 'growler'
- magnetic field testing

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design and develop modifications to electrical machines as described as described in 8) and including:
 - A Determining the extent of work correctly.
 - B Designing modification to meet requirements.
 - C Documenting modification specifications clearly.
 - D Arranging for formal certification of modifications.
 - E Completing final report.

F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing and developing modifications to electrical machines.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and developing modifications to at least two different types of electrical machines.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
Electrical

UEENEEG162A Set up and place LV electrical apparatus and associated circuits into service

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers adjusting and setting up electrical apparatus before placing and checking that they operate as intended. It encompasses working safely and to standards, following specified set up procedures, ensuring safety devices are correctly set, evaluating apparatus and circuit operation against specified parameters and completing necessary documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

License to practice

3)

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measure and the like

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG1
05A Verify compliance and functionality of low voltage general electrical installations

UEENEEE1
01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1
02A Fabricate, dismantle, assemble of utilities components

UEENEEE1
04A Solve problems in d.c circuits

UEENEEE1
05A Fix and secure electrotechnology equipment

UEENEEE1
07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE1
37A Document and apply measures to control OHS risks associated with

Prerequisite Unit(s)

4)

electrotechnology work

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and

Numeracy⁷

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare to set up electrical apparatus and associated controls	1.1	OHS procedures for a given work area are identified, obtained and understood.
		1.2	Established OHS risk control measures and procedures in preparation for the work are followed.
		1.3	Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate person(s).
		1.4	Setting up work is appropriately sequenced in accordance with job schedule

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|---|--|
| | 1.5 | Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site |
| | 1.6 | The location of electrical apparatus and controls is determined from site inspection and/or job specifications and diagrams |
| | 1.7 | Control setting and operating parameters are determined from job specifications and requirements. |
| | 1.8 | Tools, equipment and testing devices needed to commission the system are obtained in accordance with established procedures and checked for correct operation and safety |
| | 1.9 | Pre set up checks are undertaken to ensure all components are in place and secure. |
| | 1.10 | The need to test or measure a live and operating system is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures |
| 2 | Set up electrical apparatus and associated controls | |
| | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
| | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures. |
| | 2.4 | Electrical apparatus and associated controls are adjusted to their required settings. |
| | 2.5 | Testing/measuring devices are used to observe the operation of electrical apparatus and fine adjustments of controls are made as necessary. |
| | 2.6 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes. |

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|--|-----|---|
| | 2.7 | Setting up is conducted efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 Document operational settings of electrical apparatus and associated circuits. | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | 3.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | 3.3 | Results of setting up are documented including final operating parameters and an appropriate person or persons notified in accordance with established procedures |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up and placing electrical apparatus and associated circuits into service.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG162A

Commissioning processes and procedures

Evidence shall show an understanding of setting up and placing electrical apparatus and associated circuits into service to an extent indicated by the following:

T1 Commissioning processes and procedures encompassing:

- Purpose of commissioning
- Commissioning planning and documentation
- Procedures for configuring, calibrating and tuning systems during commissioning systems encompassing:
 - Procedures for validating system performs to specification
 - Procedures followed to commission instrument systems
- Purpose and importance of documentation

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for

apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set up and place electrical apparatus and associated circuits into service as described as described in 8) and including:
 - A Selecting appropriate testing/measuring devices.
 - B Making initial adjustments of apparatus and controls correctly.
 - C Finely adjusting apparatus and controls based of measured observations.
 - D Documenting final operating parameters accurately.
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to setting up and placing electrical apparatus and associated circuits into service.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to commissioning electrical apparatus and associated controls. Types of electrical apparatus and controls are motor switching and control, relevant parts of general electrical installations, process plants or production plant.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare to repair component.	1.1	OHS procedures for a given work area are obtained and understood through established routines and procedures.
		1.2	Established OHS risk control measures and procedures in preparation for the work are followed.
		1.3	Safety hazards which have not previously been identified are reported and advise on risk control measures are sought from the work supervisor.
		1.4	The nature of repair work is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
		1.5	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
		1.6	Sources of materials that may be required for the work are established in accordance with established routines and procedures.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|--------------------|---|
| | 1.7 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety. |
| | 1.8 | Appropriate machine is selected, checked for safety and prepared for any necessary machining operation. |
| | 1.9 | Cutting tools are selected, sharpened and set up for correctly for each particular machining operation. |
| 2 | Repair components. | |
| | 2.1 | Established OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures. |
| | 2.3 | Component being machined is positioned and clamped appropriately. |
| | 2.4 | Machining is carried out safely and to suit the component and material being machined. |
| | 2.5 | Appropriate measurements are taken to ensure repairs comply with technical standards and job specifications and requirements. |
| | 2.6 | Components are repaired to comply with technical standards and job specifications and requirements. |
| | 2.7 | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented. |
| | 2.8 | Unexpected situations are dealt with safely and with the approval of an authorised person. |
| | 2.9 | Ongoing checks of the quality of repair work are undertaken in accordance with established procedures. |
| | 2.10 | Repairs are carried out efficiently without unnecessary waste of materials and energy and |

ELEMENT

PERFORMANCE CRITERIA

- damage to apparatus, circuits, the surrounding environment or services.
- 3 Complete work and report.
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work area is cleaned and made safe in accordance with established procedures.
- 3.3 Fits are made to verify that repaired component conforms to requirements.
- 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and repairing and maintaining mechanical components of electrical machines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG164A Electrical machines, mechanical components

Evidence shall show an understanding of repairing mechanical components of electrical machines to an extent indicated by the following aspects:

- T1 Dangers and safety precautions
 - hazardous dust
 - cleaning material
 - safe working practices
- T2 Electrical Machine Bearings
 - Types of bearings
 - Bearing clearances
 - Techniques for removing and fitting bearings
 - Handling and storage of bearings
 - Lubrication of bearings
 - Calculation of bearing life
 - Bearing damage and remedial action
- T3 Machines Couplings
 - Types of couplings, applications
 - Fitting and aligning couplings
 - Types of belts and their applications
 - Fittings and aligning pulleys
- T4 Machine
 - components of electrical machines
- T5 Machine faults and testing procedures
 - faults
 - testing
 - inspecting
- T6 Dismantling /assembling and repair procedures
 - marking of electrical connections
 - recording positions of gears/pulleys/couplings
 - dismantle procedures

REQUIRED SKILLS AND KNOWLEDGE

- bearing removal/replacement
- test run
- T7 Brushes
 - characteristics
 - types
 - selection
- T8 Removal and installation
 - marking of winding connections
 - motor alignment
 - alignment procedures

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place,

access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Repair mechanical components of electrical machines as described as described in 8) and including:

A Establishing the nature of the repair work.

B Selecting appropriate method of repair.

C Sharpening cutting tools/twist drills correctly.

D Securing work piece correctly.

E Repairing component to required standard.

F Documenting repairs in accordance with established procedures.

G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to repairing mechanical components of electrical machines.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to repairs and maintenance of at least two of the following electrical machine components:

- Shaft
- Bearing housing
- End shield
- Fan
- Coupling
- Machine housing

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electrical

UEENEEG165A Maintain and service traction lifts systems and equipment

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers maintenance and servicing of traction lift systems and equipment. It encompasses working safely, conducting site cleaning, lubricating and painting lift equipment, inspecting of suspension, governors, compensators, floor selector and tappet switch ropes, and carrying out periodic testing on lift safety gear.

Application of the Unit

Application of the Unit **2)**

This unit applies to any formal recognition for this standard at the aligned AQF 3 level or higher.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities components
UEENEEE1 04A	Solve problems in d.c circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuit
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG1 08A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

Prerequisite Unit(s) 4)

UEENEEG1 16A Diagnose and rectify faults in traction lift systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to maintain and service lift equipment.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 The likely extent of work to be undertaken is envisaged from maintain procedures or fault/breakdown reports and/or discussions with appropriate person(s).</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Maintain and service lift equipment.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measured and devised and implemented in consultation with appropriate personnel.</p>
3 Completion and report of maintain and servicing activities	<p>3.1 OHS work completion risk control measures and procedures are followed.</p> <p>3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.</p>

ELEMENT

PERFORMANCE CRITERIA

3.3 Maintenance work activities are documented in accordance with established procedures.

Note.

Examples of documentation are components fault reports, test results, authorisations, permits, parts/component dispatch and store records

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining and servicing traction lifts.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG165A

Lift systems - lift component

Evidence shall show an understanding of the maintenance and servicing of traction lifts to an extent indicated by the following aspects:

T1 Lubricant selection for lift components encompassing:

- Corrosion protection
- Friction reduction
- Cooling
- Viscosity
- Lubricant loss and loss estimation
- Suitable oils, greases, coolants, rust preventatives and solvents for particular devices

T2 Lubricant application for lift components encompassing:

- Hand, Grease guns,
- Oil cans,
- Pressure lubricators,
- Oil misters,
- Level indicators,
- Estimating quantities,
- Lubrication points
- Automatic lubricators

T3 Lift systems single and multiple wrap roping, types of ropes and their attachments encompassing:

- Hoisting
- Governor
- Tappet
- Compensator
- Selector
- Normal lay rope
- Langs lay rope
- Standard ends attachments
- Splices

REQUIRED SKILLS AND KNOWLEDGE

- Wedge sockets
- Talurit fitting
- Babbit sockets
- Secon fitting

T4 Lift systems basic rope inspection encompassing: Lift systems basic rope inspection encompassing:

- Requirements of Lift Code/enterprise
- Purpose
- Wear
- Broken strands
- Diameter
- Deformation
- Corrosion
- Lubrication
- Tension

T5 Rope stretch encompassing:

- Requirements of Lift Code/enterprise
- Counterweight clearance
- Compensatory equipment

T6 Inspection of rope attachments encompassing:

- Requirements of Lift Code/enterprise
- Rope anchor rods
- Castings, Springs
- Wedges
- Swaging
- Checking for fracturing
- Deformation
- Remedial action

T7 Inspection of sheaves encompassing:

- Groove condition
- Rifling
- Ropes down in sheaves
- Maintenance records

T8 Maintenance, replacement and adjustment of mechanical lift components encompassing:

- Door locks
- Air cords
- Selectors

REQUIRED SKILLS AND KNOWLEDGE

- Bearings; roller, sleeve, guide shoes, and slipper
- Door guides
- Landing doors
- Car doors
- Tapes/chains
- Motor room equipment
- Well equipment
- Pit equipment

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Maintain and service traction lifts as described as described in 8) and including:
 - A Conduct site cleaning, lubricating and painting of lift equipment.
 - B Inspect lift ropes.
 - C Maintain electro-hydraulic lift equipment.
 - D Carry out lift safety gear periodic testing.
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry

practices in relation to maintaining and servicing traction lifts.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

- Competency shall be demonstrated in relation to maintaining and servicing at least two of the lift equipment as following:
 - Geared traction drive
 - Gearless traction drive
 - Drum drive
 - Suspended electro-hydraulic drive
- At least two of the roping systems as following:
 - Single or double wrap
 - Single or multiple fall
 - Side slung or underslung
 - Overhead or basement drive
 - Drum drive.
- And at least two of the components as following:
 - Suspension ropes
 - Governor ropes
 - Tappet ropes
 - Compensator ropes
 - Floor selector tapes/ropes
- All safety gear periodic tests as following:
 - Governor type A
 - Governor type B
 - Governor type C

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Pre-Requisites**Prerequisite Unit(s)**

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities components
UEENEEE1 04A	Solve problems in d.c circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuit
UEENEEG1	Terminate cables, cords and accessories for

Prerequisite Unit(s)

4)

06A low voltage circuits

UEENEEG1 08A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG1 16A Diagnose and rectify faults in traction lift systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills

5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install and maintain of escalators, moving walks and treadways.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The likely extend of work to be undertaken is envisaged from maintain procedures or plans/specifications and/or discussions with appropriate person(s).
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.
2 Install and maintain escalators, moving walks and/or treadways	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measured and devised and implemented in

ELEMENT	PERFORMANCE CRITERIA
	consultation with appropriate personnel.
	2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.7 Ongoing checks of the quality of installed/maintain apparatus are undertaken in accordance with established procedures.
	2.8 Apparatus installation/maintenance is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
3 Completion and report of install and maintain activities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.
	3.3 Maintenance work activities are documented in accordance with established procedures. Note. Examples of documentation are components fault reports, test results, authorisations, permits, parts/component dispatch and store records
	3.4 Final checks are made to that the installed/maintained apparatus conforms to requirements.
	3.5 'As-installed' apparatus and associated equipment is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintenance of escalators, moving walks and treadways.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG166A mechanics

Escalators, moving walk and treadway

Evidence shall show an understanding of installing and maintaining escalators, moving walks and tread ways to an extent indicated by the following aspects:

T1 Escalators and moving walks components encompassing:

- Machine Brakes
- Controller
- Safety devices
- Balustrade lighting
- Steps/pallets/belts
- Hand rail
- Drive chain
- Truss
- Track systems
- Step/pallet chains
- Rollers, Tension carriage
- Hand rail earthing

T2 Lubricant selection for escalator components encompassing:

- Corrosion protection
- Friction reduction
- Cooling
- Viscosity
- Lubricant loss and loss estimation
- Suitable oils, greases, coolants, rust preventatives and solvents for particular devices

T3 Lubricant application for escalator components encompassing:

- Hand, Grease guns,
- Oil cans,
- Pressure lubricators,
- Oil misters,
- Level indicators,

REQUIRED SKILLS AND KNOWLEDGE

- Estimating quantities,
- Lubrication points
- Automatic lubricators

T4 Escalators basic principles encompassing:

- Statutory and enterprise requirements: Lift Code, OHS, emergency stop, danger signage, barriers and running clearances
- Purpose of controller, safety devices, chain/steps and hand rail
- Techniques for repair of steps/belts/pallets, combs, guards, balustrades, Newel rollers, balustrade lighting and hand rails
- Adjustments of chains, hand rail, brake, steps and safety devices

T5 Escalator safe working procedures encompassing:

- Removing steps/pallets
- Working in motor room/pit
- Cleaning/lubricating
- Guards
- Hand rails remove/refit

T6 Escalator installation and commissioning encompassing:

- Aligning
- Testing
- Handling
- Running clearances

T7 Escalator types to suit applications encompassing:

- Factors
- volume of people
- Gradient
- Multi floor use

T8 Moving walks encompassing:

- Types; Continuous belts and palletised types
- Statutory requirements: OHS, Lift Code
- Comparison with escalator

T9 Tread Ways encompassing:

- Belt and palletised types
- Statutory requirements, OHS, Lift Code

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and maintenance of escalators, moving walks and treadways as described in 8) and including:
 - A Escalators.
 - B Moving walks.
 - C Treadways.
 - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated

in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and
specific
resources for
assessment** **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installation and maintenance of escalators, moving walks and treadways.

**Method of
assessment** **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate

the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

Competency shall be demonstrated in relation to installing and maintaining at least one of the following:

- Escalators (single or multiple units)
- Moving walks (single or multiple units)
- Treadways (belt or pallet type)
- At least five of the following:
 - Handrails
 - Steps
 - Pallets
 - Step-chains and associated driving equipment
 - Chains
 - Combs
 - Guards
 - Balustrades
 - Step rollers
 - Newel rollers
 - Motors
 - Controllers
 - Safety devices

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers alignment and installation of lift mechanical and electrical equipment. It encompasses working safely, alignment of lift structures such as measuring, marking out and aligning of lift installations including machine room equipment, lift well equipment, the lift car and associated equipment and landing door frames and doors, setting out of multiple lift wells in varying configuration and the installations of well and pit equipment, lift car equipment, superstructure and counterweights, machine room equipment, landing, door frames and door, landing buttons and indicator boxes.

Application of the Unit

Application of the Unit 2)

This unit applies to any formal recognition for this standard at the aligned AQF 3 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also

License to practice**3)**

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities components
UEENEEE1 04A	Solve problems in d.c circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuit

Prerequisite Unit(s) 4)

UEENEEG1 06A Terminate cables, cords and accessories for low voltage circuits

UEENEEG1 08A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG1 16A Diagnose and rectify faults in traction lift systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 5

Employability Skills Information**Employability Skills 5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to align and install lift equipment.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The likely extend of work to be undertaken is envisaged from site plans, drawings and specifications and/or discussions with appropriate person(s).
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Tools, equipment and alignment devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.
2 Align and install lift equipment.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Equipment are installed straight and square in the required locations and within acceptable tolerances.

ELEMENT	PERFORMANCE CRITERIA
	2.5 Equipment align and install in accordance with manufacture's specifications and regulatory requirements.
	2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8 Ongoing checks of the quality of installed equipment are undertaken in accordance with established procedures.
	2.9 Equipment installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
3 Completion and report of alignment and installation activities	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Final checks are made to that the installed equipment conforms to requirements.
	3.4 'As-installed' equipment is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and aligning and installing lift equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG167A

Lift systems - installation

Evidence shall show an understanding of aligning and installing lift equipment to an extent indicated by the following aspects:

T1 Single lift wells encompassing:

- Purpose
- Need for accuracy
- Modification of errors
- Use of template
- Use of plumb lines and weights
- Measuring and marking out lift wells
- Measuring and marking out machine room (where appropriate)
- Plumbing chart
- Identification of clearances
- Adjustment of templates
- Use of laser level

T2 Multiple lift wells encompassing:

- Use of centre line/datum
- Use of survey information and layouts
- Setting of well templates
- Plumb charts analysis for three dimensional impact
- Corrective action
- Use of theodolite

T3 Fixing devices and methods encompassing:

- Inserts
- Expansion anchors
- Chemically bonded anchors

T4 Equipment layout encompassing:

- Specifications
- Clearances
- 3D impact on layout

REQUIRED SKILLS AND KNOWLEDGE

- Lift code

T5 Alignment equipment encompassing:

- Gauges
- Straight edges
- Rail gauges
- Shims/packers
- Lasers

T6 Machine room alignment encompassing:

- Machine and fixings
- Diverter sheave
- Governor and tensioning sheaves
- Counterweight centre lines
- Sheave and roping system

T7 Lift car alignment encompassing:

- Superstructure
- Frames
- Doors

T8 Lift well alignment encompassing:

- Guides and brackets
- Trimmer beams
- Buffers
- Landing doors and locks
- Compensators

T9 Running clearances encompassing:

- Safety gear
- Car sill
- Door operator

T10 Car operating devices encompassing:

- Slowdown switch
- Limits
- Inductors
- Door locks
- Vanes and Shaft information

T11 Installation and aligning hydraulic equipment procedure encompassing:

- Ram/Cylinder
- Hydraulic Lines
- Bleeding Hydraulic system

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment

instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Align and install lift equipment as described in 8) and including:

Install at least two types of the following lift equipment as described below

A Lift well equipment.

- B Lift cars.
- C Machine room equipment.

Carry out at least two types of set out and alignment functions as listed below:

- A Lift well alignment.
- B Lift car alignment.
- C Machine room alignment.
- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in 'Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to aligning and installing lift equipment.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

Competency shall be demonstrated in relation to align and install at least two of the following:

- Lift well equipment
- Lift cars
- Machine room equipment
- Lift well alignment
- Lift car alignment
- Machine room alignment

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electrical

UEENEEG168A Diagnose and rectify faults in complex lift systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers diagnosing and rectifying faults in complex traction lift systems and equipment. It encompasses working safely; replacing and/or adjustment of solid state/electrical circuitry and components, diagnosing and repairing of complex faults in lift circuits and associated components (including governors, brakes, safety gear, safety devices, lift machines, door components and controllers).

Application of the Unit

Application of the Unit 2)

This unit applies to any formal recognition for this standard at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

License to practice 3)
training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities components
UEENEEE1 04A	Solve problems in d.c circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuit
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits

Prerequisite Unit(s) 4)

UEENEEG1 08A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEG1 16A	Diagnose and rectify faults in traction lift systems
UEENEEI12 4A	Fault find and repair analogue circuits and components in electronic control systems
UEENEEI13 9A	Diagnose and rectify faults in digital controls systems

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

Employability Skills Information**Employability Skills 5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to diagnose and rectify faults.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 The likely extend of work to be undertaken is envisaged from maintain procedures or fault/breakdown reports and/or discussions with appropriate person(s).</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Diagnose and rectify faults.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measured and devised and implemented in</p>

ELEMENT**PERFORMANCE CRITERIA**

- consultation with appropriate personnel.
- 2.5 Logical diagnostic methods are applied to diagnose lift system apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
- 2.6 Suspected fault scenarios are tested as being the cause(s) of system fault.
- 2.7 Cause of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of the lift systems.
- 2.8 Faults in the lift components of the system are rectified to raise apparatus and system to its operational standard.
- 2.9 System is tested to verify that the system operates as intended and to specified requirements
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.11 Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault diagnosis and rectification activities
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.
- 3.3 Rectification of faults is documented in accordance with established procedures.
- Note.
Examples of documentation are components

ELEMENT**PERFORMANCE CRITERIA**

fault reports, test results, authorisations, permits, parts/component dispatch and store records

- 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectification of faults in complex lift systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG168A electrical/electronic

Lift components and systems -

Evidence shall show an understanding of diagnosing and rectifying faults in complex lift systems to an extent indicated by the following aspects:

T1 Traction lifts encompassing:

- Lift control circuits (relay logic only): floor selector circuitry,
- Machine room control (selector) and well control (transducer) circuitry - direction slowing and stopping, re-levelling, door operator, acceleration, button, indicator/lantern, lights and emergency lights, travelling cables, key switch circuits, fans, main supply and power circuits

T2 Safety circuits encompassing:

- Type, operation and actuation
- landing door locks, car door locks, emergency stop, pit switch, car trap-door switch, fire service, car top switch, tappet switch, governor switch, and safety gear switch, reverse phase relay, phase failure relay and limit switches.

T3 Maintenance, replacement and adjustment encompassing:

- Electrical and electronic lift components - travelling cables, tachometers, selectors, encoders and transducers.
- Safety devices: overloads, circuit breakers, limit switches, terminal stopping, door protection, governors and safety gear/switches.

T4 Electrical layout/drawings and special requirements encompassing:

- Lift code and AS/NZS 3000 requirements
- specific lift symbols
- conduits
- trailing cable
- troughing
- colour coding and labelling
- segregation LV/ELV
- telephone and communication cabling
- regulatory requirements and door lock wiring.

T5 Safety drive adjustment encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Emergency stop button
- speed governor
- reverse phase protection
- broken chain/step switch
- broken main drive switch
- drive access switch
- start pressure switch and landing guards/barriers.

T6 Lift components – electronic encompassing:

- Encoders
- Transducers
- Electronic boards
- Selectors
- Rectifiers
- Capacitors
- Resistors
- Processor Board
- I/O board

T7 Drives - types, construction and operation encompassing:

- Traction
- Gearless types

Note:

Examples are: Speed/load characteristics, Efficiency, Application, Brakes, Electric prime mover (motor types and control)

- Geared types
- Speed/load characteristics, Efficiency, Application, Brakes, Electric prime mover (motor types and control)
- Other types of lifts (Drum, Rack and pinion, Chain, Screw)

T8 Fault finding encompassing:

- Visual inspection
- Performance checks and application of fault finding principles

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Diagnose and rectify faults in complex lift systems as described in 8) and including:

Release passengers from a lift, which has become immobilised as specified in the performance criteria and range statement

Diagnose and repair faults in lift circuits and associated components for at least three types of lift circuits/components as follows:

A Governors.

- B Brakes.
- C Safety gear.
- D Safety devices.
- E Lift machines.
- F Door components.
- G Controllers.

Replace and/or adjustment of lift equipment in at least three types of lift equipment as described below:

- A Electro-hydraulic lift.
- B Electric traction lift.
- C Passenger lift.
- D Goods lift.

And

A Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and
specific
resources for
assessment** 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and

replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in complex lift systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG11 Diagnose and rectify faults in traction lift systems
6A

Range Statement

RANGE STATEMENT

10) 8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

Competency shall be demonstrated in relation to diagnosing and rectifying faults in complex lift circuits and associated components for at least three (3) types of lift equipment as listed:

- Emergency light units
- D.C. power supplies
- Variable voltage controllers
- Variable speed hoist motor control
- Variable speed door motor control
- Electronic lift controls
- Lift remote monitoring equipment

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
Electrical

UEENEEG169A Manage large electrical projects

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the management of large electrical projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses management of safety, budget variation, personnel, resources, critical path timelines and completion documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish the scope of the project.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Project deliverables and budget are established from project planning and other relevant documentation and from discussions with appropriate person(s).
	1.3 Measurable outcomes are identified to evaluate the project on completion from project planning and other relevant documentation.
	1.4 Plant, materials and skills needed to meet project outcome are established from project planning and other relevant documentation.
	1.5 Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement.
2 Manage project.	2.1 OHS policies, procedures and programs are implemented and monitored.
	2.2 Achievement of project outcomes is delegated to appropriately competent persons involved in the project.
	2.3 Risk events are identified and project plan strategies implemented to ensure that outcomes are achieved to the required standard of quality specified in the contract and safety required by organization's policy.
	2.4 Procurement processes and procedures are monitored to ensure on time supply of plant and

ELEMENT	PERFORMANCE CRITERIA
	materials and in accordance with organisation's policy.
	2.5 Project progress is monitored against schedule, quality requirements and budget.
	2.6 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation's policy.
	2.7 Variations are managed in accordance with agreed processes and in accordance with the contract.
	2.8 Project records are maintained and progress reports written and forwarded to all appropriate person(s).
3 Complete project.	3.1 Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget.
	3.2 Project completion acceptance is sought from appropriate person(s) and hand-over documented in accordance with organisation's policy.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing large electrical projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG169A

Electrical project management

Evidence shall show an understanding of managing electrical projects to an extent indicated by the following aspects:

T1 Defining project parameters encompassing:

- Project scope
- Project stakeholders and clients
- Project phases and the relationship between phases
- Time requirements and limitations
- Resource requirements and limitations
- Quality requirements and limitations

T2 Time management concepts and standard practices

T3 Financial management encompassing:

- Financial management concepts
- Standard practices for managing project finances
- Project budgets
- Costs
- variations and estimations
- Invoicing against project phases/deliverables
- Acquittals and the like

T4 Quality management concepts and practices

T5 Human Resource management concepts and practices within a project

T6 Communication management concepts and practices within a project

T7 Risk management and contingencies encompassing:

- Risk management concepts
- Internal risks
- External risks
- Contingencies
- Standard practices for managing risk within a project
- Risk minimisation
- Risk removal; and the like

REQUIRED SKILLS AND KNOWLEDGE

T8 Procurement management concepts and practices

T9 Physical Resource management concepts and practices relating to equipment, technology, information and facilities

T10 Contracts encompassing:

- Contract format
- Contract content
- Interpreting contract clauses
- Legal obligations of contract parties
- Working to contract specifications
- Documentation accompanying contracts such as schedules and the like

T11 Performance assessment and continuous improvement

T12 Engineering ethics principles

T13 Customer/Client relations encompassing:

- Importance of customer/client relations
- Interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

T14 Electrical industry sector customs and practice encompassing:

- Equipment procurement, cost/benefit analysis and performance testing
- Typical approaches to planning and management
- Successful planning techniques
- Best practice management methods and styles

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Manage electrical projects as described in 8) and including:
 - A Establishing the scope of the project accurately.
 - B Ascertaining the input a project.
 - C Developing effective management processes.
 - D Managing resources and variations effectively.
 - E Resolving conflicts.

- F Adopting risk management strategies.
- G Maintaining records and submitting progress reports.
- H Meeting project outcomes.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to managing electrical projects.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to managing an industry accepted medium/large sized electrical project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
Electrical

UEENEEG170A Plan large electrical projects

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers development and documentation of large electrical project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to plan project.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established techniques for project planning are reviewed and adopted in accordance with organisation's policies.
	1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).
2 Develop project plan proposal.	2.1 Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation's policies and procedures.
	2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with organisation's policies and procedures.
	2.3 Knowledge of critical path analysis is applied to developing workflow strategies.
	2.4 Sources and availability of materials and human resources needed for the project are established in accordance with organisation's policies and procedures.
	2.5 Risk management strategies are sought and obtained for incorporating in the project plan.
	2.6 Project plan is reviewed against all inputs and adjusted to rectify any anomalies.

ELEMENT	PERFORMANCE CRITERIA
	2.7 Project plan proposal is documented in accordance with organisation's policies and procedures.
3 Obtain approval for project plan.	3.1 Project plan is presented and discussed with person(s) of higher authority.
	3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy.
	3.3 Final project plan is documented and approval obtained from appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning large electrical projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG170A

Electrical project planning

Evidence shall show an understanding of planning projects and analyzing progress to an extent indicated by the following aspects:

T1 Project planning encompassing:

T2 Purpose of project planning Evidence shall show an understanding of managing electrical projects to an extent indicated by the following aspects:

T3 Defining project parameters encompassing:

- Project scope
- Project stakeholders and clients
- Project phases and the relationship between phases
- Time requirements and limitations
- Resource requirements and limitations
- Quality requirements and limitations

T4 Time management concepts and standard practices

T5 Financial management encompassing:

- Financial management concepts
- Standard practices for managing project finances
- Project budgets
- Costs
- variations and estimations
- Invoicing against project phases/deliverables
- Acquittals and the like

T6 Quality management concepts and practices

T7 Human Resource management concepts and practices within a project

T8 Communication management concepts and practices within a project

T9 Risk management and contingencies encompassing:

- Risk management concepts
- Internal risks
- External risks

REQUIRED SKILLS AND KNOWLEDGE

- Contingencies
 - Standard practices for managing risk within a project
 - Risk minimisation
 - Risk removal; and the like
- T10 Procurement management concepts and practices
- T11 Physical Resource management concepts and practices relating to equipment, technology, information and facilities
- T12 Contracts encompassing:
- Contract format
 - Contract content
 - Interpreting contract clauses
 - Legal obligations of contract parties
 - Working to contract specifications
 - Documentation accompanying contracts such as schedules and the like
- T13 Performance assessment and continuous improvement
- T14 Engineering ethics principles
- T15 Customer/Client relations encompassing:
- Importance of customer/client relations
 - Interpersonal skills that enhance customer/client
 - Dispute resolution
 - Customer/client relations strategies
- T16 Electrical industry sector customs and practice encompassing:
- Equipment procurement, cost/benefit analysis and performance testing
 - Typical approaches to planning and management
 - Successful planning techniques
 - Best practice management methods and styles
 - Documents needed to plan a project
 - Factors influencing sequence and restraints of project activities
 - Critical path analysis covering graphical representation methods and methods of representing time/rates
- T17 Critical path and project analysis encompassing:
- Purpose of critical path analysis
 - Essential data
 - Relational sequence of work activities
 - Graphical representation methods
 - Methods of representing time/rates
 - Monitoring methods

REQUIRED SKILLS AND KNOWLEDGE

T18 Electrical industry sector customs and practice encompassing:

- Equipment procurement, cost/benefit analysis and performance testing
- Typical approaches to planning and management
- Successful planning techniques
- Best practice management methods and styles

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries

risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination

- legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Plan electrical projects as described in 8) and including:
 - A Determining the project requirements accurately.
 - B Establishing a project budget.
 - C Developing effective work flow strategies.
 - D Documenting project plan proposal.
 - E Negotiating alterations to the proposed project plan successfully.
 - F Obtaining approval of the final plan.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry

practices in relation to planning electrical projects.

**Method of
assessment** **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to managing an industry accepted medium/large sized electrical project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Competency Field

Competency Field 11)
 Electrical

UEENEEG171A Install, set up and commission interval metering

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the installation, set up and commission of interval metering for measurement of energy use by consumers under choice of supplier arrangement. It encompasses working safely and to installation and set up standards, evaluating the integrity of metering wiring and earthing systems, fixing metering, making power and communication connections, setting meter parameters and completing the necessary documentation.

Application of the Unit

Application of the Unit

4)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 3 level or higher.

- license to practice in the workplace subject to regulations for undertaking of electrical work.

Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work

Application of the Unit 4)

environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Licensing/Regulatory Information**1.2) License to practice**

The skills and knowledge described in this unit require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s) 2)****2.1) Competencies**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install, set up and commission interval metering.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented. (Note 1.)
	1.4 Switchboard on which the meter is to be installed is inspected and evaluated for compliance with safety and functionality standards. (Note 2)
	1.5 Approval to rectify safety and/or functionality defects of the switchboard is sought from person of higher authority in accordance with established procedures.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|---|--|
| | 1.6 | Installation of the meter and rectification work is prepared in consultation with other effected by the work and sequenced appropriately. (Note 3) |
| | 1.7 | Material needed for the work is obtained in accordance with established procedures and checked against job requirements. |
| | 1.8 | Tools, equipment and testing devices needed to for the work are obtained in accordance with established procedures and checked for correct operation and safety. |
| 2 | Install, set up and commission interval metering. | 2.1 OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
| | 2.3 | Existing metering is checked as being isolated in strict accordance OHS requirements and procedures. |
| | 2.4 | Approved rectification work is carried out to comply with standards and in accordance with established procedures. |
| | 2.5 | Metering is installed to comply with technical standards and job specifications and requirements. |
| | 2.6 | Metering power and communication connections are made in accordance with manufacture's specifications and functional and regulatory requirements. |
| | 2.7 | Meter operating parameters are set in accordance with manufacture's specifications and functional and regulatory requirements. |
| | 2.8 | Unexpected situations are dealt with safely and with the approval of an authorised person |
| | 2.9 | Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures. |
| | 2.10 | Metering installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles. |

ELEMENT	PERFORMANCE CRITERIA
3 Completion and report metering installation activities.	3.1 OHS work completion risk control measures and procedures are followed and supply is reinstated to the installation.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Final checks are made to that the installed metering conforms to requirements.
	3.4 'As-installed' metering and rectification work is documented and appropriate persons notified in accordance with established procedures.

Note.

1. Examples of hazards likely to be encountered are asbestos reinforced switchboard panels, deteriorating switchgear and cabling and location of the switchboard.
2. Safety and functionality standards include the clear identification of switchboard components and their function, sound electrical insulation of wiring and components, sound MEN and main earth connections, fire integrity and access.
3. Preparation includes arranging for the safe isolation of the installation, access to a telecommunications connection where two-way metering is to be installed and access to a transducer connection where gas metering is to be included.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing, setting up and commissioning of interval metering.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG171A

Interval metering

Evidence shall show an understanding of interval metering to an extent indicated by the following aspects:

- T1 Reasons for metering and the regulated market (Regulations)
- T2 Metering layouts and requirements
 - purpose, types and applications.
 - metering equipment.

REQUIRED SKILLS AND KNOWLEDGE

- varying arrangements for metering and meter layouts

T3 Interval metering concepts and installation

- Meter types
- Meter construction – block diagram
- Meter functions
- Importing and exporting energy
- Classes of meters
- Single and polyphase meters
- Purpose, types and applications.
- Installation and power connection arrangements.
- Communication methods and arrangements.
- Connections for gas metering.
- Procedures for setting meter parameters.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most

EVIDENCE GUIDE

effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit . It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and set up interval metering as described in 8) and including:
 - A Inspecting and evaluating safety and functionality compliance of the switchboard accurately.
 - B Following established procedures to obtain approval to rectify non-compliance aspects of the switchboard.
 - C Carrying out preparation work effectively.
 - D Rectifying compliance defects.
 - E Placing and securing metering correctly.
 - F Making power and communications connections in accordance with manufacture's specifications and functional and regulatory requirements.
 - G Setting meter parameters in accordance with manufacture's specifications and functional and regulatory requirements.
 - H Reinstating supply to the installation safely.
 - I Documenting metering and rectification work and notifying appropriate persons in accordance with established procedures.
 - J Dealing with unplanned events by drawing on essential

EVIDENCE GUIDE

knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in 'Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing and setting up interval metering.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to the installation of at least:

- a single phase interval meter
- a two-way interval meter
- an interval meter where compliance rectification work is required

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

Competency Field 5)

Electrical

UEENEEG172A Investigate and report on electrical incidents and causes

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers investigating and reporting the possible electrical cause of incidents resulting electric shock, injury, fatality or property damage. It encompasses working safely, gathering information from an incident site and from witnesses, conducting site tests, gathering and arranging for analysis of forensic evidence, documenting findings and presenting evidence in court.

Application of the Unit

Application of the Unit **2)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

License to practice**3)**

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities components

UEENEEE1 04A Solve problems in d.c circuits

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE1 37A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG0 Solve problems in single and three phase

Prerequisite Unit(s)	4)	
	06A	low voltage machines
	UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
	UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
	UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
	UEENEEG1 02A	Solve problems in low voltage a.c. circuit
	UEENEEG1 03A	Install low voltage wiring and accessories
	UEENEEG1 04A	Install appliances, switchgear and associated accessories for low voltage electrical installations
	UEENEEG1 05A	Verify compliance and functionality of low voltage general electrical installations
	UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
	UEENEEG1 07A	Select wiring systems and cables for low voltage general electrical installations
	UEENEEG1 08A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
	UEENEEG1 09A	Develop and connect electrical control circuits
	UEENEEG1 22A	Conduct compliance inspection of single phase LV electrical installations
	UEENEEG1 23A	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----------------------------------|--|
| 1 Prepare to investigate incident | 1.1 OHS procedures for a given work area are identified, obtained and understood. |
| | 1.2 Established OHS risk control measures and procedures in preparation for the work are |

ELEMENT**PERFORMANCE CRITERIA**

		followed.
	1.3	Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate person(s).
	1.4	Notification of the incident is reviewed in consultation with appropriate person(s) to establish the nature and extent of the investigation.
	1.5	Appropriate person(s) are consulted to ensure the investigation is coordinated effectively with others involved on the work site.
	1.6	Tools, equipment and testing devices needed for the investigation are obtained in accordance with established procedures and checked for correct operation and safety.
2	Investigate incident	
	2.1	OHS risk control measures and procedures for carrying out the investigation are followed.
	2.2	The need to test or measure live is determined in strict accordance with OHS and electrical safety legislative requirements and when necessary conducted within established safety procedures.
	2.3	Co-operation of others involved in the investigation is sought and obtained.
	2.4	Recreation of incident situation is only undertaken in strict accordance with OHS requirements and when necessary conducted within established electrical safety legislative requirements and enterprise procedures.
	2.5	Witnesses to the incident are interviewed in accordance with established procedures and protocols to determine the circumstances of the incident and those leading up to it.
	2.6	Physical evidence of the possible causes of the incident is obtained through inspection and testing are and documented in accordance with established procedures.

ELEMENT	PERFORMANCE CRITERIA
2.7	Forensic evidence gather at the site is handled to avoid contamination or damage and where necessary forwarded to appropriate persons for analysis.
2.8	<p>Witness statements and evidence gathered at the site is documented in accordance with established procedures and include:</p> <p>Procedures and results of tests undertaken on site;</p> <p>Forensic evidence removed from site and for analysis;</p> <p>Aspects of the electrical installation that do not comply with safety standards and requirements.</p>
2.9	Actions are taken to prevent any unsafe electrical hazards found on the site from posing a risk of any further injury or damage.
3 Report investigation findings	<p>3.1 Reports of forensic evidence analysis are obtained and reviewed for inclusion the final investigation report.</p> <p>3.2 Cause or causes of the incident are extrapolated from the evidence using acceptable deductive methods.</p> <p>3.3 Investigation procedures, finding, conclusions and recommendation are documented in accordance with established procedures.</p> <p>3.3 Investigation report is forwarded to appropriate person(s) in accordance with established procedures.</p> <p>3.5 Where required, evidence as documented in the Investigation Report is given in court honestly and without bias following court procedures and protocols.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and investigating and reporting on electrical incidents.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG172A

Electrical incidents

Evidence shall show an understanding of conditions that can give rise to an incident and the causes of those conditions and reporting on/giving evidence in respect to the outcomes of investigations into electrical incidents to an extent indicated by the following aspects:

T1 Procedures and protocols for giving evidence in court encompassing:

- Process for responding to a witness summons
- Requirements for preparing to appear in court to give evidence
- Court procedures and protocols for giving evidence

T2 Procedures and processes for responding to reported electrical incidents encompassing:

- Reporting requirements of the electricity legislation for electrical accidents on customer's premises.
- Responsible for investigating electrical accidents on customer's premises.
- Reporting procedures of electrical accidents on consumer's premises and distributor's assets.
- Actions to be taken when an electrical incident causes loss of life, personal injury or property damage.
- Initial task of an investigator of an electrical incident
- Extent of evidence needed to be gathered from the site of an electrical incident

T3 Conditions and actions that could result in death, injury of property damage from an electrical cause encompassing:

- Non-compliance defects of an electrical installation
- Connection or use of unsuitable (not approved) electrical equipment and appliances.
- Failure to follow safe working procedures.
- Deliberate misuse.
- Unacceptable rise in potential of exposed and extraneous conductive parts

T4 Causes of rise in potential of exposed and extraneous conductive parts encompassing:

- High impedance in the main or service neutral conductor of an MEN system.

REQUIRED SKILLS AND KNOWLEDGE

- Earth faults.
- High impedance in the protective earthing under fault conditions.
- Ineffective equipotential bonding under fault conditions.
- Ineffective protective device under fault conditions

T5 Effects and consequences of current through the human body

T6 Electrical sources of fire in building and premises

T7 Advance electrical testing and measuring devices encompassing:

- Test/measuring devices and their application
- Safe connection of test/measuring devices into a circuit
- Taking readings
- Storage, maintenance and care of test/measuring devices

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be

required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

Investigate and report on electrical incidents as described in 8) and including:

- A Establish the nature and extent of the investigation by reviewing initial notification of the incident
- B Accurate electrical and non-electrical incident evidence obtained in accordance with procedures
- C Interviewing and taking witness statements appropriately
- D Gathering relevant physical evidence and treating it appropriately
- E Documenting evidence gathered at the site including:
 - Procedures and results of tests undertaken;
 - Forensic evidence removed for analysis;
 - Aspects of the electrical installation that do not comply with safety standards and requirements
- F Taking appropriate actions to prevent any unsafe electrical hazards found on the site from posing a risk of any further injury or damage
- G Using deductive methods to determine the cause or causes of the incident
- H Documenting investigation procedures, findings, conclusions appropriately
- I Preparing and giving evidence in a court of law honestly and without bias
- J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic

assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEEE12 Compile and produce an energy sector detailed
4A report

The critical aspects of occupational health and safety covered in unit UEENEEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by investigating and reporting of at least two of the following incidents involving:

- Reported electric shock.
- Injury from a reported electrical source.
- Fatality from a reported electrical source.
- Property damage from a reported electrical source.

The incidents may occur in domestic premises, non-domestic premises or construction sites.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills

5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to develop plans and compliance policies.	1.1	Factors influencing the performance of a contracting business are investigated and evaluated.
	1.2	Information and advice is sought on the effects of legislated requirements on the operation of a contracting business.
	1.3	Formal processes to meet compliance, managerial, occupational and workplace relations' obligation in a contracting business are clearly identified.
	1.4	Focus of the business is established from investigation of market opportunities and financial climate in which it is to operate
2 Develop plans and compliance policies.	2.1	Policies are established to ensure occupational aspects of work undertaken by the business met all legislated requirements and standards.
	2.2	Policies are established to ensure compliance aspects of work undertaken by the business met all legislated requirements and standards.
	2.3	Policies are established to ensure managerial and workplace relations aspects of work undertaken by the business met all legislated requirements and standards.
	2.4	Procedures and processes are developed to give effect to the established business policies including maintenance of currency in changes,

ELEMENT

PERFORMANCE CRITERIA

developments and requirements.

- 2.5 Methods are incorporated in the business procedures to maintain currency with occupational, compliance, managerial and workplace relations developments.
- 2.6 Policies, plans and procedures are reviewed in consultation with appropriately competent person(s) and changes made where agreed as necessary.
- 2.7 Plans, policies and procedures are documented in accordance sound management practice.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing plans and compliance policies to conduct a contracting business.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG175A

Electrical contracting plans and compliance policies

Evidence shall show an understanding of developing compliance policies and plans for a contracting business to an extent indicated by the following aspects:

T1 Enterprise regulatory requirements and non regulatory standards

- Compliance regulations for businesses
- Methods of meeting compliance
- Non-regulatory standards and their effects on business

T2 Electricity distributors, supply requirements

- General requirements for the supply of electricity.
- Supply and metering requirements.
- Acceptable arrangement of switchgear and controlgear.
- Acceptable earthing methods and arrangements

T3 Electricity regulatory safety requirements

- Regulatory requirements for ensuring the safety and integrity of electrical installations.
 - Regulatory requirements are relative to the jurisdiction for which competency is sought
- Types and scope of electrical inspections and safety audits
- Authority of electrical inspectors

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement

 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop plans and compliance policies to conduct a contracting business as described as described in 8) and including:
 - A Evaluating factors influencing the performance of a contracting business accurately.
 - B Identifying the formal processes for meeting legislated obligations.
 - C Establishing an appropriate focus for the business.

- D Establishing policies to ensure all legislated requirements and standards are met.
- E Developing procedures and processes to give effect to established policies.
- F Giving written justification of solutions provided.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing plans and compliance policies to conduct a contracting business.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary

equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the selection (sizing) of power factor correction equipment for commercial and/or industrial installations using appropriate equipment based on the load profile of the selected installation. The correction equipment is limited to the capacitive type including control devices/systems including contactors or solid state types. It encompasses safe working practices, corrective equipment for multiphase circuit arrangements and issues related to protection, including circuit problems derived from harmonic generation and resonance problems within the installation.

Application of the Unit

Application of the Unit 2)

2.1) General Application

This unit applies to competency development entry-level employment based programs incorporated in approved contracts of training.

2.2) Importation

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

Licensing/Regulatory Information

License to practice 3)

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of electrotechnology components

UEENEEE1 Solve problems in d.c circuits

Prerequisite Unit(s)	4)
	04A
	UEENEEE1 05A
	Fix and secure electrotechnology equipment
	UEENEEE1 07A
	Use drawings, diagrams, schedules, standards, codes and specifications
	UEENEEG0 06A
	Solve problems in single and three phase low voltage machines
	UEENEEG0 33A
	Solve problems in single and three phase electrical apparatus and circuits
	UEENEEG0 63A
	Arrange circuits, control and protection for general electrical installations
	UEENEEG1 01A
	Solve problems in electromagnetic devices and related circuits
	UEENEEG1 02A
	Solve problems in low voltage a.c. circuit
	UEENEEG1 03A
	Install wiring and accessories for low voltage circuits
	UEENEEG1 04A
	Install appliances, switchgear and associated accessories for low voltage electrical installations
	UEENEEG1 05A
	Verify compliance and functionality of low voltage general electrical installations
	UEENEEG1 06A
	Terminate cables, cords and accessories for low voltage circuits
	UEENEEG1 07A
	Select wiring systems and cables for general electrical installations
	UEENEEG1 08A
	Trouble-shoot and repair faults in electrical apparatus and circuits
	UEENEEG1 09A
	Develop and connect electrical control circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to select power factor correction equipment	1.1 The extent and nature of the electrical installation is determined from job specifications. 1.2 Safety and other regulatory requirements to which the electrical installation shall comply are identified, obtained and understood.

ELEMENT	PERFORMANCE CRITERIA
	1.3 Cable routes, the route lengths of cables and the conditions in which the wiring system is to operate is determined from job specifications or from consultation with appropriate persons.
2 Select power factor correction equipment	2.1 Wiring systems are selected for suitability for the environments in which they are to operate.
	2.2 Cable conductor sizes are selected to meet current-carrying capacity requirements and voltage-drop and earth fault-loop impedance limitations.
	2.3 Circuit protective devices are selected to meet requirement for co-ordination with conductor current-carrying capacity.
	2.4 Earthing system components are selected to meet requirements of an MEN system.
	2.5 Evidence is obtained that electrical equipment selected complies with safety requirements.
3 Document power factor correction equipment installation details.	3.1 Evidence is obtained from manufacturers/suppliers that electrical equipment selected complies with safety requirements.
	3.2 Reasons for selections made, including calculations, are documented in accordance with established procedures.
	3.3 Electrical installation arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of selecting power factor correction equipment for commercial/industrial electrical installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG177A selection

Power factor correction — equipment

Evidence shall show an understanding of power factor correction and equipment selection to an extent indicated by the following aspects:

T1 Definitions, concept of power factor and reasons for improving power factor.

T2 Situations leading to reduction of power factor.

T3 Consequences of poor power factor encompassing:

- demand tariff costs
- non-compliance with NSP and system energy loss

T4 Design considerations encompassing:

- special conditions existing and the suitability for PFC such as existence of distortion due to electronic loads, UPS systems, power generation facilities or complex electronic loads
- load profile and the nature of the load in all operating modes and with all possible sources of supply using three phase power recorders
- power supply quality issues in terms of voltage and frequency stability
- calculation of corrective VARs
- circuit protection issues and safety
- nominal location, arrangement
- types of capacitors to be used
- use of synchronous motor for large installations
- possibility of resonance
- discharge measures
- types of PFC controls
- LV PFC; HV PFC; solid state switched

T5 Compliance with Australian Standards encompassing:

- AS1013-1971 Shunt capacitors for connection to power frequency systems
- AS/NZS 3000 Wiring Rules
- AS/NZS 3947 low voltage switchgear and Control gear

T6 Testing and commissioning of power factor equipment including controls.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment

instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Selecting power factor correction equipment for electrical installations as described as in 8) and including:
 - A Determining the extent and nature of the installation from job specifications
 - B Obtaining and understand the safety and other regulatory

requirements to which the electrical installation shall comply

C Determining power factor correction equipment using graphical or mathematical methods.

D Selecting wiring system suitable for the environment requirements.

E Selecting cable conductors sizes in consideration to current-carrying capacity and voltage-drop / earth fault-loop limitation.

F Ensuring co-ordination between circuit protective device and conductor current-carrying capacity.

G Selecting compliant earthing system components

H Documenting equipment and systems requirements to be used, specification for items selected and reasons for the selections made.

I Dealing with unplanned events

**Context of and
specific
resources for
assessment** 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Competencies 4.1)

UEENEEED1 04A	Use software for engineering applications
UEENEEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEEE1 02A	Fabricate, dismantle, assemble of utilities industry components
UEENEEEE1 04A	Solve problems in d.c. circuits
UEENEEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEEE1 90A	Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications
UEENEEEE1 91A	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software
UEENEEEE1 92A	Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and

Numeracy⁷

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop detailed electrical drawings	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed
	1.3 The need for detailed electrical drawings is determined from the nature of the work to be undertaken.
	1.4 Established routines and procedures are followed to obtain electrical drawings details required for the work to be undertaken from project specifications.
	1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site

ELEMENT	PERFORMANCE CRITERIA
	1.6 Software tools and equipment a needed for the work are obtained in accordance with established procedures
2 Develop detailed electrical drawings	2.1 OHS risk control measures and procedures for carrying out the work are followed
	2.2 The types of design detailed electrical drawings and layouts required are determined from project specifications
	2.3 Technical data of electrical system components is interpreted to determine parameters that are to be included in the detailed electrical drawings
	2.4 Appropriate software tools are used to produce detailed electrical drawings based on standard protocols
	2.5 Detailed electrical drawings are checked for accuracy are compliance with project specifications
	2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
3 Complete develop detailed electrical drawings documentation	3.1 Completed detailed electrical drawings are submitted to an appropriate person to be checked for accuracy and compliance with project specifications.
	3.2 Any alterations, additions or correction instructions are followed and detailed electrical drawings are re-submitted for final approval
	3.3 Copies of completed detailed electrical drawings are filed securely in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and develop detailed electrical drawings.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG179A

Electrical Detailed Drawings

Evidence shall show an understanding of electrical detailed drawings to an extent indicated by the following aspects:

T1 (Is the number correct?) Producing final drafts for verification encompassing:

- principles, purpose and concept of verification of drafting products encompassing: production of electrical drawings for verification by authorised persons, production of drawing sets, production of related documentation, presentations of final drafts
- processes and procedures related to the verification of final drafts by authorised persons encompassing: accuracy
- publication of verified electrical drawings

T2 Detailed electrical drawing production covering encompassing:

- distribution branch circuits and boards, services and load calculations; encompassing panels(HV/LV)/switch boards/motor control centres/final
- conductor/cable selection and calculations encompassing: electrical, data, communications
- overcurrent and overvoltage protection
- cable support systems; encompassing cable trays, trunking, conduits, ducts, guards, saddles, carriers, raceways/cavities, poles
- box and fitting fill requirements
- wiring devices and terminations
- distribution equipment; encompassing power circuit devices
- distribution system transformers; encompassing specialty transformers, power circuit devices
- lighting applications; encompassing lamps, ballasts, and components
- motors; encompassing functional controls, advanced motor controls, motor calculations, motor maintenance arrangements
- hazardous areas encompassing: electrical equipment; classification of
- emergency standby systems; encompassing UPS/inverter and battery banks
- fire alarm systems
- high-voltage terminations/splices
- cable size selection for installation cable run

REQUIRED SKILLS AND KNOWLEDGE

- cable sizes, voltage drops, conduit sizes, fault levels, fuse/circuit breaker (CB) sizes and working temperatures
- short circuit calculations
- earth loop impedance compliance test arrangements on the completed design
- touch potentials calculations
- cable schedules creation
- “single line” and “as built” drawings; encompassing three phase schematic colour diagrams, marked up cable calculations, short circuit results, earth loop impedance results
- quantities parts list and drawings for tender drawings issued by electrical consultants/engineers
- coordination and discrimination studies
- Building Management Systems (BMS) encompassing: building information modelling and sustainable design
- fuse and CB trip curves plots and displays
- troubleshooting/fault finding

T3 Schematic component commands detailed encompassing:

- schematic symbols editor
- schematic editor
- components from lists
- connectors
- terminals; encompassing multiple level and jumpers
- circuits
- multiple phase circuits

T4 Schematic editing encompassing:

- advanced utilities
- copy catalogue and location
- values
- swapping and updating blocks
- using the auditing tools
- update and retag drawings

T5 Detailed panel layouts encompassing:

- detailed panel layouts creation
- din rail tool
- terminal strip editor
- detailed panel layout annotation
- detailed reports

T6 Digitising and scanning encompassing:

- drawings digitisation; encompassing tablet and software configuration, tablet and

REQUIRED SKILLS AND KNOWLEDGE

- puck, grids setup and alignment marks for various size drawings, software parameters setting, hard copy drawings digitisation to tablet parameters
- digitised drawing editor, manipulation and save
 - digitise and grid setups and alignment marks on a hard copy of a large drawing (e.g. A1)
 - scanning devices and peripherals setup encompassing associated software usage, save (e.g. file formats for use other software applications) and management
 - drawing hard copy scan
 - scanned image conversion to vector format, edit and save in file formats for use in CAD; encompassing importation of scanned images into CAD drawings in image formats for editing

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place,

access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or

licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Produce detailed electrical drawings as described in 8) Range and including:
 - A Producing a variety of detailed electrical drawings
 - B Producing drawing sets
 - C Producing drafting documentation
 - D Interpreting and using technical data and specifications
 - E Selecting components and materials
 - F Using advanced computer-aided systems and commands
 - G Using relevant drafting peripheral systems, equipment and tools to develop detailed drawings
 - H Digitising and scanning drafting/drawings products
 - I Applying knowledge of electrical equipment design drawing methods, techniques, procedures and protocols and documenting design
 - J Applying knowledge related to storing and retrieving data, and producing related documentation for presentations
 - K Presenting preliminary and final drafts for verification

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to producing detailed electrical drawings

Method of assessment**9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units**9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with units covering the use of detailed electrical drawings

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing detailed electrical drawings:

- Covers detailed electrical drafting encompassing: circuit and wiring diagrams/schedules, block diagrams, schematics, panel/board layouts, assembly and installation drawings, modification drawings, and conversion between drawing types
- Australian/New Zealand standards and enterprise standards related to electrical drafting
- Components and materials from supplier/manufacturers' catalogues
- Detailed electrical drawings
- Drawing sets
- Drafting documentation
- Computer aided design systems, commands, drafting peripheral systems, equipment and tools
- Electrical equipment design drawing methods, techniques, procedures and protocols and documenting design
- Digitise and scan of drafting/drawing products
- Drafting data
- Storage and retrieval of drafting data
- Productions of related documentation for presentations
- Presentations
- Final drafts for verification

Organisational procedures for preparation and production of drawings, drawing sets, specifications, drafting documentation and operating and maintenance instructions/manuals for products and systems

Organisational procedures for processing, filing and saving all graphics, specifications, instructions and related documentation in correct format and location in accordance with work site procedures

Organisational procedures for collaborating with the client, key stakeholders and other staff in the selection of the preferred option

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

Develop detailed and complex drawings for electrical systems using computer aided design (CAD) systems to meet design specification. It includes 2D and 3D drawing formats covering a representative range of electrical systems such as installations with alternative supplies, installations over 400 A per phase at low voltage and/or high voltage, single or multi tenancies, heavy plant, switchgear, protection systems, earthing, power factor correction, control equipment, and energy monitoring and management.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where

License to practice

3)

applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

UEENEEED1 04A Use software for engineering applications

UEENEEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEEE1 02A Fabricate, dismantle, assemble of utilities industry components

UEENEEEE1 04A Solve problems in d.c. circuits

UEENEEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEEG1 79A Develop detailed electrical drawings

UEENEEEE1 90A Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications

UEENEEEE1 91A Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software

UEENEEEE1 92A Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software.

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills

indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop detailed and complex drawings for electrical systems	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed
	1.3 The need for detailed and complex electrical drawings is determined from the nature of the work to be undertaken.
	1.4 Established routines and procedures are followed to obtain electrical drawings details required for the work to be undertaken from project specifications.

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|---|---|--|
| | 1.5 | Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site | |
| | 1.6 | Software tools and equipment a needed for the work are obtained in accordance with established procedures | |
| 2 | Develop detailed and complex drawings for electrical systems. | 2.1 | OHS risk control measures and procedures for carrying out the work are followed |
| | | 2.2 | The types of design detailed complex electrical drawings and layouts required are determined from project specifications for the electrical systems. |
| | | 2.3 | Technical data of electrical system components is interpreted to determine parameters that are to be included in the detailed electrical drawings |
| | | 2.4 | Appropriate software tools are used to produce detailed electrical drawings based on standard protocols |
| | | 2.5 | Detailed complex electrical drawings are checked for accuracy are compliance with project specifications |
| | | 2.6 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes. |
| 3 | Complete detailed and complex drawings for electrical systems | 3.1 | Completed detailed complex electrical drawings are submitted to an appropriate person to be checked for accuracy and compliance with project specifications. |
| | | 3.2 | Any alterations, additions or correction instructions are followed and detailed complex electrical drawings are re-submitted for final approval |
| | | 3.3 | Copies of completed detailed complex electrical drawings are filed securely in accordance with established procedures |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and development of detailed and complex drawings for electrical systems

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG180A

Electrical Detailed/Complex Drawings

Evidence shall show an understanding of electrical detailed/complex drawings to an extent indicated by the following aspects:

T1 Advanced computer-aided drawing design (CAD) systems encompassing:

- principles, terms, symbols and conventions usage in deploying advanced commands using computer-aided drawing design, and application of related skills
- internet and/or network within CAD (e.g. team projects) usage
- 3-D assemblies creation
- solid model creation and editing
- usage of various software programs to produce a drafting product
- models demonstration an interpretation
- usage of geometry in parametric programs
- 2-D geometry form 3-D models creation
- surface and mass properties (e.g. area and perimeter) extraction
- importation and exportation of various file formats (e.g. BXF,IGES, and rost)
- customization to improve productivity
- multiple three dimensional views – encompassing setup environment on screen; top view; front and side views; three dimensional views
- movement through space – encompassing created views drawing; various planes; coordinate system relocation
- views creation – encompassing three dimensional geometric shapes; three dimensional complex views by manipulation of drawing planes and location of geometric shapes
- editor modification functions – encompassing facilitating modifications of geometric shapes to complete three dimensional complex views
- three dimensional view display – encompassing wire line; solid face – isometric, perspective, orthographic
- views storage – encompassing variety of views in assembly drawing files for plotting

T2 Computer based modelling and application systems encompassing:

- different types of 3 dimensional computer aided modelling techniques encompassing concepts, systems types, applications complexities and currency, enhanced features, and functionality; 3 dimensional wire frame modellers; surface

REQUIRED SKILLS AND KNOWLEDGE

modellers; solids modellers; parametric modellers; feature based modellers

- software applications used in engineering design (e.g. Finite Element Analysis[FEA]), kinematics; manufacturing (e.g. numerical controlled machining, robotics, rheology); marketing (e.g. visualisation, animation); product design (e.g. visualisation, rapid prototyping); simulation (e.g. kinematics, production systems simulators); productivity enhancement tools, applications integration and commands (e.g. hot keys, macros, programming)

T3 Computer based modelling, design and drafting systems encompassing:

- 3 dimensional models creation - encompassing aspects of modelling such as model origin; direction of axes; scaling; construction methods; planning use of layers; planning detailing preparation; planning model visualisation; productivity enhancing tools; programming, macros, hot keys, advanced commands
- 3 dimensional assembly models creation – encompassing features such as item origins; direction of axes; planning standards use; library parts and user defined internal library parts; scaling; planning detailed views – sections; planning assembly visualisation
- detailed 3 dimensional models to Australian/New Zealand standards (dimensioned and annotated) drawings production and plotting from
- detailed 3 dimensional models to Australian/New Zealand standards assembly drawings production and plotting – including sectional views
- created data storage and retrieval from off-line storage media

T4 CAD modelling techniques encompassing:

- principles, terms, symbols and conventions usage in modelling encompassing: region modelling; solids modelling; wire frame as opposed to solids
- modelling types and usage
- region modelling techniques encompassing: region primitive; regions editor
- solid modelling techniques encompassing: solid primitives; solid primitives editor; region models to solid models conversions
- composite models production encompassing: composite regions; composite solids
- sectioned models production encompassing: cutting plane; cross hatching
- pre-drawn library files and primitives to produce 3D models
- third level software to produce 3D models
- mass and area properties extraction encompassing: area properties from region models
- 3D model rendering techniques encompassing: rendering types and preferences; rendering techniques such as lights, views, scenes
- various materials and surface finish options
- 3D models hard copy production
- 3D models storage in various file formats for retrieval into CAD drawings or other application software
- principles, terms, symbols and conventions usage in modelling techniques encompassing: 3 dimensional wire frame modellers; surface modellers; solids

REQUIRED SKILLS AND KNOWLEDGE

modellers; parametric modellers; feature based modellers

- types and usage of modelling techniques
- applications software encompassing: engineering design, e.g. Finite Element Analysis (FEA), kinematics manufacturing, e.g. numerical controlled; machining, robotics, rheology; marketing, e.g. visualisation, animation product design, e.g. visualisation, rapid prototyping; simulation, e.g. kinematics, production, systems simulators

T5 Graphical engineering design techniques for products, processes, systems or services representation encompassing:

- principles, concepts and conventions of graphical design techniques for representing products, processes, systems or services
- functional operation of components/assemblies to be drawn
- surface contact or separation encompassing: type of fit; performance/operation on finish
- datum points and tolerances
- design functional specifications
- components, materials, methods and processes encompassing: range of options; choice; satisfying design specification
- graphical methods of representation encompassing: options
- graphical representation procedures for the preparation of production drawings, specifications and operating and maintenance instructions/manuals
- design impact and feedback encompassing: clients; stakeholders

T6 Managing resources - CAD encompassing:

- production related processes – encompassing costing of estimates, budget planning, labour - cost of time, subsequent cost for a given project; material cost for a given project; staff/skills selection; quality control methods
- Human Resource Management (HRM) – encompassing; HRM definition and aims, changing social environments; changing legal environments - Occupational Health and Safety (OHS); influence of changing technology - nature of work, quality of work; principles and concepts - motivational theories, human relations approach to productivity improvements, work design, industrial relations
- decision making activities – encompassing setting objectives; organising resources; achieving predetermined goals; evaluating results; the organising process - fragmentation of work processes, coordination of work processes; controlling - relationship with other management functions; resolution of problems; approaches and aids to decision making; functional solution methods – brainstorming, lateral thinking, synectics (creative thinking), group participant techniques
- decisions evaluation

T7 Managing CAD Systems encompassing:

- configuring computer systems - encompassing types of CPU and operating systems; peripheral input and output devices; importing/exporting drawing files;

REQUIRED SKILLS AND KNOWLEDGE

communication protocol standards – hardware, software, installing with a CAD package; backup storage devices; cabling and communication for specific hardware

- management of CAD system variables and layers
- Local Area Networks (LAN) – encompassing LAN concepts and functions; hardware and software requirements; CAD for networks configuration; layout planning; software storage requirements; network to user configuration; applications operations - input and output devices; file management; security operations
- operations, coordination and control – encompassing storage devices; plotting mediums; plotter and consumables
- techniques for efficient system management – encompassing drawing project file management procedures, drawings files maintenance and recording; adoption of drawing standards; procedures for achieving and backing up; internal security system establishment

T8 Managing CAD utilities encompassing:

- text editing software – encompassing commands; menus; keystrokes; special software function keys; read; modification of help; modification of assistance screens
- procedures for creation of complex CAD menus – encompassing screen and digitising tablet menus; compile files to operate screen and tablet menus
- macro and icon files– encompassing techniques for creation; techniques for customisation
- file transfer procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that

can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated

within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop detailed and complex drawings for electrical systems as described in 8) Range and including:

A Developing a variety of detailed and complex electrical drawings

B Producing drawing sets

C Producing drafting documentation

D Interpreting and using technical data and specifications

E Selecting components and materials

F Developing 2D and 3D computer based models using computer based modelling, design and drafting systems

G Applying graphical techniques to produce products, processes, systems or services designs representations

H Presenting designs of electrical engineering products, processes, systems or services

I Incorporating feedback into final products

J Verifying and presenting final drafts

K Managing, processing, storing and retrieving drafting data

L Using advanced computer-aided systems and commands

M Using relevant drafting peripheral systems, equipment and tools encompassing digitising and scanning equipment to develop detailed and complex drawings

- N Managing CAD systems and utilities
- O Applying knowledge of complex electrical equipment design drawing methods, techniques, procedures and protocols and documenting design
- P Applying knowledge related to resource requirements in CAD for electrical engineering briefs and/or specifications
- Q Applying knowledge related to storing and retrieving data, and producing related documentation for presentations

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing detailed and complex drawings for electrical systems

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended

for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with units covering the development of detailed and complex drawings for electrical systems.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to development of detailed and complex drawings for electrical systems

- Covers detailed and complex drawings for electrical systems encompassing 2D and 3D drawing formats and products covering a representative range of electrical systems such as installations with alternative supplies, installations over 400 A per phase at low voltage and/or high voltage, single or multi tenancies, heavy plant, switchgear, protection systems, earthing, power factor correction, control equipment, and energy monitoring and management.
- Australian/New Zealand standards and enterprise standards related to electrical drafting
- Components and materials from supplier/manufacturers' catalogues
- Detailed and complex electrical drawings
- Drawing sets
- Drafting documentation
- Dimensions, limits and fits, tolerances and surface textures, datum references and geometry tolerances
- Electrical specifications, layouts, sketches or verbal instructions in conformance with Australian Standards, enterprise standards and/or design brief
- Master sketches methods, techniques, procedures and devices encompassing freehand sketching
- Type, form and size of materials from information, abbreviations and symbols supplied on electrical engineering drawings, briefs and/or specifications
- Specifications may be obtained from design information, customer requirements, sketches, preliminary layouts and/or field investigations
- Feedback procedures for incorporating client feedback from implementation, installation to commissioning stages into final product and selection of preferred option
- Materials and equipment used in electrical engineering applications by selecting the correct type, form and size of materials and equipment from information, abbreviations and symbols supplied on detailed electrical engineering drawings, briefs and/or specifications
- Resources required in CAD for electrical engineering briefs and/or specifications
- CAD modelling systems and techniques

RANGE STATEMENT

- Graphical engineering design techniques for products, processes, systems or services representation
- Production processes and procedures for presentations of related design documentation, products, processes, systems or services
- Organisational procedures for preparation and production of drawings, drawing sets, specifications, drafting documentation and operating and maintenance instructions/manuals for products and systems
- Organisational procedures for processing, filing and saving all graphics, specifications, instructions and related documentation in correct format and location in accordance with work site procedures
- Organisational procedures for collaborating with the client, stakeholders and other staff in the selection of the preferred option
- Verification and production of final drafts processes and procedures
- Computer aided design systems, management, resources, utilities, advanced commands, drafting peripheral systems, equipment and tools encompassing digitising and scanning equipment
- Integrated and complex electrical equipment design drawing methods, techniques, procedures and protocols and documenting design
- Drafting data
- Management, storage and retrieval of drafting data.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Not applicable.

Competency Field

Competency Field 11)
 Electrical

UEENEEG181A Provide advice on effective and energy efficient lighting products

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers advising customers of effective and energy efficient lighting products within the scope of manufacturers' product data. It encompasses a basic knowledge of lighting principles, light source types and typical applications and interpreting manufacturers' technical data and documenting advice given.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies need to effectively respond to inquiries in the retail and wholesale lighting sectors

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to provide advice on lighting products	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Appropriate questioning and active listening are used, drawing on basic knowledge of lighting to determine the nature of the enquiry.
	1.3 Lighting documentations/files that will assist in providing the necessary advice are reviewed and understood
2 Provide advice on lighting products	2.1 OHS risk control work measures and procedures are followed.
	2.2 Basic knowledge of lighting and manufacturers' data is applied to provide the necessary advice.
	2.3 Higher technical or costing inquiries are referred to an appropriate person of higher authority.
	2.4 Inquiries and how they were responded to are documented in accordance with routine procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that a basic knowledge has been acquired of lighting, light sources and luminaries.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EG181A

Illumination and lighting principles

Evidence shall show an understanding of illumination and lighting principles to an extent indicated by the following aspects:

T1 Technology of light encompassing:

- Electromagnetic spectrum and visible (frequency/wave length) range
- Light output from a source (luminous flux), efficacy of different types of lamps and terms, units and symbols used.
- Light intensity — definition, terms, units, symbols and relationship with luminous flux
- Illuminance — definition, terms, unit, symbol and relationship with luminous flux and environmental factors
- Significance of inverse square law on illuminance
- Luminance — definition, term, unit, symbol and relationship with luminous intensity and illuminance
- Vision and illuminance standards for particular environments and activities

T2 Nature of light encompassing:

- Primary and additive colours
- Frequency and colour that light is perceived
- Comparison of the colour spectrum of sunlight and light generated from different lamp types.
- Colour temperature scale and the perceived colour of a light source
- Colour rendering and colour distortion.

T3 Incandescent lamp encompassing:

- Types and principles
- Features — envelope, filament type and temperature (K), fill gas, cap and common power ratings
- Effect of filament evaporation over time
- Effect on parameters (ϕ , η , P, hr) with variations in rated voltage
- Application and future

T4 Fluorescent lamps encompassing:

- Type T series — basic principle, double and single phosphor coating and CRI;

REQUIRED SKILLS AND KNOWLEDGE

expectations (efficacy [l/w]; visual ambience [K]; visual satisfaction [CRI]; life [hr])

- Type T accessories — basic operation of electromagnetic ballast; starter; capacitor; features and advantage of electronic ballast.
- Compact fluorescent (CFL) types — integrated and non-integrated ballasts; form; rating for equivalent light out of GLS lamp;
- Application and future

T5 High intensity discharge (HID) lamps encompassing:

- Mercury lamp — types (blended light lamps and high pressure (HP) lamp), structural features, spectral intensity and CRI
- Metal halide lamp — principles, structural features, lamp forms, spectral intensity and CRI
- Application and future

T6 LED lamps encompassing:

- Types, structural features, spectral intensity and CRI
- Application and future

T7 Luminaires (Light fittings) encompassing:

- Mechanical function and components (include ingress protection rated enclosure with suitable mounting arrangement; mechanisms to accommodate lamp(s), electrical ancillaries when needed; optical system and excessive temperature rise).
- Ingress Protection (IP) ratings and examples of their application to luminaires
- Electrical function and components (Electrical components must be appropriate for the insulation class or ELV fault protection and include supply terminals; lamp holder(s); electrical ancillaries when needed; and appropriated internal wiring).
- Optical function and components (Optical components include a variety of mechanism to: distribute light, direct light, filter light and/or limit glare; and achieve maximum possible light output ratio).
- Light output ratio of common typical luminaire without and with reflector and diffuser mechanisms.
- Light distribution and reading a polar luminance distribution curve.
- Classification of light distribution and beam spreadTypes and features of indoor luminaires (Features include light distribution, symmetry, screening and utilisation factor)
- Types and features of outdoor luminaires (Features include types of light distribution and reflector control)
- Examples of currently available luminaires for indoor and outdoor applications.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Providing advice on lighting products as described in 8) and including:
 - A Determining the nature of the advice required
 - B Reviewing appropriate lighting documentation and providing appropriate advice
 - C Applying basic knowledge of lighting to providing relevant advice
 - D Referring high technical and costing inquiries to an

appropriate person.

E Documenting inquiries and responses in accordance with routine procedures.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing advice on effective and energy efficient lighting products.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by providing advice on lighting products for each of the following groups:

Group A

Lamp types

At least three of those listed Incandescent lamp types

Fluorescent lamp types

Discharge lamps

LED lamp types

Ancillary apparatus

Group B

Luminaires

At least three of those listed Optical functions and fitting design

Light distribution

Mounting techniques

Modern technology applied to

luminaries

Luminaires for indoor and outdoor use

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electrical

UEENEEG182A Supply effective and efficient lighting products for domestic and small commercial applications

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers responding to customer request for the supply of effective and efficient luminaries and associated control and mounting apparatus. It encompasses working safely, a knowledge of luminaries, their application and parameters, energy efficiency and safety compliance requirements and regulations, interrogating customer requests, extracting information from manufacturer's catalogues and technical data and supplying the most appropriate and compliant fittings.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies in retail or public accessible wholesale selling and confined to domestic lighting and small commercial products.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where

License to practice

3)

applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEG18 Provide advice on lighting products
1A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|-----------------------------|-----|--|
| 1 Engage with customer | 1.1 | OHS procedures for a given work area are identified, obtained and understood. |
| | 1.2 | Communication with customers is conducted in a professional and courteous manner according to established procedures. |
| | 1.3 | Customer enquiries are responded to promptly and politely and in accordance with established procedures. |
| | 1.4 | Appropriate interpersonal skills are used to facilitate accurate and relevant exchange of information. |
| 2 Clarify customer requests | 2.1 | Appropriate questioning and active listening are used to determine customer needs. |
| | 2.2 | Customer requests are interrogated to clearly ascertain the most suitable lighting products. |
| | 2.3 | Customers are advised of the technical and compliance aspects that need to be considered when choosing lighting products. |
| | 2.4 | Customers are provided with information about available options and assisted to identify their preferred option. |
| | 2.5 | Personal limitations in addressing customer requests are identified and where necessary assistance is sought from appropriate personnel. |

ELEMENT

PERFORMANCE CRITERIA

- | | |
|----------------------------|--|
| 3 Supply lighting products | 3.1 Lighting products are supply as agreed with the customer and in accordance with established policy and procedures.

3.2 Own work is monitored and adjusted according to requirements for job quality, customer service and efficient resource use. |
|----------------------------|--|

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of engaging with customers to supply appropriate lighting products for domestic applications.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG182A Lighting applications for domestic and small commercial premises

Evidence shall show an understanding of lighting applications for domestic and small commercial premises to an extent indicated by the following aspects:

T1 Dealing with customer requests.

T2 Extracting information from manufacturers' catalogues and other technical data.

T3 Lighting and energy conservation

T4 Lamp types where colour is important for functional or safety reasons

T5 Luminaire types where glare or illumination level gradients may cause difficulty for vision or introduce safety problems

T6 Regulatory requirements encompassing:

- BCA requirements for lighting energy input/ metre² for domestic dwellings
- State based energy sustainability requirements (e.g. BASIX in NSW)
- Compliance requirements and marking (as per AS/NZS 4417) of products
- Electrical installation work to be carried out/supervised by a licensed electrician under a licensed electrical contractor.

T7 Criteria for recommending the most appropriate light fittings (luminaires).

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Engaging with customers to supply appropriate lighting products for domestic applications as described in 8) and including:
 - A Communication with customers in a professional manner and responding promptly to enquiries
 - B Clearly ascertain the most suitable lighting products.

- C Advising customers of technical and compliance aspects that need to be considered when choosing lighting products.
- D Providing customers with information about available options and assisted to identify their preferred option.
- E Supplying lighting produces as agreed with the customer and in accordance with established policy and procedures.
- F Dealing with unplanned events

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to supplying effective and efficient lighting products for domestic and small commercial applications

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in engaging with customers to supplying lighting products for each of the following groups:

Group A Domestic

At least one A new three bedroom domestic dwelling,
An addition/renovation of an indoor/outdoor entertainment and garden area to an existing domestic dwelling,

Group B Small commercial

At least one A commercial building of less than 200 m², half on which will be used as a small appliance service area.
A café or restaurant having a kitchen, rest-room and dining areas
A small medical centre having a doctor's surgery, preparation room, waiting room, service desk and a bathroom and kitchen facilities

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to provide advice on lighting products	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Appropriate questioning and active listening are used, drawing on basic knowledge of lighting to determine the nature of the enquiry.
	1.3 Lighting documentations/files that will assist in providing the necessary advice are reviewed and understood
2 Provide advice on lighting products	2.1 OHS risk control work measures and procedures are followed.
	2.2 Basic knowledge of lighting, colour, CRI and creation of 'effects' is applied to providing the necessary advice.
	2.3 Higher technical or costing inquiries are referred to an appropriate person of higher authority.
	2.4 Inquiries and how they were responded to are documented in accordance with routine procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that a basic knowledge has been acquired of lighting, light sources and luminaries.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EG183A

Lighting effects

Evidence shall show an understanding of lighting effects to an extent indicated by the following aspects:

T1 Colour of light sources

T2 Colour rendering index

T3 Effects of surface texture

T4 Visual perception

T5 Effects of indirect light encompassing:

- pelmet lighting
- reflected light

T6 Diffused light

T7 Psychology of lighting, perception and mood encompassing:

- colour temperature
- space and confinement

T8 Function of ambience

T9 Control of lighting levels encompassing:

- use of electrical or electronic control
- use of natural (daylight) lighting control

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Providing advice on the application of lighting for ambient and aesthetic effect as described in 8) and including:
 - A Determining the nature of the advice required
 - B Reviewing appropriate lighting documentation and providing appropriate advice
 - C Applying basic knowledge of lighting effects to provide relevant advice

D

Referring high technical and costing inquiries to an appropriate person.

E Documenting inquiries and responses in accordance with routine procedures.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing advice on the application of energy efficient lighting for ambient and aesthetic effect.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in providing the accurate and clear advice on lighting with respect to at least three of the following;

- A home theatre
- Hotel and club dining rooms
- Domestic entertainment areas
- A semi-covered alfresco dining area
- A lobby and gathering area
- Special requirements for a reception centre

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Competency Field

Competency Field 11)

Electrical

UEENEEG184A Provide photometric data for illumination system design

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the provision of photometric data to support illumination system designs. It encompasses working safely, applying knowledge of photometric, calculations for the selecting and arranging light sources for particular applications, recognising the visual requirements of the human subject, complying with standards and documenting justification for the data provided.

Application of the Unit

Application of the Unit 2)

This unit is intended as a foundational competency underpinning further advanced competencies in the application of illumination principles and luminary's layout and design.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to provide photometric data	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 The required illumination parameters of the design are obtained from a design brief, job specification or by consultation with the client.
	1.3 Compliance and recommended illumination parameters for particular situations and tasks are obtained and understood.
	1.4 Lighting manufacturers' technical information for products under consideration are obtained and understood
2 Provide photometric data	2.1 OHS risk control work measures and procedures are followed.
	2.2 Photometric principles are applied to calculating photometric data required for particular applications and variety of appropriate lighting products.
	2.3 Data includes illumination compliance requirements and recommendations given in standards.
	2.4 Data is documented, including justification for conclusion, in accordance with established procedures.
	2.5 Photometric data is forwarded to appropriate personnel in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of providing photometric data for illumination system design.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG184A

Photometric principles, vision and colour

Evidence shall show an understanding of photometry, vision and colour to an extent indicated by the following aspects

T1 Nature of light encompassing:

- dual nature of light electromagnetic spectrum
- frequency and wavelength (nm)

T2 Photometric principles and definitions encompassing:

- scope and definitions from AS/NZS 1680.1 and AS ISO 1000 - 1998
- luminous flux, definition and unit of measurement
- luminous intensity, definition and SI unit of measurement
- radians and steradians
- illuminance and luminance
- basic optics, reflection, refraction
- reflectance and transmittance
- diffuse surfaces
- the point source and the inverse square law
- cosine law
- relationship between watts and lumens
- older imperial measurements (These older units may include the footcandle or lumen per square foot, candlepower etc).

T3 Physiology of the eye and light detection encompassing:

- Scotopic, mesopic and photopic vision
- contrast sensitivity
- colour vision – rods and cones
- light levels and recognition of colour
- adaptation
- accommodation and visual acuity
- brightness and lightness
- image detection
- glare and comfort
- cognition and visual perception

REQUIRED SKILLS AND KNOWLEDGE

T4 Colour encompassing:

- Munsell and CIE Colour System
- chromaticity coordinates
- black body radiation and colour temperature
- uniform chromaticity scale diagrams
- factors determining colour appearance

T5 Photometry encompassing:

- the integrating sphere
- distribution photometry
- selected requirements of AS1680.3 (Measurement, calculation and presentation of photometric data)
- the goniophotometer
- measurement of luminous flux
- measurement of luminance and cut-off angle
- measurement of illuminance (single luminaire)
- graphical representation of photometric data
- test reports and data presentation
- lux meters and measuring equipment
- required light levels for various situations as per Australian/New Zealand Standards

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this

shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Providing photometric data for illumination system design as described in 8) and including:
 - A Obtaining illumination parameters from a design brief, job specification or by consultation with the client.
 - B Understanding compliance and recommended illumination parameters for particular situations and tasks.
 - C Understanding manufacturers' technical information.
 - D Documenting photometric data including justification for conclusions
 - E Dealing with unplanned events

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing photometric data for illumination system design.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to at least three of the following:

- Determination of lighting levels for specific situations
- Interpretation of manufacturers' photometric data
- Determination of lighting level transitions where safety is a consideration
- Calculations using the inverse square law
- Measurement of lighting levels using a light (lux) meter
- Presentation of a simple photometric report
- Present a report (lighting levels) on an existing installation

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the selecting effective and efficient light sources and luminaries for a given location and lighting design. It encompasses, applying knowledge of light sources and luminaries and given lighting design parameters, complying with standards and documenting justification for the selections made.

Application of the Unit

Application of the Unit 2)

This competency standard unit, together with its pre-requisite provides the foundation for specific application competencies in a number of areas.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG1 84A Provide photometric data for illumination system design

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|--|
| 1 | Prepare to select light sources and luminaries | 1.1 | OHS procedures for a given work area are identified, obtained and understood. |
| | | 1.2 | The parameters of the lighting design are obtained from a design brief, job specification or by consultation with the client. |
| | | 1.3 | Compliance and recommended illumination parameters for particular situations and tasks are obtained and understood. |
| | | 1.4 | Lighting manufacturers' technical information for products under consideration are obtained and understood |
| 2 | Select light sources and luminaries | 2.1 | OHS risk control work measures and procedures are followed. |
| | | 2.2 | Knowledge of light sources and luminaries are applied to selecting light sources and luminaries appropriate to given lighting design parameters. |
| | | 2.3 | Selected light sources and luminaries are within the illumination compliance requirements and standards for the given design. |
| | | 2.4 | Selected light sources and luminaries are documented, including justification for conclusion, in accordance with established procedures. |
| | | 2.5 | Documentation of the selected light sources and luminaries is forwarded to appropriate personnel in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of providing photometric data for illumination system design.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies..

KS01-EG185A

Light sources and luminaries

Evidence shall show an understanding of light sources, lamps and luminaires to an extent indicated by the following aspects:

T1 Types of light sources and their historic development including the practical requirements, advantages and disadvantages of light sources encompassing:

- incandescent
- electrical discharge in gases
- tubular fluorescent
- compact fluorescent types
- phosphor types
- low pressure sodium
- high pressure sodium
- metal halide
- mercury vapour
- tungsten halogen cycle lamps
- neon and advertising tube types
- LED technologies

T2 Each practical lamp type is designated in terms encompassing:

- luminous efficacy
- spectral output
- colour rendering
- longevity of operation
- supply requirements and control equipment
- cost
- sustainability and recycling

T3 Types of luminaire encompassing:

- general design and types
- provision of data on luminaires
- methods of light control
- properties of optical systems: refractors, reflectors, diffusers
- luminance control techniques

REQUIRED SKILLS AND KNOWLEDGE

- luminaires and auxiliaries
- Australian Standards for indoor and outdoor luminaires
- calculation of utilisation factors
- provision of photometric data
- luminance of various fittings

T4 Natural lighting and building design

T5 Techniques used to minimise energy expenditure

T6 Specific application lamps

- specific task lamps
- germicidal lamps
- indoor agricultural or hydroponic lamps

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. other units**

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to at least three of the following:

- An application using incandescent lamps for colour rendition
- Outside security lighting
- A high bay application
- Highway lighting
- Store/shop lighting
- A school or training classroom
- Localised task lighting
- A flood-lighting application
- A situation integrating some natural daylight

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of designing lighting for public, open and sports areas.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG187A

Open area and sports lighting

Evidence shall show an understanding of lighting design for outdoor and sports application lighting to an extent indicated by the following aspects:

T1 Reasons for quality lighting in sport

T2 Key terms in sports lighting encompassing:

- Quantity of light required
- Horizontal luminance
- Vertical illuminance
- Illuminance uniformity
- Uniformity gradient
- Modelling and shadows
- Colour rendering
- Colour temperature
- Glare
- Emergency escape lighting
- Switching mode
- Emergency (continuity) TV lighting
- Obtrusive light

T3 The sports lighting design process encompassing:

- Project definition
- Lighting study
- Questions for indoor and outdoor venues
- Lamp selection
- Luminaire selection
- Arrangement of luminaires
- Cost of ownership
- Installation
- Aiming, measuring and commissioning
- Maintenance

T4 Layout for lighting in multi-purpose halls and enclosed areas

REQUIRED SKILLS AND KNOWLEDGE

T5 Sports grounds and stadiums

- Lighting configuration
- Sports grounds with no spectator stand
- Sports grounds and stadiums with a spectator stand

T6 Swimming/diving

T7 Other considerations

T8 Recommendations

- Recommendations for non-televised events
- Classes of play
- Recommendations for televised events

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be

required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - designing lighting for public, open and sports areas as described in 8) and including:

A Determining the extent and nature of the lighting requirements from a design brief.

B Identifying and understanding safety and other requirements to which the lighting design shall comply.

C Planning to meet scheduled timelines

D Applying appropriate knowledge of lighting performance compliance and lighting equipment in designing the lighting.

E Considering alternative arrangements for the lighting design

F Including safety, functional, maintenance and budgetary factors in the lighting design

G Documenting and presenting the lighting design

H Responding appropriately to requests to alter the design.

I Documenting and obtaining approval of the lighting design.

J Dealing appropriately with unplanned events

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment

environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing effective and efficient lighting for public, open and sports areas.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to at least three of the following

- Flood lighting of tennis courts
- Flood lighting of netball or basketball courts
- Flood lighting of football grounds
- Lighting of squash courts
- Lighting of indoor or outdoor bowling greens
- Swimming pool lighting
- Sporting spectator lighting
- Other sporting applications
- Stair lighting / passageway lighting
- Park lighting
- Mall lighting
- Car park lighting

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers preparing quotations for supply of effective and efficient lighting products based on given specifications and/or material schedules. It encompasses knowledge of lighting and ancillary components, their application and parameters, compliance requirements, installations conditions, interpreting manufacturer's technical data, job specifications and equipment schedules and documenting quotations accurately.

Application of the Unit

Application of the Unit 2)

This unit is intended to complement the other application units relating to the design of lighting installations.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG184A Provide photometric data for illumination system design

UEENEG185A Select light sources and luminaries for given locations and designs.

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|---|-----|---|
| 1 | Establish the extent of lighting products to be supplies. | 1.1 | OHS procedures for a given work area are identified, obtained and understood |
| | | 1.2 | Established OHS risk control measures and procedures are followed |
| | | 1.3 | The scope of lighting products required is determined from job specifications and discussions with customer and/or other appropriate person(s) |
| | | 1.4 | The level of service on which a quotation is to be given is documented as a job specification and agreement sought with customer or other appropriate person(s) |
| | | 1.5 | OHS and other regulatory and compliance requirements are incorporated in the work on which the quotation is based. |
| | | 1.6 | Timelines for the submission of the quotation are established with the customer and/or other appropriate person. |
| 2 | Develop quotations. | 2.1 | Lighting products and related material take-offs are performed accurately and checked against job specification. |
| | | 2.2 | Lighting products are selected to meet performance requirements of a formal job specification |
| | | 2.3 | Calculations are applied to selecting the type and quantity of lighting products to be included in the quotation. |

ELEMENT	PERFORMANCE CRITERIA
	2.4 Item costs are determined from, enterprise costing policy and procedures.
	2.5 Quotations are checked for accuracy in costing and against job specification
3 Document and submit quotation.	3.1 Quotation is documented in accordance with established policies and procedures
	3.2 Quotation is submitted to customer within by an agreed date

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of preparing quotations for the supply of products for lighting projects

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG188A preparation

Lighting products — quotation

Evidence shall show an understanding of quotation preparation for lighting products to an extent indicated by the following aspects:

- T1 Knowledge of lighting products
- T2 Illumination principles
- T3 Lighting applications
- T4 Lighting product parameters
- T5 Compliance requirements
- T6 Installation conditions
- T7 Interpreting manufacturers technical data,
- T8 Interpreting job specifications
- T9 Interpreting equipment schedules
- T10 Documenting quotations
- T11 Use of computer program for quoting purposes

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Preparing quotations for the supply of products for lighting projects as described in 8) and including:
 - A Determining the scope of lighting products required from job specifications and discussions with customer and/or other appropriate person(s)
 - B Documenting the compliance requirements and level of service on which the quotation is to be given
 - C Establishing timelines for submission of the quotation

- D Performing material take-offs accurately
- E Applying calculation to selecting appropriate type and quantity of lighting products
- F Determined item costs from enterprise costing policy and procedures.
- G Check quotation against item costs and job specifications.
- H Documenting quotation accurately and submitting it on time.
- I Dealing with unplanned events

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to prepare quotations for the supply of effective and efficient lighting products for lighting projects.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires

that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in preparing quotation for the supply of lighting products with a quotation value in excess of \$10,000 including at least three of the following :

Group A Luminares types
High efficiency troffer fitting

At least three of the listed types on at least three occasions

High bay fittings
Compact floodlamps
Energy efficient halogen downlights
Compact fluorescent downlights
Diffused fluorescent fittings

Note: a combination of the above luminaires types may be included in the quotations for a given installation

Group B Applications
Large residential lighting design

At least two

Store/shop lighting
Shopping centre general lighting
Security lighting
Car park lighting

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the installation and maintenance of emergency exit lighting systems in buildings and premises. It encompasses working safely and to installation and maintenance standards, complying with maintenance schedules and completing the necessary documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

License to practice**3)**

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities components
UEENEEE1 04A	Solve problems in d.c circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE1 37A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 33A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits

Prerequisite Unit(s) 4)

- UEENEEG1 02A Solve problems in low voltage a.c. circuit
- UEENEEG1 03A Install low voltage wiring and accessories
- UEENEEG1 04A Install appliances, switchgear and associated accessories for low voltage electrical installations
- UEENEEG1 06A Terminate cables, cords and accessories for low voltage circuits
- UEENEEG1 07A Select wiring systems and cables for low voltage general electrical installations
- UEENEEG1 08A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
- UEENEEG1 09A Develop and connect electrical control circuits

Further Information:

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1 Prepare to install and maintain emergency systems	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Installation/maintenance is prepared in consultation with other affected by the work and sequenced appropriately.
	1.5 The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken.
	1.6 Location of apparatus and associated equipment is planned within the constraints of the building structure, significant and regulations.
	1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with

ELEMENT	PERFORMANCE CRITERIA
	others.
	1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
	1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
	1.10 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
2 Install and maintain emergency systems	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Apparatus and associated equipment are installed and maintained to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance.
	2.5 Wiring is terminated at apparatus and associated equipment in accordance with manufacture's specifications and functional and regulatory requirements.
	2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
	2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8 Ongoing checks of the quality of installed apparatus are undertaken in accordance with

ELEMENT	PERFORMANCE CRITERIA
	established procedures.
	2.9 Apparatus installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
3 Completion and report installation and maintenance activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Final checks are made to that the installed and maintained apparatus conforms to requirements.
	3.4 'As-installed' emergency systems apparatus and associated equipment is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining emergency systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG189A Safety service — emergency lighting installation and maintenance

Evidence shall show an understanding of emergency lighting installation and maintenance to an extent indicated by the following aspects:

T1 Emergency lighting luminaires and exit signs

T2 Emergency lighting control systems including wired and wireless control.

T3 Arrangements and control encompassing:

- Labelling of devices operation of emergency lighting

T4 Emergency power supplies for centrally supplied systems encompassing:

- emergency power source
- batteries and their installation
- battery charger assembly
- inverters
- alarm systems

T5 Design of emergency escape luminaire installation encompassing:

- provision of emergency luminaires
- acceptable emergency escape luminaires
- installations employing direct lighting
- installations employing indirect lighting
- lighting of stairways
- identification and marking of emergency escape luminaires

T6 Installation of electrical wiring and equipment for centrally supplied systems encompassing:

- circuit voltage drop
- protection against overcurrent
- protection of the electrical installation against fire
- segregation or identification of submains
- arrangement of final subcircuits

T7 Particular requirements for self-contained emergency escape luminaires and

REQUIRED SKILLS AND KNOWLEDGE

exit signs encompassing:

- suitability for operating temperatures
- arrangement and control
- batteries
- battery chargers
- control equipment
- electrical requirements
- self-contained automatic discharge testing facilities

T8 Battery systems used in emergency lighting encompassing:

- Types of batteries and their characteristics
- Recharging arrangements
- Procedures for testing emergency lighting

T9 Maintenance and inspection requirements encompassing:

- Compliance standards include AS/NZS2293 series and Building Code of Australia (BCA)
- information required for maintaining the system
- operating and maintenance manual
- provision for the recording of maintenance

T10 Inspection and maintenance procedures for central systems encompassing:

- required procedures.
- six-monthly procedures
- twelve-monthly procedures

T11 Inspection and maintenance procedures for single-point systems encompassing:

- required procedures
- six-monthly procedures
- twelve-monthly procedures
- battery replacement
- cleaning of emergency luminaires

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and maintain emergency lighting systems as described in 8) and including:
 - A Determining the operating parameters of existing electrical systems.
 - B Using established problem solving methods.
 - C Directing personnel to take relevant measurements.

- D Interpreting measured values appropriately.
- E Providing effective solutions to electrical system problems.
- F Giving written justification of solutions provided.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing and maintaining emergency lighting systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires

assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG10 3A Install wiring and accessories for low voltage circuits

UEENEEG10 4A Install appliances, switchgear and associated accessories for low voltage electrical installations

The critical aspects of occupational health and safety covered in Unit UEENEEG101A and other discipline specific occupational health and safety unit(s) shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and maintaining emergency lighting systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electrical

UEENEEG197A Apply currency of safe working practices and compliance verification of electrical installations

Modification History

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers current practices in working safely and verifying compliance of electrical installations that affect the currency of competencies held. It encompasses working safely, procedures for rescue from contact with live parts and for applying emergency first aid. It also encompasses current practices in visual inspections and mandatory compliance testing, identifying non-compliance defects and mandatory reporting requirements.

Application of the Unit

Application of the Unit 2)

2.1) General Application

The licensing regulator may require a holder of 'Unrestricted Electrician's Licence' or 'Qualified Electrical Contracting Licence' to undertake this unit periodically to demonstrate currency in safe working, electrical rescue practices and compliance verification of electrical installations.

2.2) Electrical Contractors

A 'licensed electrician' applying for an 'electrical contractors licence' may be required to undertake this unit to demonstrate their currency with verification of compliance requirements. In this case they are deemed to have met the prerequisites for this unit provided that:

hold a current 'Unrestricted Electrician's Licence' issued

in an Australian State or Territory.

have recently been in permanent employment as a licensed electrician.

Licensing/Regulatory Information

License to practice 3)

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Competency in this unit can only be gained by persons who hold a current 'Unrestricted Electrician's Licence' issued in an Australian State or Territory.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to enter a work area and verify compliance of an electrical installation	1.1	Work area access permits are obtained from appropriate personnel according to established procedures
	1.2	Safe work methods for controlling risk obtained, read and understood prior to undertaking a work activity.
	1.3.	Preparations for electrical and non-electrical isolation are carried out to prevent creation of hazards from loss of machine/system/process control according to established procedures.
	1.4	Documentation or deemed to comply standard on which installation is based is reviewed and understood.
	1.5	Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
	1.6	Tools and equipment needed for the work are checked for safety and correct functionality according to

ELEMENT

PERFORMANCE CRITERIA

ELEMENT	PERFORMANCE CRITERIA
	established procedures and regulatory requirements.
2. Follow workplace procedures for hazard identification and risk control	2.1 Hazards are identified and control measures implemented and monitored through active participation in the consultation process with employer and other employees.
	2.2 Hazards in the work area are recognised and reported to appropriate personnel according to established procedures.
	2.3 OHS records of incidents are completed in accordance with regulatory requirements and established procedures.
	2.4 Workplace instructions and training are followed accurately within established procedures.
3 Apply safe working practices to verifying compliance of an electrical installation	3.1 Safe work methods for controlling risk are followed accurately.
	3.2 Workplace procedures for dealing with accidents, fires and emergencies are followed according to work procedures and scope of responsibility and competencies.
	3.3 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	3.4 Compliance of the electrical equipment and as it is installed is ascertained by visual inspection in accordance with current standards and regulatory requirements.
	3.5 Mandatory tests are conducted to ascertain the compliance of the safety parameters of installed circuits, switchgear, protection and earthing in accordance with current standards and regulatory requirements.
4 Report compliance findings.	4.1 OHS risk control work completion measures and procedures are followed.
	4.2 Work site is cleaned and made safe in accordance with established procedures.

ELEMENT

PERFORMANCE CRITERIA

- 4.3 Non-compliance defects are identified and reported in accordance with current standards and regulatory requirements.
- 4.4 Recommendations for rectifying defects are made in accordance with established procedures.
- 4.5 Mandatory documentation is completed in accordance with current standards and regulatory requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of preparing quotations for the supply of products for lighting projects

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG197A Current requirements of safe working practices

Evidence shall show an understanding of current requirements of working place health and safety to an extent indicated by the following aspects.

T1 The current legal requirements covering workplace health and safety in the workplace.

T2 The current work environment in relation to safety signage, emergencies, fire protection, ensuring personal safety, industrial housekeeping and pollution sources and controls.

T3 Hazards and risks and control measures in working on construction sites.

Note.

Hazards include (not limited to) manual and mechanical handling; working at heights; working in confined spaces; noise; dusts.

T4 Workplace safety check, identifying potential workplace hazards and suggested measures for accident prevention.

T5 Working safely with electrical tools or equipment

T6 Current procedure for safe isolation of an electrical supply.

T7 Hazards associated with, extra-low voltage, low-voltage, high voltage and high-currents

T8 Hazards and control measures associated with electrical work

T9 Emergency procedures for the rescue of an electric shock victim equipment

T10 Emergency first aid for an electric shock victim

Note:

Emergency first aid is limited to first-on-the scene assistance to a victim of electric shock, and basics of CPR.

KS02-EG197A Evidence shall show an understanding of electrical installations testing and verification to an extent indicated by the following aspects:

T1 Current electrical installations legislated regulations and responsibilities of a licensed electrician

REQUIRED SKILLS AND KNOWLEDGE

- T2 Current compliance standards and regulatory requirement of electrical equipment and how and where it is installed.
- T3 Current compliance standards and regulatory requirement for testing safety parameters of installed circuits, switchgear, protection and earthing.
- T4 Current compliance standards and regulatory requirement for documenting and reporting compliance inspection and testing outcomes.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination

- legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Apply currency of safe working practices and compliance verification of electrical installations as described as described in 8) and including:
 - A Preparing to enter a workplace.
 - B Identifying work safety hazards
 - C Applying current safe working practices
 - D Identifying visual non-compliance defects.
 - E Using effective methods for conducting mandatory and optional tests.
 - F Identifying non-compliance from test results.
 - G Identifying causes of non-compliance.
 - H Completing mandatory reporting.
 - I Dealing with unplanned events

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to verifying compliance and functionality of general electrical installations.

Method of assessment **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in verifying compliance of an electrical installations comprising a main switchboard, supplying more than one circuit each for, lighting, socket outlets, a distribution board separate from the main switchboard and at least two circuits supplying fixed appliances one of which three-phase.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electrical

UEENEEG198A Apply compliance requirements to all aspects of electrical work

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers competencies to apply OHS and electrical installation safety obligations of persons licensed to undertake electrical work. It encompasses OHS requirements for identifying hazards, establishing levels of risk mitigation control, following safe working methods, determining whether an electrical installation is compliant, dealing with installation defects and documenting activities and outcomes.

Application of the Unit

Application of the Unit **2)**

This unit is intended for electrical license holders who, according to the regulatory authority, have exhibited recalcitrance in their licence and/or OHS obligations.

It may be called up electrical safety or OHS authority as a means of retraining of such license holders.

Incompetence in not meeting required obligation could result from:

A competent person acting incompetently, or

A previously competent person failing to keep abreast of changes and developments in the OHS requirements and practices, the Wiring Rules and local service rules and related regulatory requirements.

Licensing/Regulatory Information

License to practice 3)

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after has been confirmed that the participant is a practicing ‘electrician’ and hold a current ‘Unrestricted Electrician’s Licence’ issued in an Australian State or Territory.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Apply OHS compliance requirements	1.1 Permission to enter a work site, such as construction industry 'White Card', permit to work systems, industrial plant safety orientation, is obtain in accordance with OHS requirements.
	1.2 OHS risk control measures and procedures given in Safe Work Method Statements (SWMS) or Job Safety Analysis (JSA) documents followed.
	1.3 New or changed hazards are identified, the level of risk they pose assigned and control measures established before any related work is commenced.
	1.4 The level of risk and control measures for a new or changed hazard is documented in accordance with OHS requirements.
	1.5 Hazards created by other site activities are referred to person of appropriate authority such as company or site safety officer, construction project manager, employee representative and

ELEMENT	PERFORMANCE CRITERIA
	the like.
	1.6 OHS documents including incidents and issues reports are maintained in accordance with requirements with copies at the relevant work sites.
2 Ensure electrical installations are safe for use	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Compliance of an installation is determined in accordance with AS/NZS 3000 Wiring Rules Part 2 Section 8 following AS/NZS 3017 Electrical Installations— Verification guidelines
3 Document electrical installation verification compliance activities	3.1 Non-compliance defects are identified and reported in accordance with established procedures.
	3.2 Recommendations for rectifying defects are made in accordance with established procedures.
	3.3 Mandatory documentation is completed in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of compliance requirements to all aspects of electrical work.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EG198A

Electrical work compliance requirements

Evidence shall show an understanding of compliance requirements to all aspects of electrical work testing and verification to an extent indicated by the following aspects:

T1 OHS requirements encompassing:

- Legislated regulations
- Responsibilities of employers and employees
- Hazards and risks and control measures
- Safe Work Method Statements (SWMS) / Job safety analysis (JSAs)
- Identifying potential workplace hazards and establishing control measures
- Maintaining OHS documents

T2 Electrical installation safety requirements encompassing:

- Legislated regulations
- Visual inspecting of installations
- Testing installations
- Documentation

Note:

Safety requirements include local service rules and application of current editions AS/NZS 3000 Wiring Rules following AS/NZS 3017 Electrical installations — Verification guidelines

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Applying compliance requirements to all aspects of electrical work as described in 8) and including:
 - A Following requirements to gain entry to a work site
 - B Following OHS control measures and procedures
 - C Identifying new and changes hazards, assigning a realist level of risk and establishing appropriate control measures.
 - D Maintaining OHS documents and incidents and issues

reports in accordance with requirements

E Determining whether an electrical installation is compliant in accordance with regulations

F Documenting installation compliance verification activities and outcomes

G Dealing with unplanned events

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to applying compliance requirements to all aspects of electrical work.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential

knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to both a residential, commercial and industrial installations

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers inspection and testing to verify whether an electrical apparatus and/or existing circuits are safe and complies with all requirements. It encompasses working safely, visual inspections and mandatory, optional and functional testing following verification procedures, identifying non-compliance defects and mandatory reporting requirements.

Application of the Unit

Application of the Unit 2)

2.1) General Application

This unit applies to all qualifications, competencies and/or Skill Sets which require an unrestricted electrical fitter licence.

Licensing/Regulatory Information

License to practice 3)

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to

License to practice

3)

practice in the workplace where work is carried out on electrical equipment or existing circuits which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

- | | |
|-----------------|---|
| UEENEEE1
01A | Apply Occupational Health and Safety regulations, codes and practices in the workplace |
| UEENEEE1
02A | Fabricate, dismantle and assemble and utilities components |
| UEENEEE1
04A | Solve problems in d.c circuits |
| UEENEEE1
05A | Fix and secure electrotechnology equipment |
| UEENEEE1
07B | Use drawings, diagrams, schedules, standards, codes and specifications |
| UEENEEE1
37A | Document and apply measures to control OHS risks associated with electrotechnology work |
| UEENEEG0
06A | Solve problems in single and three phase low voltage machines |
| UEENEEG0
33A | Solve problems in single and three phase electrical apparatus and circuits |
| UEENEEG0 | Arrange circuits, control and protection for |

Prerequisite Unit(s)	4)
	63A general electrical installations
	UEENEEG1 01A Solve problems in electromagnetic devices and related circuits
	UEENEEG1 02A Solve problems in low voltage a.c. circuits
	UEENEEG1 06A Terminate cables, cords and accessories for low voltage circuits
	UEENEEG1 08A Trouble-shoot and repair faults in electrical apparatus and circuits
	UEENEEG1 09A Develop and connect electrical control circuits

Further Information:

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Current Licence Holders:

Those holding an 'Electrical Fitter Licence' or equivalent issued in an Australian State or Territory meet the requirements of this unit and its pre-requisite requirements.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1 Prepare to inspect and test electrical apparatus and existing circuits. | 1.1 OHS measures for the site are identified, obtained and understood. |
| | 1.2 Established OHS risk control measures and procedures in preparation for the work are followed |
| | 1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented. |
| | 1.4 Documentation or deemed to comply standard on which electrical apparatus and existing circuits is based is reviewed and understood. |
| | 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site. |
| | 1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and |

ELEMENT

PERFORMANCE CRITERIA

		checked for correct operation and safety.
	1.7	Preparatory work is checked to ensure no damage has occurred and complies with requirements.
2	Visually inspect and conduct safety testing on electrical apparatus and existing circuits.	
	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and following switch-off, lock out and tagging procedures.
	2.4	Knowledge of electrical principles and their application to electrical apparatus and existing circuits is drawn upon in determining whether an electrical apparatus/existing circuits is compliant and functions safely and as intended.
	2.5	Wiring is checked for suitability for the environments in which they are installed and suitably protected from damage or overheating.
	2.6	Protection methods and devices are validated as meeting co-ordination requirements for overload and short-circuit protection.
	2.7	Switchgear and control gear is validated as being appropriately rated and meeting functional requirements.
	2.8	Evidence that electrical equipment complies with safety requirements is cited.
	2.9	Earthing system components are checked that they are correctly located and conductors correctly sized.
	2.12	Mandatory tests are conducted on all connected electrical apparatus and existing

ELEMENT

PERFORMANCE CRITERIA

- circuits to verify that: earthing conductor resistance is sufficiently low; insulation resistance is sufficiently high; all polarities are correct; and circuit connections are correct.
- 2.12 Testing is conducted to verify that: fault-loop impedance is sufficiently low and residual current devices operates as intended.
- 3 Report inspection and test findings.
- 3.1 OHS risk control work completion measures and procedures are followed.
- 3.2 Work site is cleaned and made safe in accordance with established procedures.
- 3.3 Non-compliance defects are identified and reported in accordance with established procedures.
- 3.4 Recommendations for rectifying defects are made in accordance with established procedures.
- 3.5 Mandatory documentation is completed in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of electrical apparatus and existing circuits.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EG199A Electrical apparatus and existing circuits — verification and testing

Evidence shall show an understanding of electrical apparatus and existing circuits testing and verification to an extent indicated by the following aspects:

T1 (Is the number correct?)Electrical safety encompassing:

- Safety procedures for working on electrical systems, circuits and apparatus.
- Safe working practices as a normal part of carrying out electrical installation work
- Isolation and lockout procedures
- Tools and equipment needed to conduct electrical work compliance inspection and testing.

T2 Legislated regulations encompassing:

- legislation and regulations that require electrical apparatus and existing circuits to be inspected and tested to ensure they are safe.
- the person/bodies responsible for the various aspects of ensuring electrical apparatus and existing circuits are safe.
- results of tests that show an electrical apparatus and existing circuits is safe for connection to the supply.
- results of periodic inspection and tests that show electrical equipment are safe to use.

T3 Visual inspection of electrical apparatus and existing circuits for compliance with the Wiring Rules encompassing:

- Protection requirements
- General condition
- Wiring systems
- Equipment and accessories
- Earthing

T4 Testing electrical apparatus and existing circuits encompassing:

- tests to ensure: insulation resistance is adequate; earth continuity is such that it will ensure the operation of protection devices under earth fault conditions; polarity of active/s and neutral for final subcircuits is correct; there is no transposition of earthing and neutral conductors; fault-loop impedance is sufficiently low; RCD for correct operation and sensitivity.

REQUIRED SKILLS AND KNOWLEDGE

- functional tests to ensure active/s and neutral for the same circuit are clearly identified with their circuit protection device.
- tests that show all circuits and devices operate as intended.
- tests to determine the fault level at a particular point in an installation.

T5 Documentation encompassing:

- results of tests conducted on an electrical apparatus and existing circuits comply with requirements and ensure the installation is safe.
- documents of the results of testing electrical apparatus and existing circuits as required by the local supply authority.
- documents of periodic testing and inspection of electrical equipment including tagging requirements.

KS02–EG199A Electrical apparatus and existing circuits — principles and requirements

Evidence shall show an understanding of electrical apparatus and existing circuits principles and requirements to an extent indicated by the following aspects:

T1 (Is the number correct?)Effects of electric current encompassing:

- Physiological effects of current.
- Basic principles by which an electric current can produce heat, light, motion and a chemical reaction.

T2 Single path practical circuit encompassing:

- Arrangement of energy source, protection device, switch and load in a circuit.
- The purpose of each component in the circuit.
- Consequences of an open-circuits, closed-circuits and short-circuits.

T3 Single-source multiple-path d.c. circuits encompassing:

- Circuit configurations and connection.
- Relationship between parameter of voltage, current, resistance power dissipation in the whole or any part of the circuit.
- Safely measuring the parameters for the whole or any part of the circuit.
- Methods of determining circuit behaviour for variation in any of the parameters from measured and calculated values.

T4 Alternating voltage and current generation, phase relationships, energy in an a.c. circuit encompassing:

- Sinusoidal voltage generation and resulting current.
- The terms period; maximum value; peak-to-peak value; instantaneous value; average value; root-mean-square (r.m.s.) value; and frequency.
- Three-phases generation.
- Relationship between the phase voltages generated in a three-phase alternator and the conventions for identifying each.
- Method of determining the phase sequence or phase rotation of a three-phase

REQUIRED SKILLS AND KNOWLEDGE

supply.

- Methods of determining power and energy supplied by three phase circuits.

T5 Fundamental safety principles of the AS/NZS 3000 Part 1 (Section 1) and deemed to comply solution given in Part 2 encompassing:

- Definition of terms
- Fundamental safety principles of protection against direct and indirect contact with live parts; thermal effects; overcurrent; earth faults; abnormal voltages; spread of fire; mechanical injury and external influences.
- Fundamental principles of installation design; selection and installation of equipment; means of compliance (including alterations, additions and repairs) and verification of compliance.

T6 Electric motor selection, starting method and overload protection encompassing:

- Types of motor enclosures suitable for given environmental conditions
- Criteria for selecting motor starters and overload protection.
- Types and connection arrangements for direct-on-line and reduced voltage starters.
- Thermal, magnetic and thermistor overload protection methods.

T7 Ability to apply AS/NZ 3000 requirements for protective and functional earthing encompassing:

- Purpose of protective and functional earthing.
- Parts of the protective earthing systems.
- Earthing arrangements, earthing of equipment and equipotential bonding.
- Methods of determining the maximum fault loop impedance for a circuit.
- Selection of protective conductor and active conductor sizes for each circuit to ensure earth-fault loop impedance is sufficiently low to operate the circuit protective device.

T8 MEN system and its application encompassing:

- The roles of the protective earthing (PE) and neutral (N) conductors in an a consumer's installation and their relationship to the protective earth neutral (PEN) conductor in the electricity distributor's system or sub-main to an outbuilding.
- The importance of the MEN link when a fault occurs.
- The likely consequences of the absence of the MEN link or high impedance in the PEN conductor when a fault occurs.
- The requirements for installation of an MEN link in an installation and an outbuilding.

T9 Knowledge of the application of transformers encompassing:

- Transformers used in distribution and transmission systems and large consumer installations.
- Transformers used in welding machines.
- Applications in appliances

REQUIRED SKILLS AND KNOWLEDGE

- Risks and safety control measures associated with connection and disconnection of instrument transformers
- Safe working procedures when connecting and testing transformers.
- AS/NZS 3000 requirements and restriction on the installation and use of transformers.

T10 Ability to apply AS/NZ 3000 requirements for protection of circuit against overcurrent and abnormal voltages encompassing:

- Minimum fault levels specified by electricity distributors
- Methods and arrangement for protection against short-circuit currents and overload currents.
- Coordination of overload and short-circuit protection devices.
- Coordination between conductors and overload protection device.
- Causes of over and undervoltage.
- Device and requirements for protection against over and undervoltage.

T11 Additional protection by use of RCDs and use of extra-low voltage for basic and fault protection encompassing:

- Limitation of an RCD to protect against contact with live parts
- AS/NZS 3000 requirements for use of RCDs.
- Conditions for use of extra-low voltage to provide for basic and fault protection
- AS/NZS 3000 requirements for installation of SELV and PELV systems

T12 Ability to apply AS/NZS 3000 requirements for control and protection of electrical apparatus and existing circuits encompassing:

- Devices for functions of isolation; emergency; Mechanical maintenance and functional control.
- Method for assessing prospective short circuit current.
- Devices and arrangement for protection against overload and short-circuit current.
- Additional protection by RCD
- Protection against switchboard internal arc faults.

T13 Knowledge of AS/NZS 3000 requirements for electrical apparatus and existing circuits in hazardous areas encompassing:

- Types of areas classified as a hazardous area
- Standards to which the maintenance of electrical equipment shall comply.
- Additional training required to work competently with electrical equipment for hazardous areas

T14 Ability to verify compliance of electrical apparatus and existing circuits in accordance with AS/NZS 3000 encompassing:

- Visual inspection to determine whether the electrical apparatus and existing circuits complies with requirements set out in Section 2 to 7 of AS/NZS 3000 and relevant specific installation standards.

REQUIRED SKILLS AND KNOWLEDGE

- Mandatory tests following guidance given in AS/NZS 3017
- Portable tool safety testing and tagging system in accordance with AS/NZS 3760.

T15 Ability to perform effective safe isolation of any equipment encompassing:

- Preparation of a 'safe work method statement' (SWMS) or Job Safety Analysis (JSA) for effective safe isolation.
- Safe methods for identifying source of supply to be isolated.
- Switching-off, lock-out and tagging procedures.
- Safe methods for confirming effective and safe isolation

T16 Ability to apply AS/NZS 3000 requirements to carryout repairs and terminating thermoplastic insulated cables; elastomer sheathed cables; XLPE sheathed cables; and high temperature cables; armoured cables; and neutral screened cables in a wide range of applications.

T17 Ability to perform the circuit tests required for electrical cables in a range of installations and final sub-circuit encompassing:

- Following safe testing procedures.
- Tests to show if the earth continuity and earth-fault loop impedance are sufficiently low.
- Testing to show if insulation resistance is sufficiently high.
- Testing to show if the polarity and circuit connections are correct.

T18 Ability to read, sketch and interpret electrical diagrams encompassing:

- Purpose and characteristics of schematic, block and wiring diagrams, plans and schedules.
- Conventions used in documenting electrical information
- Read and interpret schematic, block and wiring diagrams, plans and schedules
- Sketch electrical diagrams using conventional symbols

T19 Knowledge and understanding occupational safety and health encompassing:

- Basics of Occupational Safety and Health regulations
- Legal responsibilities for employers and employees
- Employers' and employees' own "duty of care".
- Safety committees and their role

T20 Knowledge and understanding of the requirements for personal safety in the workplace encompassing:

- Purpose and use of Safe Work Method Statements (SWMS) or Job Safety Analysis (JSA).
- Purpose and process of reporting OHS incidents.
- Safety procedures for working with electrical circuits and equipment.
- Procedures for safe and effective isolation of electrical supply.
- Regulations for the supervision of apprentices and trainees.

T21 Process in rescuing a person in contact with live electrical conductors or

REQUIRED SKILLS AND KNOWLEDGE

equipment and the primary importance of the safety of the rescuer.

T22 Application of emergency first aid requirements for an electric shock victim encompassing:

- Calling for help.
- Applying cardiopulmonary resuscitation (CPR).
- Selection and use of fire extinguishers to control electrical fire at accident site.

T23 Dangers of high voltage equipment and distribution systems encompassing:

- Step and touch and induced voltages.
- Sources of induced voltage and stored energy
- Creepage and clearance requirements.
- Application of safe working procedures in the vicinity of HV equipment.

T24 Systematic method of commissioning and decommissioning electrical equipment and existing circuits encompassing:

- Commissioning safety procedures
- Circuit voltage testing
- Phase rotation checks
- Functional testing
- Instrument and control parameter settings
- Decommissioning safety procedures.
- Identification of circuits with their control and protection devices.
- Impact of isolation on other parts of an installation.
- Tagging, testing and earthing.
- Safe removal of equipment.

T25 Diagnosing and rectifying faults in electrical apparatus and existing circuits encompassing:

- Faults such as open-circuit; short-circuit; incorrect connections; insulation failure; unsafe condition; apparatus/component failure; related mechanical failure;
- Apparatus such as control devices; fixed appliances/accessories; lighting; electrical machines motors and controls; socket outlets, transformers; protection and metering devices.
- Circuits such as those supplying fixed appliances; lighting; socket outlets; motors and controls circuits; transformers; electronic or computer based equipment.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Verify compliance and functionality of general electrical apparatus and existing circuit installations as described as described in 8) and including:
 - A Selecting correct tools and testing equipment.
 - B Identifying visual non-compliance defects.
 - C Using effective methods for conducting mandatory and optional tests.
 - D Identifying non-compliance and functional defects from

test results.

E Identifying causes of non-compliance and functional defects.

F Completing mandatory reporting.

G Dealing with unplanned events

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to verifying compliance and functionality of electrical apparatus and existing circuits.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to verification and testing for at least two types of installations containing electrical apparatus and existing circuits comprising an apparatus and existing circuit supplied by a single phase supply. The other installations shall include apparatus and existing circuits supplied by a three phase supply.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Electrical

UEENEEH101A Repair basic computer equipment faults by replacement of modules/sub-assemblies

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit deals with the repair of computer equipment by replacement of slot/plug connected modules/sub-assemblies. It encompasses safe working practices, following written and oral instruction and procedures, basic testing techniques, dismantling and assembling apparatus and disconnecting and reconnecting components.

Application of the Unit

Application of the Unit 2)

This unit may apply to persons entering work in electro technology and may be used in school-based vocational programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

License to practice

3)

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities industry components

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

AND

UEENEEE1 04A Solve problems in d.c. circuits

OR

UEENEEE1 23A Solve basic problems in electronic and digital equipment

Prerequisite Unit(s) 4)

UEENEEE1 Solve problems in d.c. circuits
04A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to repair computer equipment.	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work
	1.3 The nature of the repair is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established routines and procedures.
	1.6 Tools, apparatus and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Repair computer equipment	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Apparatus is dismantled in accordance with manufacturer's guide and supervisor's instructions.
	2.5 Modules/sub-assemblies are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|---|---|
| | 2.6 | Repairs are affected efficiently without damage to other components, apparatus or circuits. |
| | 2.7 | Apparatus is assembled in an appropriate sequence with all modules/sub-assemblies and parts correctly placed, secured and connected in accordance with manufacturer's guide or industry practice. |
| | 2.8 | Procedures for referring non-routine events to immediate supervisor for directions are followed. |
| | 2.9 | Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete and report repair work activities. | 3.1 OHS work completion risk control measures and procedures are followed. |
| | | 3.2 Repaired computer equipment is prepared and forwarded to appropriate person(s) for testing. |
| | | 3.3 Work area is cleaned and made safe in accordance with established procedures. |
| | | 3.4 Work supervisor is notified of the completion of the repair work in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out basic repairs to electronic apparatus by replacement of modules/sub-assemblies.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies..

KS01-EH101A

Basic computer equipment repairs

Evidence shall show an understanding of modules/sub-assemblies replacement for basic computer equipment repairs, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1. Personal computers structure and components and their function, including motherboards, memory modules, video modules, connecting buses, storage devices and the like.
- T2. Personal computers assembling and dismantling techniques
- T3. Personal computers hardware faults and troubleshooting techniques, confined to subsystem level
- T4. Basic network hardware and components
- T5. Connection of network media
- T6. Set up of standard network configuration
- T7. Cable and conductor terminations used in electronic equipment:
 - Cable and conductor types and characteristics:
 - Insulated wire
 - Harness wiring,
 - High performance cables - characteristics are transmission performance parameters and electrical characteristics
 - Types include UTP, FTP, and STP
 - Coaxial cables types and characteristics - qualshield, trishield coaxial are armour plated coaxial cables
 - Cable anchoring and support methods
 - Termination methods
- T8. Basic repairs to computer equipment by replacing modules/sub-assemblies

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors.  - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Carry out basic repairs to computer equipment by replacement of modules/sub-assemblies as described in 8) and including:
 - A Following manufacturer service instructions for access to components.
 - B Removing at least three different functional types of modules/sub-assemblies in the work instructions.
 - C Replacing modules/sub-assemblies to manufacturer

requirements.

D Repairing damaged wires/ribbon cable to an industry standard and without damage to other equipments; includes minor soldering.

E Reassembling the computer equipment correctly.

F Testing computer equipment operation.

G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and
specific
resources for
assessment**

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Relevant Australian and International industry standards for the repair of electronic assemblies and sub-assemblies
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to carrying out basic repairs to electronic apparatus by replacement of modules/sub-assemblies.

**Method of
assessment** **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE10 Fabricate, dismantle, assemble of utilities industry
2A components

UEENEEH102A Repairs basic electronic apparatus faults by replacement of components

Modification History

Not applicable.

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|---|-----|---|
| 3 | Complete and report repair work activities. | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | | 3.2 | Repaired apparatus is prepared and forwarded to appropriate person(s) for testing. |
| | | 3.3 | Work area is cleaned and made safe in accordance with established procedures. |
| | | 3.4 | Work supervisor is notified of the completion of the repair work in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out basic repairs to electronic apparatus by replacement of components.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH102A Component replacement to repair basic electronic apparatus faults

Evidence shall show an understanding of component replacement to repair basic electronic apparatus faults, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Electronic soldering equipment and techniques

- Workshop hazards and safety associated with soldering
- Quality concepts
- Electronic soldering equipment
- The soldering process
- Lead free solder

T2. Printed circuit board soldering techniques

- Electronic component mounting
- Solder rework of printed circuit boards.
- Faulty solder joints

T3. Soldering electronic cables

- Soldering multi-strand, ribbon and coaxial cables
- Effects and prevention of electrostatic discharge (ESD)

T4. Electronic component basics

- Types of components
- The physical features and primary characteristic of components
- Marking and codes on components
- Handling static sensitive components

T5. Electronic cable overview and coaxial cable

- Coaxial cables types and characteristics
- Coaxial cable termination

T6. Performance copper cables

- Twisted pair voice and data cables
- Insulation displacement (IDC) termination

REQUIRED SKILLS AND KNOWLEDGE

- Colour codes
- Terminating performance cables
- Harness wiring

T7. Electronic apparatus components

- Fault finding
- Testing
- Replacement

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Carry out basic repairs to electronic apparatus by replacement of components as described in 8) and including:
 - A Following manufacturer service instructions for access to components.
 - B Removing at least three different types of components specified in the work instructions.
 - C Replacing components to manufacturer requirements.
 - D Terminating correctly electronic cables using solderless termination techniques
 - E De-soldering and soldering to a high reliability standard and without damage to components.
 - F Reassembling the apparatus correctly.
 - G Testing apparatus operation.
 - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note: Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to carrying out basic repairs to electronic apparatus by replacement of components.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE10 Fabricate, dismantle, assemble of utilities industry
2A components

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out basic repairs electronic apparatus limited to replacement or repair of components, including sub systems in which the fault has been previously established.

At least two of the repairs shall require soldering and desoldering and at least two of the repairs shall require a cable to be correctly terminated using a solderless termination technique.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Electronics

UEENEEH103A Repair routine business equipment faults

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the confirmation of predictable faults and repair of such faults by repair or replacement of mechanical components and replacement of discrete and integrated components of business electronic equipment. It encompasses safe working practices, following written and oral instruction and routine testing and repair procedures, verifying equipment operation and reporting.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also used to augment formally acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

License to practice**3)**

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities industry components

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, cords and specifications

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills
 The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|--|
| <p>1 Prepare to repair business equipment.</p> | <p>1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the</p> |
|--|--|

ELEMENT**PERFORMANCE CRITERIA**

- work.
- 1.3 The nature of the repair is obtained from documentation or from work supervisor or customer to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established routines and procedures.
- 1.6 Tools, apparatus and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Repair business equipment.
- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Predictable faults are confirmed by following routine testing procedures.
- 2.5 Apparatus is dismantled in accordance with manufacturer's service guide and supervisor's instructions.
- 2.6 Component parts are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage.
- 2.7 Repairs are made in accordance with manufacturer's service guide and supervisor's instructions.

ELEMENT	PERFORMANCE CRITERIA
	2.8 Apparatus is assembled in an appropriate sequence with all components parts placed, secured and connected in accordance with manufacturer's guide or industry practice.
	2.9 Repaired equipment is test in accordance with routine procedures to verify that it functions correctly.
	2.10 Procedures for referring non-routine events to immediate supervisor for directions are followed.
	2.11 Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Complete and report repair work activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Equipment is place into service and customer and work supervisor notified of the completion of the repair work in accordance with routine procedures.
	3.4 Service report is complete in accordance with routine procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out routine repairs to business equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH103A Business equipment fault finding and repair

Evidence shall show an understanding of business equipment fault finding and repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Operational concepts of business machines

- Purpose and function of common business machines
- Operation, adjustment and maintenance of photocopiers, facsimile machines, printers and PCs
- The electronic communications and connections between business machines
- Hazardous materials used in the office and handling procedures

T2. Electro-mechanics of business machines

- The operating features of electric motors, relays and solenoids, clutches and tachometers
- Function and operation of feed mechanisms, drive-trains and cleaning processors

T3. Business equipment software basics

- Programming methods
- Configuration options
- Administration and maintenance functions

T4. Electronic cable and conductor terminations

- Cable and conductor types and characteristics:
 - Insulated wire
 - Harness wiring,
 - High performance cables - characteristics are transmission performance parameters and electrical characteristics
 - Types include UTP, FTP, and STP
- Coaxial cables types and characteristics - shielded, trishield coaxial are armour plated coaxial cables
- Cable anchoring and support methods
- Termination methods

T5. Electronic safe working practices

REQUIRED SKILLS AND KNOWLEDGE

- Risk management and assessment of risk encompassing:
 - Principle and purpose of risk management, and
 - Processes for conducting a risk assessment
 - Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
 - Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
 - Parts of an electronic systems and equipment where high-currents are likely.
 - Risks and control measures associated with high-voltage encompassing:
 - Parts of an electronic systems and equipment that operate at high-voltage,
 - The terms used - 'touch voltage', 'step voltage', 'induced voltage' and 'creepage' as they relate to the hazards of high-voltage, and
 - Control measures used for dealing with the hazards of high-voltage.
 - Risks and control measures associated with low voltage encompassing:
 - Risks associated with installation, fault finding, maintenance and repair.
 - Control measures before, while and after working on electronic systems or equipment
 - Isolation and tagging-off procedures.
 - Risks and restrictions in working live.
 - Control measures for working live.
 - Safety, selection, use, maintenance and care of test equipment encompassing:
 - Safety characteristics of electrical testing devices,
 - Chemical cleaning solvents, glues and joining wastes used in electronics,
 - Safe use of electrical testing device, and
 - Checks and storage methods for maintaining the safety of testing devices.
- T6. Business equipment fault finding and repair
- Fault finding table, charts and procedures
 - Testing procedures
 - Component replacement and repair
- T7. Enterprise communication methods
- Communicating with personnel encompassing:
 - Oral communications
 - Written procedures and work instructions
 - Communicating with suppliers
 - Communicating with customers

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Carry out routine repairs to business equipment as described in 8) and including:
 - A Following service instructions to confirm reported fault.
 - B Following service instructions to access components.
 - C Removing and replace mechanical components.
 - D Removing and replace electrical/electronic components.
 - E Reassembling the business equipment correctly.

F Testing equipment operation.

G Completing service report accurately.

H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and
specific
resources for
assessment** 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to carrying out routine repairs to business equipment.

**Method of
assessment** 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies.

This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEED101A Use computer applications relevant to a workplace

UEENEEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEEH102A Repair basic electronic apparatus faults by replacement of components

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in carrying out routine repairs to business equipment by confirming at least four predictable faults in low volume (up to 40 ppm) photocopiers and following routine procedures to repair such faults.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electronics

UEENEEH104A Set up and test residential video/audio equipment

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers setting-up of non-fixed audio and video equipment as directed in user manuals in a residential or business environment. It encompasses safe working practices, connection and secure and optimum placement of system components, following written and oral instruction and procedures and customer relations.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also used to augment previously acquired competencies.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

License to practice

3)

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 Apply Occupational Health and Safety
01A regulations, codes and practices in the
 workplace

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to set up audio/video equipment.	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are reported and advise on risk control measures are sought from the work supervisor.
	1.4 Details of the system are obtained from purchase documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.6 Materials that may be required for the work are

ELEMENT	PERFORMANCE CRITERIA
	obtained and checked in accordance with routines and procedures.
	1.7 Tools and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Set up audio/video equipment.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/components are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 System components are unpacked to ensure they are complete and undamaged.
	2.5 System components are placed for optimum performance within constraints imposed by the area and customer.
	2.6 Systems components are connected in accordance with manufacturer's instructions.
	2.7 System functions are set to customer's requirements and tested for correct operation.
	2.8 Procedures for referring non-routine events to immediate supervisor for directions are followed.
	2.9 System set up is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Complete system set up and report.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established routines.

ELEMENT**PERFORMANCE CRITERIA**

- 3.3 All system/component documentation is handed over to the customer.
- 3.4 Work supervisor is notified of the completion of the work in accordance with established routine.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up and testing residential audio/video equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH104A

Residential video/audio equipment

Evidence shall show an understanding of residential video/audio equipment setting up and testing procedures, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Audio and video component functional controls

- Types of components and their functional controls
- Function set up procedures
- Testing

T2. Audio and video system set up

- Audio components in a system
- Video components in a system
- Component connection arrangements
- Set up options and procedures

T3. Electronic cable and conductor terminations

- Cable and conductor types and characteristics:
 - Insulated wire
 - Harness wiring,
 - High performance cables characteristics are transmission performance parameters and electrical characteristics
 - Types include UTP, FTP, and STP
- Coaxial cables types and characteristics - qualshield, trishield coaxial are armour plated coaxial cables
- Cable anchoring and support methods
- Termination methods

T4. Electronic safe working practices

- Risk management and assessment of risk encompassing:
 - Principle and purpose of risk management, and
 - Processes for conducting a risk assessment
- Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
- Parts of an electronic systems and equipment where high-currents are likely.
- Risks and control measures associated with high-voltage encompassing:
 - Parts of an electronic systems and equipment that operate at high-voltage,
 - The terms used - ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of high-voltage, and
 - Control measures used for dealing with the hazards of high-voltage.
- Risks and control measures associated with low voltage encompassing:
 - Risks associated with installation, fault finding, maintenance and repair.
 - Control measures before, while and after working on electronic systems or equipment
 - Isolation and tagging-off procedures.
 - Risks and restrictions in working live.
 - Control measures for working live.
- Safety, selection, use, maintenance and care of test equipment encompassing:
 - Safety characteristics of electrical testing devices,
 - Chemical cleaning solvents, glues and joining wastes used in electronics,
 - Safe use of electrical testing device, and
 - Checks and storage methods for maintaining the safety of testing devices

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this

shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set up and test residential audio/video equipment as described in 8) and including:

A Unpacking and checking system components against purchase documents and manufacturer's content list.

B Placing components for optimum performance within constraints imposed by the area and customer.

C Connecting components to manufacturer's instructions.

D Setting functional controls to customer's requirements.

E Testing functional operation.

F Completing necessary documentation, including handing over all system/component documents to the customer.

G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to setting up and testing residential audio/video equipment.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in setting up and testing residential audio/video equipment by assembling, setting up and functional testing:

- An audio system consisting of a pair of speakers, a preamplifier/power amplifier or an integrated amplifier, tuner and compact disk player, and
- An audio/video system consisting of television receiver, 5-channel amplifier, five speakers and a digital versatile disk player.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Electronics

UEENEEH105A Verify functionality and compliance of custom electronic installations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers testing and visual inspection for verifying that a custom electronic system and components are safe and comply with requirements and functions as intended. It encompasses working safely, conducting compliance tests, conducting visual inspections, identifying non-compliance defects and mandatory reporting requirements.

Application of the Unit

Application of the Unit **2)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Where the components of the custom electronic system

License to practice

3)

are connected to the public telephone system facility practice in the workplace is also subject to ACMA regulations to undertake cabling work.

Note:

Units UEENEEF101A and UEENEEF102A provide the required skill and knowledge for registration in accordance with ACMA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities industry components

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE1 08A Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits

UEENEEH1 06A Assemble and set up fixed video/audio components and systems in buildings and premises

Prerequisite Unit(s) 4)

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to verify custom electronic installations.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.5 Location of system components is determined from specifications and diagrams.
	1.6 Inspection and tests are appropriately sequenced in accordance with job schedule.
	1.7 Materials needed for the tests and verification are obtained in accordance with established procedures and checked against job requirements.
	1.8 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.
2 Visually inspect the installation.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.3 Cabling is checked for appropriate type and size.
	2.4 Cabling, accessories and components are validated as being suitably located, securely fixed and suitably protected from damage or corrosion.

ELEMENT

PERFORMANCE CRITERIA

- 2.5 Accessories and components are validated as being appropriately rated and meeting functional requirements.
- 2.6 Evidence that equipment complies with safety and functional requirements is cited.
- 2.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
- 2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.9 Inspection is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Conduct tests.
 - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
 - 3.2 Testing or measuring on a live and operating system in strict accordance with OHS requirements and within established safety procedures.
 - 3.3 Circuits/machines/plant are checked as being isolated in strict accordance OHS requirements and procedures.
 - 3.4 Tests are conducted to verify that the cabling is safe and meets specified standards and any applicable regulatory requirements.
 - 3.5 Custom electronic apparatus and devices are tested to ensure the installation is safe and functions as intended.
 - 3.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
 - 3.7 Unexpected situations are dealt with safely

ELEMENT

PERFORMANCE CRITERIA

- and with the approval of an authorised person.
- 3.8 Testing is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 4 Report inspection and verification findings.
- 4.1 OHS work completion risk control measures and procedures are followed.
- 4.2 Work site and equipment is cleaned and made safe in accordance with established procedures.
- 4.3 Non-compliance defects are identified and reported in accordance with established procedures.
- 4.4 Recommendations for rectifying defects are made in accordance with established procedures.
- 4.5 Work completion is documented and an appropriate person(s) notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of custom electronic installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH105A Custom electronic installations, testing and verification methods

Evidence shall show an understanding of custom electronic installations, testing and verification methods, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Sound reproduction fundamentals

- Sound wave propagation
- Timbre of sound
- Effects of other medium of sound waves
- Characteristics of the human ear
- Difference between mono and stereo
- Surround sound principles

T2 Audio reproduction, electronic components

- Preamplifiers amplifier encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Power and integrated amplifiers encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Graphic equalizers encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Component installation and interconnections

T3 Audio reproduction, speaker fundamentals

- Types of speaker drives and their operating mechanism
- Speaker cabinet characteristics
- Purpose and circuit arrangement of typical cross-over networks
- Speaker installation and connections

T4 Audio/video recording and replay components repair basics

- Sub-system components (i.e. functional blocks) and their operating parameters

REQUIRED SKILLS AND KNOWLEDGE

- Common faults, their symptoms and cause.
- Fault location procedures and testing points
- Device adjustments - audio/video recording and replay components are audio cassette player/recorders, compact disk players, video cassette player/recorder, digital versatile disk and super audio compact players.

T5 Audio/video control equipment

- Types of control devices and their operating principles
- Control equipment arrangement in an audio/video system

T6 Video systems installation

- Installation and set-up of digital TV reception equipment
- Installation and set-up of DVD machines
- Operating requirements of remote control units

T7 Electronic safe working practices

- Risk management and assessment of risk encompassing:
 - Principle and purpose of risk management, and
 - Processes for conducting a risk assessment
- Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
 - Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
 - Parts of an electronic systems and equipment where high-currents are likely.
- Risks and control measures associated with high-voltage encompassing:
 - Parts of an electronic systems and equipment that operate at high-voltage,
 - The terms used - 'touch voltage', 'step voltage', 'induced voltage' and 'creepage' as they relate to the hazards of high-voltage, and
 - Control measures used for dealing with the hazards of high-voltage.
- Risks and control measures associated with low voltage encompassing:
 - Risks associated with installation, fault finding, maintenance and repair.
 - Control measures before, while and after working on electronic systems or equipment
 - Isolation and tagging-off procedures.
 - Risks and restrictions in working live.
 - Control measures for working live.
- Safety, selection, use, maintenance and care of test equipment encompassing:
 - Safety characteristics of electrical testing devices,
 - Chemical cleaning solvents, glues and joining wastes used in electronics,
 - Safe use of electrical testing device, and
 - Checks and storage methods for maintaining the safety of testing devices.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are

included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Verify compliance and functionality of custom electronic installations as described in 8) and including:
 - A Identifying visual defects.
 - B Conducting all tests safely and correctly.
 - C Identifying non-compliant defects from test results.

- D Recommending appropriate corrective actions.
- E Acting within regulatory limits.
- F Reporting legibly and accurately.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to verifying compliance and functionality of custom electronic installations.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to verifying compliance and functionality of custom electronic installations with at least two different new or existing custom electronic installations. One installation shall include a basic integrated system.

Verification shall include the following:

- Visual inspection of cabling, accessories and apparatus and controls
- Conducting all safety and compliance tests

Note:

1. Testing includes isolation testing; insulation resistance; cable tests to specified standard (e.g. Category 5 standard); polarity tests; continuity of earthing; correct connections performance tests.

2. Electrical testing may be limited by the scope permitted under restricted electrical work

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers installing of fixed audio/video components and systems in a residential or business environment. It encompasses safe working practices; secure placement and connection of system components, following written and oral instruction and procedures and customer relations.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training or approved training programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various

License to practice

3)

jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities industry components

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE1 08A Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|--|
| 1 Prepare to install audio/video components and systems. | 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines. |

ELEMENT

PERFORMANCE CRITERIA

- followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor and/or other appropriate person to ensure the work is co-ordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Install audio/video components and systems.
- 2.1 Established OHS risk control measures for carrying out the work are followed.
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.3 Audio/video components are installed to comply with standards and job specifications with sufficient excess to affect terminations.
- 2.4 Accessories are installed straight and square in the required locations and within acceptable tolerances.
- 2.5 Cables and conductors are terminated at accessories in accordance with manufacture's specifications and regulatory requirements
- 2.6 Procedures for referring non-routine events to immediate supervisor for directions are followed.
- 2.7 The installation is carried out efficiently without waste of materials or damage to apparatus,

ELEMENT

PERFORMANCE CRITERIA

		circuits or the surrounding environment and using sustainable energy practices.
3	Complete installation work and report.	3.1 OHS work completion risk control measures and procedures are followed.
		3.2 Work site is cleaned and made safe in accordance with established procedures.
		3.3 Work supervisor is notified of the completion of the installation work in accordance with established routines.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assembling and setting up fixed audio/video components and systems in buildings and premises.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EA106A **assembly**

Video/audio components and system

Evidence shall show an understanding of video/audio components and system assembly and setting up in building and premises, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Sound reproduction fundamentals

- Sound wave propagation
- Timbre of sound
- Effects of other medium of sound waves
- Characteristics of the human ear
- Difference between mono and stereo
- Surround sound principles

T2. Audio reproduction, electronic components

- Preamplifiers amplifier encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Power and integrated amplifiers encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Graphic equalizers encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Component installation and interconnections

T3. Audio reproduction, speaker fundamentals

- Types of speaker drives and their operating mechanism
- Speaker cabinet characteristics
- Purpose and circuit arrangement of typical cross-over networks
- Speaker installation and connections

REQUIRED SKILLS AND KNOWLEDGE

T4. Audio/video recording and replay components repair basics

- Sub-system components (i.e. functional blocks) and their operating parameters
- Common faults, their symptoms and cause.
- Fault location procedures and testing points
- Device adjustments - audio/video recording and replay components are audio cassette player/recorders, compact disk players, video cassette player/recorder, digital versatile disk and super audio compact players.

T5. Audio/video control equipment

- Types of control devices and their operating principles
- Control equipment arrangement in an audio/video system

T6. Video systems installation

- Installation and set-up of digital TV reception equipment
- Installation and set-up of DVD machines
- Operating requirements of remote control units

T7. Electronic safe working practices

- Risk management and assessment of risk encompassing:
 - Principle and purpose of risk management, and
 - Processes for conducting a risk assessment
- Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
 - Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
 - Parts of an electronic systems and equipment where high-currents are likely.
- Risks and control measures associated with high-voltage encompassing:
 - Parts of an electronic systems and equipment that operate at high-voltage,
 - The terms used - 'touch voltage', 'step voltage', 'induced voltage' and 'creepage' as they relate to the hazards of high-voltage, and
 - Control measures used for dealing with the hazards of high-voltage.
- Risks and control measures associated with low voltage encompassing:
 - Risks associated with installation, fault finding, maintenance and repair.
 - Control measures before, while and after working on electronic systems or equipment
 - Isolation and tagging-off procedures.
 - Risks and restrictions in working live.
 - Control measures for working live.
- Safety, selection, use, maintenance and care of test equipment encompassing:
 - Safety characteristics of electrical testing devices,
 - Chemical cleaning solvents, glues and joining wastes used in electronics,

REQUIRED SKILLS AND KNOWLEDGE

- Safe use of electrical testing device, and
- Checks and storage methods for maintaining the safety of testing devices.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to

its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Assemble and set up fixed audio/video components and systems in buildings and premises as described in 8) and

including:

- A Reading and interpreting drawings of circuit arrangements and component locations.
- B Placing and securing components and accessories accurately.
- C Maintaining fire integrity.
- D Terminating cable and conductors correctly.
- E Connecting components to manufacturer's instructions.
- F Setting functional controls to customer's requirements.
- G Testing functional operation.
- H Completing necessary documentation including handing over all system/component documents to the customer.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to assembling and setting up fixed audio/video components and systems in buildings and premises.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE102A Fabricate, assemble and dismantle utilities industry components
- UEENEEE105A Fix and secure electrotechnology equipment
- UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
- UEENEEE108A Lay wiring/cablings and terminate accessories for extra-low voltage (ELV) circuits

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by assembling and setting up fixed audio/video systems in building and premises on at least two occasions.

Systems are to consist of surround sound and multi-room speakers, central audio and home theatre components.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

UEENEEH107A Repair predictable faults in general electronic apparatus

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers identifying predictable faults and repairing by replacement of subassemblies in electronic apparatus. The unit encompasses safe working practices, interpreting circuit diagrams and service manuals, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also used to augment formally acquired competencies.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to

License to practice

3)

regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

- UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace
- UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components
- UEENEEH1 02A Repairs basic electronic apparatus faults by replacement of components
- UEENEEH1 11A Troubleshoot single phase input d.c. power supplies

Prerequisite Unit(s)

4)

UEENEEH1 Troubleshoot digital sub-systems

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'.

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to repair electronic apparatus.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment, testing devices and service manual needed to carry out the work are obtained in accordance with established

ELEMENT	PERFORMANCE CRITERIA
	procedures and checked for correct operation and safety.
2 Find and repair faults.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Fault finding is approached methodically drawing on knowledge of electronic apparatus and circuit using measured and calculated values of apparatus parameters and/or with reference to manufacturer's service manual.
	2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
	2.6 Faulty components are rechecked and their fault status confirmed.
	2.7 Repairs are made in accordance with manufacturer's service guide and supervisor's instructions.
	2.8 Apparatus is reassembled and tested for safety and functionality in preparation for return to the customer.
	2.9 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.10 Repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Completion and report repair activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Written justification is made for repairs to apparatus.
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out repairs of predictable faults in general electronic apparatus.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH107A

General electronic apparatus repair

Evidence shall show an understanding of fault-finding techniques, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Technical manuals and catalogues

- Typical format
- How to read and apply information

T2. General electronic apparatus fault finding and repair

- Block diagram sub-system components (i.e. functional blocks) and their operating parameters
- Common faults, their symptoms and cause.
- Fault location procedures and testing points
- Component repair/replacement
- Device adjustments - general electronic apparatus are data capture devices, security panels, fire protection panels, industrial control apparatus, instrumentation electronics and any apparatus not specifically covered under other clauses but for which there is a service manual and circuit diagrams.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Carry out repairs of predictable faults in general electronic apparatus in buildings and premises as described in 8) and including:

- A Using methodical fault finding techniques.
- B Finding faults efficiently.
- C Replacing components without damage.
- D Providing written justification for the repairs.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to carrying out repairs of predictable faults in general electronic apparatus.

**Method of
assessment** 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH1 02A Repair basic electronic apparatus faults by replacement of components

UEENEEH1 11A Troubleshoot single phase input d.c. power supplies

UEENEEH1 12A Troubleshoot digital sub-systems

UEENEEH1 15A Develop software solutions for microcontroller based systems

UEENEEH1 39A Troubleshoot basic amplifier circuits

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out repairs of predictable faults in two different general electronic apparatus for a given representative range.

Note.

Examples of general electronic apparatus are data capture devices, security panels, fire protection panels, industrial control apparatus, instrumentation electronics and the like.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Electronics

UEENEEH108A Assemble and install reception antennae and signal distribution equipment

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the installation, positioning and securing of terrestrial and satellite arrays and dishes and associated amplifiers and the reticulation of cables and connection of multiple access outlets and associated equipment. It encompasses safe working practices, selection of antennae and distribution components, installation techniques, use of testing devices and following written and oral instruction and procedures.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training or approved training programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

License to practice

3)

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare to install and set-up reception antennae and signal distribution systems. | 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines. |
| | 1.2 Established OHS risk control measures are |

ELEMENT

PERFORMANCE CRITERIA

- followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor and/or other appropriate person to ensure the work is co-ordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Install reception antennae and signal distribution systems.
- 2.1 Established OHS risk control measures for carrying out the work are followed.
- 2.2 Circuits/components are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.3 The optimum location for an antenna to be installed is determine from signal tests and limitation imposed by the customer and regulation.
- 2.4 Accessories are installed straight and square in the required locations and within acceptable tolerances.
- 2.5 Cables and conductors are terminated at accessories in accordance with manufacture's specifications and regulatory requirements.
- 2.6 Procedures for referring non-routine events to immediate supervisor for directions are followed.

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|---|--|
| | 2.7 | The installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices. |
| 3 | Set-up reception antennae and signal distribution systems and report. | |
| | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | 3.2 | Adjustments are made to the antenna and the system to optimise reception at each outlet. |
| | 3.3 | Work site is cleaned and made safe in accordance with established procedures. |
| | 3.4 | Work supervisor is notified of the completion of the installation work in accordance with established routines. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assembling and erecting reception antennae and signal distribution equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH108A

Antenna assembly and installation

Evidence shall show an understanding of antenna assembly and installation, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. signal reception

- Inadequate / optimum / excessive signal level
- Multipath transmission
- Interference

T2. TV antennas

- Types
- Operating characteristics
- TV antenna terminology
- Multiple antennas
- Assembly and installation

T3. Transmission lines

- Types
- Characteristic impedance
- Attenuation
- Bandwidth
- Standing waves
- Installation

T4. Antenna distribution systems

- Identical and adjacent channel interference
- Masthead/distribution amplifiers
- Diplexors
- Triplexors
- Splitters and couplers
- "T" networks and existing loop wired networks
- practical small distribution system design
- Field strength meters

REQUIRED SKILLS AND KNOWLEDGE

- Attenuators
- VCR output injection
- Installation

T5. Satellite receivers

- Block diagram
- Operating characteristics
- Installation

T6. Antenna fault-finding

- Common faults
- Fault finding and repair
- Testing

T7 Electronic safe working practices

- Risk management and assessment of risk encompassing:
 - Principle and purpose of risk management, and
 - Processes for conducting a risk assessment
- Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
 - Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
 - Parts of an electronic systems and equipment where high-currents are likely.
- Risks and control measures associated with high-voltage encompassing:
 - Parts of an electronic systems and equipment that operate at high-voltage,
 - The terms used - 'touch voltage', 'step voltage', 'induced voltage' and 'creepage' as they relate to the hazards of high-voltage, and
 - Control measures used for dealing with the hazards of high-voltage.
- Risks and control measures associated with low voltage encompassing:
 - Risks associated with installation, fault finding, maintenance and repair.
 - Control measures before, while and after working on electronic systems or equipment
 - Isolation and tagging-off procedures.
 - Risks and restrictions in working live.
 - Control measures for working live.
- Safety, selection, use, maintenance and care of test equipment encompassing:
 - Safety characteristics of electrical testing devices,
 - Chemical cleaning solvents, glues and joining wastes used in electronics,
 - Safe use of electrical testing device, and
 - Checks and storage methods for maintaining the safety of testing devices.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this

Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Assemble and erect reception antennae and signal distribution equipment as described in 8) and including:
 - A Reading and interpreting drawings of circuit arrangements and component locations.
 - B Placing and securing antenna and accessories accurately.

- C Maintaining fire integrity.
- D Terminating cable and conductors correctly.
- E Adjusting for optimum reception at each outlet.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to assembling and erecting reception antennae and signal distribution equipment.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE1 08A Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by installing, connecting and setting up a typically representative reception antennae and signal distribution systems on at least two occasions.

Systems are to consist of multiple outlets for multiple users.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers setting-up of electronic gaming and games equipment to manufactures' instructions in compliance with regulations. It encompasses safe working practices, connection and secure placement of gaming/games equipment, following written and oral instruction and procedures and customer relations.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also be used to augment previously acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, access to gaming premises and where applicable contracts of training such as apprenticeships.

Note:

License to practice

3)

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 Apply Occupational Health and Safety
01A regulations, codes and practices in the
 workplace

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to set up gaming equipment.	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
	1.4 Details and location of the equipment to be set up are obtained from purchase documentation or from work supervisor to establish the scope of work to be undertaken.
	1.5 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

ELEMENT	PERFORMANCE CRITERIA
	1.6 Materials that may be required for the work are obtained and checked in accordance with routines and procedures.
	1.7 Tools and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Set up gaming equipment.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Circuits/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.3 Equipment is placed in accordance with regulatory and customer requirements.
	2.4 Equipment is connected in accordance with manufacturer's instructions and regulatory and customer requirements. (see note 1)
	2.5 Equipment operating functions are set to regulatory and customer requirements and tested for correct operation.
	2.6 Procedures for referring non-routine events to immediate supervisor for directions are followed.
	2.7 Equipment set up is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Complete system set up and report.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established routines.
	3.3 Documentation detailing equipment maintenance and operating instructions is handed over to the customer.
	3.4 Work supervisor is notified of the completion of

ELEMENT

PERFORMANCE CRITERIA

the work in accordance with established routine.

Note 1:

Connection of equipment may include both plug connected power supply and network

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up and testing gaming/games equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH109A

Gaming and game equipment set up and testing

Evidence shall show an understanding of gaming and game equipment set up and testing, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Enterprise communication methods

- Communicating with personnel encompassing:
 - Oral communications
 - Written procedures and work instructions
- Communicating with suppliers
- Communicating with customers

T2. Enterprise customer relations protocols

- Purpose of customer relations
- Procedures for dealing with customers
- Dealing with customer issues

T3. Regulatory requirements and codes of practice for the gaming equipment

- Types of equipment permitted —
 - Location restrictions and requirements
 - Operational restrictions and requirements
- Security encompassing:
 - Access to customers premises
 - Access to machines

T4. Gaming machine systems and equipment overview

- Gaming industry terminology
- Functions and specifications of the machine and its components
- Types of gaming machines
- Operational features of different machines and systems

T5. Gaming machine equipment adjustment and maintenance

- Machine access and security encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- master reset procedures,
- opening and closing doors,
- period reset procedures,
- use of audit and reset key
- Tests, adjustments and clearances encompassing:
 - Coin/note jams
 - Hopper to coin chute
 - Screens
 - Touch screen calibration
- Removals, installs and checks encompassing:
 - Bank note acceptors,
 - Card readers
 - Coin comparators,
 - Divertor
 - Drop doors
 - Hopper
 - Lighting
 - Machine positioning and mounting
 - Printer paper roll feeding
 - Switches
- Attendant screens and functions

T6. Electronic Safe working practices

- Risk management and assessment of risk encompassing:
 - Principle and purpose of risk management, and
 - Processes for conducting a risk assessment
- Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
 - Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
 - Parts of an electronic systems and equipment where high-currents are likely.
- Risks and control measures associated with high-voltage encompassing:
 - Parts of an electronic systems and equipment that operate at high-voltage,
 - The terms used - 'touch voltage', 'step voltage', 'induced voltage' and 'creepage' as they relate to the hazards of high-voltage, and
 - Control measures used for dealing with the hazards of high-voltage.
- Risks and control measures associated with low voltage encompassing:
 - Risks associated with installation, fault finding, maintenance and repair.
 - Control measures before, while and after working on electronic systems or

REQUIRED SKILLS AND KNOWLEDGE

- equipment
- Isolation and tagging-off procedures.
- Risks and restrictions in working live.
- Control measures for working live.
- Safety, selection, use, maintenance and care of test equipment encompassing:
 - Safety characteristics of electrical testing devices,
 - Chemical cleaning solvents, glues and joining wastes used in electronics,
 - Safe use of electrical testing device, and
 - Checks and storage methods for maintaining the safety of testing devices.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may

be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or

- licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
 - Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set up and test gaming/games equipment as described in 8) and including:
 - A Placing equipment in accordance with regulatory and customer requirements.
 - B Connecting equipment to manufacturer's instructions and regulatory and customer requirements.
 - C Setting functional controls to regulatory and customer's requirements.
 - D Testing functional operation.
 - E Completing necessary documentation including handing over equipment maintenance and operating instructions documents to the customer.
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to setting up and testing gaming/games equipment.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be in relation to setting up and testing a representative range of gaming machines connected to a network and commercial games machines to customer and regulatory requirement.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers installation of components for audio/video facilities in buildings and premises. The unit encompasses working safely and to specifications and standards, matching equipment with that specified for a given location, terminating and interconnecting cables/conductors and completing the necessary installation documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training or approved training programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

License to practice**3)**

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE1 08A Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>

ELEMENT**PERFORMANCE CRITERIA**

- followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor and/or other appropriate person to ensure the work is co-ordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Install audio/video components and systems.
- 2.1 Established OHS risk control measures for carrying out the work are followed.
- 2.2 Circuits/components are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.3 Audio/video components are installed to comply to standards and job specifications with sufficient excess to affect terminations.
- 2.4 Accessories are installed straight and square in the required locations and within acceptable tolerances.
- 2.5 Cables and conductors are terminated at accessories in accordance with manufacture's specifications and regulatory requirements.
- 2.6 Procedures for referring non-routine events to immediate supervisor for directions are followed.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|--|-----|--|
| | 2.7 | The installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices. |
| 3 Complete installation work and report. | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | 3.2 | Work site is cleaned and made safe in accordance with established procedures. |
| | 3.3 | Work supervisor is notified of the completion of the installation work in accordance with established routines. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing commercial audio/video system components.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH110A

Commercial audio/video system installation

Evidence shall show an understanding of commercial audio/video system installation, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects

T1. Sound reproduction fundamentals

- Sound wave propagation
- Timbre of sound
- Effects of other medium of sound waves
- Characteristics of the human ear
- Difference between mono and stereo
- Surround sound principles

T2. Audio reproduction, electronic components

- Preamplifiers amplifier encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Power and integrated amplifiers encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Graphic equalizers encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Component installation and interconnections

T3. Audio reproduction, speaker fundamentals

- Types of speaker drives and their operating mechanism
- Speaker cabinet characteristics
- Purpose and circuit arrangement of typical cross-over networks
- Speaker connections

T4. Loud speakers and microphones

- Loud speaker construction and applications
- Operation of circuits and cross over networks

REQUIRED SKILLS AND KNOWLEDGE

- Optimum layout of speaker systems
- Principle and operation of microphones
- Speaker and microphone installation in connections

T5. Specialist audio/video cabling installation and termination

- Features of high performance audio and video cables and interconnects
- High performance audio and video cables and interconnects encompassing:
 - Installation methods and limitations
 - Terminations techniques as specified by cable manufacturers

T6. Professional audio electronics

- Complex audio systems used for live sound or theatre application
- Connections and phasing of equipment
- Optimum signal levels for the acoustic environment
- Connection and adjustment of signal processing units
- Tuning, adjustment and diagnosis of systems

T7. Video and display set up

- Projectors encompassing:
 - Aspect ratio
 - Screen size
 - Orientation
 - Throw distance, vertical elevation and horizontal orientation
- Direct view monitors adjustments

T8. Audio/video control equipment

- Types of control devices and their operating principles
- Control equipment arrangement in an audio/video system

T9. Audio/video recording and replay components basic faults and repairs

- Sub-system components (i.e. functional blocks) and their operating parameters
- Common faults, their symptoms and cause.
- Fault location procedures and testing points
- Device adjustments - audio/video recording and replay components are audio cassette player/recorders, compact disk players, video cassette player/recorder, digital versatile disk and super audio compact players.

T10 Electronic Safe working practice encompassing:

- Risk management and assessment of risk:
 - Principle and purpose of risk management, and
 - Processes for conducting a risk assessment
- Hazards associated with low-voltage, extra-low voltage and high-currents:
 - Parts of an electronic systems and equipment that operate at low-voltage and

REQUIRED SKILLS AND KNOWLEDGE

- extra-low voltage,
- Parts of an electronic systems and equipment where high-currents are likely.
- Risks and control measures associated with high-voltage:
 - Parts of an electronic systems and equipment that operate at high-voltage,
 - The terms used - 'touch voltage', 'step voltage', 'induced voltage' and 'creepage' as they relate to the hazards of high-voltage, and
 - Control measures used for dealing with the hazards of high-voltage.
- Risks and control measures associated with low voltage:
 - Risks associated with installation, fault finding, maintenance and repair.
 - Control measures before, while and after working on electronic systems or equipment
 - Isolation and tagging-off procedures.
 - Risks and restrictions in working live.
 - Control measures for working live.
- Safety, selection, use, maintenance and care of test equipment:
 - Safety characteristics of electrical testing devices,
 - Chemical cleaning solvents, glues and joining wastes used in electronics,
 - Safe use of electrical testing device, and
 - Checks and storage methods for maintaining the safety of testing devices.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships.

However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install commercial audio/video system components as described in 8) and including:

- A Reading and interpreting drawings of system arrangements and component locations.
- B Placing and securing components and accessories accurately.
- C Maintaining fire integrity.
- D Connecting apparatus and associated components to comply with requirements.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a

workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing commercial audio/video system components.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE1 Fabricate, assemble and dismantle utilities industry components
02A

UEENEEE1 Fix and secure electrotechnology equipment
05A

UEENEEE1 Use drawings, diagrams, schedules, standards, codes and
07A specifications

UEENEEE1 Lay wiring/cabling and terminate accessories for extra-low voltage
08A (ELV) circuits

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and connecting a typically representative range of commercial audio/video system components in buildings and premises on at least two occasions.

Note:

Examples of systems are dedicated audio and video facilities in meeting rooms, video conferencing facilities, and centrally controlled audio/video facilities across a number of locations.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Electronics

UEENEEH111A Troubleshoot single phase input d.c. power supplies

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers determining correct operation of independent power supplies and power supply sections of electronic apparatus. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in d.c. power supplies with single phases input.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended for development of competency in either entry-level employment based programs incorporated in approved contracts of training or other approved training programs. It may also be used to augment formally acquired competencies.

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 04A Solve problems in d.c. circuits

Prerequisite Unit(s)

4)

UEENEEH1 02A Repair basic electronic apparatus faults by replacement of components

AND

UEENEEH1 14A Solve problems in frequency dependent circuits

OR

UEENEEE1 19A Solve problems in multiple path extra low voltage (ELV) a.c. circuits

OR

UEENEEH1 69A Solve problems in basic electronic circuits

OR

UEENEEG1 01A Solve problems in electromagnetic devices and related circuits

UEENEEG1 02A Solve problems in low voltage a.c. circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'.

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to troubleshoot d.c. power supplies.	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

ELEMENT	PERFORMANCE CRITERIA
2 Solve d.c. power supply problems.	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Fault finding is approached methodically drawing on knowledge of dc power supplies using measured and calculated values of parameters.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6 Fault finding activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Complete work and document problem solving activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to troubleshooting problems is documented.
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and troubleshooting d.c. power supplies with single phase input.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies..

KS01-EH111A

Single phase input d.c. power supplies

Evidence shall show an understanding of single phase input d.c. power supplies , applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects

T1. power supplies operating principles and applications

- Power supply function
- Block diagram identifying each sub-system
- Expected waveforms in a power supply
- Constant Voltage
- Constant Current

T2. D.C. rectification circuits

- Junction diode characteristics
- Transformer turns ratio and losses
- Half wave and full wave rectifiers
- Dual rail supply

T3. Filter circuits

- Capacitive and inductive filters
- Ripple

T4. Zener diode regulator

- Zener shunt regulator circuit
- Load and line regulation definitions
- Operating parameters and data sheets

T5. Three terminal regulator circuits

- Need for regulation
- Three terminal regulator characteristics
- Short circuit protection
- Line and load regulation
- Regulated power efficiency
- Remote voltage sensing

REQUIRED SKILLS AND KNOWLEDGE

T6. Electronic testing and measuring devices and techniques

- Test/measuring devices and their application - analogue and digital multimeters, voltage and digital testers, signal generators and oscilloscopes
- Connection of test/measuring devices into a circuit encompassing:
 - safety procedures
 - circuit arrangement of test/measuring devices
- Taking readings
- Storage, maintenance and care of test/measuring devices

T7. D.C. power supply testing and fault finding

- Rectifier diode faults
- Zener diode faults
- Three terminal regulator faults

T8. OH&S

- Apply safe working practices and relevant Standards, Codes and Regulations

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside

the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Troubleshoot d.c. power supplies with single phase input as described in 8) and including:

- A Using methodical problem solving methods.
- B Taking measurements correctly and accurately.
- C Calculating parameters correctly and accurately.
- D Providing solution to power supply problems, and
- E Providing written justification for the solutions to problems.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials

to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to troubleshooting d.c. power supplies with single phase input.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to troubleshooting d.c. power supplies with single phase input on the rectification section and filtering section of a half wave bridge rectifier and a full wave bridge rectifier.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and troubleshooting digital subsystems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH112A

Digital sub-system

Evidence shall show an understanding of digital sub-system troubleshooting, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Analogue and digital signals

- Comparison between analogue and digital signals
- Observing digital and analogue waveforms

T2. Numbering systems

- The binary number system
- The hexadecimal number system
- Binary addition and subtraction

T3. Numbering systems - conversions

- Conversion between numbering systems
- Binary Coded Decimal (BCD)
- Gray code
- The American Standard Code for Information Interchange (ASCII)
- Unicode

T4. Combinational logic circuits

- Precautions when handling electronic devices due to electrostatic discharge (ESD)
- Truth tables
- Basic operation and characteristics of logic gates
- Logic probes
- Verification of operation of logic circuits

T5. Digital displays

- Seven segment LED displays
- Drive requirements
- Current limiting
- Multiplexed displays
- Seven segment Decoders
- Liquid Crystal Displays (LCD)

REQUIRED SKILLS AND KNOWLEDGE

- Emerging display technologies
- Verification of seven segment display circuit
- Interfacing with logic circuits

T6. Digital subsystem building blocks

- Encoders and Decoders
- Multiplexers and Demultiplexers
- Timing diagrams
- Flip flops, Latches and registers
- Ripple counters
- MOD counters
- Synchronous counters Multi-vibrators
- Clocks
- Verification and operation (eg. PLDs, ICs)

T7. Digital fault finding

- General fault finding principles
- Common digital faults
- Digital test equipment
- Digital test equipment (eg. Logic probes, Digital Oscilloscopes, digital trainers)

T8. Logic families and specifications

- Input and output voltage characteristics
- Comparison of logic families
- Unit load
- Noise margin
- Interfacing different logic families
- Tri-state logic devices

Overview and applications of A/D converter and D/A converter

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. . It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Troubleshoot digital subsystems as described in 8) and including:

A	Using methodical problem solving methods.
B	Taking measurements correctly and accurately.
C	Calculating parameters correctly and accurately.
D	Providing solution to digital component/circuit problems.

- E Providing written justification for the solutions to problems.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential

knowledge and skills described in this unit.

The resources used for assessment should reflect current industry practices in relation to troubleshooting digital subsystems.

**Concurrent
assessment and
relationship with
other units** **9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH 102A Repair basic electronic apparatus faults by replacement of components

UEENEEH 116A Find and repair microwave amplifier section faults of electronic apparatus

UEENEEH 139A Troubleshoot basic amplifier circuits

The critical aspects of occupational health and safety covered in unit UEENEEH101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to troubleshooting a digital subsystem with at least three types of basic digital components/circuits or functions.

The troubleshooting must be demonstrated on three types of faults.

Notes:

1. The range of faults may include: open/shorted signal lines, output loading, input-to-input connections and clock-related faults.

2. Troubleshooting may involve the alteration of an existing digital subsystem to comply with a specified function and operating parameters.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers determining correct operation of amplifiers. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in amplifier sections/circuits.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended for development of competency in either entry-level employment based programs incorporated in approved contracts of training or other approved training programs. It may also be used to augment formally acquired competencies.

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided

License to practice**3)**

equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEH1 02A Repair basic electronic apparatus faults by replacement of components

UEENEEH1 Troubleshoot basic amplifier circuits

Prerequisite Unit(s)	4)
	39A
	AND
	UEENEEH1 14A Solve problems in frequency dependent circuits
	UEENEEH1 69A Solve problems in basic electronic circuits
	OR
	UEENEEG1 01A Solve problems in electromagnetic devices and related circuits
	UEENEEG1 02A Solve problems in low voltage a.c. circuits

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to troubleshoot amplifiers.	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of amplifier fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Troubleshoot amplifiers.	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|--|--|
| | 2.4 | Fault finding is approached methodically drawing on knowledge of amplifiers using measured and calculated values of parameters. |
| | 2.5 | Unexpected situations are dealt with safely and with the approval of an authorised person. |
| | 2.6 | Fault finding activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete work and document troubleshooting activities. | 3.1 OHS work completion risk control measures and procedures are followed. |
| | | 3.2 Work site is cleaned and made safe in accordance with established procedures. |
| | | 3.3 Justification for solutions used to troubleshooting problems is documented. |
| | | 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and troubleshooting amplifiers.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH113A

Amplifier fundamentals

Evidence shall show an understanding of amplifier troubleshooting, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Single stage discrete amplifier d.c. characteristics

- Risk and safety
- Field effect transistors (FET) and Bi-junction transistor (BJT) circuit symbols
- Quiescent (Q) point
- Biasing methods for BJT and FETs
- Circuit theory for BJT and FETs
- Verification of performance of BJT and FET amplifier circuits

T2. Single-stage discrete amplifier small signal characteristics

- Small signal gain
- Gain measurements
- Overdrive conditions

T3. Capacitive coupling in single-stage discrete amplifiers

- Coupling capacitor functions
- Coupling capacitor effect on low frequency response
- Emitter/source bypass capacitor effect on low frequency response
- Verification of circuit operation and frequency response (eg. Bode Plot).

T4. Multistage amplifier coupling methods

- Coupling methods
- Total gain
- Bandwidth considerations
- Verification of circuit operation

T5. Differential amplifiers

- Differential amplifier concept
- Typical circuit operation
- Differential and common-mode gain
- Common mode rejection

REQUIRED SKILLS AND KNOWLEDGE

- Constant current and voltage sources
 - Verification of circuit operation
- T6. Negative feedback
- Concept of negative feedback
 - Effects of negative feedback
 - Negative feedback configurations
 - Amplifier gain and negative feedback
- T7. Introduction to classes of power amplifier operation
- Power efficiency
 - Classes and applications
 - Crossover distortion
 - Class AB operation
 - Heat sinking
- T8. Complimentary symmetry power amplifiers
- Biasing and crossover distortion
 - Power efficiency
 - Quasi-complimentary and Darlington output configurations
 - Complete amplifier operation
 - D.C. operating condition calculations
 - Verification of circuit operation
- T9. Other solid state power amplifier design
- Transformer coupled power amplifiers
 - I.C. power amplifiers
 - Class D power amplifiers

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Troubleshoot amplifiers as described in 8) and including:
 - A Using methodical problem solving methods.
 - B Taking measurements correctly and accurately.
 - C Calculating parameters correctly and accurately.
 - D Providing solution to amplifier problems.

- E Providing written justification for the solutions to problems.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to troubleshooting amplifiers.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are

assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and troubleshooting frequency dependent circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH114A

Resonance circuits troubleshooting

Evidence shall show an understanding of resonance circuit troubleshooting, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Basic engineering mathematics

- SI Units
- Using a calculator.
- Basic Algebra
- Applying the laws of indices.
- Simplification of expressions involving square roots.
- Graphs and tables.
- Pythagoras' Theorem and trigonometry ratios.

T2. Sinusoidal alternating voltage and current

- Generating a sinusoidal waveform
- Definition of the terms period, peak, peak-to-peak, instantaneous, average, and root-mean-square value
- Calculating the instantaneous value of a sinusoidal waveform
- Calculating the root-mean-square value and frequency of a sinusoidal waveform
- Phase relationship between two or more sinusoidal waveforms
- Common waveforms used in electronic circuitry
- Observation of sinusoidal and other waveforms

T3. A.C. measuring equipment

- Operating principles of a cathode ray oscilloscope (CRO)
- Set up, calibration and use of a CRO
- Calibration and limitation of CRO probes
- Analogue and digital a.c. measuring instruments including true root-mean-square reading instruments
- Measurement of the instantaneous, peak, peak-to-peak values and period of sinusoidal and other common waveforms

T4. Phase relationships in a.c. circuits

REQUIRED SKILLS AND KNOWLEDGE

- Phasor representation of sinusoidal waveforms
- Definitions of in-phase, out-phase, phase angle, lead and lag
- Phasor addition of two voltages or currents

T5. Resistive a.c. circuits

- Ohms law in a.c resistive circuits
- Current and voltage phase relationship
- Power dissipation

T6. Inductance in a.c. circuits

- Principles of inductance
- Units
- Inductive time constant circuits
- Inductive reactance
- Ohms law in inductive a.c. circuits
- Phase relationships
- Verification of operation of RC time constant circuit

T7. Capacitance in a.c. circuits

- Capacitive reactance
- Ohms law in capacitive a.c. circuits
- Current and voltage phase relationships

T8. Series a.c. circuits

- Definition of Impedance
- Impedance
- The impedance triangle
- Voltages distribution
- Vector representation of current and voltages
- Verification of operation of series a.c. circuit

T9. Parallel a.c. circuits

- Current distribution
- Vector representation of voltage and currents
- Impedance calculations based on total circuit current and voltage
- Verification of operation of parallel a.c. circuit

T10. Series-parallel a.c. circuits

- Examples of circuit
- Rules for simplification

T11. Power factor

- Power triangle
- True power

REQUIRED SKILLS AND KNOWLEDGE

- Apparent power
- Reactive power
- Power factor
- Power factor correction

T12. Ideal transformer

- Construction and operating principles
- Step-up, step-down, turns ratios, voltage and current ratios
- Autotransformer
- Core losses
- Types of cores and applications
- Volt-Ampere (VA) rating
- Verification of operation of transformer circuit

T13. Series resonance

- Conditions in a circuit that produce series resonance
- Relationship between resonance and frequency
- Impedance of a series resonant circuit
- Phasor representation of current and series voltage drops in series resonant circuit
- Voltage magnification
- The Q of a coil and its relevance
- Bandwidth and half power points in a resonant circuit
- Selectivity
- Verification of operation of series resonant circuit

T14. Parallel resonance

- Conditions in a circuit that produce parallel resonance
- Impedance of a parallel resonant circuit
- Vector representation of voltage and parallel branch currents in a parallel resonant circuit
- Current magnification
- Verification of operation of parallel resonant circuit

T15. Filters

- Purpose of a filter
- Circuits for operation of the following passive filter circuits: high pass, low pass, band stop and band pass
- Bandwidth, attenuation, cut-off, roll off and order of filter
- Measurements and calculations relating to passive filters
- Curves showing the behaviour of various types of filter circuits
- Verification of operation of each filter type

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Troubleshoot frequency dependent circuits as described in 8) and including:
 - A Using methodical problem solving methods.
 - B Taking measurements correctly and accurately.
 - C Calculating parameters correctly and accurately.
 - D Providing solution to resonance circuit problems.

- E Providing written justification for the solutions to problems.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to troubleshooting frequency dependent circuits.

Method of assessment**9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units**9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE10 Solve problems in d.c. circuits
4A

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

UEENEEH115A Develop software solutions for microcontroller based systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers developing, implementing and testing programming solutions in microcontroller based systems. It encompasses following development brief, using appropriate development software, writing code, applying problem solving procedures, testing and modifying of programs.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also used to augment formally acquired competencies.

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It is intended to apply to any formal recognition for this standard at the aligned AQF 3 level or higher.

Licensing/Regulatory Information

License to practice

3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>

ELEMENT	PERFORMANCE CRITERIA
	followed.
	1.3 The extent of code development work is determined from job performance specifications and in consultations with relevant persons.
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved on the work.
	1.5 Appropriate development kit and software are selected based on specified requirements and performance standard.
	1.6 Strategies are implemented to ensure programming is carried out efficiently.
2 Develop code.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Correct syntax is applied when developing code.
	2.3 Key features of the programming language used are applied to develop and test solutions. Note: Key features may include use of registers, addressing modes, assembler instructions, subroutines and flags.
	2.4 Approaches to issues/problems are analysed to provide most effective solutions.
	2.5 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.
3 Test and document the development of code.	3.1 Testing procedures are developed to analyse code.
	3.2 Problems and bugs in code are rectified to ensure specifications are met.
	3.3 Intermediate and final work reports are

ELEMENT

PERFORMANCE CRITERIA

written in accordance with professional standards and presented to appropriate person or persons.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing software for microcontroller based systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH115A

Software programming fundamentals

Evidence shall show an understanding of software programming fundamentals, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Semiconductor memory

- memory cell
- antistatic precautions
- memory organization
- storage capacity and density

T2. Overview of Address decoding

T3. Microprocessor/ Microcontroller architecture

- internal architecture of a microprocessor
- single chip microcontroller architecture
- programming model of microprocessor/ microcontroller

T4. Programming

- programming concepts
- instruction set
- machine code and assembly language high level and low level language

T5. Addressing modes

- types of addressing modes
- applications for each addressing mode
- programming using different addressing modes

T6. Arithmetic and logic instructions

- types of arithmetic and logic instructions.
- applications for each type of arithmetic and logic instruction.
- programming using arithmetic and logic instructions.

T7. Branch instructions and flowcharts

- types of branching instructions
- applications for each type of branching instruction.

REQUIRED SKILLS AND KNOWLEDGE

- programming using branching instructions.
- T8. Subroutines
- purpose and applications
 - stack memory
- T9. Timing loops
- concept
 - timing calculations
 - nested timing loops
 - programming using timing loops
- T10. Input/Output ports
- input/output port devices and interfacing
 - programmable input/ output port ICs
- T11. Implementing a program for a specific task
- purpose of program
 - writing the program
 - debugging and implementing the program

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control

measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop software solutions in microcontroller based systems as described in 8) and including:

- A Using methodical problem solving methods.
- B Providing solution to micro software problems.
- C Providing written justification for the solutions to problems.
- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment

environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing software solutions in microcontroller based systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by developing software solutions in any microcontrollers/microprocessors using the following techniques:

- Modifying an existing micro program to comply with specified operating parameters
- Developing micro software to comply with a specified function and operating parameters
- Debugging software

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

UEENEEH116A Find and repair microwave amplifier section faults in electronic apparatus

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers fault finding and repair of microwave amplifier sections in electronic apparatus. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also used to augment formally acquired competencies.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

License to practice

3)

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEH1 02A Repair basic electronic apparatus faults by replacement of components

UEENEEH1 13A Troubleshoot amplifiers in an electronic apparatus

UEENEEH1 39A Troubleshoot basic amplifier circuits

Prerequisite Unit(s)

4)

UEENEEH1 46A Solve fundamental electronic communications system problems

AND

UEENEEH1 14A Solve problems in frequency dependent circuits

UEENEEH1 69A Solve problems in basic electronic circuits

OR

UEENEEG1 01A Solve problems in electromagnetic devices and related circuits

UEENEEG1 02A Solve problems in low voltage a.c. circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element.

Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to find and repair faults.

1.1 OHS procedures for a given work area are identified, obtained and understood.

1.2 OHS risk control measures and procedures are followed in preparation for the work.

1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

1.5 Sources of materials that may be required for the work are established in accordance with established procedures.

1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find faults.

2.1 OHS risk control measures and procedures for carrying out the work are followed.

2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established

ELEMENT

PERFORMANCE CRITERIA

- safety procedures.
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Fault finding is approached methodically drawing on knowledge of microwave amplifier sections and circuit using measured and calculated values of apparatus parameters.
- 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
- 2.6 Faulty components are rechecked and their fault status confirmed.
- 2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.8 Fault finding activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Repair fault.
- 3.1 OHS risk control measures and procedures for carrying out the work are followed.
- 3.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 3.3 Materials required for the repair work are sourced and obtained in accordance with established procedures.
- 3.4 Repairs are affected efficiently without damage to other components, apparatus or circuits.
- 3.5 Effectiveness of the repair is tested in accordance with established procedures.
- 3.6 Apparatus is reassembled, finally tested and prepared for return to customer.

ELEMENT	PERFORMANCE CRITERIA
4 Completion and report repair activities.	4.1 OHS work completion risk control measures and procedures are followed.
	4.2 Work area is cleaned and made safe in accordance with established procedures.
	4.3 Written justification is made for repairs to apparatus.
	4.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in the microwave amplifier sections in electronic apparatus.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH116A

Electronic communications systems

Evidence shall show an understanding of software programming fundamentals, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Microwave amplifiers

- Applications and operational constraints
- Operating principles and parameters
- Amplifier components and circuit configuration
- Amplifier faults, symptoms and causes

T2. Electronic communications, microwave antennae and waveguide fundamentals

- Antenna and wave guide principles and components
- Installation techniques for microwave communication systems
- Setting up techniques for microwave communication systems

T3. Advanced electronic (communication systems) testing and measuring devices and techniques

- Test/measuring devices and their application - frequency counters, and synthesisers, spectrum analysers, noise and distortion meters and RF communications service monitor.
- Connection of test/measuring devices into a circuit encompassing:
 - safety procedures
 - loading and matching
 - storage and delay
 - circuit arrangement of test/measuring devices
- Taking and interpreting readings
- Notion of decibels including dBm, dBr, dBu, dBo

T4. Electronic (communication systems) fault finding

- Factors to consider in clarifying the nature of a fault encompassing:
 - Initial fault report
 - Confirmation of symptoms of the fault

REQUIRED SKILLS AND KNOWLEDGE

- Comparison of symptoms with normal operation
- Effect to cause reasoning — assumptions of possible causes
- Methods for testing assumptions encompassing:
 - Visual inspection
 - Sectional testing
 - Split-half tests
 - Component isolation
- Dealing with intermittent faults - causes of intermittent faults are vibration, shock, changes in temperature and electromagnetic interference.

T5. OH&S

- Effects of RF radiation on the human body and work practices to protect against radio frequency radiation.
- Standards, Codes and Regulations of ACMA regulation for power, frequency and antenna gain and Occupational Health & Safety

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as

specified in the performance criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in the microwave amplifier sections in electronic apparatus as described in 8) and including:

- A Using methodical fault finding techniques.
- B Finding faults efficiently.
- C Replacing components without damage.
- D Providing written justification for the repairs.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment

environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and repairing faults in the microwave amplifier sections in electronic apparatus.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH1 02A Repair basic electronic apparatus faults by replacement of components

UEENEEH1 12A Troubleshoot digital sub-systems

UEENEEH1 13A Troubleshoot amplifiers in an electronic apparatus

UEENEEH1 14A Troubleshoot resonance circuits in an electronic apparatus

UEENEEH1 15A Develop software solutions for microcontroller based systems

The critical aspects of occupational health and safety covered in unit UEENEEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing a representative range of faults in the microwave amplifier sections in at least two types of electronic apparatus.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to repair replay/recording apparatus.	1.1	OHS procedures for a given work area are identified, obtained and understood.
	1.2	OHS risk control measures and procedures are followed in preparation for the work.
	1.3	The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4	Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5	Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6	Tools, equipment, testing devices and service manual needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

ELEMENT	PERFORMANCE CRITERIA
2 Find and repair faults.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Fault finding is approached methodically drawing on knowledge of replay/recording apparatus and circuit using measured and calculated values of apparatus parameters and/or with reference to manufacturer's service manual.
	2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
	2.6 Faulty components are rechecked and their fault status confirmed.
	2.7 Repairs are made in accordance with manufacturer's service guide and supervisor's instructions.
	2.8 Apparatus is reassembled and tested for safety and functionality in preparation for return to the customer.
	2.9 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.10 Repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Completion and report repair activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Written justification is made for repairs to apparatus.

ELEMENT

PERFORMANCE CRITERIA

- 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out repairs of predictable faults in audio and video replay/recording apparatus

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH117A Audio and video recording and replaying apparatus

Evidence shall show an understanding of electronic communications systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Sound reproduction fundamentals

- Sound wave propagation
- Timbre of sound
- Effects of other medium of sound waves
- Characteristics of the human ear
- Difference between mono and stereo
- Surround sound principles

T2. Audio reproduction, electronic components

- Preamplifiers amplifier encompassing:
- Function in the reproduction chain
- Typical circuit arrangements
 - Power and integrated amplifiers encompassing:
- Function in the reproduction chain
- Typical circuit arrangements
 - Graphic equalizers encompassing:
- Function in the reproduction chain
- Typical circuit arrangements
 - Component installation and interconnections

T3. Audio reproduction, speaker fundamentals

- Types of speaker drives and their operating mechanism
- Speaker cabinet characteristics
- Purpose and circuit arrangement of typical cross-over networks
- Speaker installation and connections

T4. Audio/video recording and replay components repair basics

- Sub-system components (i.e. functional blocks) and their operating parameters

REQUIRED SKILLS AND KNOWLEDGE

- Common faults, their symptoms and cause.
- Fault location procedures and testing points
- Device adjustments - audio/video systems are compact disk players, DVD players and AV systems

T5. Audio/video control equipment

- Types of control devices and their operating principles
- Control equipment arrangement in an audio/video system
- Safe use of electrical testing device, and
- Checks and storage methods for maintaining the safety of testing device

T6. Technical manuals and catalogues

- Typical format
- How to read and apply information

T7. Digital versatile disc (DVD) and compact disc (CD)

- Operational principles and standards of digital signal processing
- Standards and features of DVDs and CDs
- Operation and adjustment of DVDs and CDs, as well as
- Transport mechanisms
- Laser alignment/tracking
- Servo system description, operation and adjustment of servo loops
- System control of player
- On screen display including service mode set-up on adjustment

T8. Digital audio

- Fundamentals of digital audio systems
- Signal processing within the encoding of a system
- Error checking techniques in the encoder process
- Modulation used in the encoding process
- The process for decoding digital audio signals to produce analogue stereo output
- Features and operation of compact disk players

T9. Compact disk players

- Characteristics of optical digital recording
- Components of CD players
- Operation of servo loops
- Digital signal processing
- System control sections of a CD

T10. Digital versatile disc processors

- Operating principles, characteristics, features and standards of DVD players
- Components and adjustment of DVD players

REQUIRED SKILLS AND KNOWLEDGE

T11. Audio/video recording and replay components repair basics

- Sub-system components (i.e. functional blocks) and their operating parameters
- Common faults, their symptoms and cause.
- Fault location procedures and testing points
- Device adjustments - audio/video systems are compact disk players, DVD players and AV systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination

- legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Carry out repairs of predictable faults in audio and video replay/recording apparatus as described in 8) and including:
 - A Using methodical fault finding techniques.
 - B Finding faults efficiently.
 - C Replacing components without damage.
 - D Providing written justification for the repairs.
 - E Dealing with unplanned events by drawing on essential k skills to provide appropriate solutions incorporated in a h with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to e competency is deemed. In these cases the alignment of outcomes of vendor traini performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to carrying out repairs of predictable faults in

audio and video replay/recording apparatus.

**Method of
assessment**

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out repairs of at least four predictable faults in two different video replay/recording apparatus

Note.

Examples of audio/video recording and replay components are audiocassette player/recorders, compact disk players, videocassette player/recorder, digital versatile disk and super audio compact players.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Electronics

UEENEEH118A Fault find and repair electronic apparatus

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers fault finding and repairing of general electronic apparatus. The unit encompasses safe working practices, consulting apparatus service manuals, interpreting circuit diagrams, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also used to augment formally acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also

License to practice

3)

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to find and repair faults.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry

ELEMENT	PERFORMANCE CRITERIA
	out the work are obtained in accordance with established procedures and checked for correct operation and safety.
2 Find faults.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Fault finding is approached methodically drawing on knowledge of data circuits using measured and calculated values of apparatus parameters.
	2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage
	2.6 Faulty components are rechecked and their fault status confirmed.
	2.7 Effectiveness of the repair is tested in accordance with established procedures.
	2.8 Apparatus is reassembled, finally tested and prepared for return to customer.
	2.9 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.10 Fault finding activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Completion and report repair activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Written justification is made for repairs to apparatus.

ELEMENT**PERFORMANCE CRITERIA**

- 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in electronic apparatus.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH118A

Electronic apparatus fault finding and repair

Evidence shall show an understanding of electronic communications systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Drawings and diagrams

- Drawing types and applications encompassing:
- Drawing layouts and conventions - mechanical drawings, electrical/electronic schematics, wiring diagrams, PC boards, location diagrams (architectural drawings), and cable routes and switching arrangements and building details.
- Drawing symbols - symbols representing electrotechnology circuit components, equipment location and cable routes and control arrangements.
- Freehand drawing
- Cable/wiring/connection and equipment/component/schedules.

T2. Electronic testing and measuring devices and techniques

- Test/measuring devices and their application - analogue and digital multimeters, voltage and digital testers, signal generators and oscilloscopes
- Connection of test/measuring devices into a circuit encompassing:
 - safety procedures
 - circuit arrangement of test/measuring devices
- Taking readings
- Storage, maintenance and care of test/measuring devices

T3. Electronic fault finding

- Factors to consider in clarifying the nature of a fault encompassing:
 - Initial fault report
 - Confirmation of symptoms of the fault
 - Comparison of symptoms with normal operation
- Effect to cause reasoning — assumptions of possible causes
- Methods for testing assumptions encompassing:
 - Visual inspection
 - Sectional testing
 - Split-half tests

REQUIRED SKILLS AND KNOWLEDGE

- Component isolation
 - Dealing with intermittent faults - causes of intermittent faults are vibration, shock, changes in temperature and electromagnetic interference.
- T4. Electronic Safe working practices
- Risk management and assessment of risk encompassing:
 - Of the immediate environment
 - Of the apparatus under repair
 - Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
 - Of the immediate environment
 - Of the apparatus under repair
 - Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
 - Parts of an electronic systems and equipment where high-currents are likely.
 - Risks and control measures associated with high-voltage encompassing:
 - Of the immediate environment
 - Of the apparatus under repair
 - Parts of an electronic systems and equipment that operate at high-voltage,
 - The terms used - 'touch voltage', 'step voltage', 'induced voltage' and 'creepage' as they relate to the hazards of high-voltage, and
 - Control measures used for dealing with the hazards of high-voltage.
 - Risks and control measures associated with low voltage encompassing:
 - Risks associated with installation, fault finding, maintenance and repair.
 - Control measures before, while and after working on electronic systems or equipment
 - Isolation and tagging-off procedures.
 - Risks and restrictions in working live.
 - Control measures for working live.
 - Safety, selection, use, maintenance and care of test equipment encompassing:
 - Of the immediate environment
 - Of the apparatus under repair
 - Safety characteristics of electrical testing devices,
 - Chemical cleaning solvents, glues and joining wastes used in electronics,
 - Safe use of electrical testing device, and
 - Checks and storage methods for maintaining the safety of testing devices.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in electronic apparatus as described in 8) and including:

- A Using methodical fault finding techniques
- B Finding faults efficiently
- C Replacing components without damage
- D Providing written justification for the repairs
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and repairing faults in electronic apparatus.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing four different faults in two different types of electronic apparatus.

Note.

Examples of electronic apparatus are communication-networking devices, data capture devices, fire protection panels, industrial control apparatus, instrumentation electronics, security panels, and the like.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to repair televisions.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment, testing devices and service manual needed to carry out the work are obtained in accordance with established

ELEMENT	PERFORMANCE CRITERIA
	procedures and checked for correct operation and safety.
2 Find and repair faults.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Fault finding is approached methodically drawing on knowledge of televisions and circuit using measured and calculated values of apparatus parameters and/or with reference to manufacturer's service manual.
	2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage
	2.6 Faulty components are rechecked and their fault status confirmed.
	2.7 Repairs are made in accordance with manufacturer's service guide and supervisor's instructions.
	2.8 Apparatus is reassembled and tested for safety and functionality in preparation for return to the customer.
	2.9 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.10 Repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Completion and report repair activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Written justification is made for repairs to apparatus.
	3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out repairs of predictable faults in television receivers.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH119A

Television receiver repairs

Evidence shall show an understanding of television receiver repairs, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Technical manuals and catalogues

- Typical format
- How to read and apply information

T2. Introduction to television

- Fundamentals of the Australian broadcast television system in block diagram form
- Functions of a television camera using block diagrams
- Functions of a television receiver using block diagrams
- Principles and operations of picture tubes
- The principles of the Australian PAL colour television process
- Television receiver aerials

T3. Television scanning and deflection

- Operation of a synchronised separator, synchronised horizontal oscillator and drive stages, horizontal transistor output stage
- Operation of and repair to vertical deflection circuitry
- Operation of Raster correction circuits

T4. Television chrominance and luminance

- Chrominance and luminance signal processing at the transmitter
- Luminance signal process in the receiver including video buffer, traps and filters, video amplifiers, video output stages, brightness and contrast circuits
- Chrominance signal processing in the receiver including, chroma decoder, sub-carrier regeneration, chroma signal processing, final matrix output.

T5. Television receiver repair basics

- Sub-system components (i.e. functional blocks) and their operating parameters
- Common faults, their symptoms and cause.
- Fault location procedures and testing points
- Device adjustments

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are

included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Carry out repairs of predictable faults in television receivers as described in 8) and including:
 - A Using methodical fault finding techniques.
 - B Finding faults efficiently.

- C Replacing components without damage.
- D Providing written justification for the repairs.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to carrying out repairs of predictable faults in television receivers.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is

expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out repairs to of at least four predictable faults in a representative range of CRT television receivers.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Electronics

UEENEEH120A Fault find and repair gaming and games equipment

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers fault finding and repair of gaming equipment. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also used to augment formally acquired competencies.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

License to practice**3)**

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, assemble and dismantle utilities industry components
UEENEEH1 02A	Repairs basic electronic apparatus faults by replacement of components
UEENEEH1 09A	Set up and test gaming and game equipment
UEENEEH1 11A	Troubleshoot single phase input d.c. power supplies

Prerequisite Unit(s)

4)

UEENEEH1 12A Troubleshoot digital sub-systems

UEENEEH1 13A Troubleshoot amplifier circuits

UEENEEH1 38A Fault find and repair complex power supplies

AND

UEENEEH1 14A Troubleshoot resonance circuits in an electronic apparatus

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEH1 69A Solve problems in basic electronic circuits

OR

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEG1 01A Solve problems in electromagnetic devices and related circuits

UEENEEG1 02A Solve problems in low voltage a.c. circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to find and repair faults.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and

ELEMENT**PERFORMANCE CRITERIA**

ELEMENT	PERFORMANCE CRITERIA
	checked for correct operation and safety.
2 Find and repair faults.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Fault finding is approached methodically drawing on knowledge of gaming equipment and circuit using measured and calculated values of apparatus parameters.
	2.5 Equipment components are dismantled where necessary and parts stored to protect them against loss or damage.
	2.6 Faulty components are rechecked and their fault status confirmed.
	2.7 Faulty components are readjusted or replace in accordance with established procedures.
	2.8 Effectiveness of the repaired component is tested in accordance with established procedures.
	2.9 Apparatus is reassembled, finally tested and prepared for return to customer.
	2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.11 Fault finding and repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Completion and report fault finding and repair activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Written justification is made for repairs to apparatus including components and materials used.
	3.4 Acceptance that the reported fault(s) have been repaired is sought from an appropriate person in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in gaming and games equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH120A

Gaming machine fault finding and repair

Evidence shall show an understanding of gaming machine fault finding and repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Technical manuals and catalogues

- Typical format
- How to read and apply information

T2. Gaming equipment communications

- Online and stand alone systems
- Common gaming networks
- Linked jackpot networks
- Player tracking systems

T3. Gaming machine fault finding

- Sub-system components (i.e. functional blocks) and their operating parameters
- Common faults, their symptoms and cause.
- Fault location procedures and testing points
- Device adjustments

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in gaming and games equipment as described in 8) and including:

- A Using methodical fault finding techniques.
- B Finding faults efficiently.
- C Replacing components without damage.
- D Providing written justification for the repairs.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and repairing faults in gaming and games equipment.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH1 Troubleshoot single phase input d.c. power supplies
11A

UEENEEH1 Troubleshoot digital sub-systems
12A

UEENEEH1 Troubleshoot amplifiers in an electronic apparatus
13A

UEENEEH1 Develop software solutions for microcontroller based systems
15A

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing at least four faults in two different types of gaming equipment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in high volume office equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH121A

High volume office equipment fault finding and repair

Evidence shall show an understanding of high volume office equipment fault finding and repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Copier/printer software functions and configuration

- Copier/printer software functions and configuration options
- Device driver software installation and configuration
- Available user function
- Diagnostic software functions and their use
- Fault identification and repair

T2. Business machine transducers

- Function of transducers encompassing:
 - Linear position & velocity
 - Angular position measurement
 - Angular velocity measurement
 - Temperature sensors
 - Humidity sensors
 - Current sensors
 - Piezo sensors
- Temperature sensors types, operating principles and applications - thermocouples, resistance temperature detectors (RTD), thermistors, bimetal temperature sensors and the like.
- Optoelectronics device types, operating principles and applications - photo resistors, photodiodes, phototransistors, LASCR, photovoltaic devices, optocouplers, lasers and the like.

T3. High volume business machine functions and faults

- Operating features of electric motors, relays and solenoids, clutches and tachometers
- Function and operation of feed mechanisms, drive-trains and cleaning processors
- Input accessories, their function and operating principle encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- paper trays
- high capacity bins
- document feeders
- duplex unit
- manual bypass
- coin boxes
- card readers
- raster image processing unit
- Output accessories, their function and operating principle encompassing:
 - sorters
 - staplers
 - collators
 - folders
 - stackers
- fault identification and repair
 - machine faults
 - line faults

T4. Colour photocopiers operating principles

- Principles of colour and colour separation encompassing:
 - Effects of light on the eye
 - Colour principles
 - Colour separation
 - Colour mixing processes
 - Colour Wheel
- Colour separation in colour photocopying encompassing:
 - Three scan process
 - Four scan process
 - Under colour removal
- Principles of colour photocopying
 - Reflected light paths
 - Block diagrams of photocopiers
 - Principles of operation
- Scanning processes of colour photocopiers encompassing:
 - CCD
 - Pre amps
 - Auto gain
 - Image Processing Unit
 - Laser unit

REQUIRED SKILLS AND KNOWLEDGE

- Exposure processes
 - Printing processes of colour photocopiers encompassing:
 - Laser diode unit
 - Polygon mirrors
 - Laser synchronising and detector encompassing:
 - Cylindrical lens
 - Routine maintenance and servicing encompassing:
 - Optics
 - Paper feeds
 - Developer unit
 - Drum unit
 - Belts and rollers
 - Fusing unit
 - fault identification and repair
 - machine faults
 - line faults
- T5. Facsimile machine operating principles
- Sub-system components (i.e. functional blocks) operating parameters encompassing:
 - CCITT standards
 - analogue and digital transmissions
 - transmission process
 - phases of facsimile calls
 - Scanning operations encompassing:
 - single photosensor
 - CCD Operations
 - area image sensors
 - lighting systems
 - optical systems
 - Signal processing encompassing:
 - picture reduction
 - modems
 - Printing processes encompassing:
 - thermal
 - plain paper
 - carbon transfer
 - ink jet
 - Dialing parameters encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- pulse (decadic) dialing
- DTMF
- manual dial
- blind dial, line and dial detect
- redial and listen to dial
- Coding systems encompassing:
 - data compression
 - Modified Hauffman (MH) systems
 - Modified Read (MR) systems
 - Modified Read (MMR) systems
 - “K” factor
 - Error Correction Modes (ECM)
- Operational principles encompassing:
 - transmission
 - reception
 - copying
- Installation, operation, maintenance and servicing procedures encompassing:
 - disassembly and assembly
 - consumable replacement
 - cleaning
 - fault identification and repair
 - machine faults
 - line faults
- Facsimile services encompassing:
 - fax stream
 - duet

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in high volume office equipment as described in 8) and including:

- A Using methodical fault finding techniques.
- B Finding faults efficiently.
- C Remove/adjusting/replacing components without damage.
- D Testing equipment operation.
- E Providing written justification for the repairs and obtain acceptance of repairs.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and repairing faults in high volume office equipment.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH1 Troubleshoot digital sub-systems
12A

UEENEEH1 Troubleshoot amplifiers in an electronic apparatus
13A

UEENEEH1 Develop software solutions for microcontroller based systems
15A

The critical aspects of occupational health and safety covered in unit UEENEEH101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by finding and repairing at least four faults in a high volume (40 to 80 ppm) copier and work group Fax machine (12 ppm).

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to find and repair faults.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the fault is obtained from documentation, work supervisor and customer to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained in

ELEMENT	PERFORMANCE CRITERIA
2 Find and repair faults.	accordance with established procedures and checked for correct operation and safety.
2.1	OHS risk control measures and procedures for carrying out the work are followed.
2.2	Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
2.3	Fault finding is approached methodically drawing on knowledge of remote control apparatus using measured and calculated values of operating parameters and referenced to manufacturer's specifications.
2.4	Equipment components are dismantled where necessary and parts stored to protect them against loss or damage.
2.5	Faulty components are rechecked and their fault status confirmed.
2.6	Faulty components are readjusted or replace in accordance with established procedures.
2.7	Effectiveness of the repaired component is tested in accordance with established procedures.
2.8	Apparatus is reassembled, finally tested and prepared for return to customer.
2.9	Unexpected situations are dealt with safely and with the approval of an authorised person.
2.10	Fault finding and repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Completion and report fault finding and repair activities.	3.1 OHS work completion risk control measures and procedures are followed.
3.2	Work area is cleaned and made safe in

ELEMENT**PERFORMANCE CRITERIA**

- accordance with established procedures.
- 3.3 Written justification is made for repairs to apparatus including components and materials used.
- 3.4 Acceptance that the reported fault(s) have been repaired is sought from an appropriate person in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in remote control apparatus.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH122A

Hand held remote control units

Evidence shall show an understanding of hand held remote control unit fault finding and repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Remote control requirements

- Specifications
- multiple systems
- code formats
- bit sync
- system address
- commands, timing (clock accuracy)
- modulation system
- infrared system
- transmission errors
- methods used to reduce battery power
- key scanning and displays

T2. Data monitoring

- Points
- timing and amplitude specifications
- triggering of serial data
- data/graticule alignment
- identify and decode start bits
- system address bits, command bits
- stop bits
- load and other bits

T3. Remote control measurements

- battery voltage range, stand-by current and transmit current
- DC voltage and waveforms on IC pins
- Frequencies

T4. System controller requirements including remote, local, main housekeeping.

REQUIRED SKILLS AND KNOWLEDGE

- T5. Methods of inter-chip data communications
- T6. Fault identification and repair

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence

decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in remote control apparatus as

described in 8) and including:

- A Using methodical fault finding techniques.
- B Finding faults efficiently.
- C Remove/adjusting/replacing components without damage.
- D Testing equipment operation.
- E Providing written justification for the repairs and obtain acceptance of repairs.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to finding and repairing fault in remote control apparatus

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH1 Troubleshoot digital sub-systems
12A

UEENEEH1 Troubleshoot amplifiers in an electronic apparatus
13A

UEENEEH1 Develop software solutions for microcontroller based systems
15A

UEENEEH1 Fault find and repair complex power supplies
38A

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing at least four faults in two different types of remote control devices.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

UEENEEH123A Fault find and repair microwave heating apparatus

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers fault finding and repair in microwave heating apparatus. The unit encompasses safe working practices, interpreting circuit diagrams, applying knowledge of microwave heating apparatus to logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It may also used to augment previously acquired competencies.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to

License to practice**3)**

regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 37A Document and apply measures to control OHS risks associated with electrotechnology work

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to repair audio components.	1.1	OHS procedures for a given work area are identified, obtained and understood.
	1.2	OHS risk control measures and procedures are followed in preparation for the work.
	1.3	The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4	Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.5	Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6	Tools, equipment, testing devices and service manual needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

ELEMENT	PERFORMANCE CRITERIA	
2 Find and repair faults.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3	Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4	Fault finding is approached methodically drawing on knowledge of audio components and circuit using measured and calculated values of apparatus parameters and/or with reference to manufacturer's service manual.
	2.5	Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
	2.6	Faulty components are rechecked and their fault status confirmed.
	2.7	Repairs are made in accordance with manufacturer's service guide and supervisor's instructions.
	2.8	Apparatus is reassembled and tested for safety and functionality in preparation for return to the customer.
	2.9	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.10	Repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Completion and report repair activities.	3.1	OHS work completion risk control measures and procedures are followed.
	3.2	Work area is cleaned and made safe in accordance with established procedures.
	3.3	Written justification is made for repairs to apparatus.
	3.4	Work completion is documented and an appropriate person or persons notified in accordance with

ELEMENT

PERFORMANCE CRITERIA

established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out repairs of predictable faults in audio components.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH124A

Audio component predictable fault repair

Evidence shall show an understanding of audio component predictable fault repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Audio and video component functional controls

- Types of components and their functional controls
- Function set up procedures
- Testing

T2. Audio reproduction, electronic components

- Preamplifiers amplifier encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Power and integrated amplifiers encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Graphic equalizers encompassing:
 - Function in the reproduction chain
 - Typical circuit arrangements
- Component interconnections

T3. Technical manuals and catalogues

- Typical format
- How to read and apply information
- Audio components applications

T4. Audio component repair basics

- Sub-system components (i.e. functional blocks) and their operating parameters
- Common faults, their symptoms and cause.
- Fault location procedures and testing points
- Device adjustments

Note. Examples of audio components are preamplifiers amplifier, power and integrated amplifiers, graphic equalizers and the like.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are

included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Carry out repairs of predictable faults in audio components as described in 8) and including:

A Using methodical fault finding techniques.

B Finding faults efficiently.

- C Replacing components without damage.
- D Providing written justification for the repairs.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to carrying out repairs of predictable faults in audio components.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out repairs to two different audio components each with any three predictable faults.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEH1 02A Repair basic electronic apparatus faults by replacement of components

UEENEEH1 13A Troubleshoot amplifiers in an electronic apparatus

UEENEEH1 39A Troubleshoot basic amplifier circuits

UEENEEH1 46A Solve fundamental electronic communications system problems

UEENEEH1 Fault find and repair communication

Prerequisite Unit(s)

4)

72A systems

AND

UEENEEH1 14A Solve problems in frequency dependent circuits

UEENEEH1 69A Solve problems in basic electronic circuits

OR

UEENEEG1 01A Solve problems in electromagnetic devices and related circuits

UEENEEG1 02A Solve problems in low voltage a.c. circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills

5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to set-up and adjust commercial radio frequency (RF) transmission and reception systems	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.5 Measurement parameters are identified by reviewing transmission/reception requirements and equipment manufacturer's instructions.
	1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
	1.7 Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements.
	1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within

ELEMENT	PERFORMANCE CRITERIA
	established safety procedures.
	1.9 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
2 Set-up and adjust commercial radio frequency (RF) transmission and reception systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular control system.
	2.3 Measuring instruments are set up and adjusted in accordance with transmission/reception requirements and equipment manufacturer's instructions.
	2.4 Adjustments are made to provide optimum transmission/reception performance within regulatory requirements.
	2.5 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.7 Setting-up is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3 Completion and report set-up and adjustment activities.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting-up and adjusting commercial radio frequency (RF) transmission and reception systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH127A Commercial radio frequency (RF) transmission and reception systems

Evidence shall show an understanding of commercial radio frequency (RF) transmission and reception systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Electronic communications, transmission lines

- Time domain reflectometry measurements
- Radio frequency characteristics of transmission lines
- Losses in transmission lines
- Radiation characteristics of antennae
- Directional antennae
- Antennae matching
- UHF and microwave antennae

T2. Electronic communications, antennas and wave propagation

- Antenna fundamentals - characteristics of radio waves, antenna operation, antenna reciprocity and the basic antenna.
- Antenna types, feature and characteristics encompassing:
 - Dipole antennas and characteristics - radiation resistance, dipole length, antenna resistance, antenna Q and bandwidth, conical antennas, dipole polarisation, radiation patterns and directivity, antenna gain and folded dipoles
 - Marconi ground-plane vertical antenna features and characteristics - radiation pattern, ground plane radials and counterpoise, radiation resistance, antenna length and directivity,
 - UHF and microwave antennas
 - Relationship between directivity and gain
 - Antenna arrays - parasitic arrays and driven arrays
 - Impedance matching
- Radio wave propagation characteristics - optical characteristic, propagation through space
- Calculation of received power
- Antenna selection and location

REQUIRED SKILLS AND KNOWLEDGE

- Transmission lines
- T3. Advanced electronic testing and measuring devices and techniques
- Test/measuring devices and their application - frequency counters, and synthesisers, spectrum analysers, noise and distortion meters and RF communications service monitor.
 - Connection of test/measuring devices into a circuit encompassing:
 - safety procedures
 - loading and matching
 - storage and delay
 - circuit arrangement of test/measuring devices
 - Taking and interpreting readings
 - Notion of decibels including dBm, dBr, dBu, dBo
- T4. Electronic communications, antennas and wave propagation
- Antenna fundamentals - characteristics of radio waves, antenna operation, antenna reciprocity and the basic antenna.
 - Antenna types, feature and characteristics encompassing:
 - Dipole antennas and characteristics - radiation resistance, dipole length, antenna resistance, antenna Q and bandwidth, conical antennas, dipole polarisation, radiation patterns and directivity, antenna gain and folded dipoles
 - Marconi ground-plane vertical antenna features and characteristics - radiation pattern, ground plane radials and counterpoise, radiation resistance, antenna length and directivity,
 - UHF and microwave antennas
 - Relationship between directivity and gain
 - Antenna arrays - parasitic arrays and driven arrays
 - Impedance matching
 - Radio wave propagation characteristics - optical characteristic, propagation through space
 - Calculation of received power
 - Antenna selection and location
 - Transmission lines

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set-up and adjust commercial radio frequency (RF) transmission and reception systems as described in 8) and including:
 - A Identifying measurement parameters.
 - B Setting-up and adjusting in accordance with transmission/reception requirements and equipment manufacturer's instructions.

- C Documenting adjustment settings with established procedures.
- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to commissioning commercial radio frequency (RF) transmission and reception systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires

that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to setting-up and adjusting a representative range of two different types of commercial radio frequency (RF) transmission and reception systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Electronics

UEENEEH128A Install and test microwave antennae and waveguides

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the installation and testing of waveguides and antennae for microwave communications systems. It encompasses working safely and to installation standards, matching hardware and accessories with that specified for a given location, installation techniques, pre commission adjustment of antennas and waveguides and following instruction and procedures.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training or approved training programs.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and the like

License to practice**3)**

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

- 1.3 Safety hazards that have not previously been identified are reported and advise on risk control measures are sought from the work supervisor.
 - 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
 - 1.5 Advice is sought from the work supervisor and/or other appropriate person to ensure the work is co-ordinated effectively with others.
 - 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
 - 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Install microwave antennae and waveguides.
- 2.1 Established OHS risk control measures for carrying out the work are followed.
 - 2.2 Circuits/components are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
 - 2.3 Antennas are installed in their specified locations and within limitation imposed by regulation.
 - 2.4 Hardware and accessories are installed straight and square in the required locations and within acceptable tolerances.
 - 2.5 Cables and conductors are terminated at accessories in accordance with manufacture's and job specifications and regulatory requirements
 - 2.6 Procedures for referring non-routine events to immediate supervisor for directions are followed.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|--|-----|--|
| | 2.7 | The installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices. |
| 3 Test microwave antennae and waveguides and report. | 3.1 | OHS work completion risk control measures and procedures are followed. |
| | 3.2 | Pre-commissioning adjustments are made to the installation and the system to optimise performance in accordance with system specification. |
| | 3.3 | Work site is cleaned and made safe in accordance with established procedures. |
| | 3.4 | Work supervisor is notified of the completion of the installation work in accordance with established routines. |

REQUIRED SKILLS AND KNOWLEDGE

- Risks and control measures associated with the high levels of radiation encompassing:
 - RF hazards
 - Maximum exposure levels to RF
 - Maximum exposure to microwave radiation
- Optical fibre safety encompassing:
 - Coherent optical sources and joining procedures
 - Laser safety class 3a devices or their replace
- Safety, selection, use, maintenance and care of test equipment encompassing:
 - Safety characteristics of electrical testing devices,
 - Chemical cleaning solvents, glues and joining wastes used in electronics,
 - Safe use of electrical testing device, and
 - Checks and storage methods for maintaining the safety of testing devices.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and test microwave antennae and waveguides as described in 8) and including:
 - A Reading and interpreting drawings of circuit arrangements and component locations.
 - B Installing and securing antenna, waveguide hardware and accessories accurately.
 - C Terminating cable and conductors correctly.

- D Pre commission adjusting for optimum performance.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing microwave and antennae and waveguides.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires

that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE1 Fabricate, assemble and dismantle utilities industry components
02A

UEENEEE1 Fix and secure electrotechnology equipment
05A

UEENEEE1 Use drawings, diagrams, schedules, standards, codes and
07A specifications

The critical aspects of occupational health and safety covered in unit
UEENEEE101A and other discipline specific occupational health and safety
units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by installing, connecting and adjusting any microwave antennae and waveguides consisting of antennas, rectangular and curved sections, T sections, joints and couplers and on at least two occasions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
 Electronics

UEENEEH129A Fault find and repair navigation systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers fault finding and repair of faults in navigation systems. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical diagnostic methods and knowledge of navigation system components, rectifying faults, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

License to practice**3)**

training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in navigation systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH129A

Navigation systems

Evidence shall show an understanding of navigation system fault finding and repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1. Sub-system components (i.e. functional blocks) and their operating parameters
- T2. Environment factors effecting system performance
- T3. Typical faults, their symptoms and cause.
- T4. Fault diagnosis procedures and testing
- T5. Component replacement
- T6. Sub-system adjustments

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in navigation systems as described in 8) and including:
 - A Applying logical diagnostic methods.
 - B Using fault scenarios to test the source of system faults.
 - C Identifying faults and competency needed to rectify them.
 - D Rectifying faults in system electronics.

- E Verifying that the system operates correctly.
- F Documenting fault rectification.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in navigation systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by finding and repairing at least four faults system faults across a representative range of electronic navigation systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
Electronics

UEENEEH130A Fault find and repair satellite-based surveillance and observation systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers fault finding and repair surveillance and observation systems. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of surveillance system components, rectify faults, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of

License to practice

3)

training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEH1 02A Repair basic electronic apparatus faults by replacement of components

UEENEEH1 13A Troubleshoot amplifiers in an electronic apparatus

UEENEEH1 16A Find and repair microwave amplifier section faults in electronic apparatus

UEENEEH1 39A Troubleshoot basic amplifier circuits

Prerequisite Unit(s) 4)

UEENEEH1 46A Solve fundamental electronic communications system problems

UEENEEH1 72A Fault find and repair communication systems

AND

UEENEEH1 14A Solve problems in frequency dependent circuits

UEENEEH1 69A Solve problems in basic electronic circuits

OR

UEENEEG1 01A Solve problems in electromagnetic devices and related circuits

UEENEEG1 02A Solve problems in low voltage a.c. circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability

Employability Skills

5)

Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare to find and repair faults.	1.1	OHS procedures for a given work area are obtained and understood.
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
		1.4	The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel.
		1.5	Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
		1.6	Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|-------------------------|------|--|
| 2 | Find and repair faults. | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
| | | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures |
| | | 2.4 | Logical diagnostic methods are applied to diagnose satellite-based surveillance and observation system faults employing measurements and estimations of system operating parameters referenced to system operational requirements. |
| | | 2.5 | Suspected fault scenarios are tested as being the source of system problems. |
| | | 2.6 | Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of electronics. |
| | | 2.7 | Faults in the electronic components of the system are rectified to raise satellite-based surveillance and observation system to its operation standard. |
| | | 2.8 | System is tested to verify that the system operates as intended and to specified requirements. |
| | | 2.9 | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements. |
| | | 2.10 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes. |
| | | 2.11 | Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |

ELEMENT

PERFORMANCE CRITERIA

3	Complete and report fault finding and repair activities.	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Work site is made safe in accordance with established safety procedures.
		3.3	Rectification of faults is documented in accordance with established procedures.
		3.4	Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in satellite-based surveillance and observation systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH130A

Satellite-based surveillance and observation systems

Evidence shall show an understanding of satellite-based surveillance and observation system fault finding and repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1. Types of satellite systems and sub-systems
- T2. Earth station locality and antenna parameters
- T3. Link specifications and link calculations
- T4. Base band signalling processes
- T5. Modulation and system access
- T6. Sub-system components (i.e. functional blocks) and their operating parameters
- T7. Environment factors effecting system performance
- T8. Typical faults, their symptoms and cause.
- T9. Fault diagnosis procedures and testing
- T10. Component replacement
- T11. Sub-system adjustments

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Fault find and repair satellite based surveillance and observation systems as described in 8) and including:
 - A Applying logical diagnostic methods.
 - B Using fault scenarios to test the source of system faults.
 - C Identifying faults and competency needed to rectify them.
 - D Rectifying faults in system electronics.

E	Verifying that the system operates correctly.
F	Documenting fault rectification.
G	Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a handbook with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in satellite based surveillance and observation systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is

expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by fault finding and repairing at least four faults system faults in a representative range of electronic satellite-based surveillance and observation systems.

- using sustainable energy practices.
- 3 Complete and report fault find and repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work site is made safe in accordance with established safety procedures.
- 3.3 Rectification of faults is documented in accordance with established procedures.
- 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and fault finding and repairing radar apparatus and systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH131A Radar apparatus and system fault finding and repair/ Radar apparatus and system?

Evidence shall show an understanding of Radar apparatus and system fault finding and repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Electronic communications, secondary radar and related systems

- Secondary radar principles encompassing:
 - Role of secondary radar
 - Transponder operation
 - Operating principles
 - Signal processing
 - Pulse generation, transmission and detection
 - Mode generation, detection and response
 - Display symbol generation
 - Synchronisation with primary radar
 - Advantages over primary radar with respect to: clutter;
 - signal/noise ratio; transmit power required for operation
- Interfaces to other systems providing information for transmission of mode data encompassing:
 - Slaving/synchronisation to primary radar
 - Clutter reduction/elimination
 - Defruiting
 - Degarbling
 - Interfaces to other systems
 - Range/ducting effects
 - Advantages over primary radar
 - Power supplies and UPS
 - International standards
 - National Curriculum
 - Hot standby, cold standby
- Application of secondary radar systems- Traffic Collision Avoidance System

REQUIRED SKILLS AND KNOWLEDGE

(TCAS), Selective Identification System (SIF), Air Traffic Control Radar Beacon System (ATCRBS), Instrument Landing System (ILS), Tactical Air Navigation (TACAN), Navigation Systems (VOR, GPS, DME), Radar Altimeter, Jamming, Electronic warfare, Second Time Round Returns (STRR), and Identification –friend or foe radar (IFF).

T2. Electronic communications, radar and sonar displays devices

- Types and their applications - CRT, Plasma, LCD, Monochrome, Colour, and Touch screen.
- Sub-system components (i.e. functional blocks) and their operating parameters encompassing:
 - EHT transformers
 - detectors
 - video distribution
 - time base generators
 - phase locked loops
 - microprocessors
 - memory devices
 - demodulators
 - focusing/deflection devices
 - delay lines
 - bleed resistors
 - HV generation
- Calibration testing and maintenance procedures
- Typical fault finding, their symptoms and cause

T3. Electronic communications, radar fundamentals

- Hazards and risk control measures
- Purpose and uses of radar
- Environmental conditions affecting radar
- Design factors which affect performance
- Propagation of electromagnetic waves
- Pulse forming circuits
- Typical radar transmitter encompassing:
 - limitations and applications of each type
- Typical radar receivers encompassing:
 - Sub-system components (i.e. functional blocks) and their operating parameters
 - limitations and applications
- Radar antennae encompassing:
 - Types, application and radiation patterns - parabolic, phased array, log periodic, and cos q

REQUIRED SKILLS AND KNOWLEDGE

- antenna gain
- efficiency
- length and height factors
- Microwave techniques, devices and applications encompassing:
 - oscillators
 - amplifiers
 - modulators and demodulators
 - mixers and detectors
- Types and characteristics of various radar systems

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may

be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or

licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Fault find and repair radar apparatus and systems as described in 8) and including:

- A Applying logical diagnostic methods.
- B Using fault scenarios to test the source of system faults.
- C Identifying faults and competency needed to rectify them.
- D Rectifying faults in system electronics.
- E Verifying that the system operates correctly.
- F Documenting fault rectification.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in radar apparatus and systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by fault finding and repairing at least four faults system faults in a representative range of electronic radar apparatus and systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEH1 02A Repair basic electronic apparatus faults by replacement of components

UEENEEH1 13A Troubleshoot amplifiers in an electronic apparatus

UEENEEH1 16A Find and repair microwave amplifier section faults in electronic apparatus

UEENEEH1 39A Troubleshoot basic amplifier circuits

Prerequisite Unit(s) 4)

UEENEEH1 46A Solve fundamental electronic communications system problems

UEENEEH1 72A Fault find and repair communication systems

AND

UEENEEH1 14A Solve problems in frequency dependent circuits

UEENEEH1 69A Solve problems in basic electronic circuits

OR

UEENEEG1 01A Solve problems in electromagnetic devices and related circuits

UEENEEG1 02A Solve problems in low voltage a.c. circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability

Employability Skills

5)

Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1 Prepare to fault find and repair	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
	1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

ELEMENT**PERFORMANCE CRITERIA**

- | | | | |
|---|-----------------------|------|---|
| 2 | Fault find and repair | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
| | | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures |
| | | 2.4 | Logical diagnostic methods are applied to diagnose global positioning systems faults employing measurements and estimations of system operating parameters referenced to system operational requirements. |
| | | 2.5 | Suspected fault scenarios are tested as being the source of system problems. |
| | | 2.6 | Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of electronics. |
| | | 2.7 | Faults in the electronic components of the system are rectified to raise global positioning system to its operation standard. |
| | | 2.8 | System is tested to verify that the system operates as intended and to specified requirements. |
| | | 2.9 | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements. |
| | | 2.10 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes. |
| | | 2.11 | Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and |

ELEMENT	PERFORMANCE CRITERIA
	using sustainable energy practices.
3 Complete and report fault finding and repair activities.	<p>3.1 OHS work completion risk control measures and procedures are followed.</p> <p>3.2 Work site is made safe in accordance with established safety procedures.</p> <p>3.3 Rectification of faults is documented in accordance with established procedures.</p> <p>3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and fault finding and repairing global positioning systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH132A Global positioning system fault finding and repair

Evidence shall show an understanding of global positioning system fault finding and repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1. Sub-system components (i.e. functional blocks) and their operating parameters
- T2. Environment factors effecting system performance
- T3. Typical faults, their symptoms and cause
- T4. Fault diagnosis procedures and testing
- T5. Component replacement
- T6. Sub-system adjustments

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Find and repair faults in global positioning systems as described in 8) and including:

- A Applying logical diagnostic methods.
- B Using fault scenarios to test the source of system faults.
- C Identifying faults and competency needed to rectify them.
- D Rectifying faults in system electronics.
- E Verifying that the system operates correctly.
- F Documenting fault rectification.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in global positioning systems.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by fault finding and repairing at least four faults system faults in a representative range of electronic global positioning systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers fault find and repair telecommunication apparatus and systems. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of telecommunication system components, rectifying faults, safety and functional testing and completing the necessary service documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational

License to practice**3)**

health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 04A Solve problems in d.c. circuits

UEENEEH1 02A Repair basic electronic apparatus faults by replacement of components

UEENEEH1 11A Troubleshoot single phase input d.c. power supplies

UEENEEH1 12A Troubleshoot digital sub-systems

UEENEEH1 Troubleshoot amplifiers in an electronic

Prerequisite Unit(s)	4)
	13A apparatus
	UEENEEH1 15A Develop software solutions for microcontroller based systems
	UEENEEH1 38A Fault find and repair complex power supplies

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to fault find and repair

- 1.1 OHS procedures for a given work area are obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

ELEMENT	PERFORMANCE CRITERIA
2 Fault find and repair.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Logical diagnostic methods are applied to diagnose telecommunication apparatus and system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
	2.5 Suspected fault scenarios are tested as being the source of system problems.
	2.6 Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of electronics.
	2.7 Faults in the electronic components of the system are rectified to raise telecommunication apparatus and system to its operation standard.
	2.8 System is tested to verify that the system operates as intended and to specified requirements.
	2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Complete and report fault find and repair activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is made safe in accordance with established safety procedures.
	3.3 Rectification of faults is documented in accordance with established procedures.
	3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and fault finding and repairing in telecommunication apparatus and systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH133A Telecommunication apparatus and system fault finding and repair

Evidence shall show an understanding of telecommunication apparatus and system fault finding and repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Telephone system fundamentals

- The transmission of sound in a telephone system encompassing:
 - Function of telephone transmitters and receivers
 - Components and functions of the telephone
- Purpose of earthing and protection in a telephone system
- Customer Switching Systems encompassing:
 - Basic function
 - Difference between a key system and a PABX.
 - Advanced features
- Basic operations of System Distribution Frames (SDF)/Test Point Frames (TPF), power fail and line interface requirements (e.g. Indial, Rotary Groups, ISDN, Extension, Tie-line circuits)
- Types, purpose, use, and requirements of metering devices.
- Metering and installation arrangements of public/pay phones
- Installation methods and requirements encompassing:
 - Customer Switching Systems (CSS)
 - Interfacing equipment
 - Termination of CSS equipment
- Requirements for programming of CSS
- Hazard associated the electronic components of CSS encompassing:
 - Static discharge
 - Chemical damage
 - Mechanical damage
 - Electromagnetic Interference

T2. Telephone network facilities

- Network subsystems (i.e. functional blocks) components and operating parameters

REQUIRED SKILLS AND KNOWLEDGE

- Switches within the network
- Customer accesses infrastructure
- System security

T3. Telecommunication earthing and protection

- Telecommunication overvoltage protection system
 - Operating principles
 - Overvoltage and surge/spike suppression protection techniques
 - Overvoltage protection devices
 - Installation of overvoltage protection systems
- Earthing protection system encompassing:
 - Components and arrangement of the MEN system
 - TELEX functional earth system
 - Telecommunication system earthing single and multi-storey
 - Communication earth system
 - Protective earth barriers for segregation, cable tray, duct and metal equipment enclosures
- Electrical interference encompassing:
 - Types – RFI, EMI
 - Sources of interference
 - Techniques in reducing interference
 - Earthing cable shields
- Earth testing instruments and procedures
- Safety issues to be considered with earthing and bonding

T4. PABX fundamentals

- Programming methods
- Configuration options
- Programming options

T5. Switches, hubs and routers

- Purpose and function
- Circuit configurations
- Connection arrangements
- System protocols

T6. Decoders

- Purpose and function
- Circuit configurations
- Connection arrangements
- System protocols

REQUIRED SKILLS AND KNOWLEDGE

T1. Fault finding and repair

- Typical faults, their symptoms and cause
- Fault diagnosis procedures and testing
- Component replacement
- System adjustments

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries

risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and fault finding and repairing in electronic medical equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EH134A and repair

Electronic medical equipment fault finding

Evidence shall show an understanding of electronic medical equipment fault finding and repair, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Medical equipment principles

- Equipment categories, types, functions and operation
- Hazards and safety procedures
- Causes of failure
- Safety testing requirements and methods
- Categories and examples of medical equipment are:
 - Cardiovascular systems including: blood warmers, cardiac catheterisation systems, defibrillators,
 - electrocardiogram(ECG) machines, electrocardiogram(ECG) monitors, heart-lung machines, infusion
 - pumps, intra-aortic balloon pumps, pacemakers, syringe pump and cardiac output measurement
 - equipment.
 - Respiratory systems including: anaesthetic delivery and monitoring units, medical gases, oxygen concentrator, pulse oximeter, respiratory humidifier, respiratory support units and ventilators.
 - Neurological systems including: electroencephalograph (EEG recorder), electromyograph (EMG recorder) and intracranial pressure monitoring (ICP).
 - Renal systems including: haemodialysis machine, CVVH machine and peritoneal dialysis.
 - Medical imaging including: x-ray equipment, computerised axial tomography (CT scan), magnetic resonance imaging (MRI), nuclear medicine and diagnostic ultrasound equipment.
 - Physiological equipment including: blood pressure monitors, foetal cardio-tocograph, infant care systems, multiparameter systems, thermometry, telemetry, networking and patient warmers.
 - Miscellaneous equipment including: electrosurgery, electric stimulators, and endoscopy and laparoscopy systems, laser, operating microscopes, therapeutic

REQUIRED SKILLS AND KNOWLEDGE

diathermy and ultra sound.

T2. Medical equipment, anatomy and physiology and infection control

- Nature of infection
- Control of microbial growth
- Infection control strategies
- Body systems

T3. Medical equipment safe working practices

- Risk management and assessment of risk encompassing:
 - Principle and purpose of risk management, and
 - Processes for conducting a risk assessment
- Hazards associated with medical equipment, encompassing:
 - Infections
 - Toxic materials
 - Electrical components
 - Radiation
- Risks and control measures associated with working with medical equipment

T4. Fault finding and repair

- Typical faults, their symptoms and cause
- Fault diagnosis procedures and testing
- Component replacement
- Equipment adjustments

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. .

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment,

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Fault find and repair electronic medical equipment as described in 8) and including:
 - A Applying logical diagnostic methods.
 - B Using fault scenarios to test the source of system faults.
 - C Identifying faults and competency needed to rectify them.
 - D Rectifying faults in system electronics.
 - E Verifying that the system operates correctly.
 - F Documenting fault rectification...
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to diagnosing and rectifying faults in electronic medical equipment.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement**RANGE STATEMENT**

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by fault finding and repairing at least four faults system faults in four different types of a representative range of electronic medical equipment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Electronics

UEENEEH135A Design custom electronic equipment installations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the design of home entertainment aspects of custom electronic installations and energy control systems. It encompasses developing control scenarios based on a design brief, negotiating with architect/designer, builder and client and the like, applying knowledge of electronic audio/video components and home theatre acoustics and relevant electrical installation regulation, developing design drawings and obtaining approval for final design.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training or approved training programs. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where

License to practice**3)**

applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities industry components
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE1 08A	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits
UEENEEH1 05A	Verify functionality and compliance of custom electronic installations
UEENEEH1 06A	Assemble and set up fixed video/audio components and systems in buildings and premises

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills

indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

<p>6) Elements describe the essential outcomes of a competency standard unit</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.</p>
--	--

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| <p>1 Prepare to design custom electronic installations.</p> | <p>1.1 OHS processes and procedures for a given work area are obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the proposed custom electronic installation is determined from the design brief or in consultations with appropriate person(s).</p> <p>1.4 Design development work is planned to meet</p> |
|---|---|

ELEMENT	PERFORMANCE CRITERIA
	scheduled timelines in consultation with others involved on the work site.
2 Develop installation design.	2.1 Knowledge of audio/video components, home theatre acoustics and regulations is applied to the design.
